CERTIFICATE OF AUTHENTICITY

This microfilm was created from the record copy of unit histories and related historical material of the United States Air Force stored in the Archives Branch of The Albert F. Simpson Historical Research Center at Maxwell AFB, Alabama. This facility is the official repository for these records in accordance with AF Regulation 210-3 and AF Manual 12-50. This microfilm was created in accordance with the provisions of AF Regulation 12-40 as AU Project AU-1B-67. The microfilming was completed under AF Contract FO 1600 74 90383 under the supervision of the Technical Systems Branch of The Albert F. Simpson Historical Research Center.

MEMORANDUM

TO : G-2, Headquarters, 15th Army Group.
(Attention: Major Lloyd Thomas)

1. Reference that attached notes on the V-1, or pilotless aircraft, it is felt that it would be unwise to make much comment on a paper which deals with this complex subject in a very brief form. It is pointed out, however, that para. 4 is not strictly accurate. V-1's are carried by Heinkel 111 and possibly DO-217 aircraft from which they are launched, theoretically, from a height of 1500 feet. In practice, however, we know from P/W that there is considerable variation in carrying out this operation. Launching over the North Sea has been carried out with the aid of Pathfinder aircraft marking the track and point of release, as described in para. 4, although navigation has also been carried out by D/R and W/T means.

2. The reason for the large percentage of V-1's failing even to reach the coast of England is probably not the fault of the height of launching, which sometimes exceeds 1500 feet, but is possibly due to the normal percentage of the V-1 launchings comparable with that experienced from platform launchings.

3. These aircraft can be considered vulnerable whilst making their launching runs as they must reduce their speed to approximately 150 miles per hour.

4. It is believed that the enemy has a maximum of 75 aircraft equipped for carrying V-1. These are at present based in North-west Germany. It is considered very unlikely that, in view of their prior use against England and the Western Front and, to a limited extent, on the Eastern Front, the enemy will be in a position to bring down even a few of these aircraft to operate against targets in this theatre.

5. I am lending you some of our Air Intelligence articles written on the FZG 76 (V-1) and A-4 (V-II). We also have considerable technical data, both on the capabilities, construction etc. of these missiles and should you require a comprehensive report, with illustrations, we can either write this or give you the raw material covering the subject.

Wing Commander,
Chief Intelligence Officer.

SPECIAL INTERPRETATION (CROSSBOW) REPORT NO. 14

REPORTED V-2 SITE NEAR VILLACH, AUSTRIA

Reference Map: G.S.G.S. 4396 (YUGOSLAVIA 1/100,000) Sheet 2.

SORTIE	DATE	F.L.	PHOTOGRAPHS
23PS:5MK:175	4 February 1945	24"	4019-20, 4021-23

GENERAL: This report is issued in compliance with demand No. 211 of Target Section, M.A.T.A.F.

A. A detailed sketch map obtained by ground source shows a V-2 Site under construction on the West side of Lake BASKO at point C 913773 and details are as follows: Launching site at B.M. 661, 3 miles S.E. of VILLACH. Road under construction connecting platform with underground bomb dump at C 921763.

Second bomb dump of 10 train loads of bombs above figure 1 of point 661. Third bomb dump in shed at pinpoint C 920764. Weapon dump covered with ground sheets at C 913777. At point C 924755 is the house of National Socialist Organization where women and children are billeted.

B. This report is NOT confirmed.

1. The map reference given lies in a wooded area between VILLACH and Lake BASKO. A few houses are situated within 400 yards of the pinpoint but these were constructed prior to April 1944 and no evidence of track activity is noted on present cover.

2. The pinpoint of first mentioned bomb dump lies in a cleared portion of woods. There is no evidence of bomb storage or of road construction work being carried on.

3. No shed can be seen at pinpoint C 920764 or in surrounding territory.

4. The only access to the reported launching site appears to be provided by narrow twisting roads with sharp turns incapable of traffic of long and heavy trailers.

C. There are some signs of activity in this wooded area as follows:

1. 6 possible vehicles are at pinpoint C 923768.

2. At C 924757 is a group of 11 small barrack huts, which were erected prior to July 1944. The absence of snow on the roofs, particularly near the chimneys indicates that they are in use. Immediately North of this barracks area is a M/T park which has been partially cleared of snow.

3. In open ground along edge of wood at C 903776 are 16 rectangular pits measuring approximately 25' x 15', probably a dangerous stores dump. The pits are, at present, unoccupied. Construction took place between 26 July 1944 and 4 February 1945.

Sortie	Date	Focal Length	Quality	Photographs
SA 60/1008	17 Feb 45	36"	Good	3001-33 4001-33

1. Ground Information

(a) Ground sources report:-
"Parts for the assembly of V-2 weapons have been arriving in the vicinity of LAGO DI DOBBIACO since 1 January." (O.S.S./J-3163, para 1).

(b) Geographical co-ordinates of LAGO DI DOBBIACO are 46°43'N, 12°13'E. (Map reference B.6391).

2. (a) There is no visible sign of a stores dump or an assembly area for V-2 weapons on the cover examined, nor is there any unusual activity at DOBBIACO railway station (B.644941).

(b) The only feature of interest in the area is a tunnelled entrance constructed into the mountainside at B.646848: construction took place between 13 Aug 44 and 15 Jan 45. This site, however, does not appear to be suitable for an underground stores (except a very small one) as the track by which it is reached is narrow, and has 2 very sharp bends immediately outside the entrance.

(c) The LAGO DI DOBBIACO lies in a narrow valley with DOBBIACO at its Northern end and CARBONIN (B.635825) at its Southern end. It is possible, therefore, that the ground report refers to the dangerous stores dump at CARBONIN which has been previously mentioned in Special "CROSSBOW" Interpretation Report No. SR(C)/4 dated 26 Jan 45.

3. Appendix 'A' shows the extent of cover examined.

1. GENERAL

(a) Unconfirmed ground reports state that the enemy are building V-2 sites in area of ROSENBACH (D.025711), between JESENICE (D.0361) and VILLACH (C.8880), and that 10 train loads of V-2 ammunition have already arrived.

(b) ROSENBACH appears under the name of PODROSCA on the 1:100,000 map quoted above

(c) The report is NOT confirmed.
There is no sign of anything suggesting V-2 activity in the area examined. There is no unusual activity at ROSENBACH railway station (D.025711) and no ammunition dumps can be seen.

(d) Appendix 'A' shows the extent of cover examined.

12PR5M125	21 Jan 45	24"	Good	4001-10

1. GENERAL

(a) Ground sources report:

"It is not thought that there are any launching sites for V weapons under construction in ITALY. The CREMONA bridgehead area, however, is closed to all civilians, and to German military personnel without special passes. This zone has been cleared of its civil population."
I.S.L.D. 174/645. 16 Dec 44.

(b) There is no sign of anything suggesting V-1 or V-2 activity in the area examined.

Ground defences under construction in the area SOUTH of the river might account for the reported evacuation of civilians, particularly as many of the defences are sited amongst farm buildings.

(c) Appendix 'A' shows extent of cover examined.

(d) Map reference of the CREMONA bridge is K.853232.

1. GENERAL

(a) Ground sources report:-

"An emplacement for the launching of V-2 has been established in the vicinity of the "Chiesa delle Grazie" near CHIAVARI. The launching tube is now halted in the rail station. The German command is at the church and there is a tunnel for the concealment of the V-2 apparatus." O.S.S. 26 Oct 44. B-3

(b) The report is NOT confirmed.

Nothing suggesting a launching emplacement for V-1 or V-2 can be identified in the vicinity of the "Chiesa delle Grazie" (P.256372), and no signs of suspected V-1 or V-2 activity can be detected in the area.
There are no stores visible at CHIAVARI Railway Station (P.272359).

The main coast road runs through a tunnel approx. 205 yards long almost directly underneath the Chiesa delle Grazie. Also at P.260369 is the entrance to a very long railway tunnel which, as the railway is inactive, could be used for storage, though there is no sign of it being so used. No other tunnels can be seen.

Adjoining the grounds of the Chiesa delle Grazie, on the seaward side, are two emplacements covered with camouflage netting which completely conceals the contents of the emplacements. The installation has been reported previously as a probable coastal defence bty: study of comparative cover reveals no change in the emplacements or in the surrounding area between 4 Sep 44 and 29 Jan 45.

1. GENERAL

(a) Ground sources report:-
"A robomb launching base is reported at SAN SISTO at K.641177. It consists of a large concrete base with a rotating tube about ten metres long and five metres in diameter. The rear portion appears to be hermetically sealed. On the front part on the right, as viewed from in front, there is a pressure gauge. The tube is camouflaged and faces toward the railway switch. Civilian traffic is forbidden in the area and the region is well guarded."
Date of information: 20 Dec 44. Evaluation: B.3.
(Extract from 2677 Regt. (Office of Strategic Services), J.3028. Dated 28 Dec 44).

(b) The report is NOT confirmed.

At the map reference given, there are 3 unemplaced light AA guns. These lie on level open ground between the River PO and a flood wall; on the other side of the wall is a heavy AA site. There is no sign of anything suggesting a bomb launching base at the map reference or in the vicinity.

1. GENERAL

(a) The existence of flying bomb sites has been reported in the SESTRI LEVANTE (P.3230) area.

(b) The report is NOT confirmed: the recent, large scale cover shows no sign of anything in this area which could be interpreted as preparation for the launching of flying bombs.

(c) Appendix 'A' shows extent of cover examined.

SPECIAL PHOTOGRAPHIC INTERPRETATION REPORT.

I T A L Y

LOCALITY : SPEZIA.

1. SPEZIA. (SPRS/131. 28.1.45. 3/167.)

SUSPECTED V-2 LAUNCHING SITE AT XXX P-65260920.

(i) Excellent photos uphold yesterdays report and in addition the following can be seen:

a) The reported launching site appears to consist of a tunnel with an entrance well protected by a flat mass of well camouflaged cement or else it is a retaining wall with a flat area up hill from it. Immediatly West and up hill from the above described installation are several openings of tunnels that appear unused due to lack of activity.

b) The several small entrances are seen better in the area reported to be the underground C.P. and spoil from the workings is more clearly seen.

c) A small tunnel appears at the crest of the hill with a narrow gauge track entering it.

d) a newly constructed building is seen at the spoils dump, the roof of which has been placed since 3 Jan. A small, narrow gauge car is seen climbing the incline to the spoils dump, a further indication of activity in this particular area.

e) No statement can be made about the reported tunnel for storage other than the approaches appear very inconvenient for large objects.

(ii) It is noted that if the ramp were aimed directly out of the hill at this point it would take a course slightly North of East or an approx 80 degree. Leghorn is South East of this area at about 135 degrees, an angle of fire impossible if the launching point is at or North of the apex of the hill.

(iii) It is also seen that there are numerous small mining activities of similar nature in the hills around the town.

EIGHTH ARMY

Eighth Army is still driving on to complete the destruction of the German forces in Northeast Italy. Prisoners continue to pour in. Over 10,000 prisoners taken in 24 hours. Yesterday 27 Lancers captured 1,000 prisoners.

The part played by Royal Engineers in Eighth Army offensive was of outstanding importance and contributed very considerably to the success of the battle. The terrain between the Senio and Po rivers over which the Eighth Army fought is particularly difficult fighting country intersected by innumerable rivers, canals and ditches with high floodbanks all of which form perfect natural defence lines and tank obstacles. Also the enemy had time during the winter to prepare bridge demolitions in great depth on a scale never before encountered. That we were able to keep up the impetus of our first breakthrough across the Senio was due very largely to the fact that the enemy was taken completely by surprise by our use of the new Ark bridge. This bridge used in this offensive by the 25th Armoured Engineer Brigade enabled our tanks to follow very rapidly to give close support to the infantry immediately they had established a bridgehead.

The Ark bridge is ideally suited to this type of country and is described by the troops who use it as "just the job". The main bridging during the offensive consisted of Bailey and floating bridge equipment. Though less spectacular than the Ark, the Bailey is equally essential to get vehicles and supporting arms across in quantity.

'Sappers' record was the construction of 29 Bailey's in one day with total length of 2260 ft. During first ten days of battle 118 bridges were built with total of 10,750 ft using average 700 tons of bridging per day. Eighth Army's main river obstacles were the Po and the Adige Rivers. The Po is 12,000 ft wide, the same width as the Rhine and is an equally formidable barrier. During last winter R.E. trained a special force to bridge the Po with the result that four floating bridges were built across river in record time enabling the Army to get large quantities of vital material and supplies to our troops North of the River.

The next river obstacle, the Adige, was as difficult to bridge as the Po for it runs wider as fast and has steep floodbanks 35 ft high. Despite these difficulties the R.E.'s put 4 bridges across. Italian watermen of the Po Di Goro area who had been fighting with the Partisans were formed into a coy and some of these took part in the ferrying operations over the Adige.

FIFTH ARMY

Fifth Army troops continue to pursue and destroy the demoralized enemy in Northern Italy, encountering scattered rearguard resistance and mopping up bypassed enemy pockets.

The Germans have set up straggler collecting points and as soon as a few hundred troops congregate, they are easily organized into units and sent out to delay our troops.

Units of the 85th Infantry Division are patrolling and mopping up East of the Adige River.

Our mountain troops have been issued winter clothing and pack animals for Alpine operations.

General Jahn, commander of the Lombardy Corps of the Ligurian Army, surrendered with 8,000 Germans and many Italians, Southwest of Milan. Included in the booty were nearly 300 vehicles and 12 88mm guns. General Schlemmer, commander of the 75 Corps of the Ligurian Army, has refused to surrender his troops because of his oath to Adolph Hitler that he would not surrender while Hitler was still alive. Several hundred SS police were also captured in the vicinity of Milan.

German planes bombed and strafed the Dongo area for several hours the morning of 1 May, apparently in reprisal for the slaying of Mussolini. One bomb hit a hotel in a nearby village, killing between 10 and 15 persons.

Info Fifth Army

HQ 15 ARMY GROUP
MORNING 1 May 45.

Fifth Army troops relentlessly slashing demoralsied enemy forces into bits, continued their advances and reinforced their blockade of escape routes.

Enemy resistance has ceased to be effective in the West, but East of Lake Garda above Verona on the Brenner Route there was still opposition to our advance. It appears that the enemy is attempting to reassemble his disjointed forces at a point on this route in order to attempt the long tortuous march up into the Alps. Fifth Army operations continued to be directed toward keeping him hopelessly divided and denying him access to the highway.

While Major General WILLIS D. CRITTENBERGER, Commander of IV Corps, was making a formal entry into Milan with a selected task force including elements of virtually all units under his command, his troops were pushing on past Milan and establishing themselves along the Ticino River, which connects Lake Maggiore and the Po River, and forms an important barrier to possible withdrawal of enemy troops from Western Italy.

Farther to the East, the 10th Mountain Division continued its advance at the Northern tip of Lake Garda, moving NE towards Trento and the vital Brenner Line. In the face of sharp enemy fire the 86th Mountain Infantry occupied Riva 5504, Torbole 5702 and Nago 5903.

The 351st Infantry Regiment crossed the Brenta River at 2640, the 363rd Infantry Regiment of 91st Division at 3379 and the 6th South African Armoured Division at 4473.

The amphibious task force of the 10th Mountain Division which crossed Lake Garda to seize Mussolini's villa at Gargnano was commanded by Colonel William O. Darby, assistant Divisional Commander. The party found the villa extremely well camouflaged in green, and on searching it uncovered important documents. Local residents reported that Mussolini had left Gargnano on 25 April.

On the East shore of the lake at Algesino the Division seized the forward HQ of the Luftwaffe, an estate belonging to Ernest Stadelman, an artist whose work was exhibited in New York before the war. Stadelman, now a Luftwaffe Captain, had fled. The last German meal served in the place included roast beef according to a menu on the wall, but the chef in another notice announced that because of lack of kitchen help he could no longer fill individual orders.

Eighth Army

On Route 14 morning 30 April 2 New Zealand Division crossed Piave River, in which operation the New Zealanders took over 400 prisoners. They resumed their rapid advance and were last reported some 15 miles beyond the river. Meanwhile, 27 Lancers struck North from Mestre and passed through Treviso. Continuing their northerly thrust they reached the Piave and crossed by the Route 13 bridge which they found intact. They continue to advance. Number of prisoners taken by Eighth Army during 29 April about 10,000 but difficult to estimate as numbers increasing hourly.

9th Armoured Brigade commanded by Brigadier R.P. Cooke, CBE, DSO has played an important part throughout the Spring offensive. Supporting 56th Division, the Brigade used Buffaloes for the first time in Italy. Crowed by joint U.S. and British force made two landings on Southwest shore of Comacchio taking enemy completely by surprise and thereby turning flank of strongly defended Argenta position. Following up the advance to the Po 9th Armoured Brigade used amphibian tanks and buffaloes in support of 5 Corps and 13 Corps when they forced the Po crossing and also in support of 56 Division and 8 Indian Division for the Adige crossing. In addition to carrying assaulting troops across the rivers, the Brigade continued day and night to ferry supplies across until bridges were built. Forward elements of Brigade entered Padua and Venice with 56 Division. Brigade also transported infantry throughout offensive in kangaroos which were most valuable in keeping up momentum of attack

H 15 [illegible]
3 April '45.

On Eighth Army front about 1000 PWs were taken in capture of PADUA including fighting soldiers and stragglers. Our troops encountered German delaying positions on river BRENTA east of PADUA but after some fighting we broke through and by afternoon 29 April advanced 25 miles.

We also captured MESTRE, important industrial port on mainland opposite VENICE.

South of PADUA - MESTRE road reports are coming in of German units and formations captured or surrendering in toto. The garrison at CHIOGGIA surrendered this morning (29 April) and another battalion surrendered complete in area West of Venetian Lagoon.

It can now be disclosed that 13 Corps commanded by Lt Gen Sir John Harding, KCB, CBE, DSO, MC, has played a significant part on Italian front throughout winter and during spring offensive. During winter months 13 Corps then commanded by Lt Gen S.C. Kirkman, CB, CBE, MC, formed part of Fifth Army and was engaged in fighting under severe weather conditions in the difficult mountain country south of BOLOGNA. 13 Corps came under command of Eighth Army once again and shortly after start of present offensive was given one of the leading roles.

In the battle, it may now be made known that 7th Armoured Brigade commanded by Brigadier Cooper, CBE, played an important part in recent operations from opening of Spring offensive up to fall of BOLOGNA. Supporting 2 Polish Corps 10th Indian Division and 43 Gurkha Brigade, the 7th Armoured Brigade took part in the fierce fighting for the rivers North of Route 9. They crossed the formidable SENIO and SANTERNO and supported Polish troops in the capture of IMOLA. After breaking the enemy's defences on the SILLARO the Brigade took part with the Gurkhas in the capture of MEDICINA from the parachutists and continued in the general rapid advance through the Genghis Khan line on the IDICE river.

On the Fifth Army front, SE of VICENZA, American and South African troops closed up to the line of BACCHIGLIONE River. Troops of the 88th Infantry Division, who captured and cleared VICENZA, have pushed North and NW and crossed ASTICO River. Pockets of SS police are being mopped up in all areas. Among the large numbers of PWs taken was a Czech Brigadier General in charge of a Czech Labor Battalion.

CONFIDENTIAL

HQ 15 ARMY GROUP
29 Apr 45.

The First Armoured Division took part in the advance towards BRESCIA and the thrust to Como. The Commanding General of the First Armoured Division is Major General Vernon E. Prichard, whose family lives in St. Louis, Missouri. He was born in Onawa, Iowa. In 1915 he was graduated from West Point and was captain of that year's football team. Later he was Professor of Military Science at Yale University, New Haven, Connecticut

Fifth Army troops have completed occupation of Genoa and rounding up of prisoners. Peninsula of Porta Fino 1935 cleared of enemy pocket with capture of 55 PWs.

Despite considerable difficulty Eighth Army troops crossed Adige. This was major engineering feat because the lower reaches of Adige flow fast and owing to last 2 days of rain, approaches to River have been very difficult, and enemy rearguards have blown all bridges. Our armoured spearheads have, in some cases, had to advance on foot but made good progress when across Adige. We captured many PWs and moved up to Venetian Line on broad front.

A captured order from 278 Infantry Division, giving instructions for crossing the PO, gives priority to Signals, kitchens, ordinary vehicles and horse drawn vehicles in that order. It adds: "If MDVs cannot be crossed, officer in charge will decide on burning them. Horses will swim across." And it concludes: "No panic. We will defend ourselves with bazookas and pistols".

A prisoner from a Nebelwerfer Regiment taken by 2 New Zealand Division wrote in his diary: "Discipline has deteriorated badly. Again we move our positions six kilometers to the North. Night and day fighter-bombers and shelling. No more mail comes up. Are our parents still alive? When will the battle finish? It is a terrible muddle. No more proper organisation exists. The paratroops keep clearing out. It is senseless to keep on fighting. We are supposed to stop tanks and it is always the same people who make a bolt for it. The Italians are happy that the Tommies are coming. Utter chaos. The breakup of the German Army has begun."

HQ 15 ARMY GROUP
28 April '45.

EIGHTH ARMY

On Eighth Army front about 1000 P/W have been captured in last 24 hours up to morning 27 April. Our spearheads are pushing forward and other forces continue to mop up bypassed enemy who appear to have little idea of progress of battle. Our troops have captured Novigo 2921 and we also cleared up many Germans East and West of town. General Heidrich, commander of notorious 1 Parachute Corps, swam across PO from South to North bank and while still dripping he harangued his parachutists, dressed them down and told them "We will stop British somewhere". To help stem our push Germans have brought down fresh troops from German 155 Division not previously committed. General Schwerin was appalled when he heard that this division had to be put in the line. However, parachutists and panzer troops appear to have plenty of fight left in them despite losses and can be expected to put up resolute battle in Venetian Line which is first German defence line since Gothic Line to have concrete defences and dug in panther turrets. These defences are at least two kilometers deep.

It can now be revealed that 6th British Armoured Division commanded by Major General H. Murray, DSO, has played a very important part in Eighth Army's spring offensive. Debouching from the Argenta gap the division captured S. Nicolo Ferrarese and crossed the Po Morto Di Primaro. Driving Northwest they captured S. [illegible] in record, captured and cleared Poggio Renatico taking many P/W from German L of C troops and went on to capture Bondeno. This Northwest thrust cut right across line of withdrawal of General Heidrich's 1st Parachute Corps and forced it to pull back Northwest first over Reno where it lost much equipment, then toward PO crossings East of Bondeno. While one 6th Armoured spearhead pressed toward Finale which Fifth Army was approaching from Southwest, enemy was driven into arms of strong Fifth Army encircling forces which swept round to cut off Heidrich's retreat and rounded up over 7,000 P/W in this very successful joint operation.

Meanwhile main spearhead of 6th Armoured Division swung suddenly Northwest to reach PO and split the enemy's bridgehead South of the river. They were the first Eighth Army troops up to river and with New Zealanders shared the honor of being first across PO.

Since start of offensive 6th Armoured Division has taken over 3,400 P/W including half a MG battalion which surrendered en masse. They also captured much equipment including AT guns.

FIFTH ARMY

North and South of the PO River, Fifth Army troops continued their pursuit of the enemy against light and scattered resistance. In some areas, prepared enemy positions and fortifications were found abandoned. In the greatest advance of the day against little opposition, First Armored Division spearhead raced Northwards more than 50 kilometers to capture the airport near Bergamo 6307. Armored columns made deep penetrations West and Southwest of Lake Garda. While one spearhead sped West from Brescia, other elements captured the town of Ghedi 0052. In taking the Ghedi airport, our troops moved so fast that a German sergeant who had been assigned to blow up the airport installations, was captured before he could accomplish his job.

Troops of the 34th Infantry Division are mopping up pockets around Piacenza 6015, and Southwest of Parma, we have cut Route 62, one of the main enemy escape routes from the Ligurian Coast.

Our reconnaissance planes have observed many enemy vehicles and personnel groups withdrawing Northwards.

Following closely another enemy withdrawal troops of the special task force operating on the Ligurian Coast entered Pontremoli 7240 early 27 April without opposition. Troops advancing on Genoa encountered resistance from isolated strongpoints only. We control the city although the German coastal batteries have not yet surrendered.

Eighth Army

We have crossed Canale Bianco in several places capturing many bridges intact and have reached Adige against moderate opposition including infantry and tanks. Count of equipment captured yesterday now shows we took additional 70 guns and 12 AT guns.

Following statement made by Lt-General Graf Von Schwerin, captured commander of 76 Panzer Corps : "I know the situation for German soldiers in North of Italy is hopeless. Under the circumstances I cannot issue further orders. In full knowledge of the situation I have taken the only way open to a soldier who has been honourably but decisively beaten."

Fifth Army

Sweeping across the Valley of the Po, fast moving Fifth Army troops continued their advance on a wide front 26 April. Although enemy resistance is generally weak and disorganised there are still strong pockets fighting rearguard actions in isolated areas. On right flank, troops of the 91st Infantry Division captured Legnago 8625 on the Adige River and Cerea 8126 against some opposition. 100 Germans were killed by our troops at Legnago and in a fire fight at Cerea they captured many prisoners of war and an enemy supply train, including a tank column that was seeking a route of escape over the river at that point. Among the troops who have crossed the Po River are those of the 6th South African Armoured Division.

Mopping up activities continued in captured Verona. Southwest of the city our troops encountered road blocks and snipers in the vicinity of Vigasio 6040. Resistance also was encountered in capturing Valeggio 4445. To the West Fifth Army armoured columns continued to make progress southwest of Lake Garda. After capturing Parma 1085 our troops maintained their advance to the Northwest astride Route 9 and captured Piacenza.

Another German division commander, General Boehlke of the 334 Infantry Division was captured and our troops continue to bring in large groups of prisoners.

It was revealed today that Colonel William O. (Bill) Darby of Ranger fame commanded a task force of the 10th Mountain Division that yesterday, 25 April, by fast marching, surprised the enemy at Villa Franca and captured the airport before they were able to destroy it.

In coastal sector further advances were made along Route One towards Genoa. Troops who had been held up the previous day by stiff enemy resistance, crossed the Entella River without opposition. Blown roads and bridges delayed advances but forward elements had reached Zoagli against moderate resistance. Enemy resistance was composed of mixed Italian and German troops. The previously active coast defense guns at Portofino remained silent throughout the day.

HQ 15 ARMY GROUP
Morning 26 April '45.

Eighth Army

Eighth Army troops are up to Po along almost whole front. Night 24/25 April enemy evacuated his Po bridgehead East of Ferrara very hastily leaving behind him so much equipment and motor transport that we were unable to count it but he abandoned at least 1,000 motor transport which had either been shelled by us, bombed by Desert Air Force, or fired by Germans themselves. 9th Lancers alone knocked out and captured 10 German tanks and SP guns during fighting night 24/25 April. We also captured numerous PW's. West of Ferrara our troops pushed on successfully from their Po bridgehead and are meeting only few enemy. Main German defence line North of the Po is the Venetian or "Adige" Line. The venetian Line is very strong and runs North-west of the Adige from point 20 miles inland to skirt Monti Euganei isolated hill mass South of Vincenza. Defenses on this line have been under construction for a long time.

Fifth Army

Spreading out to the North after their successful crossing of the Po, Fifth Army troops pursuing a confused and disorganized enemy, made rapid advance 25 April against opposition which was described as slight. Following a pattern common to most of their withdrawals in Italy, however, enemy demolitions in most areas North of the river have been extensive.

Fifth Army has crossed the Po in strength. In a large area in the South bank of the Po practically all Germans have been cleared. Only small isolated groups remain, and they are being rapidly mopped up.

Farther West, we have taken Reggio D'Emilia and Parma on Route 9.

In the mountainous central sector and in the coastal sector, our troops reported almost no contact with the enemy as they move rapidly forward. With our clearing of the area North from Bologna to the Po, the German forces to the West appear to be speedily withdrawing from their remaining positions in the Appenines.

Along the Ligurian Sea on the left flank, we have advanced Northwest of La Spezia. Our troops have reported little arty fire, weak rearguards, few bridges blown and very few or very old demolitions. Aulla 7720 has also been occupied by our forces.

HQ 15 ARMY GROUP
25 Apr 45.

Fifth Army.

Fifth Army troops continued their rapid advance in the Po Valley Northwest of Bologna, with extensive mopping up operations on by-passed enemy units. There was increasing evidence of disorganisation and confusion, with enemy divisions broken up and battalions more and more operating on their own.

In the mountainous central sector our forces continued to advance as the enemy retired.

In the Coastal sector Fifth Army troops moved Northward following the fall of La Spezia.

Up to noon on 24 April more than 25,000 prisoners of war had been taken by Fifth Army since the start of the present offensive.

The 10th Mountain Division was the first major unit in the 15th Army Group to cross the River Po. It crossed on the morning of 23 April and is now attacking North of the River.

The crossing of the Po by Fifth Army troops was accomplished in the face of a remarkably fierce concentration of enemy fire. At the point of first crossing, the river is about 200 yards wide, with gradually sloping shores exposed to enemy fire. The enemy, sheltered by earthworks on the opposite shore, poured a hail of lead into the assault boats as they crossed the stream. The crossing was the culmination of a thrust of 55 miles in two days which resulted in the capture of several thousand prisoners, the seizure of at least one truck convoy and of one freight train.

Eighth Army.

Eighth Army troops have now crossed the Po River.

To the East of Ferrara the German bridgehead of the Po is slowly and relentlessly being compressed, and the enemy crossings are everywhere within forty range of our guns. In the East we are within 10,000 yards of the Po in the neighbourhood of Corbola 4803 crossing, and to the West Ferrara was taken 24 April. Between these points the enemy holds a strip of land only about 5,000 yards deep, covering the withdrawal of the remnants of 5 divisions which have still to cross the river. To the West of Ferrara we are on South banks of Po on a wide front.

HQ 15 ARMY GROUP
Morning 24 April '45.

Eighth Army

In Eighth Army coastal sector our troops pushed on across flooded country and reached Codigoro 5084. North of Lake Comacchio we pushed on towards Massa Fiscaglia 4281. To Northwest our troops cleared Formignana 3085 and advanced beyond town to Northwest.

After overcoming enemy counterattack North of Quartesana our troops pushed North and cleared Contrapo 2086 on Po Di Volano. North of Copparo 2891 where we have troops, enemy is putting up strong resistance to keep bridgehead South of Po while his forces withdraw. We are pressing this in steadily.

After clearing Germans from Ferrara Airfield where there was stiff fighting our troops are now fighting in outskirts of Ferrara. We advanced with several thrusts West of Ferrara and have reached River Po on wide front. In area Bondeno 9692 - Finale 8785 great havoc has been wrought among hastily withdrawing enemy, much transport shot up by our tanks and [illegible] prisoners taken by midday. Many vehicles also taken. Desert Air Force reported big concentration of enemy transport in area but decided not to attack it when they saw it was surrounded by our tanks and was already in the bag.

South of Reno enemy were still fighting at first light but withdrew quickly. Our own troops chased them and whole area South of river is now ours though odd prisoners continue to be taken. At one crossing Northwest of Cento 8574 our patrols found evidence of great slaughter with many corpses of Germans and horses and much enemy equipment scattered in area.

Fifth Army

Additional Fifth Army forces have reached South bank of the Po River, advancing against slight enemy resistance.

Enemy columns retreating North were again attacked by our air forces 23 April, with several hundred pieces of motor transport and horse drawn vehicles reported destroyed or damaged. Our aircraft also harassed enemy as he attempted to escape across the Po on rafts, in boats, and by other means.

In one sector we repulsed German counterattack and shortly thereafter captured 300 prisoners.

In coastal sector we recorded gains of up to 2,000 yards, capturing a mountain and several towns.

Four or Five enemy aircraft appeared over the Army area night of 22/23 April, bombing and strafing.

EIGHTH ARMY

Eighth Army troops have reached the Po in several places. In the Coastal sector our troops cleared further localities Northwest of Comacchio 5668 and continued their advance. British troops pressed on Northeast between Lake Comacchio and River Po Di Volano and are now beyond Migliarino 3677. To Northwest our troops advanced from their Po Di Volano bridgeheads at several points. We overcame determined resistance South of Formignana 3085. Enemy launched counterattack North of Quartesana but was beaten off and we pressed on. Despite extensive demolitions our troops are closing in on Ferrara and are now in outskirts overcoming enemy rearguards. Enemy counter-attacked with Infantry and Tanks beyond Poggio Renatico but repulsed and our troops pushed forward. South of Reno we mopped up German rearguards, cleared several villages and advanced on wide front. To Southwest our troops cleared S. Giorgio 9165 and made contact with enemy beyond town, while to West we pushed on beyond Argelato 8964 which is now clear. Enemy casualties have been heavy. On Polish front along 23 officers and 1500 OR's German dead have been counted. It can now be revealed that since start of Eighth Army offensive Italian Friuli and Folgore Groups under command of Eighth Army played an important part in fighting in the difficult hill country South of Route 9 leading up to the capture of Bologna. In fighting immediately preceding fall of the town the Friuli Group on the right established a bridgehead over the Idice in face of enemy MG fire. Folgore Group cleared foothills South and Southeast of Bologna and overcame stubborn enemy rearguards killing many Germans and taking PWs.

Weather: Fair with local showers in mountains.

FIFTH ARMY

Fifth Army spearheads are on the Po River. Elements of our troops have advanced an approximate 75 miles in eight and a half days of the current operation.

Two bridges across the Panaro taken intact. Panaro flows generally Northeast and empties into Po approximately 27 miles due North of Bologna. In Serchio River sector our troops continued to advance North with little opposition.

In Coastal Sector East and Northeast of port of La Spezia our forces advanced slowly against stubborn resistance. Except in this area, enemy resistance South of the Po River has ceased to be effective, and can only be described as spotty.

HQ 15 ARMY GROUP
Evening 22 April '45.

Fifth Army

Fifth Army troops continued their advance to the North in the face of fairly strong enemy rearguard resistance. Our aircraft utilized good flying weather to attack his retreating columns with fighters and fighter bombers, destroying and damaging many vehicles.

Our forces operating North and West of Bologna have crossed both the Secchia and Panaro Rivers in several places. Two bridges were seized undamaged across the Secchia which flows almost due North to join the Po, while the Panaro runs Northeast to meet the same river.

On Route 9, running between Bologna and Modena, we have occupied Castelfranco 6660 about 7 miles Southeast of Modena.

Small groups of enemy troops surrounded by our units have surrendered. In one area elements of a German tank battalion were overrun by our troops, and in another a German Regimental Commander was captured.

Eighth Army

In Eighth Army coastal sector our troops crossed Canale Valetta and despite many demolitions pushed on North of S. Giuseppe 5971 and reached Comacchio 5668 to Southeast and are now in possession of town. Northwest of Lake Comacchio British troops swung Northeast beyond Portomaggiore and reached Ostellato 3774 on North shore of Lake Comacchio while another thrust reached Southern outskirts of Migliarino 3677 on Po di Volano which is being defended by enemy. Our troops pressed on Northwest of Modelana which is now clear, overcame enemy resistance and reached Po di Volano River West of Pinale di Reno 3282 and also opposite Gobbioncello 2885.

British troops pressed on beyond Montesanto 2073 against sporadic resistance and captured bridge intact at Quartesana 2182 and formed bridgehead over Po di Volano 2000 yards West at Cona 1882. We reached Po di Volano on a one mile front Northwest of Cona, and leading elements are now two miles from Ferrara. To Southwest our troops pressed on beyond Fossa Cembaline bridgehead Southwest of Ferrara and attacked and captured S. Bartolomeo in Bosco 1274 against stiff opposition and have since advanced a long way. British troops pushed forward along North bank of Reno.

After stiff fighting with main position of two parachute divisions on line Castel Maggiore 9057, S. Brigida 9856, Cazzano 0157, enemy pulled back Northwest during night and we followed up rapidly to make contact again in area Bentivoglio 9563 - S. Giorgio 9165 9000 yards Northwest of yesterday's line.

Polish troops overcame stubborn enemy resistance beyond Granarolo, crossed Ferrara - Bologna road (Route 64) in two places about five miles Northeast of Bologna, and reached Castel Maggiore 9057.

Weather: Fair with occasional showers.

DISTRIBUTION : Normal.

Morning 23 Apr 45.

Fifth Army

Fifth Army forces continued their advance afternoon of 22 April, reaching points varying from 20 to 35 miles North and Northwest of BOLOGNA. Our troops were still encountering demolitions, strongpoints, snipers, and mortar and arty fire which slowed their advance.

South of the Panaro River in the general area Northwest of Bologna, our forces were delayed by extensive minefields.

Farther West and in the coastal sector, there was little to report. Our patrols were active in both areas.

Eighth Army

In Eighth Army coastal sector we pushed on Northwest from Comacchio along roads which are few feet above surrounding floods. British troops thrust on Northeast from NW corner of Valli di Comacchio. To NW we are strengthening bridgeheads over Po di Volano gained after thrusts North Night 21/22 April. We pressed on North astride Po di Primaro River and are now within 2,500 yards of Ferrara near airfield. Another spearhead penetrated to within 3,000 yards Southwest of airfield.

Germans are withdrawing South of Reno to conform with our advances on both flanks and our troops advanced here to make contact with enemy dug-in infantry on line running Southwest from one mile South of S. Pietro in Casale 9471. To Southwest our troops pressed on against opposition to outskirts of S. Giorgio 9165 and are now up to road running SE of village on 2,000 yards front. We also pushed on toward Argelato 8964.

DISTRIBUTION: Normal.

HQ 15 ARMY GROUP
Morning 22 Apr '45.

Eighth Army

On right flank of Eighth Army front our troops thrust Northeast of Porto Maggiore crossed several waterways and captured bridge intact (area 3078) across Medelana 3178 - S. Nicolo Canal. We pushed on across Canal towards Medelana which enemy are defending strongly and fighting continues in outskirts of town. By 1800 hours we had advanced 4,000 yards from morning's position this sector.

Southwest of Medelana we advanced against sporadic resistance toward S. Nicolo Canal and reached Canal North of Ganbulaga 2575. Enemy made resolate attempt to hold canal but we crossed astride railway to Southwest and after capture of Montesanto and its railway station pushed on 3,000 yards.

Our troops forced crossings over Fossa Gombaline Southwest of Marrara in close contact with enemy who reacted strongly and drove back one of our bridgeheads.

To Southwest our troops established bridgehead over Idice in bend against fierce opposition and pressing on forced enemy out of Mezzolara 0658. We established another bridgehead over Idice Southwest of Mezzolara against determined opposition.

Our troops Northwest of Budrio forced crossing of Fiunicello Canal one mile behind Idice and pushed on 2-3,000 yards beyond to make contact with main enemy position on S.Brigida 9856 - Cazzano 0154 road.

We pushed fwd on wide front Northeast of Bologna, captured Granarolo Dell'Emilia 9757 and advanced another 2,000 yards where we are now fighting hard. It can now be announced that 21 Tank Brigade played notable part in operations carried out by 5 Corps in Argenta Area.

Fifth Army

Elements of Fifth Army, speeding Northwest of captured Bologna in pursuit of retreating German armies evening of 21 April had reached points at least twenty miles Northwest of the city and were moving rapidly on against rearguard resistance which attempted to slow our advance. Our forces were encountering snipers, demolitions, strongpoints, and occasional light mortar and arty fire.

Troops of 88th Division and 6th South African Armored Division were moving steadily ahead, while 10th Mountain Division and 85th Infantry Division moved to North, overcoming strong enemy delaying detachments and capturing many PW's.

Our aerial reconnaissance showed long columns of German transport and men retreating to North and Northwest with roads crammed. In some cases, the backtracking columns reported to be several miles long. Our air attacked these enemy columns but unfavorable weather limited the effectiveness of that action. Possible escape routes to Northeast are being threatened by Eighth Army.

Scores of truckloads of German PW's streamed steadily South over the two main highways, while our supply trucks moved North.

Elsewhere on front our patrols entered Pieve Pelago 3018 against no opposition. Coastal sector opposition continued to be fairly stiff.

Distribution: Normal.

H.Q. 15 ARMY GROUP
Evening - 21 April 1945.

FIFTH ARMY.

Pushing North rapidly on the heels of the withdrawing Germans, elements of Fifth Army, 21 April, advanced to SAN GIOVANNI 7664, approximately 16 kilometres Northwest of Bologna which was taken in the morning.

Only slight resistance was encountered by Fifth Army troops of the 34th and 91st Infantry Divisions and they entered Bologna from the South and West in the early morning. One of the first elements was from the 3rd Battalion, 133rd Regiment, 34th Division which rode on tanks of the 752 Tank battalion into the vital communications hub at the base of the Appenine mountains. Lieutenant Colonel Bruno G. Marchi, Fort Dodge, Iowa, commands the 3rd Battalion and Major Coryton M. Woodbury, Roswell, New Mexico, the tank battalion.

Moving West of Bologna units of Fifth Army encountered spotty resistance with Germans employing SP guns and SA in delaying actions. The situation continued fluid.

Farther West in the Brazilian Expeditionary Force sector, the village of ZOCCA 6033 was captured. Partisans operating under control of IV Corps entered SESTOLA 4220 without resistance. In the Coastal area Fifth Army troops were encountering strong opposition in the only spot in which the Nazis did not appear to be withdrawing.

EIGHTH ARMY

On right flank of Eighth Army our troops pushed on further beyond Scolo Bolognese and are now three miles North of Portomaggiore. We also swung Northwest from the Bolognese and against opposition crossed over Canal which runs from Medelana to S. Nicolo in two places near railway. To West our troops pressed on North and cleared Marrara 1673 on Po Morto Di Primaro.

We also advanced Northwest along North bank of Reno and leading troops crossed Fossa Comballine (Area 0971). Our troops closed up to Idice bend Northeast of Budrio 0452. We strengthened and reinforced our Idice bridgehead Northwest of Budrio and forward elements pressed on to Scolo Fiumicello one mile beyond. We beat off determined enemy counterattack against our second Idice bridgehead Southwest of Budrio and consolidated our positions on far bank.

During night 20/21 April enemy initiated withdrawal North of Route 9 and taking advantage of this, Polish troops continued their advance on a wide front overcoming enemy resistance and crossed Idice at several points North of Route 9, pressing on beyond river. They captured Castenaso 9949 and crossed river beyond town. Pushing on rapidly along Route 9 Poles cleared S. Lazzaro. Crossing Idice they entered Bologna against opposition and reached centre of town early Morning 21 April where they met their American comrades from Fifth Army.

HQ 15 ARMY GROUP
Morning 21 April 45.

Fifth Army

Converging on Bologna from West and South, Fifth Army troops made the most important advances of the Spring offensive 20 April. The enemy offered continued but varying resistance to our multiple attacks along the wide front. There are no signs of a general enemy withdrawal, although considerable movement was noted North and Northwest from Bologna.

Along Route 65 and in high ground flanking highway, our troops pushed forward aggressively against opposition. We have advanced four miles North of Pianoro on the main road.

Between Route 65 and Route 64, our troops advanced, making gains up to three miles during the day.

Tanks of the 6th South African Armoured Division rolled up Route 64 and entered Casalecchio 8346 late afternoon of 20 April. The South Africans captured 300 prisoners during the day. Elements of the 85th Infantry Division assisted the South Africans by attacking from the West and repulsed a counter attack in vicinity of town. Casalecchio is three miles Southwest of Bologna.

Troops of the 10th Mountain Division continued to exploit their severing of Route 9 West of Bologna and the situation in this area remains fluid.

Seeking to maintain contact with the enemy, Brazilian troops occupied Montalto 5929 and moved forward about three miles along their entire line.

Italian partisans, who have been operating under control of 4 Corps for several months, occupied numerous hills, including M. Lancio 4214, a 4,000 foot peak about four miles South of Sestola 4220.

In coastal sector, our forces continued their advance and pushed up Route One to reach Sarzana 7710. Major General Edward N. Almond of Luray, Virginia, is in command of our troops in this sector. There are indications that the enemy is using sailors and former air corps personnel to bolster his depleted strength along the coast.

In coastal area, enemy seems to be disposing of surplus propaganda material evidently printed in 1941. Enemy leaflets fired at our troops said in substance: "The end of the war is near. Why not quit now?"

Eighth Army

On right flank of Eighth Army front we pushed on beyond Scolo Bolognese. Our infantry and tanks pushed on one mile beyond Portomaggiore while to Northwest we advanced 2000 yards beyond Bolognese on the Ferrara road against opposition. In face of heavy shellfire we entered S. Nicolo Ferrarese, key village on Route 16, where enemy is defending canals on far side of village. In thrust to Southwest our infantry and armour cleared Traghetto 1663, crossed Po Morto di Primaro River and pushed on Northwest along North bank of Reno against opposition taking P/Ws.

To Southwest our troops are nearing Idice in bend northeast of Budrio 0353 while Budrio itself was cleared of enemy 20th April and attacking Northwest of town our troops overran strong Idice defences including many mines and wire on both floodbanks but using flamethrowers we established bridgehead against tough resistance and took 30 P/Ws. Our troops also drove enemy back and forced second bridgehead over Idice Southwest of Budrio.

Between here and Route 9 the core of enemy resistance was broken in last 24 hours very heavy fighting and enemy forced to withdraw. Our troops pressed on and reached Idice Southwest of Budrio while to South our infantry and tanks are forcing enemy back and crossing further water obstacles in front of main Idice defences. Immediately South of Route 9 we pressed forward on 3000 yards front.

DISTRIBUTION : NORMAL.

THIS PAGE IS DECLASSIFIED IAW EO 13526

CONFIDENTIAL

HQ 15 ARMY GROUP
Evening 20 April 45.

Eighth Army

On right flank of Eighth Army front progress continues. In desperate effort to stem our advance, enemy has thrown in more tanks North of Scolo Bolognese. We reached Canale Diversivo East of Portoverrara 2869 against opposition. Our troops forced crossing over Scolo Bolognese West of Portomaggiore and pushed on in face of determined resistance. Next important obstacle on which battered enemy forces with hastily rushed up reinforcements must take stand is canal which runs from S. Nicolo Ferrarese 1871 to Maddalena 3178. Enemy is also holding Po Morto di Primaro between S. Nicolo Ferrarese and Reno North of Molinella 1561. We have leading elements up to Po Morto di Primaro on wide front and our tanks are just aside key village of S. Nicolo Ferrarese 1871. Our troops pushed Northwards astride Gaiana in area two miles North of main Medicina - Budrio road and are making good progress. Below here our troops exploited bridgehead formed earlier in day over Sanderno River last German delaying position before before Genghis Khan line and made rapid advance of 4000 yards to strike the Idice North of Budrio. On either side of this spearhead our forces are hurrying to conform. North of Route 9 our troops attacked from their Gaiana bridgehead and had exceptionally fierce fighting all day against German 1 Parachute Div. They forced enemy back across further water obstacles despite fierce counter-attacks and made general advance of about 2000 yards on a one mile front. During night 19/20 April enemy resistance weakened and our troops are now advancing all along line. South of Route 9 our troops pushed on conforming with rapid advance in central sector of Eighth Army front. There was fierce fighting between Italian troops and German paratroops for Casalecchio di Conti 0336 in which we came off best.

Weather: Fair.

Fifth Army

Fifth Army troops continued their all-out attack in the hills South and West of Bologna today. Major General Geoffrey Keyes' II Corps advancing against stiff enemy resistance took M. CA'DILL. ALMRO 8937 about 1,000 yards East of Route 65. 91st Division advancing North captured M. Della Capanna 8537 about 2,000 yards West of Route 65.

Other troops, including South African units, are advancing North along Route 64, and in the late afternoon had reached the Southern outskirts of Casalecchio 8346 in conjunction with troops attacking from the West. By late afternoon Major General Willis D. Crittenberger's IV Corps had important elements of the 10th Mountain Division and the 85th Infantry Division, with armour, in the Po Valley, and across Highway No. 9 West of Bologna, and were in the vicinity of Ponte Samoggia 7357. This severed communications between Bologna and Modicina.

Major General George P. Hays, commands the 10th Mountain Division; Major General John . Coulter commands the 85th Infantry Division; Major General William G. Livesay, commands the 91st Division.

In the Serchio River Valley, Fifth Army troops have moved forward against no opposition to occupy Castelnuovo 1208. Our forces in the Coastal sector, advancing against very light opposition, are astride Route One at a point some 2,000 yards Southeast of Sarzana 7510. Route One cuts West at Sarzana and runs on to the Port City of La Spezia.

Information has been received that some of the enemy batteries on Punta Bianca 7702, which have been active against our forces fighting in the coastal sector, have probably been destroyed.

DISTRIBUTION: Normal.

EIGHTH ARMY

CONFIDENTIAL

HQ 15 ARMY GROUP
Evening 19 April 45

The enemy has been routed from the Argenta gap. This brilliant breakthrough was carried out by 5 Corps commanded by Lt. General C. F. Keightley, CB, DSO, CBE, with 56 (London) Division commanded by Major General J. Y. Whitfield, DSO, OBE, on right and 78 Division commanded by Major General R.K. Arbuthnot, CBE, DSO, MC, on left. Both divisions were supported by armour of 2nd Armoured Brigade commanded by Brigadier J.F.D. Combe, DSO, who, after escaping from German PW camp, led partisan band until he rejoined Eighth Army. It was 5 Corps who, at beginning of Eighth Army offensive, broke through North part of Senio front. After days of bitter fighting against fanatical resistance these troops overcame the most concentrated defence line yet encountered in Italy and debouched from Argenta gap into the more open country beyond. Keeping up the impetus of their great drive they overran further canals, strongpoints and defensive positions and captured a number of tanks and SP guns intact.

Having captured Chiesa Del Bando 3264 56 Division swung left and in swift drive captured bridge intact area 2964. They pressed on North of canal, reached main road to North and are now driving toward Porto Maggiore.

Meanwhile 78 Division fought their way forward along Route 16 and drove enemy out of Consandolo 2364 by last light 18 April. Fanning out from here in two main thrusts they made spectacular dash North supported by tanks captured bridge over canale Benvignante and reached Scolo Bolognese at two points West of Porto Maggiore night 18/19 April, while to Southwest troops of the same division pressed on up Route 16 and drove enemy out of Benvignante 2068. To Southwest our troops pushed forward across waterlogged country and fierce fighting took place West of Fiorentino.

New Zealanders and Indian Army troops attacked across Gaiana astride railway night 18/19 April and storming very strong enemy dug in positions in floodbanks they crossed over and drove on against tough resistance in face of extremely heavy fire. New Zealanders forced a crossing over Quaderna on one mile front North of railway while Indian Army troops reached Quaderna South of railway. The parachutists who are trying to hold these attacks are fighting bitterly and in spite of the considerable numbers of PWs taken more are having to be killed at their post.

North of Route 9 enemy is very sensitive to our aggressive patrols and raiding parties. South of Route 9 Italian troops of Eighth Army are attacking dominating feature Casalecchio De Conti 0336.

Weather: fair and hazy. Outlook: fair.

FIFTH ARMY

Although the enemy is desperately attempting to delay our advance, Fifth Army troops made further important gains South and Southwest of Bologna. The Germans have thrown in virtually all available local reserves in their frantic efforts to prevent a general breakthrough into the Po Valley, and numerous counterattacks have been launched to regain lost ground.

Astride Route 65, our forces pressed forward, taking hill 357 (Area 8935), reaching the outskirts of Pianoro 8834 and capturing M. Posigliano 8634. Local counterattacks, some supported by mortar barrage, repulsed in this area. One such counterattack took place at Vic None (area 8734).

Between Route 65 and Route 64, our troops advanced a kilometer North of M. Dei Frati (Area 8433), captured M. Baco (Area 7935) and M. Giovule 7933 and reached point on Route 64 due West of M. Giovule.

In Serchio Valley we have occupied Perpoli 1507, M. Paste (Area 1303) and Vergemoli 1002. Along the coast our troops continued to mop up in hills East of Route one, meeting strong opposition.

In first enemy air activity in recent weeks two low-flying hostile aircraft bombed and strafed near Route 64 night of 18 April. No damage or casualties reported.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Morning 20 Apr '45

FIFTH ARMY

Moving forward against enemy resistance which varied from delaying tactics to heavy, determined opposition, Fifth Army troops again recorded gains from a few hundred to several thousand yards afternoon of 19 April.

In fighting along Route 65 our forces seized high ground East and West of Pianoro and engaged in mopping up pockets of resistance in town itself.

M. Mario 8136, 1500 foot height situated some 1200 yards East of Route 64 and Reno River, was captured.

Northwest of Route 64 and recently captured M. Baco (Area 7935) we continued to advance.

Our forces drove forward several thousand yards in area West of Route 64. M. S. Michele 7442 also captured.

Farther West we have occupied 5000 foot M. Altissino 3603.

In coastal sector North and South of Route One our forces made gains ranging up to 2000 yards.

EIGHTH ARMY

Keeping up momentum of their attack North of Argenta troops of 5 Corps reached Canale Bolognese on a wide front. 56 (London) Division pushed on up road to Portoverrara 2869 and though they found bridge over Bolognese blown, they forced a crossing, cleared Portoverrara and reached Canale Diversivo beyond town.

78 Division continued their advance and captured Portomaggiore bridge over Bolognese intact and drove Germans from town in house to house fighting. Troops of same division in another thrust Northwest cut Portomaggiore - S. Nicolio Ferrarese 1871 road near road junction with Route 16 and took over 70 PWs. They also pushed West and reached Portomaggiore - Traghetto 1763 railway 2000 yards West of Route 16.

To Southwest New Zealand troops strengthened and consolidated their Gaiana bridgehead. Preceded by heavy arty bombardment, Polish troops stormed enemy defences across Gaiana against extremely heavy and determined resistance, captured a bridge intact and established two bridgeheads on 2000 yard front 2-½ miles North of Route 9. Tanks crossed over to support our infantry. To Southwest our troops pushed on and reached Gaiana North of railway and very hard fighting continues. South of Route 9 Italian troops of Eighth Army pushed on in Appenine foothills.

HQ 15 ARMY GROUP
Evening 18 April 45

EIGHTH ARMY

On right flank of Eighth Army British troops drove on across difficult flooded country against stiff opposition and are now one mile beyond pumping station to Northwest. British troops captured and cleared up strongly defended key town of Argenta which had been cut off from main German forces by our very successful outflanking movement on previous day. Keeping up their momentum night 17/18 April our troops smashed their way forward up the gap and captured two canal bridges intact in advance up to road junction 3000 yards East of Boccaleone pushing back German infantry and tanks and taking 70 PWs. Enemy counterattacked but was beaten off.

West of railway we pushed on to within 1000 yards of Boccaleone 2563 against determined resistance and are pressing on. From Boccaleone to Fossa Sabbiosola 3000 yards Northeast and thence along Fossa to Lake Comacchio is third, last and toughest of German defence lines in Argenta gap. This is continuation of enemy's Genghis Khan defence line on Idice River designed to be the strongest line covering Bologna and the approaches to the Po. North of here are further prepared defences along East - West canal through Portomaggiore 2669 and canal from S. Nicolo 1871 to Northwest but country becomes less flooded and constricted than in gap.

To Southwest Indian Army troops with tank support pressed on 4000 yards across difficult and boggy open country, beat off enemy opposition and reached lateral road on 2000 yards front Southwest of Fiorentina 1152.

New Zealand troops forced enemy back behind Gaiana canal on two mile front North of railway but have not crossed canal. Indian Army troops overcame tough German resistance Northwest of Medicina and forcing enemy back pressed on astride Medicina - Castenaso road and reached Gaiana on 1000 yard front with patrols over the canal in places.

To Southwest Polish troops overcoming enemy resistance squared up to Gaiana on wide front North of Route 9 and patrols penetrated across canal in several places. Immediately South of Route 9 Italian troops of Eighth Army pushed on against opposition and reached Gaiana on 3000 yard front. We maintained contact in hills to West.

Weather: fair. Outlook: fine.

FIFTH ARMY

Progress continued on almost all sectors of Fifth Army front 18 April, our forces moving slowly forward against bitter, stubborn enemy resistance.

East of Route 65, our troops made slight advances, fighting to a point approximately 1000 yards Southeast of Lianoro 8834.

San Benedetto (Area 8633) and Colombara (Area 8632), two small villages West of Route 65, were cleared of enemy and our troops continued to mop up scattered pockets of German resistance on the Monterumici feature.

South African troops of Fifth Army have captured Mount Castellino (Area 7629) approximately 1000 yards East of Route 64.

Farther West our troops captured 2400 foot Mount Tramonto 7334 and also seized Hill 569/6634 and nearby village of San Prospero.

In Coastal Sector our forces took hamlet of Villa Dorgia (Area 8206) situated North of Route One.

HQ 15 ARMY GROUP
Morning 19 Apr 45.

Fifth Army

In some of the stiffest fighting of the Italian campaign, Fifth Army troops made significant gains in vicinity of Route 65 18 April and in sector West of Route 64 spectacular advances through difficult terrain were made.

Along Route 65 our troops advanced 1000 yards towards Pianoro 8834 in the face of heavy opposition. After capturing strategic M. ADONE 8431, troops of the 91st Infantry Division pushed Northwards along a ridge for two miles to occupy M. Dei Frati (area 8433). Capture of M. Adone was accomplished after bitter two-day battle in which the 361 Infantry Regiment commanded by Colonel R.W. Broadlow struggled with enemy on steep slopes, employing almost every weapon from hand grenades to direct fire by arty pieces. Our troops encountered thick concrete enemy pillboxes in scaling fortified mountain. The peak, which dominated large sector of Fifth Army front during winter's fighting, now provides friendly observation over vast area of enemy terrain. Our troops planted the National Emblem on mountain's peak to mark this hard-won victory.

To West, our troops captured Badolo 8333, about a mile West of M. Dei Frati.

Troops of the Sixth South African Armoured Division advanced three kilometers North from positions on M. Sole 7829. It is revealed today that M. Sole was captured by the First City Cape Town Highlanders and that the Witwatersrand Rifles-Delarey Regiment captured Caprara.

In the Serchio Valley and in Coastal sector our positions were improved. Stiffening resistance noted on coast and arty fire continues from enemy positions at Punta Bianca.

Eighth Army

On right flank of Eighth Army front British infantry and tanks continued their relentless drive Northwest against very fierce German infantry and armoured resistance and captured important enemy strongpoint Chiesa Del Dando 3164 outpost of his Fossa Sabbiosola line.

Swinging left handed beyond Argenta on the Northern Reno bank British troops on morning 18 April drove enemy out of Baccaleone 2563 and smashing through toughest defence line in Argenta Gap between here and Fossa Sabbiosola our infantry and tanks thrust rapidly on 3000 yards North of Baccaleone overrunning enemy defence lines and capturing enemy tanks and SP guns intact, in some cases with exhausted crews sleeping beside them and are now debouching from gap.

Southwest of here our troops swung North across flooded fields and forced bridgehead across canal East of Fiorentina 1152. We are now up to Gaiana in many places along eight mile front North of Route 9. Our patrols have crossed over in many places and report enemy holding strong defensive positions on far bank with some outposts in East floodbank as on Senio River. Enemy has cleared fields of fire in front of floodbank positions.

South of Route 9 Italian troops of Eighth Army pushed on across Gaiana in two places against opposition. They also drove on through Appenine foothills towards Gaiana Northwest of M. Castelazzo 0434.

EIGHTH ARMY

On Eighth Army front our troops continued to fight their way forward against determined opposition and we are now 1000 yards Northwest of pumping station. In day of very fierce fighting our troops have enlarged and strengthened their bridgehead over Marina Canal Northeast of Argenta and inflicted heavy casualties on enemy. We drove on to Northwest both sides of railway against continued opposition and are now 2000 yards beyond ARGENTA which has been cut off from main German forces by this swift outflanking movement. Enemy still holding out in town.

To Southwest Indian troops pushed on and reached Canale Di Medicina, 4 miles Northeast of Medicina. Keeping up momentum of their great drive in Central sector of Eighth Army front New Zealanders surmounted further water obstacles, pushed on another 4000 yards and reached Gaiana canal on 2 mile front North of railway. After capturing Medicina Gurkhas pressed on South of railway and stiff fighting continues about 2000 yards Northwest of town. Our infantry and tanks drove on against opposition between railway and Route 9.

Polish troops fought their way forward along Route 9 against very determined resistance and are now two miles beyond Castel S. Pietro. Fierce fighting continues.

To Southwest Italian troops pushed on through hills and are now about two miles beyond Sillaro on four mile front South of Route 9. We captured 1000 PW in last 24 hours.

FIFTH ARMY

Fighting their way forward against resistance which reached almost fanatical pitch in one sector, Fifth Army troops continued to advance afternoon of 17 April. Opposition particularly bitter along Route 65 South of Bologna, where German forces contesting our advance from scores of tunnels, caves and pillboxes. Enemy laid down intense SA, MG and mortar fire in efforts to halt our attack. German SP arty very much in evidence.

In area East of Route 65 our troops made advances in very heavy fighting.

Farther West elements of our forces fought their way to summit of long-contested Monterumici 8328, 1,900 foot peak situated some 3000 yards West of Route 65.

Southeast of captured M. Sole 7829 South African troops made gains of up to 1000 yards against strong resistance.

In action North of occupied Sperticano 7630 forces of First Armored Division took 1,600 foot Mount D'Avigo (Area 7532), and also Hill 360/7432 to Northwest of D'Avigo. Captured height of D'Avigo overlooks Route 64, 2000 yards to East. Resistance in sector fairly heavy.

Elements of Tenth Mountain Division fought their way over rugged terrain against strong opposition to record advances of more than 1000 yards after capturing M. Moscoso 6935.

In Coastal sector Northwest of Route One our forces advanced more than a mile in area Northwest of Ortonovo 8407. Opposition consisted mainly of heavy enemy arty fire.

The Legano Group, Italian troops now fighting on Fifth Army front, were inspected 17 April by Lieutenant General of the Realm. In this area strong combat patrols probed enemy positions, extensive minefields were located and enemy responded with MG and mortar fire to our every move.

HQ 15 ARMY GROUP
Evening 17 Apr '45.

Fifth Army

Fifth Army troops made general advances along front as coordinated spring offensive rolled forward according to plan.

Gains made in the face of fanatical enemy resistance. The Germans are making full use of terrain, SA, AW and mortars.

On right flank the attack continued and limited gains made against very heavy resistance and many counterattacks. Heavy minefields continue to impede our progress. Our troops cleared Hill 367 (area 9133) and hold it in strength. Torre (area 8329), Disotta (area 8329), Disopra (area 8328) and Furcoli (area 8328) occupied.

In central sector First Armoured Division troops overcame stubborn opposition to capture M.Radicchio (area 7130) night of 16 April and advanced three kilometers to capture M.Milano (area 7430) morning of 17 April. Four counterattacks on M.Sole repulsed. Collina 7829 also captured. After capturing M.Croce (area 6729) and Bacucchio (area 6732) troops of the Tenth Mountain Division moved rapidly through hills to reach M.Moscoso 6935 and high ground overlooking Montepastore 7135. The successful attack in the M.Moscoso area was made by troops of the IV Corps which is commanded by Major General Willis D. Crittenberger.

On left flank our troops captured Ortonova 8407, M.Tomaggiora (area 8514) and other high ground North of M.Grugola 8312. They have reached a point on Route One due West of Castellaro (area 8505) and West of the highway have advanced beyond Marina Di Carrara 8302.

Eighth Army

On Eighth Army front 56 London Division forced crossing over Marina or Canaletta Canal at pumping station 3362 against some opposition taking PW's and pushed on North of Canal to establish bridgehead. We also drove on across water-logged fields to Southwest and reached Canaletta 1½ miles West of pumping station.

Farther West our troops pushed on against stiffening resistance, bypassed the village of Argenta, and established bridgehead across Marina Canal Northeast of town against very determined opposition, taking many PW's from German 29 Panzer Grenadier Division, fresh and well equipped division committed from reserve in desperate effort to plug gap. Tanks crossed over to support our infantry on North bank. Enemy made initial counterattack against our bridgehead but beaten off. Fierce fighting continues. Our patrols into outskirts of Argenta report railway station 2860 strongly defended.

In main plain North of Route 9 Eighth Army's great drive continues. Indian troops pushed on from their Sillaro bridgehead two miles North of railway and penetrated flooded country beyond, encountering arty and MG fire. New Zealand troops crossed Scolo Sillaro and night 16/17 April in rapid two mile advance reached Medicina Canal North of railway.

Meanwhile Gurkhas advancing South of railway captured Medicina, former HQ of General Heidrich's First Parachute Corps, last night 16/April. Germans had fired town before being driven out. Enemy tried to form a stop line on Canale De Medicina but unable to hold Allied pressure. Our troops now pushing on from Medicina astride railway.

Polish troops after capturing Castel Guelfo pressed on to capture Poggio Piccolo 1142 and we are now continuing to drive on Northwest. Enemy was still defending Castel S.Pietro strongly during night but our leading troops were able to enter the town first thing this morning and passed straight through to push on to Northwest.

Contact maintained South of Route 9 where enemy is conducting steady withdrawal from one hill position to the next in effort to keep up as their colleagues are driven back in the plain.

Weather: Fair or fine. Outlook: Cloudless with good visibility.

HQ 15 ARMY GROUP
Morning 17 Apr 45.

Eighth Army

Since 1st April Eighth Army troops have captured well over 7,000 prisoners in the fighting in Adriatic Sector, and of these, 6,000 have been taken since attack across the Senio on 9 April. Troops of 56 (London) Division pressed on West of Argenta whilst our troops are also closing in on town from Southeast. Whole of this area is heavily mined and strongly defended. Our troops made further crossing over Sillaro three miles Southwest of Bastia.

Patrols reached Sillaro North of Villa Serraglio 2247. Forward troops of an Indian Division forced a crossing over Sillaro about two miles North of Massa Lombarda - Medicina railway and pushed on 1,000 yards to lateral road beyond. Having broken core of enemy defences astride railway night 15 April. New Zealanders pushed forward and reached next water barrier Scolo Sillaro on front of 3,000 yards Northwest of Fantazza 1044.

43 Gurkha Brigade consolidated their hard won bridgehead 3,000 yards Southwest of railway and pushing on rapidly troops are 2,000 yards Southwest of Medicina.

Polish troops captured Castel Guelfo 1540 morning 16 April against fierce German opposition and advanced Northwest and West of town against some opposition. Poles also cleared further enemy positions East of Castel S. Pietro which Germans are defending stubbornly. General Anders, Commander in Chief of Polish forces has been present during recent successful operations of Polcorps.

South of Route 9 Italian troops crossed Sillaro in face of enemy fire from Castel S. Pietro. Contact maintained in mountains farther West.

In whole of these operations in Romagna plain where rapid exploitation by armour is severely hindered by close network of rivers, ditches and drainage canals, the work of 25th Armoured Engineer Brigade, R.E. is worthy of special recognition. By their efforts it has been possible to throw temporary bridges across these obstacles as soon as assault infantry has gained initial bridgehead, and thus to get armour and heavy weapons up in immediate close support.

Fifth Army

Fifth Army continued it's attack along entire front 16 April. In coastal sector of 1000 to 2500 yards were made.

In central sector South African troops of Fifth Army after taking M. Sole 7829 and Caprara 7728 pushed forward to capture M. Abelle (Area7729) after heavy fighting. American troops moving up Route 64 passed through Calvenzano 7227 and continued to Northeast.

In the high ground West of Route 64 troops of the 10th Mountain Division captured M. Mosca (Area 6930) and town of Tole 6538. Troops of this Division reported 500 PWs. Ten counterattacks against M. Mosca repulsed during enemy efforts to retake this feature.

On right flank limited advances made through enemy defences consisting of heavy minefields and closely coordinated SA and mortar fire.

The 34th Division (The Old Red Bulls) in fierce engagement which took place near church close to GORGOGN.NO 9033 about 1000 yards Northeast of M. Belmonte, celebrated their five hundredth day of combat. Coming out of their foxholes before daylight, they advanced over ground heavily strewn with mines. By noon they were in hand-to-hand conflict with enemy troops around Gorgognano Church and by nightfall took church by assault reminiscent of Hill 609 two years ago in North Africa and the Rapido River crossing.

HQ 15 ARMY GROUP
Evening 16 April

Fifth Army

Fifth Army troops in the area South of Bologna and East and West of Route 65 launched an offensive on 16 April. The attack, preceded by extensive air preparation and a heavy arty bombardment, is progressing against strong German resistance. In advances thus far, our forces have also encountered thickly sown minefields.

Elements of our forces have reached Fazzanello (Area 8429) and LA TORRE (Area 8329), and are receiving intense machine gun fire. M. Sole 7829, 2000 foot dominating peak in area West of Route 65, taken by our troops, who have also reached the town of Caprara 7728, and occupied Hill 444 (area 7628). Enemy mortar fire in this sector has been extremely heavy. Elements of the First Armoured Division have taken M. Pero 6627, 2200 foot height overlooking Vergato 6925. Vergato and Suzzano 6628 clear of enemy.

Troops of the Brazilian Expeditionary Force have taken Hills 876 (Area 5625) and 788 (Area 5725) against some resistance, and have also driven off platoon strength counterattack against Hill 927 (Area 5625).

In Coastal sector our troops are on M. Castellano (Area 8405). Platoon strength counterattack against our forces on Castellaro broken up by mortar fire.

Eighth Army

Against reinforced resistance in Argenta Gap Eighth Army troops continued to drive slowly North. Enemy is still doing all he can to hold this vital hinge. We are still meeting stubborn resistance area of bridge 3382. We pressed on astride railway Northwest of Bastia against stiff opposition and leading troops are now within one mile of Argenta. We captured over 170 PWs this area.

To Southwest our troops established another bridgehead over Sillaro 2½ miles Southwest of Bastia and patrols pushed on to Canale Cuaderna. Night 15/16 April New Zealand troops attacked from their Sillaro bridgehead against infantry and tank opposition and pushed on astride railway beyond PANIZZA 1844. We took 150 PWs including battalion Commander and knocked out 8 tanks, some of them Tigers.

Heavy fighting continued during the night for Sillaro bridgehead 3000 yards Southwest of Massa Lombarda - Medicina Railway. To Southwest after beating off enemy counterattacks against Polish bridgehead South of Castel Guelfo Polish troops enlarged and reinforced bridgehead with infantry and tanks. Troops of the Polish Corps are closing in on Castel San Pietro 0837 while Italian troops advanced from South to within 3000 yards of town and captured Monte del Re 0832. General advance continues in mountains farther West.

Weather: fair. Outlook fair.

HQ 15 ARMY GROUP
Evening 15 April.

Eighth Army.

On Eighth Army front strong raiding party reached Canaletta Canal at Macchina Idrovora or water pumping station (area 3362), crossed canal and returned with 98 PWs. We advanced West of Filo 3557 and cleared hamlet of Palazzuola 3458 and are continuing Westward towards Bastia.

A parallel thrust along the Menate-Bastia road is now within one mile of Bastia bridge 3156. The whole of the approaches to Argenta gap are thoroughly mined and prepared for defence. Our Sillaro bridgehead astride Massa Lombarda - Medicina railway now strengthened and consolidated.

To Southwest our troops advanced towards Sillaro against enemy rearguard positions. Sasso Morelli 1930 now clear.

Polish troops captured Imola last light 14 April. We pushed on beyond lateral road about three miles Northwest of Imola. In hills farther West patrols pushed forward and maintained contact.

It can now be revealed that when attack went in across Senio Germans met it with 42 Jaeger Division South of Comacchio and 362 Division, 98 Division and 26 Panzer Division down to near Route 9. 4 Para Division subsequently came into battle on left flank of our bridgehead.

Weather: Much haze at first. Patchy cloud later. Outlook: Fair to fine.

FIFTH ARMY

Troops of Fifth Army in the difficult terrain West of Reno River advancing from the Castel D'Aiano 6025 and M. Della Spe (Area 6126) area against strong opposition 14 April seized control of the two mile long Roffeno ridge culminating at its Eastern end in the barren conical stone mass of Rocca Di Roffeno 6327. A 40 minute bombing by our Air Corps and an arty preparation of 35 minutes preceded the move forward by our troops.

Several small villages were taken, including Torre Iussi (Area 6227), which was wrested from the Nazis in intense house to house fighting. Farther West the village of Montese 5524 was captured against scattered resistance.

Some casualties were suffered by our troops because of heavy minefields and fierce SA and mortar fire. More than 325 PWs have been reported taken.

Stubborn resistance was encountered by our troops as they continued their advance East of Route One in coastal sector.

Elsewhere on the front scattered patrolling was reported by both our forces and those of the enemy.

Morning 16 April.

FIFTH ARMY

Continuing their advance against stiff opposition troops of 10th Mountain Division in rugged central sector of Fifth Army 15 April took M. Pigna 6328 and M. Sette Croci (Area 6425) and moved on to Northeast. Many anti personnel mines encountered. Just to East our forces captured village of Casigno 6425 and moved ahead to vicinity of Suzzano 6628.

In coastal sector Allied troops took M. Grugola 8312 and hill 906 (Area 8310) from which enemy had blocked their advance for two days. Number Nazi's captured during this action. Along Route One elements of 92 Infantry Division repulsed counter attack launched by enemy from Avenza 8402. Stiff resistance felt in this sector, as Americans continued their push.

Slight mortar and arty fire received on other portions of front.

EIGHTH ARMY

On Eighth Army front our troops continued their twin advance to Argenta Gap. Driving on NW from Palazzuola 3357 we reached area Cascinone Massari 3158 one mile NE of Bastia village on Southern fringe of floods which cover central portion of gap.

2/.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

To South our troops thrusting along Monate - Bastia road crossed railway and reached Bastia bridge 3156. Enemy opposition in the gap is very stubborn and mines and floods make cross country movement difficult.

It can now be revealed that British 56 (London) Division commanded by Major General J. Y. Whitfield DSO, OBE, has played important part in fighting in this sector of Eighth Army front since start of offensive. It was 56 (London) Division which carried out waterborne landings resulting in capture of Monato on 11 April and in landing South of pumping station (at 3362) on 13th.

Farther Southwest we cleared area lying between Conselice and waterlogged meadows to Northwest. We continued to consolidate Sillaro bridgehead astride Massa Lombarda-Medicina railway strengthening our positions against close enemy opposition. Our infantry established another bridgehead over Sillaro 3000 yards Southwest of railway and heavy fighting continued all day in this area with German Spandaus and SP guns.

To Southwest troops of 2nd Polish Corps commanded by Major General Z. Bohusz-Szyszko made a spectacular advance from Imola which they captured last evening 14 April along Route 9 to the Northwest. Against rearguard opposition they drove on and crossed Sellustra river without a check and by evening 15 April were closing up to Castel S. Pietro.

On right flank of this advance Polish troops of 5 Kressowa Division captured bridge over Sillaro (Area 1539) intact. Fanning out on far bank they reached road running Southeast from Castel Guelfo 1540 to river. We had severe fighting in this area and received heavy shelling and mortaring. Many parachutist PWs taken.

On Route 9 itself Poles also captured Toscanella 1135 in a rapid advance of 5 miles. South of Route 9 our troops made further advance on front of some 4 miles Southeast from Imola and have taken M. Bello 1031 commanding feature in Appenine foothills and points on ridge between Santerno and Sellustra Valleys.

In mountains to Southwest our troops advanced and found bridges over river Sellustra blown.

HQ 15 ARMY GROUP
14 Apr 45.

FIFTH ARMY

Elements of 92 Division, fighting along Route One in coastal sector, continued advance 13 April. Our troops moving forward North of Carrara entered hamlet of Castelpoggio 8510 against practically no opposition. Enemy forces observed Northwest of village dispersed by our mortar fire.

Our troops resumed attack against enemy early 13 April and advanced as much as 1500 yards from South to Southwest of Carrara. Extensive minefields encountered by our forces in advance, though resistance described as scattered.

Enemy arty fire in sector slight.

In spite of pounding they have received from our bombers and heavy arty, coast defense guns on Punta Bianca still active night of 12/13 April though greatly diminished from fire of last two days.

EIGHTH ARMY

On Eighth Army front in fighting North of Reno we had captured 200 PWs by last light 12 April. Our troops made further advances against strong opposition area Filo 3557. Positions unchanged South of Reno along River Santerno. We repulsed enemy counterattacks against our bridgehead over Santerno South of Massa Lombarda and afternoon of 12 April our bridgeheads North and South of Lugo-Massa Lombarda railway linked up. Strong forces of infantry and tanks North and Northwest from combined bridgehead drove Germans back, and encircled Massa Lombarda which we captured before midnight 12/13 April.

At last light 12 April our air observation saw enemy pulling out area Conselice 2749 with guns, tanks and horse drawn vehicles. During night 12/13 April our troops captured S. Patrizio 2746 three miles North of Massa Lombarda and entered outskirts of Conselice where fighting continues. There are still enemy pockets between Conselice and Santerno behind our spearhead.

Opposite our Mordano 2536 bridgehead opposition which had been stiffer during afternoon 12 April lessened and by last light we got tanks across Santerno after British sappers had constructed bridge under close and direct enemy fire. After last light we captured Mordano and reached road 600 yards beyond river on wide front. During night opposition slackened and by morning 13 April we had advanced 2000 yards against light opposition. North of railway our leading troops patrolled across river Sanguino which has been enemy's previous delaying position. Sanguino runs South from Santerno bend (Area 2433). Our leading troops have entered Zello 2231 3000 yards from Imola.

In hills South of Route 9 we made further advances and ran into enemy in positions nearly 3000 yards north of his original Senio line North of Riolo Dei Bagni. Further advances made along the Santerno Valley Northeast of Tossignano, and we occupied Casalfiumanese 0925 and pushed on further 2000 yards along left side of Valley.

Northwest of here we also made considerable gains 4000 yards beyond original enemy positions. Germans still hold original positions in area M. Grande 0032 and it is evident that whole line pivots on this feature.

It is announced that the North Irish Horse played a significant part in these operations.

Weather: Becoming cloudy, risk of rain in mountains.

CONFIDENTLL

HQ 15 ARMY GROUP
13 Apr 45.

Eighth Army

On Eighth Army front our troops who landed on Southern shore of Valli di Comacchio morning 11 April have taken 200 PWs including elements of scratch battalion hastily thrown together consisting of convalescent and miscellaneous personnel collected for this emergency in Argenta 2860. Our troops here linked up with forces advancing along North bank of Reno.

This operation loosened up German opposition South of Reno and enabled us to push on astride Route 16, cross Canalina Canal and reach Canale di Fusignano, next water obstacle. Due West of here we also made considerable advances and armoured elements are up to River Santerno where it turns Northeast (area 3351), 6000 yards Southeast of Bastia 3057. This armoured thrust met slight opposition.

To Southwest in area between S. Lorenzo 3245 and S. Agata 2941 we crossed Santerno in strength evening 11 April. Heavy fighting continued night 11/12 April against enemy infantry and tanks. German tanks attempted to counterattack along road running Southeast to river from Mondaniga 3044, but though enemy is fighting extremely hard here, all counterattacks repulsed and unsuccessful.

Earlier in day 12 April second bridgehead formed across Santerno South of Massa Lombarda 2741 - Lugo road. This attack began during morning when our troops crossed Santerno against slight opposition and took three loops areas 2940 and 2639 between main Santerno and Santerno Morto. These loops are virtually islands and enclose total area nearly one square kilometer. Early afternoon 11 April we crossed main Santerno in force this area against infantry and Tiger tank opposition and established a bridgehead 1000 yards wide and nearly 800 yards deep. South of Lugo - Massa Lombarda Railway.

Enemy counterattuked left flank of bridgehead night 11/12 April but repulsed and we have pushed steadily forward against strong force of Tigers deployed about 1000 yards in front of Massa Lombardo; night 11/12 April further troops crossed the river to widen bridgehead. Armour was able to cross over and is now in action with Tigers.

South of Mordano 2536 our troops formed 3rd bridgehead across Santurno against strong opposition from crack 26 Panzer Division. Despite heavy German opposition we held our positions and have strengthened bridgehead. We reached Santorno 3000 yards Southwest of Mordano and mopped up enemy rearguard companies in area North of Castel Bolognese taking about 50 PWs. At dawn 12 April Polish troops captured Castel Bolognese from strong German rearguard.

South of Route 9 we pushed forward across Senio all along the line against enemy rearguards. Our patrols crossed road on North bank and penetrated into hills beyond and we are established on M. Ghebbio 2024 dominating feature in this area.

Along remainder of front we pushed forward against retreating enemy. We are now established on Gesso Escarpment Southeast of Tossignano 0823. Italian troops captured Tossignano.

During the course of the fighting on the Eighth Army front the North Irish Horse played a conspicuous part.

Weather: fine to fair. Visibility good.

Fifth Army

Pushing forward aggressively Fifth Army troops continued successful attack in coastal sector during night of 11/12 April. Enemy resistance strong in some sectors and considerable increase in hostile arty.

After capture of Carrara Fifth Army troops advanced two kilometers North of city to take mountain villages of Torana 8806 and Gragnana 8709 against light resistance. Our troops captured hamlet of Colonnata 9207 and other high ground in mountain mass five kilometers East of Carrara. All enemy troops have been cleared from Carrara.

To South our troops West of Massa continued attack against strong opposition. Small enemy counterattack with German troops riding on two tanks repulsed. One of our ration trains North of Massa was attacked by 15 enemy but hostile force driven off and all our equipment saved.

Our troops are across Frigido at all points in Coastal Sector. West of Route One forward elements have reached outskirts of Marina di Massa.

Little contact with enemy reported on remainder of Fifth Army front.

10 Apr 45

Eighth Army

No change in Eighth Army coastal sector. German patrol beaten off NE of Fusignano. One of our patrols to Senio North of Cotignola encountered enemy fire and withdrew. Grenade duel occurred this area.

South of Route 9 Germans raided our positions near Tebano 2325. Firefight ensued lasting one hour before enemy forced back. Both sides suffered some casualties. To SW our patrols contacted enemy at several points along Senio. German patrol driven back by our fire SW of Riolo dei Bagni 1823.

Weather: Fine. Outlook: Fine.

Fifth Army

Against stiffening enemy resistance, particularly on right flank, Fifth Army forces fighting in coastal sector East and West of Route One made general gains 9 April and contined to advance.

Elements of 442 Infantry Regiment, advancing North of captured M. Belvedere 9401, captured Altagnana 9403 in heavy fighting. SW of Altagnana forces from same regiment engaged against enemy South of Pariana 9302. Both villages are situated in area NE of Massa 9101, Pariana being approximately 2,000 yards and Altagnana 2,500 yards from town.

By noon 9 April 473rd Infantry operating with 92 Division had fought their way to outskirts of Massa on South, advancing against strong enemy resistance.

West of Route One along flat coastal plain, 92 Division's 370th Infantry moved forward to within several hundred yards of Frigido River, which flows SWfrom North of Massa to Ligurian Sea. River empties into sea South of Marina di Massa 8798.

Our troops met enemy SA, mortar fire and mines in their advance, and road blocks also encountered along Route One. Arty fire, with exception of coastal guns firing from Punta Bianca, was slight. More than 350 PWs taken in fighting so far. Information received indicates that in relation to size of his forces involved, enemy has suffered heavy casualties. Casualties suffered by our forces fairly light in comparison.

On remainder of front patrols active with several firefights reported. Enemy arty fire was of a harassing and sporadic nature.

Fifth Army

Moving forward against scattered enemy resistance, Fifth Army troops fighting in coastal sector along Route One South and West of Massa continued to advance 8 April.

Elements of 442 Infantry Regiment were pushing ahead from captured M. Belvedere 9401, while troops of same regiment continued to clear enemy resistance in area South of M. Folgorito and East of Route One. Small enemy counterattack NE of M. Belvedere repulsed.

Advancing to Porta 9397 with tank support, 92 Division troops moved on to capture Montignoso 9399, about two miles SE of Massa, and also small town of Strinato (Area 9597) North of Strettoia.

Arty fire in sector slackened considerably though enemy coastal guns at Punta Bianca 7702 still active.

Elsewhere on front our patrols active with several firefights reported. Enemy arty along front generally light. Some hostile flare activity observed in right sector.

Eighth Army

In Eighth Army coastal sector no change on Spit between Adriatic and Valli di Comacchio. Enemy hold Porto Garibaldi 5966 and North bank of Canale Valletta. In SW corner of Valli di Comacchio our troops continued clearing area North of River Reno. Total of 250 PWs captured this area.

To SW normal patrolling along River Senio. South of Route 9 one of our patrols to River encountered enemy fire from North bank. Farther West in mountains strong German raiding party driven off South of Tossignano.

Weather: Cloudy with scattered showers. Good visibility.

Eighth Army

In Eighth Army coastal sector night 6/7 April enemy raided one of islands 5164 which we occupied night 4/5 April. Raiders driven off and we took 5 PW.

In SW corner of Valli di Comacchio our troops pushed on North of River Reno against stiffening German resistance. We cleared several enemy strongpoints and have now captured nearly 200 PW this area.

Normal patrolling along Senio. We received heavy shelling SW of Cotignola. Patrols clashed South of Route 9. German fighting patrol driven off West of Cuffiano with casualties. Patrols of both sides active farther West in mountains.

Weather: mainly fair. Outlook: little change.

Fifth Army

Despite increasing enemy arty and mortar reaction to our advances, Fifth Army troops pressed forward to take dominating high ground South and East of Massa in coastal sector on 6/7 April.

After mopping up M. Folgorito 9599 American troops of Japanese ancestry of the 442 Infantry Regiment captured M. Belvedere 9401, a 3,000 foot peak 2 miles due East of Massa. Other elements of the 442 Infantry Regiment secured Serreta Ridge 9698 to SE of M. Folgorito.

Other units advanced NW from STRETTOLA 9496 t take high ground East of Route 1 overlooking Porta 9597 and reached points 3 miles South of Massa, where enemy resistance from flanks and front was encountered.

Counter-attack of from 40 to 60 enemy broken up by our arty NE of STRETTOLA. Small enemy groups attempting to infiltrate our positions on M. Belvedere successfully driven off after fire fights.

Fire from enemy coastal guns at Ponte Bianca 7702 received in coastal sector as well as strong arty and mortar fire.

Elsewhere on front normal patrolling continued, but few contacts with enemy reported.

Composed of Americans of Japanese ancestry, the 442nd Infantry Regiment, elements of which served with Fifth Army from Naples to the Arno, have rejoined Fifth Army it was revealed today.

The crack 100th Battalion of the Regiment, which formerly was attached to the 34th Infantry Division, was committed to action in the Naples area and participated in the Volturno crossing, Cassino, Anzio, and the break-through to Rome and the North. On 26 June, the 100th Battalion became an organic unit of the 442nd Regimental Combat team and the Regiment continued Northwards from Piombino to the Arno. Detached from Fifth Army for the invasion of Southern France, the Regiment made the invasion with 6 Corps.

DISTRIBUTION: Normal.

Fifth Army

Action on Fifth Army front 6 April largely confined to terrain along Route One in coastal sector where our troops continue attack launched 5 April. M. Folgorito 9599 outflanked on 5 April has been captured. Elsewhere our patrols active, meeting MG, mortar and SA fire as they probed German positions.

On right flank enemy patrol repulsed by our troops NW of M. Fano (area 9532).

In central sector some mortar and arty fell in our forward areas and our patrols encountered long range MG and mortar fire in their operations.

In coastal area fighting continued. Having taken M. Folgorito, our troops advanced to North of this 3,000 feet feature and were also cleaning out pockets of enemy resistance south of peak. Resistance was scattered.

Heavy enemy fire vicinity of Strettoia 9496 forced slight withdrawals by our forward elements. West and slightly North of town small enemy counterattack repulsed.

Fighters and fighter-bombers continued in support 6 April utilising favourable flying weather to strike at enemy gun positions, troop concentrations and transport. Guns of naval vessels lying offshore were also firing in support of our forces. Between 50 and 60 PW taken in fighting thus far, mainly by troops in the M. Folgorito area.

Eighth Army

It can now be revealed that successful clearing of Spit between Adriatic and Valli di Comacchio was carried out by 2 Commando Brigade. Nearly 1,000 PW captured. Taking advantage of this operation we occupied islands in the Comacchio and also night 5/6 April improved our positions in SW corner of Lake making successful local attack across river Reno NW of S. Alberto and capturing further 60 PW.

To SW our patrols contacted enemy North of Cotignola. We raided German positions on Senio SW of Cotignola and took 5 PW. South of Route 9 near Tebano 2325 one of our fighting patrols attacked German house with grenades and inflicted casualties. Strong German fighting patrol driven off SW of M. Spaduro 0226. Patrol clashes occurred NE of S. Clemente.

DISTRIBUTION : Normal.

Eighth Army

In Eighth Army coastal sector after clearing Spit up to Canale Valletta (area 6166) our troops occupied four small islandsin Valli Di Comacchio night 4/5 April on which are situated farms Casone Fosse Di Porto 5263 Casone Callirolo 5164 Casone La Fosse 4964 and Casone Agosta 4962. Loss of these buildings deprived enemy of useful observation posts from which to observe our movements on spit.

We received heavy shellfire opposite Cotignola. Night 4/5 April two German parties raided strongpoints on East bank of Senio SW of Cotignola but driven off with casualties. Same night three enemy raiding parties attacked our positions on Senio near S.Severo but all broken up by our mortar and arty fire. At dawn 5 April Germans raided same positions but again repulsed.

To SW normal patrol activity along river. Farther West in mountains firefight occurred when one of our patrols met German patrol SE of Tossignano 0823. Our patrols contacted enemy SE of S.Clemente 9928. We received some mortar fire area Fossinetto 0131.

Weather: Fine. Outlook: Fine.

Fifth Army

Attacking from positions at Strettoia 9496 and Azzano 9899 through mountainous terrain East of Route One in coastal sector Fifth Army troops on morning of 5 April met enemy opposition consisting of light AA and heavy mortar fire, which stiffened during day. Our attack supported by mortars and arty: Our tactical Airforce rendered close and effective support by heavily bombing enemy installations, strongpoints and bivouac areas.

Our forces advanced 3,000 yards in Northwesterly direction from Azzano and outflanked 3,000 ft M.Folgorito 9599 on East and NE.

Troops attacking from Strettoia made limited initial advances. Strong enemy counterattack near Ports 9397 forced withdrawal of our forward elements from advanced positions in that area. Heavy fighting continues.

Elsewhere our patrols active and several hostile infiltration attempts repulsed with casualties to enemy.

Distribution: Normal.

Fifth Army

Scattered patrol contacts with a few firefights and sporadic, harassing enemy arty fire again characterized action on Fifth Army front 4 April. A few rounds of large caliber enemy arty fell in right sector.

On right flank enemy patrol repulsed by SA fire in firefight NE of M.Della Vigna 9232. Some German mortar fire fell in our forward areas, and several enemy flares fired over sector.

In central sector patrols reported only light contact with enemy. Our arty activein sector, setting fire to enemy ammunition dump, demolishing three German occupied houses and silencing several hostile MG's and mortar positions.

On left flank enemy patrol driven off in Serchio Valley.

Evidence of Polyglot nature of German forces opposing Fifth Army emphasized recently in survey of PW's taken in single day on one sector of front. Of 33 deserters coming through our lines, 16 German units were represented, and six nationalities: French, Alsatians, Poles, Austrians, Italians and Germans.

Eighth Army

In Eighth Army coastal sector our troops consolidated their gains on strip of land between Po Di Primaro River and Valli Di Comacchio. They crossed Canal which runs into Lake (area 6060) and pushed on North along two roads which are above flood level.

Our troops reached Canale Valletta which connects Valli Di Comacchio and Adriatic into which canal debouches (area 6166). Here they are meeting much increased opposition and enemy appears to be well dug in to North of Canal.

Farther inland enemy patrol driven off South of S. Polito 3540. Normal activity SW along Senio. We received some shelling and mortaring North of Route 9. Patrol clashes occurred this area. Farther West in mountains sharp enemy local attacks near Frassinetto 0131 beaten off.

Weather: Mainly fair with local showers in Appenines. Outlook: Fair.

Distribution: Normal.

EIGHTH ARMY

Following up local operation in Eighth Army coastal sector our troops cleared remainder of ground South of canal which runs into VALLI di COMACCHIO (area 6060) in course of which more PWs taken. Having crossed mouth of PO di PRIMARO river our men turned South along West bank and joined up with our other troops who had crossed river (area 6358). Pushing inland SW they captured several enemy strongpoints and defensive positions and reached vicinity of LA CASCINA 6156.

Those troops who landed near SALARUCCA 6057 captured this strongpoint house and striking South along road encountered heavy opposition round road junction 6157. Simultaneously another party crossed PO di PRIMARO West of road (area 6055) and cleared whole of North bank both sides of road. They encountered mines. Remaining pockets of resistance were cleared by midday 3 April.

To SW two German patrols driven off SW of FUSIGNANO. Our patrols active along SENIO. Farther West in mountains our fighting patrols inflicted casualties on enemy North of M. SPADURO 0226. Patrols clashed NE of S. CLEMENTE.

Weather : partly cloudy. Outlook no change.

FIFTH ARMY

Few patrol contacts made along Fifth Army front 2/3 April. Enemy arty increased slightly in coastal sector.

On right flank and in central sector light arty and mortar fire virtually only activity. Little enemy reaction to our normal patrolling.

On left flank 10-man enemy party engaged by our troops in firefight near CUTIGLIANO and hostile patrol forced to withdraw.

DISTRIBUTION: Standard.

Fifth Army

Patrols operating on Fifth Army front 2 April continued to find enemy defences alert as they encountered S.A., mortar and MG fire in reconnaissance of enemy positions. Several firefights occurred along front.

On right flank only light ground activity reported. One of our patrols clashed with enemy and our arty silenced German MG in another area. Some enemy flares fired in sector night 1/2 April

In central sector enemy patrol approaching our lines detected by flares and fire brought down on hostile force. Our arty active, scoring hits on enemy personnel digging in and also on enemy occupied house.

In coastal sector enemy patrol which approached hill feature North of AZZANO 9899 driven off after short firefight.

Eighth Army

In coastal sector Eighth Army troops carried out a successful local operation at dawn 2 April. Operation comprised thrust up spit of land between Sea and PO DI PRIMARO River while simultaneous landings were made on Eastern shore of VALLI DI COMACCHIO behind German defences. Our troops cleared German defensive positions half way up spit (Area 6358) under considerable shellfire and captured small island in PO DI PRIMARO in this area.

Pushing on we reached tip of spit and from here crossed PO DI PRIMARO at the mouth and landed on West bank. We also crossed river one and a half miles upstream from mouth and pushing inland cleared enemy positions (area 6258). Meanwhile crossing the VALLI DI COMACCHIO our troops made two simultaneous landings on Eastern shore against opposition. First party landed South of canal which runs across strip of land dividing lake from sea (area 6060).

Pushing NE, road bridge over canal at TERRA DI BELLOCCHIO was found to be blown. Advancing East along canal under heavy shellfire we captured next bridge at C.S.A. PATRIGNANI 6160 intact. Area North of canal is flooded.

Second party landed near SALARACCA 6057 and spreading out captured several strongpoint houses, defensive positions and gun positions in all covering area of about four miles square. In this very successful local operation we captured about 200 PWs and one 88 mm gun.

Further inland enemy raiding party attacked one of our positions NE of S. SEVERO 3233 but driven back. To SW we received heavy mortar and arty fire.

Normal patrol activity on remainder of front.

Weather: Fine. Outlook: Fair.

2 Apr 45.

No activity in Eighth Army coastal sector. Two strong German raiding parties attacked our positions SE of Alfonsine but driven back. Enemy patrol attacked one of our strongpoints South of S. Polito 3540 but forced back.

North of route 9 two German patrols beaten back after fire fights. Enemy patrol occupied house on South side of Senio near Tebano 2325 but driven out by one of our fighting patrols who then occupied house. Normal patrolling farther West in mountains.

Weather: fair. Outlook fair.

Fifth Army

Scattered patrol contacts, some resulting in fire fights, again characterised action on Fifth Army front 1 April. Arty fire continued light and harassing along entire front. Numerous enemy flares were fired particularly on right flank.

In right sector one of our patrols clashed with enemy SW of Monterumici 8328 in firefight which lasted an hour and a half. Another small action occurred in sector where our patrol inflicted estimated ten casualties on Germans occupying building.

Our patrols active in central sector and encountered SA and MG fire as they probed enemy positions. One of our parties ambushed small enemy group killing 2 Germans and taking 2 PWs. Several other brief clashes reported in sector.

On left flank one of our raiding parties attacked enemy dugout near Lama di Sotto 1907 and inflicted casualties on defenders.

DISTRIBUTION: Normal.

Fifth Army

Fifth Army patrols made few contacts with enemy 30/31 March. Slight harassing arty received on some of our forward positions. Enemy generally unaggressive.

On right flank our patrols carried out normal activities. Some enemy activity observed and our arty scored several hits on hostile positions.

In central sector our troops drove off enemy parties attempting to infiltrate our lines at scattered points. Our patrols drew some enemy SA fire.

In coastal sector usual patrolling continued and some contacts with enemy reported.

Eighth Army

Quiet twenty four hours period on whole Eighth Army front. Our patrols contacted enemy in buildings on South bank of Senio between Alfonsino and Fossignano. Patrols clashed NE of S. Potito and fire fight ensued. One of our patrols contacted enemy near Bagnacavallo - Lugo railway.

North of Route 9 patrol met enemy MG fire. We received some mortar and arty fire South of Route 9. Raiding parties exchanged fire NE of Cunfione and both sides suffered casualties. Farther West patrol clash occurred SE of Fossignano.

Weather: Cloudy with light rain, becoming fair. Outlook: Fair.

Eighth Army

No activity in Eighth Army coastal sector. Enemy patrols beaten off East of POSSO VETRO and opposite FUSIGNANO. Our guns shot up enemy movement near BAGNACAVALLO - LUGO railway where it crosses SENIO.

To SW grenade duels occurred along river. Supported by arty one of our fighting patrols attacked German house NE of CUFFIANO and inflicted casualties. Another fighting patrol attacked enemy strongpoint in mountains NW of BORGO TOSSIGNANO 0723 and in hand to hand fighting killed 6 Germans and took one PW. Normal patrol activity farther NW in mountains.

Weather: fair to fine. Outlook visibility moderate becoming poor.

Fifth Army

Action on Fifth Army front 30 March again limited to scattered patrol contacts. Enemy reacted to our reconnaissance activities with SA and mortar fire. Light harassing arty fire fell in forward areas.

In right sector one of our patrols clashed with enemy in fire fire fight NE of MONTERUMICI 8528. Another clash occurred near VADO 8128 where three of enemy patrol believed killed. Our patrol returned without loss.

Several firefights reported in central sector where our patrols found enemy generally alert. Our arty active against enemy installations firing on hostile arty positions, groups of personnel and vehicles.

On left flank small enemy patrol driven off approx 2000 yds West of Mount CORCHIA 0300.

Eighth Army

In Eighth Army coastal sector on spit of land East of Comacchio between Po di Primaro and sea one of our listening posts killed five or six enemy night 27/28 March. Shortly after midday 27th March company of enemy attacked near Cotignola but we put down defensive fire and all was quiet by 1300. North of Route 9 near where Faenza - Bologna railway crosses Senio strong enemy arty, mortar and Nebelwerfer fire especially during early part of night.

Farther West we repulsed two strong enemy raids during night about one mile SE of M. Spaduro 0226. Enemy patrol which used flamethrower when attacking one of our outposts on M. Spaduro driven off. One of our own patrols met and dispersed suspected enemy ambush half a mile North of M. Cerere.

Weather: Fair to cloudy.

Fifth Army

Intermittent rains and restricted visibility continued to limit operations on Fifth Army front 28 March. Our patrols reported some contact with enemy and light, scattered hostile arty fire fell in our forward areas.

On right flank one German was killed and enemy MG captured in patrol clash. Some enemy arty and mortar fire fell but sector generally quiet.

In central sector some digging and movement observed in enemy areas and our arty started fires and caused explosions in shelling targets behind enemy lines.

Hostile patrol driven off in Serchio Valley. On extreme left flank one of our combat patrols encountered heavy defensive fire and was forced to withdraw.

Eighth Army

Little activity in Eighth Army coastal sector but further inland enemy patrols more aggressive than usual during night 25/26 March. On Southern shores of Lake Comacchio in area 5653 we captured three PWs getting out of a boat and N7 of S. Alberto enemy patrol driven off.

On Senio N7 of Bagnacavallo enemy put in raid in two platoon strength which we repulsed, and enemy patrol half a mile further South driven off.

North of Faenza enemy used searchlights when they raided our forward position in area 3030. In this raid enemy lost 14 prisoners 2 killed and 5 wounded from two platoons taking part.

Further S towards route 9 enemy put down considerable arty and mortar fire and was extremely sensitive to any movement on our part. South of route 9 enemy raiding party 20 strong attacked point 92 (area 1522) but dispersed by arty and MG fire. Half a mile farther West we put in small attack on point 106 (area 1742) but met strong opposition and withdrew. Near M. Spaduro 0226 there were several patrol clashes while in vicinity of M. Cerere 0031 enemy raiding party approached our positions and carried out harassing fire programme with SA fire for half an hour and withdrew. Subsequent enemy patrol driven off.

Weather: cloudy with light intermittent rain.

Fifth Army

Activity on Fifth Army front again confined to patrolling with little enemy contact reported. Marked increase in enemy arty in central sector.

On right flank usual enemy movement observed and taken under fire. Targets included MGs, enemy occupied houses, gun battery and vehicles.

In central sector intense arty barrage received during night 25/26 March. In two hour period 735 rounds of arty and 110 rounds of mortar fire fell in area. Elsewhere enemy alert to our patrols and several sharp skirmishes occurred.

On left flank usual enemy groups roamed coastal sector and engaged by our troops and arty.

Fifth Army.

Somewhat increased aggressiveness by German patrols and strong enemy defensive fires encountered by our patrols resulted in several sharp fire fights on Fifth Army front 25 March. Enemy arty fire very slight and mostly of a light caliber.

On right flank one of our patrols clashed with enemy, withdrawing after hurling grenades at hostile group. Our arty in sector engaged tanks, armoured cars and small groups of enemy personnel.

In central sector several enemy patrols repulsed by our troops in short clashes. In one action eleven enemy soldiers killed by one of our patrols, and in another an attempted German ambush of our patrol backfired when our troops discovered ruse and killed three enemy without loss to themselves.

In Serchio Valley our troops drove off enemy patrol which had attempted infiltration of our lines.

Eighth Army

Little activity on whole of Northeastern sector of Eighth Army front. Near Faenza enemy fighting patrol of about 40 attacked our positions late evening 24 Mar but driven off by SA, Mortar and arty fire.

South of Route 9 we attacked enemy occupied house at Tebano 2325 night 24 Mar, demolished house and withdrew. Farther West activity limited to patrolling without contact except in one case where we engaged party of 15 enemy East of M. Spaduro 6226.

Weather: Fair.

Eighth Army.

Activity in Adriatic sector confined to slight mortaring and arty fire. S/ of Cotignola our tanks shot up enemy occupied houses evening 23 March. Shortly afterwards in same area enemy launched attack in company strength. Fighting continued for two hours before enemy withdrew.

South of Route 9 we improved our positions slightly near Villa Di San Giorgio 2022.

Early morning 24 March enemy attacked our forward positions on M.Battogiolo (area 1020). In repulsing attack we inflicted casualties and took PW's. One of our patrols encountered enemy on spur of M.Cerere 0031 and forced them to withdraw after firefight.

Weather: Fine but fog patches clearing to haze in Po Valley.

Fifth Army.

Action on Fifth Army front 24 March continued to be confined to scattered patrol clashes and sporadic harassing arty fire. Our patrols encountered enemy MG, machine pistol and some mortar fire as they probed German positions.

On right flank German patrols attempting to infiltrate our lines set off some of their own mines and were forced to withdraw. Patrol clash occurred West of Monteramici 8328. Our patrol withdrew without casualties in face of strong enemy fire.

In central sector several sharp firefights reported. Enemy aircraft appeared over sector and some German flare activity observed.

Some 100 rounds of mortar fire fell in Serchio Valley. On extreme left flank our arty engaged small groups of enemy soldiers with good results.

Distribution: Normal.

Fifth Army

Normal scattered patrol contacts made by Fifth Army troops along front. Enemy arty continued light.

On right flank one of our patrols found group of houses near Furcoli (area 8328) fortified and strongly defended. After engaging in short firefight, during which casualties were inflicted on enemy, patrol returned to our lines. Light harassing arty and mortar fire received in forward areas. Enemy-occupied houses, observation post and personnel taken under our arty fire.

In central sector aggressive Fifth Army and hostile patrols active and several firefights resulted. Our recce patrols reported an unusual amount of digging and position preparations opposite their positions.

In coastal sector 20-man raiding party West of Route One repulsed by our arty and mortars. Our patrols received arty and mortar fire at various points.

Eighth Army.

Activity on Eighth Army front again limited to patrolling. West of S.Alberto enemy patrol which attacked early 23 March with grenades and flamethrowers repulsed. Patrol clash which took place in area Tebano 2325 resulted in two enemy killed and two wounded. We suffered no casualties. South of Cuffiano enemy patrol which attempted to attack a house occupied by us intercepted by one of our patrols and dispersed.

In mountains NE of S.Clemente 9928 grenade fights ensued early 23 March. Slight increase in enemy shelling and mortaring during night until first light.

Weather: Fine but hazy.

Distribution: Normal.

Fifth Army patrols made scattered contacts with enemy along front and several firefights occurred. Enemy arty very light.

On right flank combat and recce patrols active. Enemy raiding parties attempted to infiltrate through our positions at several points but repulsed. Numerous enemy targets taken under our arty fire with good effect.

In central sector approx 25 enemy, supported by MGs attempted to assault one of our outposts from two directions. After short firefight they were repulsed with casualties. One of our patrols engaged in grenade fight with hostile party and captured several PWs. Another of our patrols supported by arty and mortars had firefight with enemy patrol that lasted nearly an hour.

Eighth Army

On Eighth Army front enemy raided one of our strongpoints SE of Alfonsine but forced back. German raiding parties also attacked our positions near S. Polito 3540 but driven back by SA and mortar fire. German fighting patrol beaten off SW of S. Severo 3033.

Normal patrol activity along Senio both sides of Route 9. Patrols clashed SW of Molo dei Bagni and German patrol shot up by our mortars. Further West in mountains one of our patrols engaged enemy party with grenades and SA fire North of Tossignano 0823.

DISTRIBUTION: Standard.

Eighth Army

On Eighth Army front our troops made local advances to improve their positions in sector NW of Lozzano 4747. We took some PW. No E. enemy patrol beaten off near S. Polito 3540. Strong German fighting patrol attacked one of our strongpoints South of Pelisio 3051 but driven back. Immediately North of Route 9 another enemy patrol forced back after fire fight.

Night 19/20 March German raiding party crossed river NE of Cotignano and attacked strongpoint forcing us to withdraw. Later our arty bombarded strongpoint. Several German patrols repulsed SW of Rio le dei Negni. One of our fighting patrols clashed with enemy party East of S. Clemente 9928. Germans suffered 5 killed and 7 wounded. Later our patrol drove off another enemy patrol.

Weather: Fine. Outlook fine but hazy.

Fifth Army

Activity on Fifth Army front 20 March continued light as our patrols reported scattered contact against enemy. Sporadic harassing arty and mortar fire fell in forward areas. Several small groups of enemy soldiers, as well as gun positions and motor transport, taken under fire by our arty.

On right flank one of our patrols which penetrated into vicinity of Monterumici 8328 encountered mortar and rifle grenade fire and withdrew under cover of smoke screen.

In central sector patrol killed 8 enemy in firefight, while another group captured PWs in raid. Our troops suffered no casualties in this raid.

Further West patrol captured enemy MG and ammunition in raid. In coastal sector our patrols received light harassing MG and mortar fire.

DISTRIBUTION : Normal.

FIFTH ARMY

Continued patrolling characterized activity on Fifth Army front with enemy reacting vigorously to our aggressive thrusts.

On right flank one of our patrols raided La Torre (area 8329) and engaged in fire fight before returning to our lines. Another patrol to a hamlet (area 8128) encountered enemy fire. Several other sharp skirmishes were reported in this sector.

In central sector small group of enemy raided outposts which troops held after short fire fight. Two enemy killed and several casualties inflicted.

In left sector enemy patrol repulsed with SA and grenade fire SE of Molazzana 1304. Our arty continued its effective pounding of German positions, personnel and vehicles.

EIGHTH ARMY

No activity in Eighth Army coastal sector. Strong enemy raid on one of our strongpoints NE of Fusignano driven off. To SW another German raiding party beaten back near S. Polito 3540. Our patrols active to South.

Afternoon 18 March preceded by mortar, arty and tank fire on enemy dykebank positions both sides of Senio SW of Cotignola our infantry attacked towards East dyke-bank. We gained Eastern slope and hurled grenades across dyke onto enemy dugout positions on Western slope. Grenade duel lasted an hour before Germans evacuated position. We then dug in and established position on Eastern slope. In evening our local commander went to top of bank and saw two Germans on reconnaissance approach from across river. He shot one and took other P/W.

At midnight 18/19 March enemy party recrossed Senio and occupied their original position on West slope. Further grenade duels ensued. Normal patrol activity both sides of Route 9. German patrol driven off North of S. Clemente 9928 in mountains farther West.

Weather : mainly fair. Outlook no change.

Eighth Army.

No activity in Eighth Army coastal sector. We received heavy shelling NE of Pusignano evening 17 March. Our patrols active in Senio bend NW of Bagnacavallo. Our arty harassed enemy working parties on West river bank this area. One of our fighting patrols met enemy MG fire South of Russi-Lugo Railway and forced to withdraw. German patrol attacked our positions South of Cotignola but broken up by our arty. South of Route 9 patrols clashed SW of Cuffiano. Enemy continued to bombard strongpoint house between Cuffiano and Riolo Dei Bagni which Italians captured 16 March. Farther West in mountains patrols of both sides active.

Weather: Occasional early rain over Appenines otherwise fine. Outlook fine.

Fifth Army.

Patrols operating on Fifth Army front 18 March encountered enemy SA, mortar and MG fire as they reconnoitered German positions. Two concentrations of enemy arty fire received, one in central sector and one on left flank.

On right flank enemy patrol repulsed NW of M.Belmonte 9932. One of our patrols encountered trip flares and minefields and suffered some casualties.

In central sector ten man enemy patrol driven off and some 200 rounds of enemy arty fell. Our patrol operating near Poggiolino (area 4818) met German sniper fire.

In coastal sector our troops drove off enemy party West of Trassilico 1201. Our mortars and arty engaged enemy targets with good results and scored ten direct hits on enemy occupied house East of Strettoia 9496.

Distribution: Normal.

FIFTH ARMY

Drizzling rain and overcast skies restricted activity on Fifth Army front. Firefights developed at scattered points as a result of patrol contacts. Enemy arty was slight.

On right flank one of our combat patrols encountered heavy defensive fire about two miles North of Monzuno 8224. The Germans fired a mortar barrage estimated at 250 rounds as well as MG, grenade and SA fire. Small enemy party attempted to penetrate our lines near M. Belmonte, but withdrew rapidly after brief firefight.

In central sector our patrols reported that several localities which were the scenes of many sharp encounters during recent weeks, are now clear of enemy. One of our patrols in this sector ambushed a 30 man German patrol killing three and wounding five.

On left flank six man patrol captured 12 enemy about mile West of Calomini 1202 and another of our patrols captured several enemy North of Barga.

EIGHTH ARMY

Twenty-four hour period 26/27 March was generally quiet on whole Eighth Army front. In sector North of Route 9 activity confined to slight enemy harassing fire and two or three enemy patrols all of which driven off. South of Route 9 firefight occurred near Tobano between enemy patrol and one of our outposts which resulted in withdrawal of enemy.

Farther West we engaged small enemy parties near Villa di San Giorgio 2022 with mortar fire. Enemy arty mortar and Nebelwerfer fire also active in this area.

NW of M. Spaduro one of our patrols engaged by two enemy sections. Fight ensued and enemy forced to withdraw after suffering 10 casualties in killed and wounded. Own casualties light.

Weather : cloudy with occasional rain.

FIFTH ARMY

Scattered patrol skirmishes characterized activity on Fifth Army front. Some increase in enemy ground activity.

On right flank our patrols made few enemy contacts. Local firefight occurred near San Ansano 8631. Our arty engaged enemy personnel and positions and suspected enemy OP.

Strong enemy party attempted to retake small village in central sector but thrown back by our troops after twenty minute fight. They approached hamlet from two directions and fired rifle grenades and mortars before assaulting position. Several of the Germans spoke good English and called out "Give up or we will kill you all !" Two Americans who were captured in fight escaped during confusion while enemy withdrew.

Another enemy party of approx 25 men attacked one of our outposts and was repulsed. Enemy patrol attempting to infiltrate through our lines dispersed by hand grenades.

EIGHTH ARMY

Our patrols active in Eighth Army Adriatic sector. Enemy patrols driven back East of Fosso Vetro and to SW along Senio. Enemy fighting patrol attacked strongpoint with bazookas on South river bank near S. Severo 3233 but broken up by our arty. Normal activity both sides of Route 9.

At 0530 hrs 16 March supported by arty two Italian raiding parties of Friuli Group attacked enemy strongpoint house (taken by enemy night 13/14 March) surrounded by outbuildings short way South of Senio between Cuffiano 2023 and Riolo dei Bagni 1823. They approached house across open country from East and SE and reached objective one hour later. Enemy reacted strongly with MG fire from South bank and mortar fire from North side of river. In ensuing fight outside house we captured 5 parachutists before being forced to withdraw.

Later in day an Italian volunteer party comprising one officer and 18 men attacked same house from South. They crept towards house along wadi under continuous enemy fire and 8 men were wounded en route. On nearing house remainder divided into two parties. Under heavy MG fire from house and river bank one party led by officer opened up with Bren gun from about 150 yds East of house. Parachutists retaliated from strongpoint and our other party opened fire with MGs from West side of house. Engaged from both sides strongpoint defenders did not notice Italian officer slip round to front and jump into house throwing grenades. Six parachutists defending house panicked and ran out with their hands up. Our men then closed in and took house.

In day's action German parachutists lost 10 PWs, 15 wounded and 20 killed. For remainder of day enemy continued to engage position with arty and mortars from across river. Our troops were supported by Desert Air Force who shot up enemy gun positions on North bank.

Farther West in mountains patrols of both sides active.

Weather: fog patches on coast.

DISTRIBUTION: Standard.

EIGHTH ARMY

On Eighth Army Adriatic coast enemy patrol driven back. Our arty broke up German patrols East of Fosso Vetro. One of our patrols clashed with enemy South of Alfonsine. Normal patrolling along Senio to S/.

Enemy raiding party attacked strongpoint on Senio East bank at S. Polito 3540 but beaten off with casualties. Our arty shot up enemy transport west of S. Severo 3233. We received considerable mortar fire North of Route 9. South of Route 9 our patrols maintained contact and our mortars harassed enemy movement. Strong German patrol crossed Senio S/ of Riolo Dei Bagni but beaten back. Farther West in mountains patrols of both sides active.

FIFTH ARMY

Fifth Army patrols and raiding parties continued to probe enemy defenses 16 Mar and enemy patrols were also active, resulting in several sharp clashes along front. Our recce parties encountered SA, MG, bazooka and mortar fire in their operations.

In right sector elements of our troops continued to occupy positions won night of 14/15 Mar in raid on hill 367 (area 8732). Our forces are dug in near crest of peak, in some places only 60 yds from enemy.

In Salvaro 7327 First Armoured Division troops engaged in sharp fire fight with enemy smartly before dawn 16 Mar. At one time during fight they controlled several buildings in town, including portion of heavily defended church. Germans laid down heavy SA, mortar and MG fire on our troops from areas adjacent to town and from town itself. Enemy fired several flares over area. After suffering some casualties we withdrew.

Small enemy patrol repulsed by MG and mortar fire South of Africa (area 6825) and casualties inflicted on enemy group ambushed by our troops North of here.

Another small German patrol driven off vicinity Rocca Corneta 4916.

On left flank our MGs and mortars engaged enemy mortars with good results. Two of enemy weapons silenced.

Weather : some haze, clearing by afternoon, no precipitation.

DISTRIBUTION: Standard.

Eighth Army

On Eighth Army front one of our patrols pushed on up Spit between Adriatic and Po Di Primaro River. Our patrols active farther inland. Enemy patrol driven off near Rossetta A245. Another German patrol broken up by our fire East of Senio on Bagnacavallo-Lugo road. We received phosphorous bombs and grenades NE of Cottignola.

Our patrols active North of Route 9. Increased enemy mortar fire this sector. Night 14/15 March our mortars harassed enemy working party near Biancanigo 2326. Our arty shot up enemy vehicles on road NE of Cuffiano. German patrol infiltrated into our positions SE of Tossignano but beaten back. Our patrols active in mountains NW of Tossignano.

Weather: Hazy inland: Early fog patches dispersing later. Outlook Fair.

Fifth Army

Patrols and raiding parties engaged in several minor clashes with enemy along front.

On right flank light arty and mortar fire received. Scattered ground activity observed during day of 14 March in enemy's rear areas. Our arty engaged several active enemy S.P. Guns and other targets. Dusk to dawn patrols reported few enemy contacts.

East of Reno River our troops occupied Serra (area 7327) night of 14 March and continued to push westward toward Salvara 7327 where they met strong resistance from enemy SA and MG's. Germans also aggressive during night. Strong force attacked our positions in vicinity of San Martino 7628 but repulsed after short fire fight.

West of Reno River one of our raiding parties penetrated deep into enemy territory North of M.Belvedere 5217 and destroyed quantity of equipment and ammunition. Enemy raids repulsed South of Africa (area 6825) and at several other scattered points in that area.

Little activity in coastal sector.

Distribution: Normal.

Fifth Army

Operations on Fifth Army front confined to scattered patrol clashes and sporadic enemy arty and mortar fire. Our patrols reported only light contact with enemy forces.

In right sector 87 round concentration of enemy mortar fire fell in one area in 45 minute period, while our arty engaged targets of opportunity with good results.

Farther West fire from our mortars silenced enemy MGs firing from VERGATO 6925 and patrol clash occurred West of CASTEL D'ALANO 6025. Other fire fights took place NW of M. GIOVO 2611 where three out of enemy party of 10 men are believed to have been killed, and in SERCHIO Valley NW of CASTELNUOVO 1308.

In coastal sector our arty fire dispersed several groups of enemy.

Weather: good visibility, no precipitation.

Eighth Army

Our patrols active in Eighth Army coastal sector. Enemy patrols beaten back East of FO 80 VECCHIO. To SW German fighting patrol supported by flame thrower attacked one of our strongpoints North of COTIGNOLA but driven off. Enemy patrol also broken up while trying to cross SENIO at S. SILVERO 3233. Our patrols active both sides of route 9.

Our arty harassed German working party NE of CUFFIANO 2023. Enemy machine gunners active this area. Night 13/14 March German raiding party crossed river and attacked one of our positions SE of RIOLO DEI BAGNI 1823 forcing us to withdraw. Further West in mountains patrols of both sides active.

Weather: Fog patches dispersing gradually during morning. Outlook no change.

Fifth Army

Fifth Army troops encountered increasing enemy aggressiveness near VERGATO. Two enemy raids and two patrol clashes reported. Our patrols and arty continued to harass enemy in other sectors of front.

On right flank arty bombarded enemy positions and scored direct hits over wide area. After our shells closed enemy dugout in vicinity of BURIANO 9934 Germans seen digging in debris and evacuating wounded under protection of Red Cross flag. Direct hit on enemy-occupied building caused two explosions and set fire to building. Our combat and recce patrols made few contacts with enemy.

East of Reno River enemy party estimated at about 14 men attacked one of our outposts South of San Martino 7628 and fire fight developed. SA and arty defensive fire drove off attackers. Our troops took several PWs. Further group of 10 enemy raided another outpost NW of M. TERMINE 7526 but attack dispersed by mortars and MGs.

At bend of Reno River North of VERGATO 6925 one of our patrols engaged 25 man German patrol. During fire fight our troops received heavy mortar fire. Enemy counterattack on M. SPIGOLINO 4309 repulsed.

On left flank our troops encountered minefields while improving their positions in BERCHIO Valley. Our patrols received hostile MG fire near route one South of STRETTOLA 9496.

Eighth Army

On Eighth Army front one of our patrols pushed up spit of land between ADRIATIC and PO DI PRIMARO River. Our patrols also active East of FOSSO VETRO. Enemy patrols broken up by SA. Germans evacuated house 500 yards East of SENIO on BAGNACAVALLO - LUGO road which we then occupied as outpost position.

Evening 12 March preceded by arty duel we attacked enemy dugout positions in East dyke bank from area this house. Enemy attacked simultaneously from river and fierce close-quarter fight ensued lasting three quarters of an hour between house and dyke bank. Our men were supported by flame thrower. Later enemy returned to attack but broken up by our own guns and arty. Twenty seven Germans killed in whole action. We suffered one dead and some wounded. To SW grenade duels occurred along SENIO. Normal patrol activity both sides of route 9. Patrols clashed opposite RICLO DEI BAGNI 1823 and firefight ensued. Our patrols active in mountains further West.

Weather: Fair but hazy after morning fog.

Distribution; Normal.

EIGHTH ARMY

No activity in Eighth Army coastal sector. Two German patrols broken up West of S. Alberto 5352. One of our patrols contacted enemy in house SE of Alfonsine. We received heavy shelling to SW. Enemy patrols to Senio East bank near Russi - Lugo railway driven off.

Immediately South of Cotignola our positions in east dyke bank engaged by bazooka from across river. Our arty retaliated and shelled enemy positions on West bank. Our men also shot up enemy strongpoint house on West bank with Piat. House collapsed. Grenade duels occurred SW of Cotignola.

Normal patrol activity both sides of Route 9. Farther West in mountains one of our patrols contacted enemy East of S. Clemente 9928.

Weather: fog clearing towards mid-day Outlook fine.

FIFTH ARMY

Patrols continued active on Fifth Army front 12 March and our troops engaged in several firefights with enemy. Our forces made slight improvement of their front-line positions in two areas, and occupied mountain peak in central sector. Enemy arty fire was generally light along front.

In right sector approx 1000 yds SW of Monterumici 8328 our troops improved their positions by about 300 yds and occupied several houses. Our outposts also advanced slightly South of Salvaro 7327. No enemy opposition in either area.

North of M. Belvedere 5217 one of our patrols received long range enemy MG and SA fire. NW of Belvedere fire from Brazilian troops killed three Germans out of group of nineteen and forced surrender of remaining sixteen.

M. Spigolino 4309, 5900 foot peak North of Route 66, captured 11 March. Killing of seven Germans and capture of four in firefight for peak was reported. Enemy attempt to recapture height repulsed morning of 12 March.

In coastal sector light enemy arty fire fell on our forward positions and patrols reported some contact with enemy.

Weather: good visibility, no precipitation.

DISTRIBUTION: Standard.

HQ 15 ARMY GROUP
12 Mar '45.

Fifth Army

Vigorous Fifth Army patrols continued aggressive probing along front with enemy activity confined principally to reaction to our patrol thrusts. Slight increase in enemy arty, especially near M. Grande D'Aiano (area 5826).

On right flank one of our patrols attempting to infiltrate into German positions halted by harassing mortar and MG fire raking route of approach. In stiff firefight another patrol near San Ansano 8631 clashed with hostile party night of 10/11 March. Three Germans killed and a fourth believed killed. Enemy aircraft dropped several bombs on our forward positions just East of Route 65.

With bazookas, rifle grenades and SA unknown number of enemy attacked one of our outposts near Salvaro 7327 night 10/11 March. They hit building occupied by our troops but thrown back with casualties. Our troops along Reno River South of Vergato received mortar and MG fire from town during hours before dawn 11 March.

In document recently captured on Fifth Army front Field Marshal Kesselring urged war-weary German infantrymen to continue fanatical resistance in Italy. Kesselring message was quoted in order issued by Freyherr Von Gablenz, Commander of 232 Infantry Division: "We do not defend Italy in these battles, but Germany itself. Not one inch of ground must be surrendered to our enemies without a battle. Officers and men alike must be permeated with this thought. I know that the troops, particularly the Commanders, are convinced of the necessity of this campaign."

Eighth Army

In Eighth Army coastal sector one of our patrols again pushed up spit of land between Adriatic and Po Di Primaro River and took eleven PW's. Patrol clash occurred East of Fosso Vetro. Normal patrol activity along Senio River both sides of Route 9. One of our patrols to River opposite Riolo Dei Bagni found strongpoint house unoccupied. Farther West in mountains several patrol clashes occurred.

Weather: Fine to fair. Outlook little change.

Distribution: Normal.

EIGHTH ARMY

No activity in Eighth Army coastal sector. Our patrols active East of Fosso Vetro. Our arty broke up enemy patrol NE of Fusignano.

Night 9/10 March one of our patrols comprising two NCO's and eight other ranks successfully knocked out enemy strongpoint house in front of Senio East dyke bank NE of Fusignano. They were supported by our arty which shelled houses on both sides of objective. At 2030 hrs patrol started to crawl towards strongpoint 1000 yds distant. By 2300 hrs they were within 200 yds of house when enemy opened up very heavy nebelwerfer barrage on our position this area.

Taking advantage of surrounding noise our men made a dash towards house and set up Piat gun 40 yds from objective. Enemy were taken by surprise and Piat scored direct hit on house. Our patrol also opened up with MG and grenades. Enemy retaliated from house and also from their dugout position in East slope of dyke bank but house became untenable and Germans defending it forced to withdraw.

Firefight occurred SW of Fusignano. Normal patrol activity along Senio both sides of Route 9. Patrols clashed in mountains SE of Tossignano. We received heavy mortar fire area Borgo Tossignano 0723. East of S. Clemente 9928 one of our patrols was attacked by enemy party and forced to withdraw.

Weather: fair. Outlook no change.

FIFTH ARMY

Renewed enemy aggressiveness was encountered by Fifth Army troops in Reno valley NE of Vergato. Our patrols made few contacts in other sectors of the front.

On right flank scattered enemy movements and flare activity were observed. Our arty and mortars continued to pound enemy positions and enemy troops were dispersed with casualties near Il Poggio 0033 and Casignola (area 9933). Mine-clearing patrols suffered some casualties from sugar-mines, schu mines and stake mines.

Ten man enemy patrol, supported by 150-round mortar concentration, repulsed by our troops SE of M. Belmonte 9032. During another patrol in this area several of our troops became isolated on top of a ridge during heavy fighting on 9 March. German efforts to dislodge them were unsuccessful and the soldiers succeeded in breaking out and reaching our lines during night.

Strong enemy SA and MG fire prevented our patrols from entering Fornaci (area 7227). Near village an undetermined number of enemy attacked hill but driven off by our arty. Aggressive enemy infantry action brought with it an increase in arty fire.

Troops of 10 Mountain Division added another M. Belvedere (area 6524) to their list of captured peaks. This mountain and M. Valbura (area 6424), both about one and one half miles NW of Castelnuovo 6622, were occupied without opposition.

Fifth Army

Limited gains made by Fifth Army troops in vicinity of Vergato 6925 night 8/9 March. Our patrols had several clashes with enemy parties along front and enemy arty scattered and sporadic.

On right flank one of our patrols captured some German paratroopers on Hill 425 (area 9732). Another of our patrols in this vicinity engaged in brief firefight with casualties to both sides.

Our troops in central sector moved up to Sabbioni 7226 and other points on Carviano Ridge about a mile East of Vergato. This gives our forces control of all high ground commanding East bank of Reno River to about a mile North of Vergato. West of river we occupied high ground overlooking Africa (area 6825) and have patrolled to town itself. Twenty man German raiding party attacked platoon outpost in sector morning of 9 March, killing one man and wounding several. Our infantrymen reacted quickly with SA, MG's and grenades and called for defensive arty fire. Ten of enemy killed within few yards of our positions while the rest withdrew.

Our patrols North of M.Della Torracoia made little contact with enemy but two of these parties discovered caches of enemy ammunition and guns. The patrols destroyed considerable quantities of enemy arty, mortar and SA ammunition as well as two 88 mm Guns and one 37 mm Gun.

Eighth Army

In Eighth Army coastal sector one of our patrols probed up spit of land between Adriatic and Po Di Primaro River toward German strongpoint house on East River bank (area 6358). They found house strongly defended and protected by dug-in positions and minefield across spit. We took some PW's. Our patrols active East of Fosso Vetro.

To SW we shot up enemy working party NE of Fusignano. Enemy shelling intensified West of Bagnacavallo. Enemy attacked one of our strongpoints opposite Cotignola but driven back. Our arty shot up enemy movement NE of S. Severo.

Patrols clashed North of Faenza-Bologna Railway. In mountains South of Route 9 one of our patrols encountered strong German patrol South of Tossignano. One of our patrols contacted enemy SE of S. Clemente.

Weather: Hazy becoming fine. Outlook fine.

Distribution: Standard.

9 Mar 45

Eighth Army

No activity in Eighth Army coastal sector. Enemy patrol beaten back East of Fosso Vetro. One of our patrols to Senio NE of Fusignano contacted enemy. We received heavy Nebelwerfer fire near Bagnacavallo.

Another grenade duel occurred over Senio East dyke bank. Dyke has steep banks and flat top approx 10 yards wide. Our men are dug in on East slope while Germans are similarly positioned on West slope of same bank. This action is typical of many which have taken place along Senio North of Route 9.

North of Cotignola our troops observed enemy dugout position on Eastern slope of East dyke bank which Germans occupied at night and vacated during day. In their absence we concealed powerful explosive charge in dugout connected to our position by a wire. German party occupying positions night 7/8 March were blown up and buried under debris. Following morning one of buried enemy party was observed being dragged to safety with a rope tied round his waist.

South of Route 9 our patrols to river drew fire. Enemy raiding party crossed Senio SW of Riolo dei Bagni night 7/8 March but driven back after fire fight. Later enemy party again crossed but with same results. In mountains West of Tossignano patrols of both sides active.

Weather: Fair to cloudy with occasional light showers. Outlook mainly fair.

Fifth Army

Increased enemy sensitivity to our patrols on right flank and intense arty in sector West of Route 64 characterised activity on Fifth Army front.

On right flank patrols drew immediate reaction from enemy with arty and mortar fire. One of our raiding parties reached its objective NE of M. Belmonte where heavy enemy shelling was received. Troops of a mortar platoon captured enemy patrol that had infiltrated through our lines. Our arty continued its effective engagement of enemy targets over wide area, attacking troop concentrations, convoys and emplacements.

East of Reno river our troops occupied Carviano 7126, about a mile East of Vergato. Four close-in patrol clashes occurred in vicinity of M. Serlese (area 7427) with casualties to enemy.

Germans continued to shell roads leading South and SW from Castel D'Aiano 6025 and in vicinity of M. della Spe (area 6126). Heavy concentrations of enemy arty and mortar fire received in these areas throughout night of 7/8 March.

Some enemy arty also received in Gerchio Valley where one of our patrols captured a three man enemy patrol.

Fifth Army

Many skirmishes accompanied vigorous mopping up operations in 10 Mountain Div sector. Elsewhere on Fifth Army front our patrols continued active.

On right flank enemy arty and mortar fire light and scattered with enemy concentrating mortar fire in area of M.BELMONTE 9032. Enemy raiding party of estimated company strength, supported by arty, mortars, SP guns and automatic weapons, driven off after heavy firefight about a mile East of CASTELLA 7020 with casualties to both sides. Our troops occupied positions at POGGIACI area 7227, CASTELVECCHIO 7327 and SERRO (same area) night of 6 March against light resistance.

Intermittent heavy arty and mortar fire fell on our newly-won positions in vicinity of CASTEL D'ALANO 6025. Additional PW's taken in mopping up operations in PIANICOLA 6126 and on South slopes of M.BELLA CASTELLINA (area 6224).

Eighth Army

In Eighth Army coastal sector one of our patrols probing up spit of land between Adriatic and RO DI PRIOLO River met defensive fire. Our patrols active East of PO330 VECHIO and NE of FUSIGNANO. To S/ normal patrol activity and grenade throwing along SENIO. We received some nebelwerfer fire night 6/7 March.

Enemy patrol crossed river East of FELISIO 3031 but broken up by our mortars before reaching objective. Another German patrol crossed SENIO North of Route 9 but repulsed. We received increased enemy mortar and arty fire this area.

Farther West in mountains patrols of both sides active. Sporadic enemy shelling.

Weather: Mainly fair. Outlook no change.

Distribution: Normal

EIGHTH ARMY

In Eighth Army coastal sector our patrols active. We received some shelling on Terra di Primaro 6356. Our patrols SW of FUSIGNANO encountered wire and mines. Night 5/6 March enemy fighting patrol attacked one of our positions on Senio east dyke bank South of RUSSI - LUGO railway but driven back. Grenade fights occurred this area. We received shelling SE of S. Severo.

In mountains south of Route 9 one of our patrols encountered fire NW of TOSSIGNANO. Enemy raiding party attacked strongpoint house east of S. Clemente 9928 but beaten back. Our patrols active this area. Clash occurred NE of S. Clemente in which enemy suffered casualties.

Weather : fair.

FIFTH ARMY

In series of successful limited objective attacks Fifth Army's 10 Mountain Division supported by Brazilian troops have cleared enemy from dominating heights in front of our lines NE of M. della Torraccia. Original attack launched morning 3 March and by afternoon of 6 March gains up to five miles made through rugged mountain terrain against enemy arty, mortar and AW fire.

More than 1200 PWs taken since beginning of operation, and enemy losses high. German battalion commander and his staff among PWs and practically all one German company captured. Many PWs had come into lines opposite our forces only 12 to 24 hrs before attack, which apparently achieved large degree of surprise.

Our troops encountered some enemy minefields in their advance as they moved forward against entrenched German forces. Fighters and fighter bombers supported attacks and utilized good flying weather to strike at enemy gun positions, troops concentrations and transport. Our tanks and tank destroyers also supported operations.

In addition to aim of taking limited objectives of key terrain features to improve positions local attacks served as test and battle indoctrination course for new and untried 10 Mountain Division. Division accomplished its missions with relatively few casualties and in a manner to indicate that standard of training was of highest caliber. It proved itself a battle-wise division and able to take its place among the best. The division jumped off at 0700 hrs on 3 March from M. della Torraccia and M. Castello after 20 minute arty preparation supported by aircraft, tanks and tank destroyers. In first few hours of attack American troops captured M. Terminale (area 5621), hill 953 (same area) and hill 1011 (area 5521), both more than 3000 feet high. They also captured IOLA 5621 where tanks and tank destroyers mopped up pockets of enemy resistance after infantry had bypassed village. To East Brazilian troops assisted attack by capturing ROCCA PATIGLIANA 6120 and SAN MARIA VILLIANA 6121.

Captured in subsequent fighting were M. Acidola 5923, BADRA (same area) , CAMPO del SOLE (area 5723), SASSOMOLARE 5824, PRADA (area 6022), M. della Croce (area 6122), BACUCCO (area 6123) and numerous other heights and small localities.

In action of 5/6 March 10 Mountain Division troops secured M. Grande d'Aiano (area 5826), M. della Castellana (area 6224), M. Spicchione (area 6325), M. della Spe (area 6126) and mountain town of CASTEL D'AIANO 6025. Brazilian troops captured CASTELNUOVO 6622 and several other nearby localities.

Elsewhere on Fifth Army front our arty and patrols continued to harass enemy.

DISTRIBUTION: Standard.

FIFTH ARMY

Fifth Army troops continue to improve and consolidate their positions in area NE of M. Belvedere. Elsewhere normal patrols made little contact.

In right sector our troops advanced from 400 to 600 yds night of 4 March to occupy territory previously controlled by our fire and patrols. Hill 375 (area 7828), hill 476 (area 7927) and hamlet of Di Sopra (area 7726) occupied. Heavy minefields and booby traps encountered on hill 481 (area 7828) and our troops withdrew to foot of hill after suffering several mine casualties.

Enemy mortar fire near M. Belvedere increased but enemy arty continued light and harassing. Considerable movement observed in enemy's rear areas. Both troops and vehicles were seen moving in both directions along Route 9.

NE of M. Belvedere American and Brazilian troops of Fifth Army made further progress improving their forward positions through the rugged terrain.

Enemy raiding party of about 40 men near ROCCA CORNETA repulsed by defensive fire from our arty and armor.

EIGHTH ARMY

In Eighth Army coastal sector one of our patrols probed up spit of land between Adriatic and Po di Primaro river and encountered enemy fire from opposite river bank.

German patrol beaten off SE of FUSIGNANO. Enemy raided our positions on Senio East bank North of COTIGNOLA but forced back. German patrol repulsed North of Route 9. We received mortar and arty fire South of Route 9. German patrol crossed river SE of BLANCANICO 2328 but dispersed by our fire. Several enemy patrols broken up by our fire South of CUFFLANO.

Farther West in mountains enemy patrols driven back NW of TOSSIGNANO.

EIGHTH ARMY

Further details of Italian attack in Eighth Army coastal sector : having cleared coastal woods and captured several German strongpoints our troops continued attack afternoon 3 March. With strong arty and Desert Air Force support British tanks and Italian infantry made frontal attack against enemy strongpoint house at TERRA DI PRIMARO 6356 and surrounding dug-in pillboxes which formed definite defensive line across spit of land between Adriatic and Po di Primaro.

Our tank guns knocked out Terra di Primaro house and shot up pillboxes driving enemy out into the open. Infantry battle ensued and by end of afternoon enemy resistance collapsed and we had taken nearly 200 PWs. As reported yesterday outstanding feature of this successful action was close cooperation between British arty and Italian infantry.

Farther West during Italian attack on enemy strongpoints on North bank of Po di Primaro river at bend (area 5855) on 3 March an Italian officer crossed Po di Primaro alone in a boat armed only with two grenades. He picked his way through minefield on North dyke bank and approached German strongpoint house which was still under fire from our arty. German defenders had taken cover and did not see Italian officer approach. He opened front door and shouted loudly whereupon entire enemy party of 18 defending house emerged and gave themselves up. Italian officer escorted them back to river and shouted across for more boats and transported his PWs to South bank. This gallant exploit enabled our men then to cross over and occupy the house. Same officer later rescued Italian soldier who lay wounded in minefield.

To SW our patrols active along Senio river. German patrol driven off SE of FUSIGNANO. Preceded by heavy arty and mortar barrage Germans attacked our strongpoints on East bank of river South of RUSSI - LUGO railway, but driven back. We attacked enemy pocket on Senio East bank NE of S. SEVERO 3233 and forced them to withdraw.

South of Route 9 enemy raiding party crossed Senio and attacked one of our strong-points but forced back after hand-to-hand fight. Half an hour later another enemy party attacked same position but broken up by our fire. Enemy also raided one of our houses from rear on East river bank NE of CUFFIANO. We counter-attacked, killed five Germans and took four PWs. Farther West normal patrol activity.

Weather : Mainly fair but local showers over sea. Outlook mainly fair.

FIFTH ARMY

Fifth Army troops continued to probe enemy positions 4 March and engaged in several fire fights as they met strong defensive fire. Harassing arty fire fell in our forward area, while our arty engaged hostile targets with good results.

One of our raiding parties operating East of M. BELMONTE 9032 killed nine Germans and captured three in a stiff fire fight. South of CASAGLIA 7828 our forces again advanced their front line positions against no opposition.

Farther West one of our combat patrols captured 16 PWs in RANOCCHI (area 5420) and another 18 in CASELINA (area 5320), both West of M. Della Torraccia. A recce patrol killed one German and captured another in a clash on Hill 953 5218 and another of our raiding parties engaged enemy near Hill 906 (area 5219).

North of M. della Torraccia and M. Castello our troops continued to improve their front line positions, occupying several villages and strategic heights.

Patrol clashes also occurred in vicinity M. Spigolino 4309 and in Serchio valley.

Weather : Good visibility, no precipitation.

DISTRIBUTION: Standard.

HQ 15 ARMY GROUP

Fifth Army

Patrols active on Fifth Army front 3 Mar. Our troops clashed with enemy at several points. Sporadic harassing arty and mortar fire fell in forward areas and our arty engaged enemy gun positions, troop concentrations and transport with good results.

Action took a more aggressive tone North of M. della Torraccia and M. Castello where Fifth Army troops made good initial gains to improve positions by seizing additional valuable terrain features.

Patrol clashes occurred near San Ansano 8631 and South of Casaglia 7828, where our troops drove off a party of enemy attempting to infiltrate our lines. After infiltration party had been repulsed our forces moved forward several hundred yards against no opposition.

In coastal sector fire fight reported vicinity Vergemoli 1002.

Weather: Good visibility, no precipitation.

Eighth Army

In Eighth Army coastal sector Italian troops and partisan forces launched attack afternoon 2 Mar to clear enemy from his positions in coastal woods North of Casal Borsetti 6352. Preceded by arty barrage supported by tanks and with strong Desert Air Force support, our troops achieved initial surprise. We overran enemy OPs and captured German maps. Despite strong enemy opposition and many mines we pushed on and by night 2/3 Mar reached base of spit of land between Adriatic and Po di Primaro river (area 6356).

Enemy counter attacks night 2/3 Mar beaten off. We took PWs. Italians also attacked Eastward along North bank of Po di Primaro at bend (area 5855) and captured enemy strongpoint house. We took about 25 PWs. Enemy patrol probed our positions East of Fosso Vetro but broken up by our arty. Our patrols active along Senio NE of Fusignano.

To SW preceded by arty and mortar fire German raiding party attacked one of our strongpoint houses on Senio East bank North of Cotignola, but driven off. We received MG and mortar fire North of Route 9. Farther West in mountains NW of Tossignano patrols of both sides active.

Weather: Cloudy. Outlook, fine.

Further news of Italian attack as follows: On 3 Mar Italian troops of the Cremona Group advanced further up spit of land between the Po di Primaro and the sea and cleared several strongpoints which, as a result of their action on 2 Mar, had been reinforced during the night. They inflicted severe casualties and captured nearly 200 PWs including several officers. By this action the Italians have cleared up the entire coastal area South of the Po di Primaro.

Eighth Army

No activity in Eighth Army coastal sector. German party entered house on East bank of FOSSO VECCHIO and were shot up by our arty.

To SW we attacked enemy strongpoint on SENIO dykebank. In fierce fighting both sides suffered casualties. Immediately South of Route 9 German patrol crossed SENIO but beaten back by our fire. Night 1/2 March two enemy patrols driven back by our MG fire this area.

In patrol clash South of RIOLO DEI BAGNI both sides suffered casualties. Enemy patrol approached our positions NW of BORGO TOSSIGNANO 0723 but driven off after fire fight.

Fifth Army

Increased enemy arty fire in all sectors featured action on Fifth Army front 2 March. Normal patrolling carried out with little contact with enemy, while our arty and mortars continue to engage German troops, installations and transport.

In right sector enemy positions, SP guns, mortars and vehicles taken under fire by our batteries, with a direct hit reported on enemy dugout near M. CASTELLARO (area 9833).

Farther West some enemy flare activity was observed and German SA and grenade fire from West of MONTERUMICI 8328 fell on our forward positions. Patrol clash occurred approx 1000 yards SW of M. SOLE 7829.

More than 500 rounds of arty and mortar fire fell vicinity M. BELVEDERE night 1/2 March and morning of 2 March. Enemy patrol driven off near GALLICANO 1403 and our four point two inch Chemical Mortars engaged German activity and personnel North and West of GALLICANO with good results.

Weather: scattered clouds, reduced visibility in some areas.

FIFTH ARMY

Action on Fifth Army front 1 March was largely concentrated in right sector where our troops successfully raided German positions and engaged in several sharp firefights. Hostile arty fire increased in sector and single German aircraft dropped bombs and strafed in rear of our lines.

Large scale raid on German positons few hundred yards SW of Monterumici 0340 silenced several MG's after two hour firefight. NE of Monterumici three of our patrols clashed with enemy in short engagement.

Single enemy aircraft, believed to be a J.U. 88, dropped bombs and strafed along Route 65 South of Monghidoro 8618. No damage or casualties reported.

Enemy patrol of 20/30 men driven off about 1,000 yards SE of Casaglia 7018 and another hostile group repulsed East of M.Della Croce (area 6122). The Belvedere - Torraccia - Castello area quiet with scattered enemy arty and mortar fire falling on our forward positions. In Serchio valley our fire knocked out enemy observation post.

Weather: Scattered clouds, restricted visibility.

EIGHTH ARMY

In Eighth Army coastal sector our arty harassed enemy activity on North bank of Fo Di Primaro River between sea and Valli Di Comacchio. Our fighting patrols East of Fosso Vetro encountered enemy fire.

German patrols probing our positions NE of Fusignano beaten back. Clashes occurred on Senio East bank SW of Cotignola. We took some PW's. At dawn 1 March enemy raiding party crossed river SE of Biancanigo 2326 and attacked one of our strong-points but dispersed by our arty.

Farther West patrols clashed South of Tossignano and after firefight enemy forced to retire. In same area one of our patrols killed two Germans and took P's. Normal patolling in mountains NW of Tossignano.

Weather: Fair after fog. Outlook no change.

Distribution: Standard.

EIGHTH ARMY

No activity in Eighth Army coastal sector. Enemy tried to occupy buildings on shore of Valli di Comacchio NW of S. ALBERTO but driven off. To SW we received heavy mortar fire night 27/28 Feb.

Midday 27th Feb Germans again attacked our positions on Senio East bank South of RUSSI - LUGO railway and forced us to withdraw. Our counterattack generally successful and we took PWs. Several Germans still remain on East flood bank. North of Route 9 one of our propaganda broadcasts caused temporary cessation of German MG fire while enemy listened. Heated discussion among Germans subsequently heard.

Night 27/28 Feb two strong enemy fighting patrols crossed Senio immediately South of Route 9 and attacked our strongpoint houses but beaten back. Increased enemy shelling this area. To SW our mortars harassed enemy movement. Supported by mortars and arty German night patrols tried to penetrate our positions South of RIOLO DEI BAGNI 1823 but driven back. Farther NW in mountains patrols clashed South of TOSSIGNANO 0823 and enemy forced to withdraw after firefight.

Weather : Fine. Early morning fog clearing towards midday. Outlook little change.

FIFTH ARMY

Scattered patrol clashes and some enemy arty and mortar fire characterized action on Fifth Army front 28 Feb.

On right flank enemy arty fire increased slightly. One of our raiding parties operating SE of CASAGLIA 7828 encountered enemy minefields and booby traps and suffered light casualties. A firefight occurred several hundred yards East of CARVIANO 7126.

In central sector strong enemy patrol repulsed near M. della Torraccia and Germans continued to mortar the Torraccia and Belvedere features. Our patrols operating in this sector received some hostile MG and rifle grenade fire.

Coastal sector remained quiet with light arty and mortar fire and some sniper fire.

Weather : Good visibility, no precipitation.

DISTRIBUTION: Standard.

Fifth Army

Activity on Fifth Army front 27 Feb largely confined to patrolling with little contact. Enemy arty and mortar fire generally light with small concentrations reported in central and coastal sectors.

Enemy patrol repulsed SW of Casaglia 7828 and one of our patrols operating near Vergato 6925 met heavy German defensive fire and forced to withdraw. Near M. Castello (area 5719) our forces improved positions slightly and occupied hamlet of Seneveglio (area 5820) against no opposition. 97 rounds of hostile arty fire fell on our M. Castello positions.

Farther West area of M. Della Torraccia 5520 extremely quiet following failure of attempted strong German counterattack night 25/26 Feb. NW our arty engaged enemy transport, gun emplacements and tanks with good results, knocking out two Mark Four tanks.

In sector between Serchio Valley and West coast patrols encountered long range MG and mortar fire.

Weather: Good visibility, no precipitation.

Eighth Army

No activity in Eighth Army coastal sector. Italian party raided enemy strongpoint on North bank of Po di Primaro River NW of S. Alberto inflicting casualties on enemy and withdrew to South bank.

German patrol infiltrated into our positions NE of Fusignano but repulsed. To SW our arty shot up enemy positions along Senio South of Russi - Lugo railway. Preceded by heavy Nebelwerfer and arty barrage some area strong enemy raiding party crossed river night 26/27 Feb. They captured one of our strongpoints on East bank and pushed on South behind dyke bank. Our troops counterattacked and drove Germans back to West bank. Both sides suffered casualties.

Normal activity North of Route 9. Supported by MGs enemy fighting patrol attacked one of our defended houses South of Riolo dei Bagni 1823 but driven off by our arty and SA fire. Enemy suffered some casualties. Patrols of both sides active farther West. Enemy used Smoke NE S. Clemente to cover evacuation of casualties caused by our arty. We received some Nebelwerfer fire this area.

Weather: Fair and hazy. Outlook: Little change.

Eighth Army

Our patrols active in Eighth Army coastal sector. Patrol clash occurred East of Fosso Vetro. To SE along Senio our arty harassed enemy working parties. German fighting patrol crossed Senio at S. Severo 3233 but forced back by our fire.

Patrols active South of Route 9. German six man patrol SE of Tossignano 0823 broken up by our arty fire. Another enemy patrol East of S. Clemente driven off by our MG fire.

Weather: fair to cloudy. Outlook little change.

Fifth Army

Several enemy counterattacks in vicinity of M Della Torraccia and successful raid on enemy positions in central sector were highlights of activity on Fifth Army front.

Right flank comparatively quiet. Patrols active and arty engaged enemy personnel and vehicles. Light scattered enemy arty, mortar and MG fire received.

In central sector a raiding party captured ten Germans and cleared out three enemy pillboxes to capture bunker on ridge North of Canovetta 9331 in face of stiff enemy opposition. In attempt to repel raiders Germans unleashed arty, mortars, MGs and hand grenades.

Preceded by intense arty barrage strong enemy counterattack launched against our positions on M Della Torraccia morning 26 Feb. Germans in battalion strength suffered heavy casualties and lost PWs before withdrawing. They continued to throw heavy arty and mortar fire on our positions until dawn. A smaller Nazi assault on the mountain broken up afternoon of 25 Feb with aid of our arty. Heavy arty and mortar fire received on M Castello (area 5719) and small counterattack repulsed near La Serra 5820.

HQ 15 ARMY GROUP
26 Feb 45.

Fifth Army

While Fifth Army troops organised and consolidated recent gains in mountain ridges W of Route 64 our arty and patrols continued active in other sectors of the front.

On right flank our arty particularly effective in pounding enemy troops, vehicles and installations. Direct hit scored on enemy tank near Settefonti 9737. Enemy casualties also inflicted by our mortars at M. Castellaro Bertochi (area 0033) and M. Cerere spur 0031.

In central sector one of our patrols was attacked frontally and from flank by enemy party. In ensuing firefight two Germans were hit. Enemy patrol withdrew under cover of protecting mortar fire. Strong combat patrol engaged enemy in firefight NE of Castelnuovo 6622, killing six and taking six PW.

In mountains W of Route 64 our troops captured high ground NE, N and NW of M. Della Torraccia 5520. Small enemy resistance pockets mopped up, enemy pillboxes neutralised and PWs taken.

Although there has been comparatively little ground activity in recent months enemy has suffered heavily from arty bombardments, PWs report. One German stated that our arty concentrations were "enough to break anybody's nerve". One enemy unit had casualties of from 40 to 50 percent of its fighting strength since December first.

Eighth Army

Our patrols active in Eighth Army coastal sector. Enemy propaganda by broadcast and pamphlets NE of ALFONSINE.

Preceded by heavy arty barrage on our positions two strong enemy raiding parties crossed SENIO evening 24 Feb with object of capturing our strongpoint positions along river bank SW of FUSIGNANO. Our arty bombarded attackers. German raiding parties about 500 yards apart rushed E dyke bank simultaneously and reached low lying fields beyond where they tried to join forces. After fierce fight lasting about one hour enemy driven off. Germans silhouetted against sky as they retreated over dyke made good targets for our marksmen. As they withdrew one group of Germans entered booby trapped house which blew up. We took some PWs.

Later during night 24/25 Feb another enemy raiding party crossed SENIO S of FUSIGNANO but driven back with casualties. We again took PWs. Enemy party also tried to penetrate our positions opposite S POLITO 3540 but repulsed. To S we made local improvements to our positions along SENIO E bank captured night 23/24 Feb. Enemy still holds isolated positions on E bank area of Wier 3000 yards upstream from COTIGNOLA.

S of Route 9 our arty and mortars harassed enemy movement. Enemy patrol S of RIOLO DEI BAGNI 1823 repulsed. Night 24/25 Feb "F" Recce sent two very successful fighting patrols to church on Eastern end of VENA DEL GESSO escarpment 1121 overlooking SENIO Valley W of RIVOLA 1421. One patrol killed 8 and wounded 10 Germans while other patrol killed 9 and wounded unknown number. "F" Recce is Italian unit formed by Eighth Army from Italian parachutists of FOLGORE DIV over one year ago since when it has fought with Eighth Army all way up ITALY. It is equipped with British equipment.

Weather fine or fair. Outlook little change.

HQ 15 ARMY GROUP
25 Feb 45

EIGHTH ARMY

On Eighth Army front our mortars engaged enemy working parties West of S. ALBERTO 5352. Our arty dispersed enemy patrol East of Fosso Vetro and further SW demolished enemy building North of S. POLITO 3540.

Night 23/24 Feb our troops made local attack to gain positions on East Senio flood bank and to clear enemy from East side of river SW of BAGNACAVALLO 3838 between RUSSI - LUGO railway and S. SEVERO 3233. Our attack was generally successful and we now have several positions on East flood bank. An isolated enemy position North of COTIGNOLA holding out behind our advance troops was successfully silenced by our tanks morning 24 Feb.

In Senio bend SW of COTIGNOLA German resistance was stiffer. Enemy still hold isolated positions on East bank this area. To North of RUSSI - LUGO railway enemy holds East bank of river.

At dawn German ten man parachutist patrol crossed Senio and approached Polish strongpoint SE of CASTEL BOLOGNESE 2427 from North. They were observed at 100 yards distance from house and immediately engaged by our arty which continued to lay down concentrations behind parachutists thereby cutting off their line of retreat. Simultaneously Poles attacked Germans from house.

Trapped between infantry and arty fire Germans fought desperate hand to hand battle until after half an hour we had killed four parachutists including the CSM patrol commander and taken five PWs. Remaining parachutist escaped. Poles returned to house and watched four dead Germans throughout day to ensure that they were not feigning death with intention of escaping during night.

After sunset our men left house and confirmed four enemy dead. They also captured escaped parachutist who was unable to get further than 100 yds from house owing to continued Polish observation. Thus whole German patrol eliminated.

Farther West normal patrol activity. Our mortars fired German position in hay-stack East of S Clemente.

Weather: generally cloudy. Outlook little change.

FIFTH ARMY

Advancing 24 Feb on East and West slopes of M DELLA TORRACCIA 5520 elements of the 10 Mountain Division supported by aircraft and arty improved their positions on flanks of the peak. Enemy troops attempted infiltration of our lines at some points but driven back with losses and our forces in this area are strengthening and consolidating positions. Fighting was continuing 24 Feb.

To East Brazilian troops continued their supporting attack and moved forward against some resistance to capture hill 739 (area 5819), 2500 feet, and hill 958 (area 5720), 3100 feet. Also occupied villages of BELLAVISTA (area 5720) and LA SERRA 5820.

In efforts to counter our gains enemy launched three counter attacks near LA SERRA, employing [illegible] tactics in the second and attempting infiltration and using hand grenades in the third. First two attacks repulsed. Some enemy troops who succeeded in penetrating our lines in third, driven back. Hand to hand fighting reported in this area.

Enemy continued to harass our troops in attack areas with arty and mortar fire, employing heavy arty concentration of 270 rounds to East of M DELLA TORRACCIA.

Elsewhere on front our patrols continued recce and raiding activities with several fire fights reported. Enemy patrol of about 25 men repulsed approx 1000 yards South of CASAGLIA 7828.

Weather: Fair to good visibility, no precipitation.

HQ 15 ARMY GROUP.
24 Feb 45.

Fifth Army

After overcoming stiff opposition FIFTH Army troops secured further commanding terrain in their local attack in the BELVEDERE area. Good observation along front enabled our arty and air support to continue hammering of enemy positions.

On right flank our arty scored a direct hit on enemy dugout and when enemy personnel exposed themselves, they were effectively engaged by air-bursting arty shells. Germans then raised Red Cross Flag to evacuate their wounded.

In central sector several raids on enemy fortified positions were made by American troops. One of these patrols went through wire and minefields to attack series of fortified houses. Despite heavy fire from enemy mortars, machine guns, bazookas, small arms and grenades patrol continued forward to unload all its ammunition into windows and cellars of buildings. When our troops withdrew enemy did not pursue them. Another patrol, after making several attempts to storm small group of houses, pulled back and directed arty fire on buildings, demolishing several of them and inflicting heavy casualties on enemy.

In the BELVEDERE area American troops captured 3500 foot M. DELLA TORRACCIA 5520 after bitter fighting. They mopped up pockets of resistance on peak and repelled several counterattacks launched by enemy on position. A party of Italian partisans operating under control of American unit seized ROCCA CORNETA 4916 night of 22 February. Strong enemy counterattack supported by arty and mortar fire repulsed by our troops near C.MILANO (area 4817).

It is now known that one unit of Germans who had been marching for six days were loaded into trucks and rushed to BELVEDERE front recently where they were immediately thrown into action in attempt to help stop American advances.

Brazilian troops supporting BELVEDERE operation organised positions on M. CASTELLO (area 5719) and cleaned up several German pockets of resistance.

Eighth Army

No activity in EIGHTH Army coastal sector. small scale enemy patrolling along FOSSO VETRO. Our arty harassed enemy positions near COTIGNOLA.

German patrol crossed river S of FELISIO 3031 but beaten back by our arty and small arms fire and suffered casualties. German three man patrol comprising one officer one NCO and one Italian penetrated deeply into our positions SE of CUFFIANO but were all captured. To W normal patrol activity in mountains.

In patrol clash S of TOSSIGNANO our arty dispersed German patrol. We raided enemy strongpoint N of S. CLEMENTE and took 2 PWs. Strong enemy party then approached and engaged our raiding party. In ensuing fierce fire fight enemy suffered some casualties.

Weather fair to cloudy. Outlook no change.

DISTRIBUTION: Normal.

HQ 15 ARMY GROUP
23 Feb '45.

In Eighth Army coastal sector enemy attacked one of our outpost houses between Fo Di Primero River and sea about two miles North of Casal Borsetti 6352 and forced us to withdraw slightly to another position. Further enemy attack on this position driven off. German patrol to our outpost on North bank of Fo Di Primero NW of Mandriole 5852 beaten back. Enemy suffered some casualties. One of our patrols contacted enemy on West bank of Fosso Vetro SE of Alfonsine. To S normal patrolling along Senio. One of our patrols to River North of Cotignola met MG fire. Our mortars and arty shot up enemy movement along Senio.

South of Route 9 German patrols again crossed River and attacked our strong-points but driven back with casualties. Further West patrols of both sides active. Our mortars engaged German house NE of M Spaduro 0226. 6 man patrol NE of S Clemente 9928 attacked party of six Germans in slit trenches. We killed four Germans and took two PW's. As party were returning to our own positions cries of PW attracted attention of another enemy party who came to their rescue. In ensuing fray enemy suffered some casualties.

Weather: fine to fair. Outlook fair.

Fifth Army

Advancing 22 Feb in local attack launched East and West of M Belvedere American troops of Fifth Army reached top of M Della Torraccia 5520, 3500 feet peak NE of M Belvedere. They moved forward against enemy forces defending their positions from elaborate trench system on the height.

Brazilian troops continuing their supporting attack launched morning 21 Feb occupied M Castello (area 5719) and captured village of Abetaia 5718.

Using sixty - eighty men in each attempt enemy continued counter-attacks North of M. Belvedere and to NW along Mancinello - Pizzo Di Campiano ridge. Our troops consolidated newly won positions and repulsed all German attempts to dislodge them.

Hastily brought up German company of approximately eighty men counterattacking 21 Feb North of M. Belvedere practically destroyed by our defensive fire. Twenty-five of attacking force killed and more than thirty PW's captured. Approx eighty Germans forming near Valpiana (area 5118) for another counter-attack dispersed by our arty.

One of our men captured in counter-attack was freed when soldiers from his unit surrounded house where he was held and captured nineteen German PW's. After stiff and prolonged fire-fight in which our troops directed arty and MG fire on enemy. The nineteen prisoners were taken when captured American soldier shouted for attacking force to hold their fire as Germans wanted to surrender.

For probably first time in history of military medicine some of casualties from the attack area are being evacuated from mountain top by means of cable tramway which makes vertical descent of 1350 feet in a complete run of 1800 feet. Cable tramway has cut time required to evacuate a patient from between six and ten hours to four minutes and has freed for other duties three litter crews normally required for each casualty. Tramway car carries medical attendant with patient.

In other sectors of the front patrols were active and numerous contacts were reported. Hostile arty fire showed slight increase on right and left flanks. Our arty and mortars scored hits on German - occupied houses and on enemy transport.

Weather: good visibility, no precipitation.

DISTRIBUTION: Normal.

CONFIDENTIAL

H. 15 ARMY GROUP
22 Feb '45.

Patrols active in right and central sectors of Fifth Army front with firefights reported at Di Sopra (area 9833) and South of Muzzano (area 8229). In latter action our raiding party probing German defenses met heavy resistance and suffered casualties. Farther West German patrol supported by mortar and arty fire raided hill 505 (area 7827). Enemy withdrew after firefight which lasted three quarters of an hour.

Continuing the local attack launched 19/20 February East and West of M.Belvedere 5217 our troops continued to improve their positions 21 February against stiffening opposition. In conjunction with attack other elements of our forces jumped off morning 21 February East of M.Belvedere and SW of Abetaia 5716 and gained up to 1,000 yards against opposition.

NE of M. Belvedere our troops have taken hill 1079 (area 5520) and have also secured ridge running SW from this hill to M. Belvedere. Mazzancana (area 5518) has been occupied and our forces have also seized hill 1053 (area 5418). NW of M. Belvedere our troops consolidated their positions and repulsed several small enemy counterattacks near Campiano (area 4817) and Serrasiccia (area 4615).

In our attack SW of Abetaia our troops moved forward after heavy arty preparation and are now engaged to E of Mazzancana and S and SW of M. Castello (area 5619). Enemy opposition in both attack areas has consisted largely of small arms, machinegun and mortar fire, with some arty.

Our aircraft continued to support attacks 21 February, striking at enemy arty, transport, and troop concentrations. Many PW's taken.

In "Battle of the Loudspeakers" E of Route 65 enemy responded to one of our propaganda broadcasts with light mortar fire and soon afterwards brought his own loudspeakers "into action" with three German propaganda programs to our troops.

Weather: Good visibility, no precipitation.

Eighth Army

No activity in Eighth Army coastal sector. Our mortars and arty harassed enemy movement along Senio. Normal patrol activity along river North of Route 9.

S of Route 9 one of our night patrols to Senio NE of Cuffiano 2023 was fired on by enemy patrol from W bank. One hour later at midnight three enemy parties crossed river same area to attack one of our strongpoint houses short way inland. Two parties comprising 15 men each converged on house from N and S while third party remained at short distance W of house to give cover fire. Owing to extreme blackness of night two attacking parties got close to strongpoint before alarm was given by Germans shouting " Hands up " as they rushed house from both sides simultaneously.

Some of our men withdrew from house short way to SE to act as cover party and opened fire on enemy attacking strongpoint leaving six men to defend position. In pitch blackness these six men fought hand to hand battle with 30 Germans for half an hour under hail of fire from our own and enemy firing parties on either side of house. Our men new enemy had had enough when German Commander gave order to retire. Enemy withdrew taking their wounded with them and 2 PW's from our six defenders.

One of our fighting patrols encountered MG fire SE of Tossignano. Sharp patrol clash occurred N of M. Spaduro 0226.

Weather: Fair. Outlook no change.

Distribution: Normal

HQ 15 ARMY GROUP
21 Feb 45.

Eighth Army

On Eighth Army front German patrol infiltrated through coastal woods and attacked Italian outpost house North of Casal Borsetti 6352 but driven off after firefight. Enemy then mortared area inland of woods. Our own mortars and arty replied. 135 enemy mortar bombs counted but we suffered only one casualty.

Farther inland our mortars and arty active along Senio. Patrols contacted Germans. South of route 9 strong enemy raiding party supported by arty and MGs crossed river and attacked strong points East of Cuffiano 2023 but driven off by our arty and SA fire. Later one of our patrols followed retreating German party but did not find them. More small enemy attacks repulsed area Cuffiano.

Normal patrol activity farther West in mountains. German patrols attacked one of our positions South of M Spaduro 0226 with grenades but beaten back after firefight.

Weather: fair. Outlook fair. Ground frost.

Fifth Army

In successful surprise action Fifth Army troops launched local attack to improve positions in M. Belvedere sector West of route 64 night 19/20 Feb. Aided by arty preparations and close air support our troops captured M. Belvedere 5217 and other commanding features despite moderately stiff enemy resistance and precipitous terrain. In other sectors of front contact maintained by active patrols.

On right flank our arty and mortars effectively engaged enemy personnel and installations near M Calderaro 9933. For third consecutive day enemy propaganda shells fell in sector.

In central sector considerable enemy movement observed and taken under fire by our arty and mortars. One of our raiding parties received hand grenade fire from enemy in clash at close quarters.

In the local attack west of route 64 NW of Porretta Terme (area 5812) enemy arty strong and concentrated initially, but after daylight Fifth Army counter-battery and aircraft silenced most of enemy guns. Resistance continued with mortar and long range MG fire. Our troops also encountered heavy minefields as they pressed forward to capture mountain villages of Polla 5017 and Valpiana (area 5118), 1139 meter M Belvedere, M Gorgolesco (area 5317) and hill 1088 (area 5318).

Four enemy counterattacks struck at our newly won positions on M Mancinello - Pizzo Di Campiano ridge West of Belvedere mountain mass night 19/20 Feb. All were repulsed. In one counterthrust about 30 enemy came forward with hands raised until within close range, and then dropped to ground and opened fire. Failing to take our troops by surprise they were driven off with heavy casualties. Our own losses were extremely light.

The positions along M Mancibello ridge were taken night 18/19 Feb by unit that scaled an almost sheer rock face, ascending 1500 feet, by means of ropes in some cases.

DISTRIBUTION: Normal.

Fifth Army

Normal patrols operated along entire Fifth Army front with some improvement in our positions on left flank. Arty fire was slight.

On right flank scattered arty and mortar fire received. One of our patrols encased enemy in fire fight N of M. Grande. Members of another patrol were attacked by strong enemy force W of P. Cerere and encountered enemy machine-gun fire from two directions.

In central sector our outposts were raided by enemy patrols near M. Belvonte and near Pizzano.

Our troops met defensive near M. Cappel Fuso 4716. They overcame mortar, machine-gun and small arms fire to improve positions on the Mancinello - Pizzo Di Campiano Ridge (area 4513 - area 4817) running SE of M. Cappel Fuso.

Eighth Army

Our patrols active in Eighth Army coastal sector. Mortars put abrupt end to German propaganda broadcast.

Preceded by exceptionally heavy mortar and arty bombardment of our positions along Senio enemy raiding party crossed river by night and attacked small group of our strong-point houses on river bank E of Fusignano while houses were still being mortared. German party infiltrated inland from river and splitting into three parties attacked strong-point from rear. Bazooka crew in centre attacked house direct while two MG sections on either side gave covering fire from behind haystacks.

Our men holding buildings were warned of attack by German Commander shouting fire orders. Sharp firefight ensued before enemy driven off. During fray one German ran forward armed with electric torch which he shone in face of one of our Bren gunners to dazzle him. Before gunner could shoot torchbearer slipped behind one of house walls which was hit by bazooka almost immediately and collapsed on top of him. Later our men searched for German under wall but found only German forage cap and blood stained rifle with one of our bullets through the magazine.

To SW patrols of both sides active. Determined enemy attack against one of our outposts opposite Cotignola beaten off. Our mortars harassed German working parties along Senio N of Route 9. Farther W in mountains patrols of both sides active.

Distribution: Normal.

Eighth Army

On Eighth Army front our fire scattered enemy patrol East of Fosso Vetro. We received rockets SE of Alfonsine.

Sporadic mortar and arty exchanges occurred to SW along Senio. In patrol clashes North of Cotignola both sides suffered casualties. German raiding party attacked our outposts opposite Cotignola but driven back by arty, which also shot up enemy house on river near Cotignola and inflicted casualties on Germans.

To SW patrols of both sides active along Senio. Our mortars and SA fire harassed enemy working parties. Farther West we received heavy mortar and MG fire South of Borgo Tossignano 0723. Patrols clashed in hills to NW and enemy suffered casualties.

Weather: Mainly cloudy Outlook little change.

Fifth Army

Patrols moving through fog and mist which severely restricted visibility were active along entire Fifth Army front 18 Feb. Clashes occurred at several points as enemy remained alert and engaged our recce parties with SA, MG and mortar fire. Hostile arty fire again light.

On right flank our forces drove off enemy patrol in area of M. Cerere 0031 while combat patrol operating near M. Grande 0032 met heavy enemy defensive fire.

Farther West our troops repulsed enemy party approx mile and a half SE of Castel-Nuovo 6622. Our Patrols received some long range MG fire from German positions, and enemy personnel in vicinity of Pi-nsinatico 3808 were dispersed by our arty fire.

Weather: Poor visibility, no precipitation.

Fifth Army

Although the lull in arty fire along Fifth Army front continued there was some increase in mortar and machinegun fire. Patrols active and numerous firefights occurred.

On right flank an enemy patrol repulsed E of M Cerere 0031 by our small arms and machinegun fire. Later one of our patrols investigated the area and found abandoned enemy equipment. A combat patrol N of M Cuccoli 9832 engaged an enemy patrol in firefight with casualties to both sides.

In central sector normal patrols operated. One combat patrol had firefight with a 30 man enemy party N of hill mile W of Pizzano 9432.

On left flank one of our patrols to Abetaia 5718 set off booby trap in a house and suffered several casualties. One of our raiding parties encountered enemy fire near M Spigolino 4309.

Eighth Army

No activity in Eighth Army coastal sector. To SW our mortars and arty engaged enemy activity on W bank of Senio bend. Farther SW normal patrolling. Enemy patrol to E bank of Senio SW of Solarolo 2832 repulsed. Our mortars silenced enemy MGs same area.

Still farther W we received heavy shelling and mortaring in mountains SE of S Clemente 9928. Preceded by mortar arty and MG concentrations one of our patrols took enemy position this area. NE of S Clemente one of our patrols shot up German patrol and inflicted casualties.

Weather: fair with extensive mist. Outlook: fair with haze and local fog.

EIGHTH ARMY

No activity in Eighth Army coastal sector. Our patrols East of Fosso Vetro encountered enemy MG fire. Mortars knocked out enemy MG this area.

Preceded by heavy arty barrage German patrol infiltrated into our positions on East bank of Senio South of FUSIGNANO but driven back by our arty and SA fire. Later one of our patrols found five of German patrol dead on Senio dyke bank. Our Piats and mortars harassed enemy working party North of COTIGNOLA. German patrol attacked one of our outposts opposite COTIGNOLA but driven off after sharp firefight. To SW normal patrol activity. Patrols clashed in mountains SE of TOSSIGNANO 0823. Mortar duels occurred SE of S Clemente 9928.

Weather : Cloudy generally: mist clearing in afternoon. Outlook little change.

FIFTH ARMY

Patrols were active on Fifth Army front 16 Feb, our troops clashing with enemy at several points as they encountered strong defensive fire. Hostile arty fire showed general decrease along front.

On right flank our four point two chemical mortars scored direct hits on enemy tank and also effectively mortared enemy personnel. Our recce patrol in area of FRASSINETO 0131 engaged in firefight with hostile patrol, and clashes also occurred mile and a half East of M. Belmonte 9032 and a half mile NE of MONTERUMICI 8528. In latter engagement our patrol is reported to have killed six enemy and knocked out two MGs with hand grenades.

Our patrol to area of FOGGIOLI 8832 in vicinity of Route 65 met heavy SA and MG fire.

Weather : Broken clouds, fair visibility.

Fifth Army

Enemy infiltrating parties attempted to penetrate Fifth Army forward positions but were repulsed by our troops in several sectors of the front. Our patrols reported little contact. Enemy targets engaged by our arty with good effect.

On right flank enemy patrol attempted to break through our lines in vicinity of Monteacuto 9933 but driven off by mortar fire. Another enemy group on NW slope of Pressinete Ridge 0431 taken under Machinegun fire and withdrew. One of our patrols directed mortar fire on machinegun emplacement and a direct hit was made causing a number of enemy casualties. Several patrol clashes occurred and one enemy patrol captured near Mt Cerere 0031.

Several enemy installations N of Bologna were engaged by our aircraft and arty. Following bombing and shelling several explosions and considerable smoke observed in target areas.

On left flank enemy arty unusually light. Enemy pressure on Mt Canala 9596 in coastal area caused our troops to withdraw to Southern slopes of this feature. These are positions held prior to the recent attack by our forces in coastal sector. Our troops also engaged several enemy infiltration parties.

Eighth Army

No activity in Eighth Army coastal sector. Patrol to Serio River SW of Fusignano met no enemy but met with Piat gun. Patrols clashed NW of Ostignola.

To SW our mortars, tank guns and MG's engaged enemy working parties along Serio. German patrol attacked one of our strong point houses on S bank of Serio SW of Rivola 4121 but driven off.

Further NW our arty harassed enemy on lateral road NW of S Clemente 9928. One of our fighting patrols inflicted casualties on German patrol in this area.

Weather: Cloudy to fair. Outlook: Little change.

Distribution: Normal.

Eighth Army

On Eighth Army front enemy patrol attacked an Italian outpost South of Valli di Comacchio but was beaten back. Patrol returned to attack again but kept off by our heavy artly and mortar fire. One of our patrols East of Fosso Vetro encountered enemy MG fire. Our arty engaged German mortars this area and our gunners knocked out enemy SP gun beside a German house NE of Fusignano. House also hit and caught fire.

To SW usual patrol activity along Senio. Our tank guns dispersed German working party SW of Felisio 9041.

South of Route 9 German patrol crossed Senio near Casale 2426 with object of taking PWs. Patrol was from parachute div and comprised two Serjeant Majors and three Lance Corporals, all volunteers for this job. They crossed river at night in assault boat. One of our outposts allowed them to land and proceed toward a strong-point house a short way inland. Outpost then warned our men holding strongpoint of approach of German patrol. As the parachutists neared the house they split up into two parties of three and two men respectively and by-passed house with intention of taking it from the rear. Meanwhile Commander of our strongpoint stationed half his men in house ready to open fire with MGs from upstairs windows while remainder lay in wait for Germans in back yard.

Our Commander himself opened an upstairs back window so that the light would lull enemy into feeling of security. The party of two Germans remained at a distance and the other three approached house from the rear. Our Commander shouted "Hands up" from upstairs window. The three parachutists then opened fire on window and while our MGs replied our men attacked from yard below. In ensuing fray we killed one para-chutist and took two PWs. Remaining two fled.

Further West normal patrol activity.

Weather: Fair to cloudy. Outlook little change.

Fifth Army

Activity on Fifth Army front 14 Feb again concentrated in Coastal sector where enemy continued active against our troops. Both our patrols and those of enemy active, and on right flank and in central sector our arty engaged hostile targets with good results.

In right sector firefights occurred near Il Poggio 0033 and near Pizzano 9432. Our patrols operating in vicinity of M. Belmonte 9032 and along Route 65 (area 8832) encountered heavy enemy fire and suffered some casualties.

Brazilian troops repulsed enemy patrol approx mile and a half NE of Mirrico 6221 and a raiding party operating NE of Gaggio 5516 clashed with hostile patrol.

In Serchio Valley a few hundred yards East of Lama di Sotto 1907 our troops withdrew slightly before enemy raid and then restored their original positions.

On extreme left flank between Strettoia 3596 and Seravezza 9796 our outposts moved back a short distance after enemy forces had infiltrated our lines and also launched a raid about 500 yards East of Strettoia.

Weather: Overcast in some sectors, fair visibility.

Fifth Army

Day and night patrolling and light exchanges of arty and mortar fire characterized action on Fifth Army front. Several enemy prisoners taken and enemy suffered casualties. Increase in enemy patrolling reported.

In sector South of Bologna enemy patrol driven from Montecalderaro 9933. We captured small patrol near Frassineto 0131. Few patrol contacts made in this area and there was harassing MG, mortar and arty fire.

On left flank patrol of Brazilian troops in platoon strength supported by arty raided hill feature about a mile East of Gaggio 5516 and engaged enemy in firefight. Farther west our troops repulsed 8 man enemy patrol that penetrated our positions.

In coastal sector demonstration by our tanks in vicinity of Gallicano 1403 drew enemy fire. Our patrols clashed with enemy at several points causing some enemy casualties. Considerable enemy arty received on forward positions.

Eighth Army

On Eighth Army front our patrols active South of Valli Di Comacchio. To SW arty more active on both sides. We scored direct hit on vehicle on road along Senio SE of Alfonsine and set it on fire.

Our morturs harassed German working parties along Senio floodbank North of Cotignola. Enemy fighting patrol attacked one of our outposts East of Senio immediately North of Faenza - Bologna railway but was repulsed. We took PWs. One of our patrols probed to river this area and retired after brisk firefight. Enemy patrol South of Cuffiano 2023 dispersed by our fire.

Farther West mortar and MG duels occurred and normal patrol activity.

Weather: extensive mist at dawn cleared by mid morning. Outlook fair.

EIGHTH ARMY

No activity in Eighth Army Coastal sector. One of our patrols East of Fosso Vetro encountered enemy fire. Our arty scored hits on bridge over Senio at Alfonsine.

German working parties East of Fusignano harassed by our arty. Our snipers shot up enemy in one of gaps in Senio East flood bank North of Cotignola. Strong enemy raid on one of our outposts on East bank of Senio immediately North of Faenza - Bologna railway forced us to withdraw. South of Route 9 German arty, mortar and MGs active.

To West normal patrol activity. MG duels occurred SW of Tossignano.

Weather : Cloudy with much fog.

FIFTH ARMY

Aggressive Fifth Army patrols probing positions 12 Feb met strong defensive fires along front as German troops remained sensitive to our recce parties. Counter attacks against our troops in Serchio valley continued. Sporadic harassing arty and mortar fire fell in forward areas.

On right flank one of our patrols operating NW of M. Grande 0032 encountered enemy MG, mortar and arty fire as they approached German outposts. To West of M. Grande, our arty and mortars engaged German dugouts and working parties with good results. South of Bologna the enemy continued his use of smoke, possibly to shield movement, digging parties and laying of mines.

In Serchio Valley our troops repulsed several enemy counter attacks.

In Coastal sector patrols were active with some hostile arty and mortar fire falling on our positions.

Weather: Broken clouds, fair to good visibility.

Fifth Army

Enemy Aggressiveness continued in Fifth Army coastal sector where repeated counterattacks launched against our positions. Enemy alert to our patrol thrusts along entire front and numerous contacts made.

On right flnak dusk to dawn patrols probed enemy positions. Our arty effectively engaged enemy installations and guns and a mule pack train was taken under fire by our mortars.

In central sector our raiding parties and patrols contacted enemy at scattered points and several firefights ensued. One raiding party penetrated about two miles North of Baccanello 9329 where they encountered minefields and heavy defensive fire from enemy. Intermittent rain turning to snow augmented difficulties of our patrols travelling over almost impassable mountain trails.

Operating deep in enmy territory strong American raiding party made two day patrol to Alpe Tre Potenze 2908. They raided enemy-occupied buildings, destroyed several thousand rounds of small arms ammunition and other supplies and took a number of P/W's.

In Serchio valley enemy is making a determined effort to retain control of the Lama Di Sotto ridge 1908, and principal action E of Serchio has been in this area. Several firefights also developed from patrol encounters W of river.

In coastal area our troops repulsed two counterattacks near M. Cauala (area 9696). E of Route One our troops have consolidated their positions about a kilometer S of Strettoia 9496. After repelling several counterattacks N of Fiume La Foce W of Route One our troops received heavy arty and mortar fire and withdrew to stronger defensive positions S of river.

Eighth Army

In Eighth Army coastal sector German patrol to S bank of Po Di Primaro River near Passo Di Primaro 6155 was repulsed. To W our mortars shot up enemy MP position on N bank of Po Di Primaro at bend (area 5855). We engaged in firefight with enemy patrol on E bank of Canale Naviglio S of Alfonsine.

Enemy blew more gaps in Senio E floodbank N of Cotignola. These gaps are thought to be designed to flood fields on our side of river when it is in flood. Some gaps covered by enemy fire now used by German patrols.

To SW our arty and mortars engaged enemy movement along W river bank.

Patrols on both sides active on remainder of front.

Weather: Cloudy periods of rain or sleet. Outlook: Cloudy with wintry showers.

Distribution: Normal.

EIGHTH ARMY

No change in Eighth Army coastal sector. Our mortars harassed enemy working party East of Alfonsine.

One of our fighting patrols to East bank of Senio river South of Fusignano was engaged by enemy party with hand grenades from their dug-in positions in the dyke bank. Patrol leader opened up on Germans with tommy gun and his men threw grenades forcing enemy to evacuate his position.

Preceded by heavy mortar concentration enemy attacked one of our strongpoints on East bank of Senio, North of S. Polito 3540, but was repulsed. Our mortars silenced enemy fire across river North of Cotignola. Patrols of both sides active along Senio both sides of Route 9. Our mortars and arty engaged enemy working party along river. German patrol crossed river Northwest of Cuffiano 2023 but driven off by our fire. One of our patrols to Senio SE of Riolo dei Bagni 1823 encountered booby-traps.

Farther West our own and enemy patrols active. Arty duel occurred in mountains Southeast of Tossignano 0823.

Weather : Intermittent rain or drizzle.

FIFTH ARMY

Action on Fifth Army front 10 Feb concentrated in coastal sector and in area of Serchio valley, where our troops repulsed several enemy counter attacks. Elsewhere on the front patrols active. Two of our raiding parties penetrated deep into German-held territory.

On right flank one of our patrols captured prisoner in a fire fight mile and a half West of M. Belmonte 9032.

Farther West our raiding parties active. One party operating North of Affrico 6221 knocked out enemy MG, while another party probed deep into enemy territory, two miles Southwest of M. Belvedere 5217, destroyed two MGs and killed six enemy soldiers. Third party captured PWs and inflicted casualties on enemy in a raid on German-held houses mile SW of Alpe Tre Potenze 2908.

East of Serchio river and North of Castelvecchio 1605 our forces broke up three enemy counter attacks, two of which were in estimated-company strength. A fourth counter attacking force, forming to NE of Castelvecchio, dispersed by our arty fire.

In coastal sector our troops repulsed enemy counter attack South of Magro canal (area 9197). Hostile arty fire was heavy more than 800 rounds falling on forward positions.

Weather : Overcast skies : some snow night of 9/10 Feb.

DISTRIBUTION:

Standard.

Fifth Army

Jabbing at enemy in various sectors along entire front Fifth Army troops found Germans alert to our patrols and encountered increased opposition.

Numerous contacts made and several counterattacks repulsed. Increased enemy arty was general.

SE and S of Bologna our arty pounded enemy positions and our troops engaged enemy in mortar duels in vicinity of M. Castellaro (area 9833) and M. Cerere 0031. Air OPs directed fire on number of enemy guns and troop concentrations on 8 Feb. More than 270 rounds of enemy arty fell in forward areas along Route 65 in period ending daylight 9 Feb. Patrolling by both sides continued throughout sector.

Strong enemy pressure encountered in Serchio Valley area where number of counterattacks repulsed by our troops. An attack of Battalion strength was broken up by arty fire in vicinity of Lama 1908.

In coastal area counterattacks were stopped at Strettoia 9496 and North of Fiume La Foce 9095.

Eighth Army

No activity in Eighth Army coastal sector. Our mortars dispersed enemy working parties on N bank of Reno river NW of S. Alberto 5352. Our patrols active E of Fosso Vetro.

To SW our mortars and arty harassed German working parties E of Alfonsine. In same area a cow entered a booby trapped house which blew up. Germans set off many flares E of Lugo. Patrols of both sides active along Senio. Our positions N of Route 9 received very heavy shelling and mortaring.

S of Route 9 one of our raiding parties took some Pws. Enemy fighting patrols probed our positions E of Rivola 1421 but driven off by our arty fire. In hills NW of Tossignano 0823 enemy raiding party attacked strongpoint house but repulsed after fire fight. Enemy suffered some casualties.

Weather : Fair to cloudy, hazy in battle area. Outlook : Fair.

DISTRIBUTION : Normal.

EIGHTH ARMY

In Eighth Army coastal sector enemy patrols probed our positions on South bank of Po di Primaro river bend (area 6356) and also farther West on North bank of Po di Primaro North of MANDRIOLE 5852. Both patrols repulsed. Our mortars and MGs harassed German working party SE of ALFONSINE.

One of our patrols to Senio river South of FUSIGNANO 3844 took PWs. Our arty engaged enemy movement area COTIGNOLA. One of our patrols to Senio West of S. SEVERO 3233 contacted enemy. Our arty and mortars engaged enemy activity on West bank of river area FELISIO 3031.

Immediately South of Route 9 one of our patrols to Senio took some PWs. Another patrol crossed river South of BIANCANIGO 2326 and clashed with German patrol by light of burning haystacks before withdrawing to East bank. Patrols of both sides active along Senio and in hills farther West. We received mortaring SE of S. CLEMENTE 9928.

Weather : Fair to cloudy. Outlook fair.

FIFTH ARMY

Approx fifteen of enemy party of thirty were killed or wounded by an ambush patrol which surprised enemy group 1000 yds NE of CASTELNUOVO 6622. Our patrol suffered four casualties in this action.

North of GALLICANO in Serchio valley our troops still engaged against enemy counterattacking force of approx one company. Counterattack, launched morning 8 Feb, took place a few hundred yards North of hamlet of BARCA (area 1505).

In coastal sector morning 8 Feb after advancing against light opposition our patrols remained on positions 300 to 2000 yds in advance of our front lines. Our troops were meeting some SA, MG and mortar fire, though hostile arty fire was relatively light.

Weather : Good visibility, higher temperatures, no precipitation.

DISTRIBUTION: Standard.

Fifth Army.

Stiff enemy opposition encountered by Fifth Army troops SE of BOLOGNA and in SERCHIO valley. Recent gains in these sectors defended and consolidated.

On right flank our patrols continued to feel out enemy positions and our tanks effectively engaged enemy machine-gun emplacements. On afternoon of 6 Feb our troops reached base of CUMULA Ridge (area 9432) where they encountered extensive minefields and were halted by machine-gun and machine pistol fire by enemy entrenched in rocks and caves on steep slopes of ridge.

In central sector there was sporadic enemy shelling of forward areas in vicinity of Route 65 the night of 6/7 Feb. In one of heaviest enemy shellings of recent weeks a total of 1360 rounds of enemy arty fell in this area between afternoon of 5 Feb and early next morning.

In SERCHIO valley our troops took COLLE, small hamlet quarter mile S of TREPIDOLO 1706 against some resistance afternoon of 6 Feb. Counterattck about a mile North of CASTELVECCHIO 1605 resulted in our troops losing some ground which they later regained. Several other enemy attacks were repulsed. Enemy arty and mortar fire fell on forward positions.

Eighth Army.

In Eighth Army coastal sector strong enemy raiding party attacked outpost house half a mile North of CASA BORSETTI 6252 with bazookas and flamethrowers but was driven back. Enemy patrols active East of MOLSO VECCHIO.

Our fighting patrols active on East bank of SERCHIO opposite LUCO 3338. Germans now starting to blow ships in SERCHIO floodbank. Enemy patrols which probed our positions on East bank of SERCHIO in area of CORTINORO driven off. Our mortars dispersed enemy working parties near FALLILIO 3031.

Patrols report SERCHIO River rising as snow thaws. Patrols of both sides active along river. One of our fighting patrols probed enemy positions and encountered mines opposite RIOLO DEI BAGNI 1825.

Further West our patrols active. Arty duels occurred in mountains NW of CASTIGLIONE 0625.

Eighth Army

No change in Eighth Army coastal sector. Enemy patrol broken up on North bank of R Di Primaro river North of Mandriole 5852. Another German patrol probed our positions East of Fosso Vetro but repulsed.

One of our fighting patrols to Senio NE of S. Pelito 3540 encountered heavy MG fire and returned. To SW patrols of both sides active along Senio. Our mortars engaged Germans in boats on the river at Cotignola and also dispersed Germans on river bank one mile SW of here.

Immediately South of reoute 9 one of our patrols drew MG fire. Farther SW mortar and arty duels occurred across Senio. Our patrols active area Cuffiano. Enemy patrols probed our positions along Senio NW of Casola Valsenio 1017 but driven back by our fire. Our mortars dispersed enemy working party on South bank of Santerno river NW of Tossignano 0825. Farther West in hills our patrols active.

Weather: Cloudy with fog. Outlook fair.

Fifth Army

Fighting continued on Fifth Army front 6 Feb as our troops held positions won in early stages of limited objective attack launched on right flank afternoon of 5 Feb.

Jumping off after short arty preparation we met enemy arty, MG and mortar fire as gains were made up to five and six hundred yards against stiff opposition.

Area of Livergnano 8729 and route 65 heavily shelled by enemy, more than 400 rounds of arty and 200 rounds of mortar fire falling in 2 hours and 40 minute period. SE of Castglin 7628 enemy patrol was repulsed. Some rounds of 170 mm fire, first in several weeks, fell near Porretta 5812.

One of our raiding parties attacking a German position on M Spigolino 4309 captured enemy MG and returned to their positions with it.

Our troops continued to make limited advances East of Serchio river moving forward against light opposition. Montebono 2106 and Renaiao 2208 East of Serchio river were occupied. Limited advances also made NE of Castelvecchio 1605.

Elsewhere on front patrols maintained contact against enemy. Slight increases in hostile arty fire noted on extreme right flank and in coastal sector.

Weather: Fair visibility. No precipitation.

Fifth Army

Mile Fifth Army patrols encountered slightly increased enemy resistance along most sectors of the front. Coordinated advances by our troops on both sides of the Serchio River to improve positions flanking the valley.

In right sector one of our combat patrols penetrated into enemy territory and engaged enemy force. Enemy was repulsed near Frassineto 0131.

In central sector enemy was sensitive to our patrols and there was also some increase in enemy patrolling and arty.

In Serchio Valley East of river our troops occupied Castelvecchio 1505 evening 4 Feb and moved on to take Albiano 1705 against some small arms opposition. Continuing advance morning 5 February our troops recaptured Lund Di Sotto 1906 against some opposition and other elements occupied Hill 916/1807.

East of Serchio River we recaptured Colomini 1202 and town was cleared in early morning 5 Feb. Elements moved forward about a mile North of Sillicano against small arms and machine gun fire.

In coastal sector several patrol firefights occurred near Route One North and Northeast of Querceta 9594.

Eighth Army

No activity in 8 Army coastal sector. Our Arty engaged enemy outposts along Senio River S of Alfonsine. One of our patrols contacted enemy on East bank of river opposite Gotti Nolo 3934.

No S? normal patrol activity along Senio. Patrols of both sides active South of Bizzocanigo 2326. German patrol approached one of our outposts East of Rivola 1421 but driven back by our fire.

Further East in mountains East of S Clemente 9926 one of our fighting patrols encountered strong opposition and found area mined.

Weather: Cloudy with widespread mist and fog. Outlook: No change.

Eighth Army

No change in Eighth Army coastal sector. Our troops attacked a much contested strongpoint house on East Bank of Fosso Vetro. Despite heavy enemy mortar and MG fire we forced an entrance. House was booby trapped and blew up and we subsequently withdrew.

One of our fighting patrols engaged enemy working party West of Conventello 4847 with grenades and Piat. Another fighting patrol to railway crossing over Fosso Vetro two miles S.W of Conventello set fire to enemy strongpoint house and silenced MG post. We took PWs.

Patrols of both sides active along Senio. Immediately North of Route 9 our mortars harassed enemy working parties on river bank. Normal patrol activity South of Route 9. Patrols clashed on South side of Senio opposite Cuffiano and firefight ensued.

Farther West in hills German patrols active and attempted to probe our lines but driven off by S.A and arty fire.

Fifth Army

Strong Fifth Army raiding parties and patrols along the front met considerable enemy resistance. Casualties caused on both sides and several enemy PWs taken.

Numerous patrols active SE and South of Bologna and several firefights occurred in this area. Enemy arty light and scattered.

On left flank our troops occupied Gallicano 1403 in area which enemy captured during counter-attack in the Serchio Valley last December. Other slight advances were made astride the Serchio river.

Weather: Mist intermittently turning to rain made visibility poor but in some sectors snow remains waist deep.

Fifth Army

Numerous patrol contacts, many of which resulted in fire fights, again characterised action on Fifth Army front 3 Feb.

In central and coastal sectors, slight increase in enemy arty fire was noted. Several concentrations of from 25 to 40 rounds fell in forward areas. Fierce defence fire from small arms and mortars was received by our troops operating approximately mile and a half Northeast of Mount Belmonte 9032. Farther West, enemy reacted strongly to one of our raiding parties which approached hill 278 (area 7528).

In area of Mount Palazzo 6321, an enemy patrol was driven off by our troops. German snipers were active near Gallicano 1405. Our arty engaged enemy troop concentrations and gun batteries with good results.

Weather: some rain night of 2/3 Feb, poor visibility.

Eighth Army

No change on Eighth Army coastal sector. Preceded by heavy arty barrage enemy attacked simultaneously several of our outpost houses East of Fosso Vetro. Supported by our arty troops repulsed all attacks except in one case when enemy captured house, subsequently recaptured. Later Germans renewed attacks on same positions but again driven off with casualties.

One of our fighting patrols cut way through fire half mile North of S. Polito 3540, drew German MG fire, and withdrew. To Southwest along Senio our aggressive patrolling provoked considerable enemy arty fire.

Patrols of both sides active South of Route 9. Farther West in hills patrol clashes on lateral road North of Tossignano 0823. We took some PWs and inflicted casualties. Our arty broke up strong German party mile and half East of S. Clemente 9926.

Weather: Cloudy with intermittent light rain or drizzle. Poor visibility expected. Thaw continues.

Fifth Army

Heavy defensive fire from well fortified German positions was encountered by Fifth Army patrols 1 Feb as they tested the strength of enemy installations. Nearly all our patrols drew hostile small arms and mortar fire or engaged enemy in firefights as they approached German dugouts and strongpoints.

German self-propelled arty shelled area of Livergnano 6729 and Route 65 near M Castellazzo (area 8551) one of our patrols killed three Germans and captured prisoner after fierce clash in which hand to hand fighting took place. Two of our men were wounded.

Enemy patrol attacking with grenades was driven off near M Castello (area 5719) and long range German machine gun fire was received by our recce parties operating SW of M Belvedere 5217. Between highway and Reno River (area 6620) enemy arty fire decreased slightly.

In coastal sector one of our patrols crossed the Cinquale Canal and clashed with enemy force approximately two miles North of Forte Dei Marmi 9393.

Weather: Poor visibility, slight precipitation in some sectors.

Eighth Army

No activity in 8 Army coastal sector. Enemy patrol to one of our outposts on North bank of Canale Bonifica two miles SW of S Alberto driven off. Our mortars active and engaged enemy along Fosso Vetro.

Normal patrol activity along Senio. Patrol clash on East bank of river West of Pagnacavallo resulted in fire fight after which Germans withdrew.

To Southwest our troops contacted enemy along East floodbank of Senio. Our mortars harassed enemy working party East of Solarolo 2852. German patrol crossed river this area but driven back.

Aggressive patrolling continues South of Route 9. Our arty very active and scored direct hits on targets. German patrol tried to cross river half a mile Northeast of Rivola 1421 was broken up and withdrew. German patrols probing our positions South of Rivola also repulsed.

Arty and mortar duels occurred SE of Tossignano 0823. German patrol probing towards our positions Pt 307 0822 South of Tossignano driven off. One mile NW of Tossignano patrols clashed and grenade duel occurred. Enemy suffered casualties. Farther NW patrols of both sides active.

Weather: Fair to cloudy, outlook no change.

Eighth Army

No activity in coastal sector.

We received some mortaring on shore of Valli di Comacchio North of Mandriole 5852. Supported by artillery our infantry and tanks attacked enemy strongpoint house on East bank of Fosso Vetro two miles North of Conventello 4847 but forced to withdraw by very heavy enemy arty concentration.

German fighting patrol which approached house on East bank of Senio one mile NE of Fusignano compelled to withdraw by our fire. Patrols active both sides of Senio. Our arty engaged enemy working parties on West bank SW of Cotignola. One of our patrols found houses demolished on East bank of Senio opposite Felisio 3031 then withdrew in face of heavy MG fire.

South of Route 9 German patrol to East bank of Senio about one mile NE of Cuffiano 2023 broken up by our arty. Sharp patrol clashes occurred South of Isola 1622. Both sides suffered casualties. Further NW patrols of both sides active.

Fifth Army

Patrols probing German defenses 31 Jan received heavy SA, MG and mortar fire as enemy remained alert and reacted strongly against our Recce parties. Numerous firefights reported along entire front. Sporadic harassing enemy arty fire fell in forward areas.

In Right sector one of our raiding parties operating North of Canovetta 9331 met heavy MG and rifle grenade fire which forced them to withdraw after an hour's firefight with enemy. Our arty reported hits on enemy occupied houses and on four gun battery of German arty.

FurtherWest one of our patrols suffered casualties from German "schu" mines as they clashed with enemy force 1000 yds SE of Casaglia 7828.

Large combat patrol penetrated deep into German lines approximately mile and half East of M. Rondinaio 2608, clashed with enemy in fierce five hour firefight, captured six prisoners and inflicted casualties on enemy force. Our patrol returned without loss of a man.

German aircraft dropped bombs in Piandisetta 7522 area. No damage or casualties.

Weather: Scattered clouds, fair visibility, no precipitation.

DISTRIBUTION: Normal.

Fifth Army

Although patrol contacts were slight along Fifth Army front, arty exchanges increased and enemy aircraft were active.

Nine enemy planes were engaged by our fighters South of BOLOGNA early evening 29 January. One enemy craft destroyed, another probably destroyed and a third was damaged. The German planes broke formation North of our frontlines, enter d Fifth Army area in groups of two and three, dropped bombs and strafed at scattered points. Our antiaircraft guns scored hits on several of the planes and one was probably destroyed. No casualties or damage reported. Flares were released over LUCHON but no hostile action occurred.

On right flank of Fifth Army sector several of our patrols received enemy mortar and machinegun fire but other patrols made no enemy contact.

In central sector there was limited patrolling and enemy maintained unusually heavy curtain of harassing fire including small arms, machineguns and mortars. Perfect visibility enabled our arty to knock out several enemy guns and to engage effectively German fortifications and troop concentrations. A German machinegun nest in house in Mt BELVENTE area destroyed with direct hit by our arty.

Badly wounded South African soldier found by one of our patrols reported he had been abandoned in the snow by German ambush patrol that had captured other members of his small party.

In coastal sector our patrols particularly active and encountered considerable enemy fire.

Eighth Army

No activity in Eighth Army coastal sector.

Enemy fighting patrol again attacked one of our strongpoints on South bank of RENO River 1½ miles Northwest of S. ALBERTO. We were forced to withdraw but later recaptured strongpoint. Patrol clash occurred on North bank of CANALE DI BONIFICA Southwest of S. ALBERTO.

Farther Southwest patrols of both sides active along RENO. Enemy patrol crossed river about one mile North of COTIGNOLA but dispersed by our mortars. Our patrols report BORGO hamlet (area 3654) on East bank of RENO opposite COTIGNOLA demolished. To Southwest again our mortars engaged enemy working parties along West river bank. Our arty engaged enemy vehicles area Route 9 and inflicted casualties. Strong German raid on strongpoint on East bank of RENO one mile Northeast of CUFFIANO 2023 broken up by our arty and small arms fire.

Brisk patrol clashes occurred South of river near RIVOLA 1421. Enemy suffered some casualties. Large explosions heard this area.

Italian patriots shot up German party on West bank of SANTERNO River opposite BORGO TOSSIGNANO 0723. Enemy aircraft dropped bombs on our positions Southwest of here but did no damage.

In mountains to Northwest sharp patrol clash occurred in which enemy suffered casualties.

Weather fair to cloudy; light snow showers on Appenines.

DISTRIBUTION: Normal.

Eighth Army

No activity in Eighth Army coastal sector. Enemy patrol infiltrated into our positions on South bank Reno River one and half miles West of S Alberto 5352 but driven off.

To SW our patrols probed toward Fosso Vetro drew enemy fire and retired. Patrol to East bank of Senio opposite Fusignano encountered heavy German MG fire and withdrew. Further SW patrols of both sides active along Senio.

Immediately North of Route 9 our mortars engaged enemy vehicles on West bank of river. Our patrols to Route 9 bridge over Senio and South of Route 9 fired on by Germans. Our mortars harassed enemy working parties on West bank.

Further West German patrol tried to cross river without success. Our patrols active in snow-covered mountain sector.

Germans again resorting to both loud speakers and leaflet propaganda in Italian aimed at Italian troops on Eighth Army front in attempt to persuade them to desert. Effect on Italian troops nil.

Weather: Mainly fair. Outlook fair in North some snow showers in South.

Fifth Army

Bright moonlight and crusted snow which made any movement easily seen or heard restricted operations on Fifth Army front 29 Jan. A few German aircraft taking advantage of moonlight dropped bombs at scattered points.

An 18-man enemy raiding party which attempted to infiltrate our lines in right sector was ambushed and believed to have been almost wiped out. The Germans, utilizing route used by one of our patrols which killed and captured a large number of Germans night 27/28 Jan, were allowed to come within few yards of our positions and then were engaged with SA, mortars, MGs and arty.

Enemy fired propaganda leaflets entitled "How to become ill in order to be evacuated" in area of M. Belmonte 9032. Hostile arty fire fell in forward areas near Route 65. Patrol clashes took place in area of M Belvedere 5217, where we captured prisoners, and North of Gallicano 1403.

Enemy aircraft dropped bombs in right sector near Piencaldoli 9417 San Benedetto di Querceto 9021 and Monzuno 8224.

In coastal sector single German plane dropped anti-personnel mines near Pietragunta 9792. No damage or casualties reported.

Weather: Fair visibility, no precipitation.

Fifth Army

Fifth Army patrols contacted enemy at many points along entire front and engaged in several skirmishes with enemy parties. Increased enemy activity noted in some areas.

On right flank patrol contacts were general. One clash occurred on North side of the L Belmonte Ridge 9032. South of Bologna a volunteer combat patrol of 351 Inf Regt raided enemy outpost, killed large number of Germans and took three PWs. With the objective isolated by curtain of arty fire the patrol closed in under a rolling barrage. After rushing the objective, despite deep snow and fire from two MGs covering the approaches, members of the patrol tossed at least thirty hand grenades through doors and windows of a house being used as a strongpoint. One MG was knocked out and crew of the other quickly overpowered and captured. Sn fire continued from bunkers beneath another house. First Lieutenant Ralph Decker of Junction City, Kansas, leader of patrol, placed large demolition charge in the house and few seconds later building blew up, destroying the bunkers and Germans.

On left flank enemy raid repulsed half mile NW of Gaggio Montano 5516. Patrols in Serchio Valley engaged in several firefights. On Route 1 West of Strettoja (area 9596) several patrols encountered fire from enemy machine pistols.

Eighth Army

Positions unchanged in Eighth Army coastal sector. We received some mortar fire. German patrol to South bank of Reno River some two miles West of S Alberto 5352 driven off.

To SW patrol clashes occurred East of Fosso Vetro. Both sides suffered casualties. We received heavy mortaring in this area during night. Enemy patrol probed our positions one and half miles SW of Alfonsine and driven off. Only slight enemy movement reported along Senio farther SW.

German patrol tried to reach one of our strongpoints on East bank Senio opposite Cotignola but driven off by grenades. From here to Route 9 enemy arty more active but patrols made no contact.

Immediately North of Route 9 enemy patrol to East bank of river dispersed by our arty. South of Route 9 our fighting patrols crossed Senio. Still farther SW patrol activity restricted by river flooding.

Weather: Occasional snow turning to rain later; slight improvement expected.

Distribution: Normal.

Eighth Army

Activity confined to active patrolling on whole Eighth Army front.

German patrols most active East of Fosso Vetro North of Route 16. One of our patrols this area engaged enemy strong point on West bank with piats and withdrew. South of Route 16 patrol dispersed enemy party and inflicted casualties.

One of our fighting patrols to East bank of Senio North of S Polito 3540 forced enemy party to withdraw and inflicted casualties on them. German patrol wearing white camouflage suits attacked one of our outposts on East bank of Senio same area but was repulsed with casualties.

To SW there was increased enemy arty, mortar and MG fire. Patrols of both sides active along Senio. Our mortars harassed large enemy working party behind West river dyke SE [illegible] 2852. Immediately South of Route 9 one of our patrols crossed river contacted enemy and withdrew to East bank. Fires seen in Cuffiano 2023.

Farther west in mountains enemy patrol driven off by our sa fire about two miles SE of Tossignano C823.

Weather: fine to fair. Outlook unsettled.

Fifth Army

Aggressive Fifth Army patrols operating on icy hazardous trails and across swollen mountain streams engaged enemy in several stiff fire fights 27 Jan. Two of our raiding parties met heavy defensive fire as they contacted German positions. Hostile arty and mortar fire continued.

A raider patrol near M Vano (area 9532) met strong opposition and forced to withdraw. Our arty started fires in a German ammunition dump about one mile NW of M Vano while enemy shelled Silverpano 8729 and Route 65.

Patrol clash occurred half mile East of Vergato 6925.

Farther West one of our raider patrols captured prisoners and a MG in fierce fire fight mile and half NW of M Mosca 3004 and enemy party of twenty was engaged two miles West of Frassilico 1201. Clashes also reported 500 yds North of Gallicano 1403, in the coastal sector along Route one South of Montignoso 9399, and just North of Strettoja (area 9596).

Indicative of the fierce local engagements being fought on Fifth Army front is recent action of a 350 Infantry Regiment First Lieutenant who killed four Germans and captured sixteen in breaking up enemy strongpoint retarding his platoon's advance. Hearing German voices from reverse slope of the hill he was on, the lieutenant ran several times to the crest, hurled his grenades into German trenches and then ducked below brow of hill to escape heavy return fire. After he had exhausted his supply of fifteen grenades, sixteen enemy surrendered and four were found dead in their positions.

Weather: rain and snow night of 26/27, low temperatures, fair visibility.

Distribution: Local

Fifth Army

Driving rains swept Fifth Army front 26 Jan and transformed snow into slush. Patrol contacts were light.

Prisoners of War report that Russians are being forced to construct German defense positions in some sectors of Fifth Army front.

On right flank patrols active and contacts with enemy reported. In one skirmish several enemy believed to have been killed.

In central sector American Infantrymen inflicted casualties at a roadblock and knocked out a MG in a clash North of M.FANO (area 9532) afternoon 25 Jan.

A South African patrol to FONDAZZA (area 7425) reported that the town, in heart of No Mans Land between German and Fifth Army lines, is occupied by civilians unperturbed by constant crossfire of arty.

One of our patrols probed deep into enemy territory North of PIANSINATICO 3806 without contact. However on their return trip the patrol received enemy MG fire.

In coastal area our patrols engaged in a series of firefights. Several of the clashes were at close range and hand grenades were exchanged.

Eighth Army

In Eighth Army coastal sector enemy attempt to destroy outpost on East bank of PO DI PRIMARO (see 5954) beaten off. Germans suffered some casualties.

To SW our patrols active and in contact along SENIO. Preceded by heavy arty barrage enemy attacked our outpost positions on Southern outskirts of S.POLITO 3540 but driven off. Several firefights occurred across river South of here. We received some mortar fire.

Some explosions reported area of LUGO 3536. Germans attacked one of our strong-pointsn East bank of SENIO South of COTIGNOLA but driven back to West bank and suffered casualties. Our patrols active along SENIO from here to Route 9.

Enemy working parties engaged by our arty and mortars South of Route 9. Patrols of both sides active.

In mountains farther West our aggressive patrols made no contact.

Weather: Cloudy followed by rain or drizzle; No prospect of immediate change.

DISTRIBUTION: Normal

Eighth Army

No activity in Eighth Army coastal sector.

Preceded by arty barrage German party again raided one of our strong point houses East of Fosso Vecchio two miles NE of Alfonsine but was repulsed. Enemy demolished more houses this area. S. Antonio (area 4044) a hamlet on South bank of Senio now clear.

To SW patrols of both sides active along Senio. German fighting patrol attacked one of our outposts on East bank of Senio opposite Cotignola with MGs and bazookas but was driven back to West bank.

Farther SW enemy mortaring and shelling on reduced scale.

North of Route 9 enemy working parties on Senio West bank harassed and dispersed by our mortar fire. Patrols both sides active here.

South of Route 9 enemy very sensitive to our aggressive patrolling.

Weather: snow or sleet turning to rain or light drizzle; no immediate prospect of change.

Fifth Army

Fifth Army patrols testing German defenses 25 Jan engaged in numerous fire fights as the enemy reacted strongly to our probes. Two small enemy raiding parties were beaten off in one area and hostile arty and mortar fire continued.

On right flank patrol fire fights occurred in area of M Belmonte 9032 and German prisoners were captured near San Ansano 8631.

Farther west our patrols received sa and mortar fire as they contacted enemy at many points. Patrol clashes took place at Castelnuovo 6622 M Palazzo (area 6422) and vicinity Villiana 6121. Two enemy raiding parties which raided our lines at Querciola (area 5016) were beaten off with losses to the attackers.

In coastal sector patrolling continued.

Weather: snow and rain night 24/25 Jan, fair visibility.

Fifth Army

Activity on Fifth Army front confined to continued patrolling with scattered contacts and firefights with enemy in some sectors.

On right flank one of our raiding parties vicinity M.CERERE 0031 set off a booby trap and encountered enemy MG fire. Enemy patrol near M.CUCCOLI 9032 repulsed.

In central sector our patrols made little contact. Fifth Army arty continued to hammer enemy positions.

On left flank two patrol clashes about a half mile West of SAN MARTINO 7620 resulted in casualties on both sides.

Enemy arty continued moderate to heavy in area of M.BELVEDERE 5217 and the coastal area.

Eighth Army

Positions unchanged in Eighth Army coastal sector.

German night fighting patrol attacked one of our strongpoints about two miles NE of ALFONSINE East of FOSSO VECCHIO but driven off after firefight. Enemy blew up more buildings SW of ALFONSINE. One of our fighting patrols to East bank of SENIO opposite FUSIGNANO captured some PW in face of heavy MG fire. Positions unchanged along SENIO bank.

Our fighting patrols reached bridge over SENIO two miles SW of COTIGNOLA but held up by mines, MG and mortar fire. River bank booby trapped this area. After withdrawing, our patrols heard explosions from direction of river.

To SW our mortars harassed enemy working parties along West Dyke bank.

South of Route 9 enemy rockets fell East of SENIO. One of our patrols crossed river one mile SW of BLANCANIGO 2326 but forced to withdraw to East bank. Still farther West patrol clashes occurred.

Weather: Cloudy with intermittent light sleet or snow.

Eighth Army

Positions unchanged in Eighth Army coastal sector.

Our arty scored direct hits on enemy strongpoint houses on South bank of Senio Southwest of ROSSETTA 4245. German patrol attack on one of our outpost houses on South bank of Fosso Vetro 4847 Southeast of ALFONSINE repulsed. Enemy patrol later returned to attack but again driven off by our tanks, arty and mortar fire. Again resorting to his policy of wholesale demolition of houses and property in whole ALFONSINE area, to deny our troops cover in this bitter weather, enemy destroyed several more houses Southwest of town.

Our tank gunfire forced enemy to evacuate stron point houses on West bank of Senio North of S. POLITO 3540. Our patrols found houses on Northern outskirts of S. POLITO booby trapped. When fired on by one of our Piats, houses blew up and caught fire.

Further Southwest frost conditions hampered patrol activity along Senio. Southwest of COVIGNOLA our forward positions received some rifle and grenade fire.

Immediately North of Route 9 SP guns and mortar duels occurred across river. Our patrols crossed river this area contacted enemy then withdrew to East bank. To Southwest after several attempts enemy party supported by heavy Spandau fire crossed river but retired again without aggressive action.

To West in mountains activity hampered by weather conditions.

Weather : Fair or fine turning to cloudy.

Fifth Army

Fifth Army patrols probing German positions 23 January exchanged fire with enemy at several points as they encountered strong defences. Two hostile aircraft flying singly dropped bombs along the front.

Enemy arty fire continued with a 50 round Nebelwerfer concentration reported in right sector. Firefight occurred North of Monte FANO (area 9532) and our patrols to CASA NUOVO (area 8732) and BARCHETTA (area 8832) met heavy enemy fire. An enemy aircraft dropped four bombs in LOLANO area, and another hostile aircraft dropped four bombs near RIOVEGGIO (area 7625). No reports of damage or casualties. Enemy patrol repulsed vicinity of AFFRICO 6221 and our troops involved in short firefights just West and some 2 miles Southwest of Monte Belvedere 5217. Enemy shelled area of GAGGIO MONTANO 5516, and our patrol to Monte Cardosino (area 5509) drew hostile fire.

PIETRASANTA 9792 and FORTE DEI MARMI 9293, in coastal sector, also shelled. Enemy troop concentration in house Southwest of MASSA engaged by our arty. No results observed.

Weather : Slightly overcast and fair visibility.

DISTRIBUTION: Normal.

Fifth Army

Despite extremely cold weather and continued deep snow Fifth Army patrols maintained normal activity along entire front.

In sector SE and South of Bologna several patrol clashes occurred. Our arty effectively engaged enemy positions and at one point German horse-drawn equipment and vehicles were hit. Observers reported enemy ambulance evacuating wounded. Fifth Army troops also occupied a ridge about a kilometer North of Colle Termine 7526.

On left flank our patrols particularly active and made numerous contacts with enemy. Bombiana 5818 heavily mortared by enemy. Strong enemy raid in Serchio Valley repulsed one kilometer SW of Gallicano 1403.

Enemy aircraft made scattered attack in central sector night 21 Jan. In early evening an enemy aircraft dropped bombs vicinity Castiglione 7209 and caused some casualties. Other attacks occurred near Molinetto 9228, at a point South of Firenzuola 9007 and along Route 65 North of Basso Della Radicosa 8713. No damage or casualties reported. Late evening an enemy aircraft bombed and strafed near Loiano 8624. There were eight attacks in all during the evening, each by a single aircraft. One enemy plane reported probably destroyed.

Eighth Army

No activity in Eighth Army coastal sector.

An enemy aircraft bombed our forward positions East of Alfonsine but caused no casualties or damage.

Our fighting patrols probed to East bank of Senio South of Fusignano, made no contact and found unoccupied German positions.

To SW German Recce patrols probed East of river but driven back after firefight. Night 21/22 Jan enemy MG and SA fire very active area S.Polito 3540.

Farther South our accurate fire dispersed enemy patrol East of Senio. Very slight enemy reaction to our aggressive patrolling along river North of Route 9.

Immediately South of Route 9 our patrols crossed river and found Germans very alert with their positions well covered by MG fire. To SW German patrol crossed river and forced us to withdraw from outpost position. On being engaged by our mortar and arty fire enemy evacuated position.

Farther West patrols both sides active.

Weather: Scattered patches of clouds, prospect fine.

Eighth Army

Positions unchanged in Eighth Army coastal sector.

Preceded by heavy enemy arty barrage strong German raiding party attacked from Fosso Vetro and penetrated our positions 2½ miles Northeast of Alfonsine afternoon 20 Jan but were forced back to original positions.

To Southwest patrols active both sides along Senio. Our forward positions North of Cotignola received fairly heavy mortar fire night 20/21 Jan. One of our fighting patrols to Senio dyke bank opposite Cotignola engaged in fire fight with enemy across river then withdrew.

Patrols both sides active along Senio North and South of Route 9. Farther west in mountains bad weather conditions continue to hamper operations.

Weather: fine or fair.

Fifth Army

Fifth Army patrols, operating in deep snow, reported only light contact with enemy 21 Jan.

Our arty engaged a column of German motor transport with good results in right sector. Hostile artillery and mortar fire continued, two fairly heavy concentrations being reported.

On right flank enemy patrol activity increased slightly. An arty concentrations of 70 rounds received in one hour vicinity West of Molinetto 9228. An area South of Casaglia 7028 was shelled and mortared by enemy.

In central and coastal sectors some long range machine gun fire was directed against our troops, and patrol clashes were reported a half mile Northwest of Vergenoli 1002, and near Mt Canala 9696.

Weather: good visibility, some snow night of 20/21 Jan.

FIFTH Army

FIFTH Army raiding parties patrolling along the front encountered only slight enemy activity although fire fights occurred at scattered points. There was a general decrease in enemy arty.

In the M. BELVEDERE sector numerous patrols were active but reported few contacts. One of our reconnaissance patrols received sporadic MG and mortar fire about 800 yds NE of M. FANO (area 9532).

In central sector an enemy patrol which attacked one of our battalion outposts was repulsed. Little enemy arty received in this area.

On left flank one of our patrols engaged enemy in fire fight near PLANSINATICO 3808 and inflicted some casualties. Another FIFTH Army patrol scaled a high ridge West of SPIGOLINO 4309 and made contact with the enemy.

Reports received of small enemy patrols dressed in British winter clothing attempting to pass through our positions. In one case ruse was detected and enemy patrol shot up.

EIGHTH Army

In EIGHTH Army coastal sector our tanks shot up enemy strongpoint house area 5955 on South bank of PO DI PRIOLO, canalised continuation of RENO River. Enemy compelled to withdraw and our troops occupied house.

Further inland patrols both sides active.

Night 19/20 Jan German fighting patrol infiltrated into our positions SE of ALFONSINE but driven back by drum. Our arty harassed German working parties on West bank of FOSSO VETRO this area. Positions substantially unchanged along SENIO bend.

Enemy patrols crossed river SE of COTIGNOLA but forced to withdraw. Further SW our snipers and mortars harassed enemy working parties along SENIO night 19/20 Jan. Sniper dispersed German working party single handed.

In patrol clash immediately South of Route 9 enemy patrol forced to withdraw to West bank of SENIO after sharp fire fight. One of our raiding parties crossed river South of BIANCANICO 2326 and cleared enemy from outpost house. Some patrol found neighbouring house booby trapped.

Strong German fighting patrol crossed SENIO NE of CUFFIANO 2023 and attacked outpost house overlooking river. After sharp hand to hand fighting Germans driven back to West bank. Afternoon 19 Jan our troops captured group of German strongpoint houses on South bank of river one mile SW of CUFFIANO against strong mortar and MG opposition. Our troops were supported by Desert Air Force who scored hits on objective. Enemy attempt to counterattack houses from across river halted and broken up at waters edge by our arty. Germans lost some PW and suffered casualties.

Further West in mountains bad visibility restricted operations.

Weather: Fair periods and outlook mainly fair.

Eighth Army

No activity in Eighth Army coastal sector.

We attacked enemy strong point houses (area 4951) in angle of Canale Bonifica and Canale Naviglio. Enemy suffered some casualties.

Repeating infiltration tactics enemy penetrated into woods across Senio River 1½ miles Northeast of Fusignano but were cleared up and suffered casualties.

Canadian infantry supported by tanks captured enemy strong point buildings on South bank of Senio opposite Fusignano. Germans then threw grenades into captured positions and forced us to withdraw from forward houses. Later we recaptured all buildings.

To Southwest German patrol crossed river but after fire fight was forced to withdraw. Farther Southwest enemy, taking advantage of mist, intensified digging activity along Senio.

Enemy very sensitive North of Route 9. Patrol to East bank of river drew spandau fire and was heavily mortared. Immediately South of Route 9 we received enemy shelling.

Farther Southwest patrols both sides active along Senio. Our patrols to river in area of Rialo Dei Pagni 1823 engaged enemy on North bank with small arms fire and grenades. Two German patrols infiltrated across Senio Southwest of Rialo Dei Pagni but driven back to North bank after brisk fire fight. We received some Nebelwerfer fire and shelling this area.

Weather: fair.

Fifth Army

Rain and snow, turning into slush, hampered movement on Fifth Army front 19 January as activity dropped to lowest point in several days. Patrols reported little contact with enemy.

Hostile patrol raid vicinity Mt Grande repulsed. Gaggio Montano (5516) area mortared by enemy.

Patrol fire fights occurred approximately one mile West of Mt Belvedere 5217, two to three miles Southeast of Abetone 3311 and just Northeast of Castelvecchio 1605 in Serchio River valley.

In coastal sector harassing artillery fire increased slightly. Enemy forced to abandon position in vicinity of M Cerreta 9698 when engaged by our mortars and machine guns.

Fifth Army

Fifth Army combat patrols continued their aggressive probing of enemy positions and sparred with enemy parties in scattered engagements along the front. Light defensive arty fire received.

On right flank our patrols particularly active vicinity M.Grande where little enemy contact reported.

In central sector considerable local movement observed behind German lines. Enemy using one-horse sleighs and bobsleds to supply his troops on the snow - covered forward positions.

An American patrol pushed North towards Pergochia Di Vignale 9632 and received heavy fire from a church which enemy using as strongpoint in the village. Our troops returned fire and withdrew after brief skirmish.

On left flank a Fifth Army patrol returning from Prada (area 5116) engaged eight-man patrol in firefight near the town and forced enemy to withdraw.

Good visibility enabled our arty to engage enemy targets effectively.

Eighth Army

No activity in Eighth Army coastal sector.

Strong enemy raiding party forced us to withdraw from outpost position on North bank of Canale Bonifica two miles West of S. Alberto. To SW our patrols cleared Germans trying to infiltrate across Fosso Vetro 4748 North of Conventello. Some PW taken.

In area Fusignano our counterattacks successful against small German Bridgehead across Senio River. Enemy driven back to his original positions.

Enemy attacks against our outposts on East bank of Senio South of Cotignola driven off. Germans suffered heavy casualties. Farther SW our mortars harassed enemy working parties along West bank of Senio.

Patrols both sides active South of Route 9.

Weather: Mainly overcast; prospects cloudy, light rain or drizzle.

Eighth Army

No activity in Eighth Army coastal sector.

In area Pusignano enemy crossed the Senio in strength of about 100 men and established small bridgehead which is being counter-attacked. We took some PWs and according to their statements inflicted some 20 casualties on one company alone of the attacking force.

North of Cotignola our outposts came under heavy mortar and machine gun fire.

Our patrols are in active South of Route 9 where they captured some enemy small arms from his abandoned outpost positions vicinity Chiarona (area 2626).

Weather: overcast; light drizzle or sleet; icy roads.

Fifth Army

On Fifth Army front 17 January largely confined to patrolling as our forces contacted enemy at scattered points. Hostile arty and mortar fire generally light.

In central sector a newly laid German minefield was located.

On right flank enemy suffered losses in two small and abortive raids North of Mt Sprduro 0327. Hostile patrol driven off near Mt Lenzola (area 0524).

Our patrols, operating deep in enemy territory on rugged 3000 and 4000 foot peaks Northeast of Serchio River, exchanged fire with German patrols a mile or so North of Cutigliano 4006 and some 2 miles Northwest of Mt Mosco 3004. Another clash took place just West of Gaggio 5516.

An enemy patrol moving along Route 1 in coastal sector driven off by our troops in firefight about 4 miles S of Massa 9000.

Weather: slight overcast, fair visibility, no precipitation.

FIFTH Army

FIFTH Army patrols probing into enemy's forward positions exchanged fire with German forces at several points along the front 16 Jan. One heavy concentration of arty and mortar fire received and a single enemy aircraft, first to appear in many days, dropped bombs in left sector.

On right flank long range MG fire received in area of M. BATTOGLIOLA 1020 and patrol clash took place near M. SPADURO.

In central sector action was brisk near SAN LORENZO 8631 in which vicinity patrols attempting to reach German positions met intense SA fire which forced them to turn back. Other clashes occurred some two miles East of M. GRANDE and at ROCCA PITIGLIANI 6020. More than 200 rounds of arty and mortar fire fell in two and one half hours vicinity BOSCHI 5818.

Bombs dropped by a single enemy aircraft vicinity BAGNI di LUCCA 2797 caused no damage or casualties.

Weather: fair visibility, snow flurries and rain.

EIGHTH Army

No change in EIGHTH Army coastal sector.

Near LEONCINI enemy working parties engaged by our arty towards evening 15 Jan. Enemy very sensitive to movement by our patrols this area.

Fighting along whole of SENIO front continues with local actions each side trying to deny to the other the use of houses near River as observation posts and strong points. Enemy uses bazookas in attempts to demolish houses occupied by our troops.

South of Route 9 deep patrol by Indian troops although ambushed at start succeeded in liquidating enemy outpost, killing 10 and capturing 10.

It can now be revealed that armoured units of the 7th Armoured Bde took part in the sweep made by Major General WHITFIELD's 56th (London) Division to clean enemy from his bridgehead over SENIO South of COTIGNOLA 3 Jan. This Brigade, at present commanded by Brigadier O.L. PRIOR - PALMER, saw distinguished service in the desert with the 7th Armoured Division, the famous "Desert Rats".

Weather: continuing cold, much ground mist, thaw conditions changed to hard frost.

H.Q. 15 ARMY GROUP
16 Jan '45

EIGHTH ARMY

Coastal sector unchanged.

Enemy raiding party area NE of Alfonsine captured outpost house from our troops but driven off with loss of dead and PWs and house recaptured.

We attacked buildings successfully about two miles NE of Fusignano against heavy opposition. NE of Lugo 3338 we improved our defence positions and patrols forced enemy to withdraw across the river. -

North of Route 9 there was light shelling and mortaring both sides and patrols were engaged by enemy on South bank of river. Enemy activity silenced by heavy mortar fire.

In hills South of Route 9 activity confined to patrolling by our troops.

Weather: Cloudy with rain, sleet or snow.

FIFTH ARMY

Rising temperatures and clearing skies brought some relief to snow-bound Fifth Army troops 15 Jan, although snow lies deep along centre and right sectors as result of the recent storm. During heighth of snow storm more than 12 inches fell in less than 24 hours. Drifts more than 2-feet deep restricted patrolling.

On right flank several patrol clashes occurred causing some enemy casualties. Enemy artillery and mortar fire decreased in the area.

In central sector there was marked increased in enemy artillery, mortar and machine-gun fire.. Enemy patrol activity confined largely to reaction against our patrols. One enemy party crossed Reno river 4 kilometers South of Vergato 7025 but withdrew after exchanging long-range small arms fire with our outposts.

On left flank a number of our patrols were active but little contact reported. Considerable enemy activity observed and there was an increase in enemy artillery fire.

Fifth Army

Operations on Fifth Army front 14 Jan severely restricted as snow, poor visibility and low temperatures prevented any extensive movement. Our patrols contacted enemy at scattered points and some long range MG fire fell in forward areas. Enemy continued to follow an inconsistent and haphazard pattern in the volume and caliber of his arty fire which was generally light and harassing in nature 14 Jan. No one caliber of shell is heavily predominant in hostile fire although those of 88 mm, 105 mm, 150 mm and 170 mm are most often received. In addition to their own arty, German forces opposing Fifth Army still resorting in a minor degree to use of a variety of foreign arty pieces which include some of Italian, Russian, Czech and French origin.

On right flank S.A. fire repulsed hostile patrols in several areas. Near M Spaduro a German patrol driven off and our arty engaged enemy movement.

In central and left sectors some harassing MG fire received and an enemy patrol of approx 20 men beaten off about two miles West of Barga 1804.

Weather: Snow flurries and light rain, poor visibility.

Eighth Army

Enemy persistence in establishing outposts South of Reno near coast results every day in loss of further PWs. Further enemy raids East of Senio are costing him dear in dead and PWs.

After one such engagement East of Pusignano night 11/12 Jan our outposts found 30 enemy dead next morning.

One enemy party attempting to lay mines East of the Senio near Route 9 driven off by our MG fire and several men captured.

A Polish patrol penetrated 1000 yds beyond Senio to forward slopes of M Chebbio 2024 and returned without casualties after engaging enemy.

Weather: Thaw conditions followed by heavy rains transforming roads into quagmires; fair periods, some rain.

Distribution: Normal.

Eighth Army

Further details of successful Canadian clearing up operation South of the Reno near coast show that enemy company position taken completely by surprise. Troopers of the Governor General's Horseguards assisted by men of local partisan band were able to eliminate whole of company post South of River, troops of which seemed but little trained for active operations after their long spell of coast defence in Norway.

Along whole length of Senio enemy maintains his policy of active defence and has established outposts on East bank in area Fusignano and North of Route 9. Meanwhile his troops are busy elaborating defences in depth. Forced labour of every nationality being used even on Senio frontline works.

Weather: snow conditions followed by rain, and frozen roads.

Fifth Army

With the most severe snowstorm of the winter sweeping high Appenines, activity on Fifth Army front limited generally to security patrolling. The fresh snowfall, totalling from six to eight inches in less than 12 hours, increased depth of snow to average of 12 to 14 inches in most areas. Storm expected to continue for several days. Frontline infantrymen have revetted their foxholes with sandbags and wood to prevent their icy ditches from caving in under pressure of heavy drifts. Wherever possible reserve troops took protection in shell scarred farmhouses defiladed from enemy or huddled in mountain caves.

In right sector one Fifth Army patrol found Furma. (area 1220) clear but received machinegun fire from high ground North of town. A 48 hour patrol probed slopes of Vens Del Gesso 1121 without contacting enemy.

German patrol passed through our outposts one mile North of M Grande night 12 January but enemy withdrew after firefight at close range.

In central sector harassing arty and mortar fire received. Strong enemy combat patrol repulsed with casualties West of Route 65.

On left flank normal enemy arty received and several German patrols repulsed with casualties to enemy.

Distribution: Normal.

Fifth Army.

Aggressive Fifth Army patrols, probing German positions night 11/12 Jan, encountered fierce opposition at two points in central sector and engaged enemy forces in firefights at several other places along the front. Moderately heavy arty and mortar fire fell in our forward areas.

On right flank of Fifth Army front hostile force in La Casetta 0425 reacted strongly to our patrol in that area and laid down heavy fire. Light contact with enemy occurred at several other points in the sector. Fontanelice 0521 shelled by Germans and mortar fire increased in Mt.Grande area.

Combat patrols of our troops attacking Canovetta (area 0732) and San Ansano 8631 met intense rifle, grenade and mortar fire from enemy forces in the two towns. After exchange of fire, patrol attacking Canovetta withdrew under cover of arty barrage. In San Ansano action mortar fire was laid down on our troops when they attempted to cross Savena River and forced them to return to own lines.

Field Marshal Albert Kesselring, for long Commander of German Armies in Italy and rumored to have been ill or wounded, apparently is again in active command of his troops. German order of day for New Year's day, captured on the Italian front, signed by Kesselring, announces "Am leading you in the battle of 1945."

Weather: Overcast skies, fair visibility.

Eighth Army.

After several days of inactivity an engagement in the Comacchio Spit resulted in capture of over 40 PW's. In addition 20 enemy dead were counted. Enemy fighting patrols unusually active night 11/12 Jan in attempts to establish identities of our forward units. One SS raiding party in company strength crossed the Senio near Fusignano. They crossed in three groups, first two of which unsuccessful. Third however blew up some houses before being counterattacked and driven off. Own patrols in this sector also active and positions have been improved.

South of Cotignola our patrols discovered no sign of enemy this side of Senio. Enemy working parties have been active area route 9 and one further patrol driven back.

South of route 9 enemy sent another company raiding party across Senio on night 11/12. This was supported by arty, but made no penetration of our positions and was repulsed. Our own patrols in this sector were active and found enemy in usual positions. We laid two successful ambushes.

Weather: Fair to cloudy; Light snow in places.

DISTRIBUTION: Normal.

Eighth Army

Activity in Eighth Army coastal sector limited to light enemy shelling. South of Fusignano 3884 enemy patrol infiltrated into one of our positions but was driven out.

Enemy still maintains small posts in flood bank our side of Senio. He has developed this policy in the valley where abnormal flooding tendency of rivers, each of which has headstream in snow - covered Appenines, necessitates building of artificial flood dash banks sited 50 - 100 yards from and either side of normal river bed. Raised above flat country they are excellent for observation. Inner side of these banks affords excellent cover as they much deeper than outer slope.

At CUTIGNOLA 3654 one of our patrols attempted to get to railway bridge but met extremely heavy opposition and was unable to make headway. Enemy patrols continue active North and South of Route 9. Little activity otherwise.

South of Cuffiano 8023 enemy patrol established itself in buildings our side of Senio and is being dealt with.

Weather: Fair with patches of cloud; hard frost continues.

Fifth Army

Operating deep into enemy territory strong Fifth Army raiding parties were active along entire sector. Although enemy patrolling was lighter several brisk patrol clashes occurred.

On right flank enemy movements engaged by our arty with good effect and normal patrolling general.

In Central sector a patrol engaged in fierce fight. They exchanged hand and rifle grenades as well as bazooka and SA fire and caused number of enemy casualties. Other patrols met concentrated mortar and arty barrages and heavy machine gun fire.

During a patrol to Disotta (area 8329) an American infantry man engaged in hand to hand fight with three Germans when his rifle failed to fire. He knocked out one of enemy by throwing rifle at him and engaged other two with his fists. In ensuing melee one of enemy bit Americans finger to the bone. German mortar fire broke up the Hollywood - style battle and the American patrol forced to withdraw.

Strong patrol to Barchetta (area 8332) found the town unoccupied but received enemy fire from high ground North of town.

On left flank there was increased enemy flare activity.

Along Coast our patrols encountered mines, wire entanglements and machine-gun and mortar fire.

Clear weather enabled Fifth Army arty, working closely with Ground and Air Ops, to blast enemy targets effectively.

DISTRIBUTION: Normal.

HQ 15 ARMY GROUP
11 Jan '45.

Fifth Army.

Patrols though somewhat restricted by snow and ice were active on Fifth Army front 10 Jan, firefights occurring at several points. Sporadic harassing arty fire and some sniper fire received in forward areas. Our troops again reported enemy groups in white clothing and using skis or snow shoes.

On right flank patrol clashes reported in M.Grande area, in vicinity Rivola and SE of San Clemente 1928. Budrio (area 1121) reported strongly held by enemy. Snipers fired on our positions West of Tossignano.

In central sector our troops repulsed enemy patrol just North of M.Belmonte. Clashes took place also some three miles NE of Bombiana 5818 and same distance SW of Gaggio 5516.

Farther West small enemy raiding party beaten off near Sommocolonia 1906.

Deep drifted snow and icy roads, major obstacles to movement of troops and supplies over road net behind Fifth Army front, are constantly neutralized by highly efficient engineer system of snow and ice removal and road posts. Employing snow plows, bulldozers, scrapers, wreckers and trucks, trained engineer detachments and units maintain twenty four hour vigil on all important supply routes. Road posts set up along principal highways are equipped with snow plows and wreckers to keep roads clear and assist stranded vehicles. These posts, controlled by central engineer office, are alerted if roads become hazardous or vehicles are stalled. Snow is removed almost as it begins to fall and gravel is spread on icy roads and dangerous curves by our troops assisted by Italian labor. These patrol teams cover all roads where drifts likely to hamper traffic. System planned and placed in operation by engineer section of Fifth Army.

Weather: Scattered clouds, fair to good visibility, no rain.

Eighth Army.

In Eighth Army coastal sector another enemy patrol on Southern bank of Reno at 6155 was counterattacked and yielded 10 PW's belonging to 710 Division fresh from coast defence role in Norway. Prisoner said rumour was Hitler had ordered Reno to be held at all costs.

Both sides patrolled aggressively along Senio between routes 16 and 9. One of these patrols from German 278 Division retired on being shot up by us and left some PW's and dead, all discovered to be Italian members of Todt organisation, German Beni Military Labour Corps. PW's claimed they had been driven ahead of patrol as protective screen presumably to draw fire and detonate mines.

In area South of route 9 German SP guns shot up buildings on our side of river. Latter now 5 feet deep and flowing fast.

Germans in more mountainous sector patrolled wearing snow camouflage suits and carrying MG's and bazookas. All these patrols driven off.

Weather: Fair to cloudy; Frost continues.

DISTRIBUTION: Normal

Eighth Army

Weather restricted activity on whole Eighth Army front to patrolling.

Enemy patrol 30 strong on Southern bank of Reno at 6155 was driven back by arty fire.

Desert Air Force has carried out successful bombing missions on key road - bridge at Alfonsine with to enemy forces in route 16 sector.

Fifth Army

Clearing skies along Fifth Army front after several days of intermittent snow improved visibility. Bitterly cold temperatures especially during night and deep snow drifts restricted activity to local patrolling and sporadic arty exchanges.

On right flank enemy patrol crossed Senio River East of Riv le 1421 but driven back by our troops. Enemy resisted attempts of our patrols to cross river in the same area. Enemy raid in M Spadura area repulsed with small arty that caused some enemy casualties.

In central sector light arty and mortar fire received. Reconnaissance patrols by enemy and American troops operated South of Bologna.

On left flank strong enemy patrol repulsed North of Volpere (area 6229). Some of our troops patrolling near Calamini 1202 West of Serchio River received bazooka and SP fire from the town. The patrol took cover and directed arty fire on enemy positions.

Weather: fair to cloudy with frost continuing.

FIFTH ARMY

White clad Fifth Army reconnaissance parties and ski patrols made little contact with enemy as deep snows continued to restrict activity all along front. Continued snowfall 8 Jan added several inches to depth of snow now more than twelve inches in some areas.

In right sector there was increase in enemy patrols. All were repulsed. In M Grande area 30-man enemy patrol in white snow suits was driven off.

In central sector virtually no ground activity except limited patrolling. A patrol of 361 Infantry Regt encountered heavy German opposition near enemy held town of Barchetta (area 8632) East of Route 65 on night 7/8 Jan. Enemy highly sensitive to our movements toward village and delivered intense SA and mortar fire.

In coastal sector increase in enemy arty reported. One of our patrols penetrating close to enemy positions received grenade fire.

Under protection of Red Cross flag 7 Jan a four-man litter squad and guide crossing no-mans-land in daylight to pick up wounded American officer were fired on by enemy MG. Guide returned wounded and reported two of litter bearers killed. The other two litter bearers have not returned.

Despite numerous measures taken by Germans to impress their troops with honor and glory of death on battlefield, recent enemy practices on Fifth Army front indicate that enemy still seeking to employ his own "glorious" dead to cause casualties among Allied troops. Boobytrapping bodies of both his own and our battle dead is on the increase. Such devices may consist of grenade concealed in uniform pocket of slain soldier with concealed wire running from grenade's safety pin to a stake under body, or other ingenious applications of same principle.

In addition to grenade type of booby trap enemy has employed teller (or a/tk) mines with igniters so set that any unwary attempt to remove body will detonate mine. S. mines, schu mines and simple explosive charges have been similarly employed and are often concealed near bodies. Such practices have been noted at various stages of Italian campaign but are now being resorted to more frequently.

EIGHTH ARMY

Slight thaw during day but deep snow on whole front still hampering operations.

In coastal sector enemy established patrol on Southern bank of River Reno at 6155 South of narrow spit of land East of Lake Comacchio. We took PW.

Area S Alberto heavily shelled.

Patrols were active down whole of Senio front. Small groups of enemy infantry maintained positions East of River dug deep into reverse slope of bank.

Weather: Fair at first but unsettled and followed by rain and snow.

DISTRIBUTION: Normal.

8 Jan '45

EIGHTH ARMY

Heavy falls of snow and rain curtailed activity on whole front.

In coastal sector difficulties further added to by mines, demolitions and flooded fields. Despite this British and Canadian troops pushed up coast as far as Casal Borsetti 6352 and farther inland as far as river Reno where it leaves SE corner of Lake Comacchio at 6155.

Elsewhere aggressive patrolling both sides especially in area Fusignano 3844 where enemy raiding party beaten off in early hours of 6 Jan.

In four days Canadian and British troops have cleared 50 square miles between Ravenna and the Valli di Comacchio. Six hundred prisoners were taken and four field guns captured intact. Also captured was a quantity of enemy equipment including mortars and A/tank guns. Eight tanks or SP guns were destroyed.

Weather : cloudy with rain and sleet, and snow on ground.

FIFTH ARMY

Moving with great difficulty over slippery mountain paths and trails and through deep drifted snow Fifth Army patrols maintained contact with enemy 7 Jan. Hostile arty and mortar fire decreased slightly. Patrols operating high in rugged Appennines obliged to move slowly and with great caution. Snow flurries and fog reduced visibility to a few yards in most sectors and mountain streams swollen to abnormal proportions hindered forward movement. In many sectors troops are using snow shoes, skis and white clothing.

Short firefights took place in areas of M Grande and M Belmonte in right sector. Some long range MG fire received in central sector. An estimated 15-man enemy patrol repulsed one and half miles SW M Belvedere 5217 by SA and arty fire. Night 5/6 Jan American infantrymen suspecting a hostile group was in the area, fired three white phosphorus mortar shells in quick succession, the bursts revealing German patrol about one hundred yards away. Enemy patrol withdrew after fire placed on them.

Weather : restricted visibility, snow flurries in mountains.

DISTRIBUTION: Standard.

HQ 15 ARMY GROUP
7 Jan 45.

Fifth Army

Heavy snows, in some areas a foot deep, and poor visibility restricted operations on Fifth Army front 6 Jan to lowest point in several days. Hostile arty and mortar fire fell all along front. German flare activity general.

In right sector patrols clashed at Casetta 0032 and mile NW of M Della Volpe 1420. Hostile patrols suffered casualties in firefight just South of Tossignano. Rocket projectiles fell in M.Grande area and enemy shelled Casola Valsenio 1017. Also on right flank enemy fired propaganda leaflets into our lines.

In central sector American patrol returning from mission near S Ansano 8631 engaged in a tug of war with Germans over a telephone wire trailing behind Americans. Patrols clashed immediately NE of Monterumici 8328.

Enemy MG just SE of Montecavalloro 6621 silenced by our mortar fire.

Eighth Army

Continuing their pursuit of disorganised German units retreating up spit of land East of Lake Comacchio Canadian tanks and infantry, despite demolitions, mines and floods, have cut line of retreat of about two companies of enemy in marshes South of Mandriole 5858.

Enemy who retreated Westward from S Alberto were met by their own guns coming up to support them. In resulting confusion we captured four field guns and crews.

To South pockets of enemy still hold East bank of Senio and mopping up continues.

Enemy shelling and mortaring has increased considerably on whole front South of Cotignola and in one case enemy patrol used flamethrowers.

Weather: Rain; Some snow in mountains.

DISTRIBUTION: Normal.

Eighth Army.

Drive over Canale Bonifica surprised Germans defending southern shores of the Valli di Comacchio and forced them to withdraw from S. Alberto area in westerly and easterly directions.

Canadian tanks and infantry followed up and after occupying S. Alberto drove east towards Mandriole 5852 in pursuit of routed enemy.

Desert Air Force strafed retreating Germans and inflicted heavy casualties.

East of Alfonsine complete defeat of yesterday's counter attacks, in which British and Canadian infantry beat off Germans double their own strength, was followed by consolidation of our positions east of the Fosso Vecchio which at this point flows parallel to and 1000 yards east of the Senio.

South of Cotignola 3534 whole of enemy's Senio bridgehead finally swept clear and remaining German pockets which had been isolated by armoured thrusts are being mopped up by supporting infantry. In this operation nearly 300 PW's taken and total on whole front between Faenza and Lake Comacchio over 500.

Further south activity on both sides limited to patrolling.

Fifth Army

With enemy extremely sensitive to probes by Fifth Army combat and reconnaissance parties, extensive patrolling continues all along front. A brilliant moon reflecting on snow blanket that covers front enabled enemy to detect our approaching night patrols and lay down terrific MG and mortar barrages.

Fifth Army right flank relatively quiet with slight shelling and mortaring. A series of patrol contacts reported.

Under cover of long range MG and SA fire a 10 man German patrol in central sector attempted to pierce our lines north of Livergnano night 4 Jan. American infantrymen dispersed patrol which withdrew after returning some fire. Earlier in evening an outpost in same area heard enemy tank moving in darkness and called down an arty concentration. Results of barrage evidenced after firing by appearance of German medics.

Clear visibility in central sector enabled our observation post arty teams to wipe out number of enemy guns and emplacements.

On left flank ferocity of patrol clashes characterised by one Fifth Army patrol that surprised enemy sentry whom they killed with a knife. Later this same patrol, attacked by 6 Germans, killed all enemy party. Some patrols in this sector prowl in enemy territory for as long as 24 hours at a time.

Patrols in coastal sector say enemy continues to booby trap our dead, as well as their own.

Today marks the second anniversary of the organization of the Fifth Army which was activated on 5 Jan 1943 at Oujda North Africa.

Weather : fair to cloudy becoming overcast with intermittent snow.

DISTRIBUTION: Standard.

HQ 15 ARMY GROUP
5 Jan 45.

Sharp firefights flared up in many sectors of FIFTH Army front as our aggressive patrols sparred with enemy raiding parties on both sides of the lines.

On right flank firefights occurred in vicinity of VIA DEL GESSO 1121, a sheer escarpment extending all along right sector front.

Four hundred yards SE of TOSSIGNANO enemy, using incendiary bullets, set fire to several houses. A British patrol engaged enemy strongpoint North of M. CASTELLO 0031, knocked out MG and inflicted casualties.

Following heavy exchange of arty mortar and SA fire US troops drove off enemy raid about one mile North of LIVERGNANO in an engagement lasting more than an hour. Enemy has been observed expanding his elaborate defences South of BOLOGNA with mines, barbed wire and other defensive works.

Approximately six enemy aircraft flew over central sector evening 3 Jan and dropped bombs and incendiaries about five miles East of LUCIANO 8624. They were engaged by our antiaircraft guns and one JU 87 was hit.

NE of COLLE TIMAINE 7526 an outpost of the South African Division was surrounded by an enemy party but enemy dispersed by our mortar fire. In some area opposing patrols engaged in grenade fight.

Brazilian troops repelled strong enemy combat patrol North of VOLPARA (area 6220) after a firefight.

SANTERNO Valley sector remains quiet with active patrols maintaining contact. Germans effecting unit relief West of M. STELLATO 9496 were brought under surprise fire by our mortars and sustained many casualties.

Eighth Army

On EIGHTH Army front battle becoming more intense South of VALLI DI COMACCHIO. Enemy being forced back from his defensive positions on network of canals West of coastal marshes.

Fighting on along lateral road from CONVENTELLO 4847 Canadian Infantry and tanks reached CASTLE BONIFICA (see 5151) one and a half miles SW of S. ALBERTO 5352. Turning swiftly Eastward along South bank of BONIFICA our troops captured bridge over canal intact SE of S. ALBERTO. They crossed over and pressed on North towards old LAMONE watercourse, now dry.

In fighting South of BONIFICA at least 5 Tigers and 5 German SP guns knocked out.

Enemy counterattacked strongly from SENIO River NE of ALFONSINE against left flank of Canadian advance. They used reserve Recce troops of 8S and 26 Panzer Divs in infantry role. Despite their strength all counterattacks repulsed and over 150 PW taken.

British and Canadian troops mounted surprise attacks and gained further territory against German bridgehead pocket between NAVIGLIO and SENIO Rivers. Canadians established bridgehead one mile wide across NAVIGLIO West of GRANAROLO 3531 against considerable opposition and mines. To SW British tanks supported by infantry of British 56 (London) Division Commanded by Major General J.Y. Whitfield made arm used sweep between NAVIGLIO and SENIO rapidly reducing remaining German bridgehead by over half and causing considerable confusion among surprised Germans. This successful operation was culminating point of previous skillful fighting by the men of 56th Division veterans of Gothic Line battle of GEMMANO which led up to this advance. In British and Canadian operations Germans lost further 100 PW in few hours and 2 SP guns knocked out.

Our patrols active along SENIO both sides of Route 9.

Further ST strong enemy raiding parties supported by arty, Nebelwerfer and mortar fire crossed SENIO but all forced back to North bank.

Weather: becoming cloudy; outlook unsettled.

DISTRIBUTION: Normal.

4 Jan '45.

Eighth Army.

No change in extreme coastal sector of Eighth Army front.

In area NE of Alfonsine Canadian infantry and armour continued their thrust Northward from Route 16. They inflicted heavy casualties on German Jaeger troops and took a further 100 PW. After capturing Conventello 4847 we advanced along the S. Alberto 5552 road on West side of Fosso Vecchio gaining some 3000 yards against Tiger and Panther tanks brought up by Germans to support their failing infantry. Tank slugging match continues some two miles from S. Alberto.

Reduction of bridgehead West of Senio continues and British troops operating between Faviglio and Senio have gained upwards of 500 yards against stiff opposition.

Activity elsewhere confined to patrolling.

Weather : Fine to fair.

Fifth Army

In Fifth Army's right sector German raids in areas of M Del Verro (area 0425) and Sillaro ridge (area 0826) preceded by rocket (Nebelwerfer) barrage repulsed with losses to attackers. Along Senio river enemy remained extremely sensitive to our thrusts. Hostile forces in hamlet of Paradiso immediately NW of Tossignano 0823 engaged our patrols as they tried to enter village.

Our party in central sector broke up small enemy raid vicinity S. Ansano (area 8631). Fairly heavy hostile arty fell vicinity Liverzano. German attempts to ambush our patrols continued.

South of M. Sole 7629 South African troops clashed with small enemy groups. Tank enemy raids in the Caggio 5516 area repulsed with arty, and hand grenades. Harassing arty and mortar fire in all sectors.

Weather : excellent visibility, no precipitation.

Fifth Army

Fifth Army raiding parties and patrols pushed deeply into enemy positions on various parts of the front. Strong enemy patrols, some with mortar and arty support, also were active.

In right sector of front decrease in enemy arty noted. Extensive patrolling by both sides carried out all along sector.

In central sector large enemy patrol overran one of our outposts North of Liverzano night 1 Jan but position later retaken in counterattack by our troops. Concealed along routes of approach to German positions enemy parties attempted to ambush several of our patrols and sharp fire fights ensued. We captured some prisoners.

On left flank strong enemy combat patrol supported by mortars and arty repulsed near Montecavalloro 6621.

In coastal area our patrols made contact with enemy at several points and encountered number of booby traps along Route One in direction of Massa 9101.

Eighth Army

Positions remained unchanged in Eighth Army coastal sector. In area East of Alfonsine Canadian Infantry and armour continued clearing up strong enemy positions between Lamone and Fosso Vecchio in a Northeasterly thrust. They captured over 70 PW from German Jaeger who stubbornly defended each Casa.

Farther South the pocket East of Senio being slowly cleared but must still be regarded as a substantial enemy bridgehead over river.

Elsewhere activity both sides confined to patrols and light shelling.

In recent fighting tiny farmstead Casa Baldi-Randi was captured. Here Major Fiore, one time land agent to Mussolini, was executed by German SS at request of former master.

Weather: Fair periods with some snow in mountains.

2 Jan '45.

Eighth Army

Positions unchanged in Eighth Army coastal sector. We received light shelling this area night 31 Dec/1 Jan.

To the SW patrols both sides still active along Senio river bend. SW of FUSIGNANO 3844 German raiding party with mortar support crossed river but forced back to West bank. Enemy suffered casualties and we took some PW. More PW taken when we repulsed small scale enemy attack across Senio North of COTIGNOLA. East of Naviglio enemy counterattacked strongpoint house 1000 yds NE of VILLA GUAGLIA (area 3430) but driven off after sharp engagement. Further gains made between Naviglio and Senio.

British troops occupied Church in S. ANDREA 3329. Our patrols pushed on North of S. ANDREA but forced to withdraw by enemy MG fire. Our patrols probed beyond road previously occupied NE of S. PIETRO in LAGUNA.

Patrols both sides also active along SENIO North of Route 9. Enemy patrols which crossed river at several points forced to retire to West bank. Our arty and mortar fire very active this sector.

Our fighting patrols active also South of Route 9 along SENIO.
Eighth Army arty harassed German transport on CUFFIANO - RIOLO road (2023 - 1823).

Weather: Cloudy with light snowfalls over battle area followed by some fair periods.

Fifth Army

On Fifth Army right sector 1 Jan SAN MARTINO (area 1421) reported clear of enemy. Hostile patrols engaged in vicinity of M. CERERE and M. SPADURO and firefights took place in areas of M. CASTELLARO and M. GRANDE.

Enemy heavily shelled FONTANELICE 0521 and increased mortar and arty fire also received in other areas of this sector.

In central sector enemy turned propaganda loudspeakers on our troops in one area and followed up his "program" with weak patrol activity. A firefight occurred at PARROCCHIA 9632. The M. GRANDE area again heavily shelled by enemy.

In SERCHIO River Valley area, where our patrols tested enemy defences, enemy patrols driven off. Hostile arty fire increased. Area otherwise quiet.

Enemy fired rifle grenades SW of CASTELNUOVO 6622 and a small enemy patrol was repulsed near ROCCA PITIGLIANA 6020.

Farther West and in coastal sector Fifth Army troops improved positions and maintained pressure against enemy.

Weather: Fair to good visibility, slight overcast in some sectors; no rain or snow.

Fifth Army

On the Fifth Army right flank enemy particularly sensitive. Our patrols again encountered heavy fire from enemy positions while attempting to cross Senio river near Rivola 1421. Several patrol fire fights occurred also in area South of M. Del Casino 1022.

Increased enemy nebelwerfer fire fell in central sector. Mortar and rifle grenade fire was received SW of Montecavallero 6621.

Against scattered resistance our troops pressed forward in Serchio river area and recaptured all ground taken by enemy East of river in his recent heavy attack. Pushing forward from [illegible] our troops advanced nearly two kilometers across Corsonna stream to occupy hill town of Sommocolonia 1906 one of first places taken by enemy in Serchio Valley attack. Fifth Army troops also made limited advances West of the Serchio where they received enemy fire from Hills overlooking Gallicano.

Coastal sector quiet except for active patrolling. No change in forward positions.

Eighth Army

Our patrols active in Eighth Army coastal sector. Positions unchanged.

To SW patrols both sides active along Senio river bend. Strong Canadian raiding party supported by arty and tanks attacked towards Senio East of Fusignano 3744 and destroyed some enemy MGs on East bank of river. Our arty dispersed German patrol which tried to cross river North of Cotignola 3534. Enemy suffered casualties.

British troops made further gains between Naviglio and Senio North of Faenza. Night 30/31 Dec we forced crossing over Fosso Vecchio canal SW of S Andrea 3329 against strong opposition and occupied buildings beyond canal. Vecchio runs parallel to and one mile West of Naviglio this area.

Further SW our troops pushed on and now control one mile stretch of road NE of S Pietro In Laguna 3028 at right angles to Naviglio. Many mines encountered this area.

Patrols from both sides active along Senio North of Route 9. Enemy working parties on West bank this area heavily engaged by our mortars and MG fire. We received considerable shelling between railway and Route 9.

Our patrols active South of Route 9. Enemy patrol crossed river this area but forced back to West bank.

Still further SW one of our patrols successfully ambushed and attacked enemy patrol. Five of six Germans killed.

Weather: clear and cold.

SEVENTH ARMY GROUP INTELLIGENCE SUMMARY No 10 of 14 JUL 43

(a) Sidelined information will not be reproduced in any intelligence summary of formations under this HQ except by special permission.
(b) This Summary will be destroyed within 48 hours of receipt.

1. OPERATIONS : 10-12 JULY

So far the invasion of SICILY has progressed as well as could possibly have been hoped and far better than could reasonably have been expected. The enemy's position is already extremely difficult, for not only were the German forces badly dispersed at the time of landing, but their Italian comrades, who were better placed to resist it, have shown singularly little ability or even inclination to do so.

Our forces landed on the morning of the 10th and found the beach defences as slight as had been expected. Landings were, in fact, mainly handicapped by the heavy cross swell, which made it difficult to get craft ashore. Enemy opposition was equally slight in most places, and it appears from statements by prisoners that complete surprise was effected. This is confirmed by the fact that almost the only enemy troops encountered during the first day's operations belonged to 206 and 207 Coastal Divisions and 134 Independent Coastal Regt. The enemy was unable to put either his Italian or German Field divisions into action.

On the East coast, the greatest degree of opposition was encountered at the Northern end of the Gulf of NOTO, but by 0930 hrs, satisfactory progress was being made in all sectors. The PACHINO area was cleared and 700 PW taken, AVOLA was occupied and NOTO attacked. By 2100 hrs, SYRACUSE had fallen.

Meanwhile, our forces further South were advancing from PACHINO towards ISPICA. The landings on the SW coast at LICATA and between GELA and PUNTA SECCA were equally successful. LICATA was in our hands by 1155 hrs, and our tanks were pushing Northwards towards CANICATTI. GELA was also captured, and by 1710 hrs a battalion of LIVORNO Division, the only field formation to be encountered during the day, was withdrawing towards BUTERA. To the SE, SCOGLITTI was occupied and our forces pushed on towards VITTORIA.

On 11 July, the enemy had recovered from the shock of our landings, at least sufficiently to put a proportion of his field divisions into action, but there were no signs of coherently planned counter-measures, nor, indeed, have any appeared subsequently. The Italian dispositions revealed few surprises. 54 NAPOLI Division, whose suspected move to the SE from CALTAGIRONE was confirmed, added its rather ineffective support to the resistance North and West of SYRACUSE, and 4 LIVORNO Division made a number of piece-meal counter-attacks on GELA from the West and NW. 103 PIACENZA Division, however, which was thought to be in the CATANIA Plain, took no part in the day's operations, and has, so far, not been identified on the ground. It is pre-eminently the moves of the German forces which, in this campaign even more than in NORTH AFRICA, give the clue to the enemy's appreciation of the situation and his capacity to deal with it. It became clear that he had been caught at a disadvantage, for although during the day he managed to mount a counter-attack against GELA from the direction of BISCARI with 2 HERMANN GOERING Gren Regt and 45 of the Division's tanks, he could do nothing to counter our threat to AUGUSTA and the vital CATANIA Plain, and was busily engaged in moving the bulk of 15 "Panzer" Division across from the Western part of the island. He began by misappreciating the direction of our attack;

/he went.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

he went on to misappreciate its most important immediate objectives, and he was unable to concentrate a sufficiently strong force to make a decisive counter-attack at the point he selected.

The weight of the attack on GELA was, indeed, considerable, and at one time it reached the outskirts of the town, but it encountered determined defence and was repulsed with the loss of 10 Mk IV tanks. It is noteworthy that 3 P.G.R. of 15 Panzer Division did not take part in the attack, having apparently moved Westwards to join 1 P.G.R. The attempt of LIVORNO to co-operate from the West was no more successful, though elements reached TORRE MANFRIA H.1433. Meanwhile, to the SW our forces were approaching COMISO and on the Eastern flank we had occupied PRIOLO J0540, the high ground West of CASSIBILE J.0620, NOTO and ROSOLINI H8503 and ISPICA. Very little movement was observed on the roads South from the CATANIA Plain, and the expected enemy counter-attack did not materialize. By contrast, heavy movement was seen on the roads running from BOLOGNETTA B5030 as the main body of 15 Panzer Division struggled Eastwards under heavy bombardment from the air. Whether either 26 ASSIETTA or 28 AOSTA Divisions were also concerned in the movement remains to be seen.

On 12 July, nothing further was seen of this movement from West to East, and it must be supposed either that 15 Panzer Division has reached a new concentration area (there are indications that its HQ was in the central area of the island) or has been held up by damage to the roads caused by air bombing attacks. The remaining P.G.R. of the Division, No 2, was identified in the PRIOLO area together with elements of the HERMANN GOERING Division. It appears, therefore, that at least the greater part of the German infantry available in the CATANIA area was committed to stopping the rot South of AUGUSTA. It was not successful, however, for the town was occupied yesterday evening. SOLARINO H.9934 and MELILLI J.0043 were both occupied by our forces, and a further advance made from the latter place towards VILLASMUNDO H.9751. To the SW, the advance was equally rapid. Our armour passed through BUCCHERI H.7637 and pushed to the outskirts of VIZZINI H.7641, while the infantry on their left occupied MODICA and RAGUSA and advanced NNE towards CLIPPATANA H.7028, and further SW captured COMISO airfield. Neither PIACENZA Division nor the tanks of HERMANN GOERING appeared on the ground to contest these advances.

In the GELA area, the Battle Group from the HERMANN GOERING Division was unable to renew its counter-attack, and was attacked in its turn and pushed back to the area just South of NISCEMI. LIVORNO Division was also counter-attacked and driven back with heavy loss, 33 Inf Regt being practically destroyed. Further West, the troops round LICATA extended their bridgehead to CAMPOBELLO G.9251 and NARO G.8155 and were moving in Northwards on CANICATTI and INE on RIESI H.0758.

The total of PW taken so far is in the neighbourhood of 10,000.

Conclusion: The enemy's power to resist and counter-attack our advance depends on the two German divisions in the island. Of these, one has been split and the other, less one regt, has not yet reached the battle area. It is possible that a relatively strong counter-attack force can be assembled from 15 Panzer Division and part, at any rate, of the HERMANN GOERING Division, though it may prove difficult to disengage the latter. But his initial misappreciation and overhasty reaction have allowed us to develop a deep bridgehead and build up a large force, and he will find it difficult now to counter-attack effectively with the forces at present in the island.

2. ENEMY IDENTIFICATIONS

The following is a list of Contact Identifications as known 1900 hrs 12 July 43.

On the Italian side, the published Order of Battle has been proved substantially correct, though in some cases the organisation of Coastal Bns in Regts has been at fault. There are in addition some new identifications.

Later information is that Gen. D'HAVET, G.O.C. 206 Coastal Div has been captured and the Division can be assumed to have been all but destroyed.

With regard to the German identifications, our previous knowledge has been substantially confirmed. I/P.G.R. 2 has evidently moved down from the CATANIA area to cover the approaches to AUGUSTA, while the H.G. tanks have gone across to meet the threat from the GELA area.

3. ENEMY SHIPPING AND SUPPLY

A. Messina Straits Train Ferry

As had been anticipated for some time, one of the 2 train ferries which had been present at TARANTO since May 15, has now returned to the Straits of Messina. She was observed there by PR on the morning of July 11, after reconnaissance on July 8 had revealed her departure from TARANTO. There are now two train ferries active in the Straits. The one recently arrived has a deadweight capacity of 175 tons, while the other has a capacity of 450 tons. Assuming that the new arrival makes the same number of trips per day as her sister ship, it is estimated that her return to service will increase the intake across the straits by some 525 tons daily.

B. Use of Northern Ports and Lighter traffic.

With SYRACUSE and AUGUSTA already in our hands, and the threat to CATANIA such that the enemy may no longer consider it safe to use this port, all Eastern Sicilian harbours have almost certainly been abandoned as ports of intake. The natural corollary is that the enemy will be forced to rely on the Northern ports of MESSINA and PALERMO, and make more use than hitherto of the small harbours of MILAZZO and TERMINI. The difficulty for the enemy lies not in the capacity of the two principal re-mining ports, which is more than ample for maintenance needs, but in port clearance. Already almost all offloading of ships at MESSINA is done by lighter owing to damage to port installations. MESSINA is already somewhat of a bottleneck since all stores despatched by rail can only be routed either South via CATANIA or West via TERMINI (junction of the Northern and East-West line from CATANIA). Owing to the rapid progress along the east coast it seems likely that the Northern route will have to bear the burden of all the traffic destined for forces operating from the centre of the island. From TERMINI onwards there will be the extra congestion caused by movement of supplies landed at PALERMO for similar destinations. Furthermore, the ports of TERMINI and MILAZZO have access only onto the same main line which is likely therefore to be heavily over-loaded.

The use of PALERMO, as well as the Western ports of TRAPANI and MARSALA, has already been largely denied to the enemy for the last three months owing to vulnerability from air attacks and damage done by previous raids. As pointed out, the difficulties of operating the remaining ports are such that there can be little doubt that from now on the enemy will rely even more on lighterage and ferry traffic across the Straits than on shipping to the Northern ports. As stated in para A a second train ferry is now back in service and PR continues to show large numbers of small craft operating in the Straits. Despite the fact that large numbers of craft have to be used to achieve the daily tonnage which could be brought by say even one 1500 - 3000 ton ship, the advantages of small craft are obvious; quick turn round, use of small harbours, and smaller target for air attack. It seems certain therefore that from now on the enemy will expand the already considerable volume of lighter traffic across the Straits and rely mainly on this for supply intake to SICILY.

/C. Enemy shipping.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

C. Enemy Shipping in the Mediterranean.

Extensive PR of Mediterranean, Adriatic and Aegean harbours has enabled an estimate to be made of the enemy's shipping resources in the Mediterranean. The presence of 1,654,000 g.r.t. of shipping over 250 g.r.t. has been established in these ports. To this should be added an estimated total of 115,000 g.r.t. for shipping at sea or in minor ports not covered, thus giving a grand total of 1,769,000 g.r.t. present in the Mediterranean. Of this same 150,000 g.r.t. is represented by damaged vessels.

The true significance of this mass of figures can only be appreciated if the distribution of the shipping within the Mediterranean is considered. This indicates that the Western Mediterranean has for some time been the most active sector. At the middle of May some 55% of the enemy's total resources were in the West with 45% in the Adriatic and Aegean. The difference is however, greater than a mere estimate of gross tonnage would indicate, for in the Western Mediterranean, a larger proportion of the shipping is serviceable. After making allowances for ships generally unsuitable for military and commercial purposes, it is estimated that 60% of the enemy's serviceable shipping in the Mediterranean remains West of the Sicilian Channel. No considerable West-East movements have recently been observed.

D. Damage to Communications.

As a result of an air attack on the railway system of MESSINA on 12 July the main line to CATANIA and PALERMO was shown by PR to be blocked.

2. DISTRIBUTION OF ENEMY FORCES

(a) Italian

58 LEGNANO Division. There are reports that this division, located in the DRAGUIGNAN - FREJUS area of Southern FRANCE has returned to ITALY. Its destination is unknown.

(b) German

As was anticipated two German Divisions from France are now thought to be in ITALY: namely the 16 Armoured and 29 Motorised Divisions. The location of these divisions is as yet unknown and there is no evidence that either is intended for SICILY. It seems more likely that both are intended for the defence of the Italian mainland. Both these divisions were wiped out at Stalingrad and have since been reformed in France.

It must not be assumed however, that these are the only German divisions likely to arrive in Italy. As was suggested in Summary No. 8 Germany has again formed a reserve of divisions in France (consisting almost entirely of reformed Stalingrad divisions) and it seems probable that these are more likely to be sent to Italy and the Balkans than to Russia. 60 Mot Division (reported by GOEBBELS to be renamed 2 Pz Grenadier Div) was among the divisions believed to have left France for Italy where it was reforming in the NIMES-AVIGNON area. There have as yet been no further reports of the move of this or other divisions to Italy but further formations may be expected.

The migration of German divisions to the Balkans and in particular to S. GREECE continues. 100 Light Division, (another of the Stalingrad Divisions) has been identified in YUGOSLAVIA, probably in the BELGRADE area. 104 (704) Jaeger Division is now thought to be in N. GREECE enroute from YUGOSLAVIA to S. GREECE; and the presence of 1 Armoured Division in GREECE is now definitely accepted.

The four German Garrison Infantry Divisions, 704, 714, 717, and 718 which have been in the Balkans for some eighteen months have now all been upgraded to Jaeger Divisions and renamed 104, 114, 117, and 118.

3. NOTES ON ENEMY FORCES.

(a) Hermann Goering Div Recognition Signs.

The following information has been obtained from PW captured in Tunisia.

(i) Arms of Service.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(i) Arms of Service.

The colours of the arms in this Division followed more closely G.A.F. than German Army procedure, e.g.

GREEN - Grenadier and Jaeger Regts.
BROWN - Signals.
RED - Anti Aircraft and Artillery.
YELLOW- Tank, S.P. Artillery and Recce Units.

The pointer on the clockface which is the emblem of the division is coloured according to the arm. Artillery is distinguished from Anti Aircraft by the addition of a red inner circle on the clockface.

(ii) H.Q. and Command Flags.

H.G. Div H.Q. - A square flag divided into three horizontal stripes, coloured black, white and red. The German Air Force Eagle is superimposed.

Div Comd's Flag (on car) - A square flag divided diagonally into red and black triangles and with the German Air Force Eagle superimposed.

Bn H.Q. Flag - In each case a triangular pennant with a horizontal stripe in the colour of the arm.

(b) 132 ARIETE Armoured Division.

A captured document shows that ARIETE Division, destroyed at EL ALAMEIN is being reconstituted with the following main units: MONTEBELLO Lancers, VICTOR EMANUEL II Cavalry, LUCCA Cavalry "in their latest mechanised and motorised form."

COMMENT:

132 ARIETE (or Battering-ram) Division was the first Italian armoured division to be sent to North Africa. It arrived in the Spring of 1941 but the tanks had been sent over ahead, in time to be destroyed by General WAVELL at BEDA FOMM. Thenceforth ARIETE endured all the vicissitudes of the Libyan campaigns; always ill-equipped and almost always under-strength, it was destroyed, revived and reorganised times without number. Italian propaganda was however, industrious in "building up" its reputation and indeed it did on the whole show better form than either of the other two Italian armoured divisions. It is therefore not surprising that the name of ARIETE should be given to the new division which is being collected together after the loss of all Italian armoured divisions in Africa.

The VICTOR EMANUEL II Cavalry Regiment is normally in 2 Cavalry Division at present located in Southern FRANCE. It is known that it had been the Italian intention to convert this division into 134 Armoured Division, which, according to reliable reports, was to be named ERECCIA after one of the Italian divisions which took part in the Spanish Civil War. Recent reports had, however, indicated that the proposed conversion had not progressed beyond the mechanisation of the artillery regiment. It is probable that the revival of ARIETE marks the definite abandonment of the scheme.

MONTEBELLO and LUCCA Cavalry Regiments are of recent creation, though regiments of those names existed during the last war. MONTEBELLO Regiment is numbered 8 and was last identified at PESCARA. The fact that this town is also the depot of 2 Cavalry Division suggests that the new ARIETE Division is an offshoot of 2 Cavalry Division, but it is probable that the latter will

/continue ....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

continue to exist.

Mechanised cavalry regiments are normally equipped with six ton light tanks or armoured cars. The new division is probably designed mainly as a light armoured formation, though it is possible that it will have a battalion of medium tanks attached (now organisation 20 x 13 ton tanks and 24 x 75 mm guns self-propelled on 13 ton tank chassis.

THIS PAGE IS DECLASSIFIED IAW EO 13526

15 ARMY GROUP INTELLIGENCE SUMMARY No. 11 of 17 JULY 43.

(a) Sidelined information will not be reproduced in any intelligence summary of formations under this HQ except by special permission.
(b) This Summary will be destroyed within 48 hours of receipt.

1. OPERATIONS : 13 - 15 JULY.

After six days operations the enemy has still been unable to mount a serious counter-attack and it is clear that by the evening of the 14th he had decided that it was impossible to organise one with the forces at his disposal, and had consequently abandoned all hope of holding us South of the CATANIA Plain. The enemy appears from the start to have laid himself open to defeat in detail, and to have failed not only to make any use of the Italian formations from the West but even to concentrate German forces in the East for a full scale counter attack.

HERMANN GOERING Division is split between the East Coast and area NISCEMI - CALTAGIRONE. The coastal battle group of this division is now known, from captured documents, to form the Brigade Schmalz with III Bn H.G. Pzgr Regt (equipped with SP guns) I Bn HG PGR, III Bty HG Arty Regt and 2 PGR (alias PGR HOEHNER, PGR FALKENO) of 15 Panzer Div under command. It was this force which carried out the counter attack on the morning of the 14th towards AUGUSTA and succeeded in breaking into the town and reaching the harbour before finally being driven out again. To the West of this force 54 NAPOLI Division was strung out from RAGUSA to COMISO, with HQ at VITTORIA. 76 Inf Regt was disposed with Bns at RAGUSA, CARLENTINI and SCORDIA. 75 Inf Regt at PALAZZOLO and at CHIARAMONTE and 169 Blackshirt Bn. at COMISO. Other units of the divisions were likewise split. It is not surprising therefore that the division was unable to offer any concerted resistance and was quickly disorganised. On 13 July the GOC and his staff were rounded up at VITTORIA.

In order to fill the gap left by the disorganised and rapidly surrendering NAPOLI Division elements of 3 German Parachute Regiment were dropped in the PALAZZOLO and FRANCOFONTE areas on 12 July having, according to prisoners, arrived from TARASCON (SE FRANCE) via VIENNE and CATANIA. As in Russia in the spring of 1942, at ALAMEIN, and again in TUNISIA parachute formations have been called upon to fill an emergency defence role.

North of GELA the Western Battle Group of HG division, known as Battle Group GOERING, together with 4 LIVORNO and 207 Coastal Division have been pushed gradually North after their unsuccessful counter attacks of the 11th. The GOERING group appears to consist of I and II Bns HG Pzgr Regt, II and III Bns HG P.G.R., part of HG Arty Regt and the divisional Engineer and Recce Bns. The latter has been reporting and reconnoitring our positions along the whole of the southern front. A hitherto unidentified German unit, 923 FORTRESS Bn, and 71 WERFER Regt have also been reported in the area. A captured map showed 4 LIVORNO Division with HQ at CALTAGIRONE, together with two bns of 34 Inf Regt. The division also included two mobile groups each of a tank Coy, SP Coy, Inf Coy, and Arty group at CALTAGIRONE and NISCEMI/BIVIETTO. By 14 July 34 Inf Regt had moved back to the area PIETRAPERZIA - BARRAFRANCA, while part of the division was already back at ENNA. On the morning of 13 July, HQ 207 Coastal Division was at SAN CATALDO but had withdrawn to CALTANISSETTA by the following day. Part of the division was then holding a line AGRIGENTO - RACALMUTO with a mobile group at ALIFANAH. At 1130 hrs. on the 15th the Division was actually ordered to counter attack the Allies in ENNA. On the extreme West of the front 3 PGR of 15 Panzer Division (FULRIEDE) was identified for the first time in this battle in the area CANICATTI on 13 July. So far no identification has been

/made of.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

nade of 1 PzR and 215 Tank Bn of this Division, though there is an unconfirmed report that the latter was at ENNA on 15 July.

There were signs by the evening of the 13th that the pace of the withdrawal northwards was quickening. During the afternoon heavy movement of MT and guns was observed on the roads MT from CATANIA, north from MADDUSA as well as eastwards on the road PALERMO-SANTA CATERINA. Already by mid-day Sixth Army W/T Station at ENNA had closed down in preparation for a move and a representative of 15 Armd. Div was engaged in reconnoitring a possible new defensive line NW of Pt. 3274.

If a worse and swifter fate is not to befall the Axis forces in SICILY it seems essential that as many German units as possible be disengaged and withdrawn northeast, even if it means abandoning the West of the island. As in the past the Germans may be expected to leave the Italian formations to their fate having previously commandeered their available MT. The fighting to date has been done almost exclusively by German units, while Italian effort in defence of the homeland has scarcely equalled that made in defence of the Empire. It seems not improbable that the final stand in Sicily will be an entirely German affair.

2. ENEMY IDENTIFICATIONS.

Italian.

Identifications have mainly been confirmatory. 177 Bersaglieri Regt. with 529, 526, and 527 Bns was identified by contact in the AGRIGENTO area. A captured document gives it as part of a counter attack force comprising also a sqdn of 30 PALERMO Cav Regt. 12 Army Gp and 17 Blackshirt Legion. The latter is part of 26 ASSIETTA Div.

H.Q. 131 Tank Regt identified at CALTANISETTA. Mobile Gp "E" was also situated there, containing a coy of FIAT 3000 B Tanks (5 ton tanks mounting a 47/32 gun). These tanks are of last war design and little use.

Mobile Gp "D", containing a coy of 101 Tank Bn and a new identification of 2 coy, 10 Mob MG Bn, is identified at MISTRETTA.

Elements of 104 ISONZO Div have been identified on 7 Army front but there is no information yet to suggest that the Division is there.

There have been no identifications to date of 103 PIACENZA Div.

3. ENEMY SUPPLIES AND COMMUNICATION.

(i) Concentrated air attacks upon MESSINA and REGGIO, the two terminals of the Straits train ferry have caused great damage to railway facilities. Cover of MESSINA on 12 July shows that the main line to CATANIA has been blocked by two craters, while damage has been caused to the line from MESSINA to PALERMO. Widespread destruction is also seen in workshops and sidings, where a mangled mass of rolling stock was still burning at the time of the sortie. At REGGIO on 13 July the main line to SAN GIOVANNI was impassable, while extensive damage to sidings had been caused.

Cover of NAPLES on 15 July shows that damage to the marshalling yards is on a very heavy scale. 19 trains are seen to have received direct hits, one has been completely burnt out, and a great number of tracks have been blocked or damaged. Fires are burning in rolling stock.

These reports assume their true significance if taken in conjunction with the possibility mentioned elsewhere of enemy reinforcement of the ETNA line. NAPLES, REGGIO and MESSINA are the only points at which effective interference

/can be .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

can be caused to its rail route South to Sicily, and as such offer opportunities of doing concentrated damage to supplies and reinforcements. To take NAPLES as an example, the damage to the 19 trains means a slowing down in the flow of supplies and reinforcements along the main coastal route. At MESSINA in addition to the actual damage caused, delays which already exist in the clearance of supplies and reinforcements from the port, will have been further aggravated.

(ii) In the week ending 10 July, it is estimated that 17,050 tons of shipping entered Sicilian ports, in addition to the lighter and train ferry traffic across the Straits. Examination of the distribution of this tonnage among the various ports show clearly which were the harbours most used by the enemy in the period which culminated in the Allied invasion. MESSINA took the lion's share of the intake with 10,750 tons, CATANIA came next with 4,300 tons, while PALERMO and AUGUSTA showed only slight activity. There was no intake to either SYRACUSE or TRAPANI.

Thus despite continued air attacks the enemy is still relying mainly on the port of MESSINA, since to the above figures must be added an estimated 1875 tons a day of supplies carried on the train ferries.

4. DISTRIBUTION OF GERMAN FORMATIONS.

FRANCE.

Moves of German divisions from North to South West France have been reported. A CAF Field Division is believed to have arrived in the CARCASSONNE area, and possibly two air Division in the area AVIGNON - NIMES, where numerous gliders and other aircraft have been reported. It is probable that 19 CAF Field Division and 7 Parachute Division are concerned with this move. The presence of parachute formations is confirmed by the capture in Sicily of prisoners of 3 Parachute Regt who stated that they had arrived from CARCASSONNE via NAPLES on 10 July. At the time of writing it is not known to which division this regiment belongs. Whatever the original intention may have been which occasioned the bringing of Parachute formations to SE France it now seems probable that they are to share the fate of the RAMCKE brigade and be relegated to an infantry role.

ITALY.

The German forces in Italy are now believed to have been further strengthened by the arrival of 3 Motorised Division. This is another of the "Stalingrad" Divisions. It is not improbable that a further armoured division, 24 or 26 has also arrived. PW evidence suggests that elements of an armoured division were already arriving in VIENNA on 9 July. This would mean that a total of four German divisions had arrived. 16, 24 or 26 Armoured, 3 and 29 Motorised Divisions.

BALKANS.

The reinforcement of German formations in the Balkans continues. The latest arrival is 297 Infantry Division(yet another re-formed Stalingrad division). The Division's present location is not known, but elements may be in GREECE.

15 ARMY GROUP INTELLIGENCE SUMMARY NO 12 of 21 JUL 43

(a) Sidelined information will not be reproduced in any intelligence summary of formations under this HQ except by special permission
(b) This Summary will be destroyed within 48 hours of receipt.

1. OPERATIONS 16 - 19 JULY

Our bridgehead has been extended and widened in all directions except one, the vital line covering CATANIA where the HERMANN GOERING division is opposing a bitter resistance. Elsewhere all is in flux. The Italian troops have nowhere opposed any serious resistance, and, like the civilian population, seem rather to welcome our arrival, expressing themselves, when captured, highly gratified at our choice of SICILY as a point of disembarkation. In their disintegration they have involved the other GERMAN division, the reformed 15 Panzer. Caught on its way to the West of the island by the surprise of our landing 3 P.G.R. was in action in the area it had reached, CANICATTI, by 13 July, though it was 16 Jul before elements of the 1 P.G.R. Battle Group, which began to move from SALEMI on the night of 10 Jul, was identified in the ENNA area.

On 19 Jul HERMANN GOERING Division was holding in front of CATANIA with the SCHMALZ Battle Group in the East and CENTURIPE to the West. In the West the line lay back along the DITTAINO and the Eng Bn on the extreme right was worried about the flank of the Division. It had blown the bridge at RADDUSA Station (H.4784) but had been unable, in spite of repeated efforts, to make contact with 15 Pz Div. In between was apparently an unspecified Blackshirt Bn and possibly some fragments of LIVORNO and NAPOLI driven North from RAMACCA. These last have not been recently identified on the ground but should be available in this area. Further West 15 Pz Div is falling back Northwards and North Eastwards, trying to make contact. 1 P.G.R., which had not to date been very heavily engaged was apparently holding firm in the ENNA area where prisoners were taken from both I and II Bns. 2 P.G.R. was contacted from 16 to 19 Jul; a prisoner on 17 Jul said that the regt was directed from CANICATTI to SAN CATALDO and turned North and North East. It may be that FULIRIEDE, who has had much the most fighting so far, was intended to move back through LEONFORTE behind the screen of P.G.R. I, but an identification of his III Bn on 19 Jul in the ENNA area and our rapid advance since on LEONFORTE may indicate that this plan has been at least partially thwarted.

We know at least where 15 Pz Div is going and that gives us a forecast of the shape of things to come in SICILY. As early as 16 July a representative of the division (Lt. Col. GUELL, who appears to be a senior staff officer on Div HQ) was carrying out a recce apparently in the area between the TROINA - CESARO road and the Northern coast road while another officer of the division was also reconnoitring TROINA and CESARO and back as far as BRONTE and RANDAZZO. A provisional site for Div. HQ was selected at MALCMOGLIERA (G.6816). It is clear that 15 Pz Div has been given the task of defending the Northern slopes of ENNA. It is not clear whether the sector is expected to extend to the sea, though GUELL mentions the coast road as a possible L of C.; if it is to get such a long frontage one would expect the division to receive some reinforcements. A noteworthy point is that these defensive positions were proposed "By Corps" and on 12 July occurred a reference to 14 Pz Corps which sent an order to all units of 15 Pz Div. 14 Pz Corps was at STALINGRAD and it is natural to connect it with the four ex-STALINGRAD divisions, 3 and 29 Panzer Grenadier and 16 and 24 (or 26) Panzer Divisions which are known to

/have arrived.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

have arrived in ITALY. (According to a captured diary 14 Pz Corps was in South ITALY in Jun). Again, it would be unreasonable and unnecessary to send over merely a Corps HQ to take command of divisions already in the island at such a critical moment so that we must be prepared to see fresh forces following.

Reinforcements have continued to arrive in driblets. Two Fortress Bns numbered 923 and 924 have turned up, one on 7th Army and one on 8th Army front together with a March Bn 69, called KAMPFBATAILLON REGGIO. As in TUNISIA the Germans apparently have a fair store of independent battalions which can be brought in hastily to relieve a dangerous situation. It is not known whether any more parachutists have arrived and at least II Bn of 3 Para Regt on the word of the O.C. appears to have suffered very heavy losses. The main change in the Order of Battle is the elimination of an entire Italian division, 103 PIACENZA, which now appears to be relieving 10 PIAVE Division in the ROME area. This puts the previous candidate for the position of the fifth field division in SICILY, 104 MANTOVA, back in the running again but so far there has been only a tentative and unconfirmed identification of this division. Surely if it were there, especially if it were in the CATANIA area it would have been identified by now. It looks as if the Italians considered four field divsions sufficient for SICILY and that MANTOVA was left in CALABRIA.

We have a little news of 26 ASSIETTA Division which so far has been identified mainly by inference from Tac/R reports of troops withdrawing in front of our advance. It now appears from a prisoner that at least parts of 30 Inf Regt had been directed on PALERMO. There have been frequent air reports of movement towards PALERMO from the centre. Another part of the division may be represented by the report of a column of troops on foot extending from SCIACCA to CASTEL VETRANO at 1100 hrs on 19 Jul. It seems likely that ASSIETTA is withdrawing to the West of the island to put up possibly only a token defence of the capital.

The emphasis throughout is on the Germans and it is clear that the final defence of SICILY in the North Eastern tip will be an all German show. Italian morale is reported on all hands as catastrophic and it is clear that the Germans have ceased to place any confidence in them and make their plans without any reference to them. German morale will probably not be first class; there are many aliens among their number and the extra-ordinary measure of withdrawing all pay-books from 15 Pz Division may be intended to prevent desertions. But the most discouraging factor for the German troops will be the feeling that they have to bear all alone the weight of the defence of a country far from their own among indifferent Allies and an apathetic civil population.

2. <u>ENEMY SUPPLIES AND COMMUNICATIONS.</u>

A. PR has revealed a marked increase during the past week in the number of small craft operating in the Straits of Messina. Cover on 18 July showed that there were at least 11 Siebel Ferries, 14 F - boats, and a considerable number of small craft active. This number is well above the average of vessels which have been seen during the past month or six weeks, and must be regarded as a direct consequence of the Allied invasion. In view of this it would not be surprising to see further reinforcements appearing shortly on the island, if indeed they have not already been ferried over.

Whether further craft materialise or not in this area will depend on the progress and duration of the campaign. In any case it would be logical to expect the enemy to maintain a substantial number of vessels there if only as an insurance against a possible hasty evacuation to the mainland.

The two train ferries are still present in the Straits, although they appear to have been less active of late. This may be accounted for by the congestion likely to be reigning at the ferry termini as a result of Allied air raids, details of which were given in our last summary.

B. In the period 11 - 17 July, shipping intake to SICILY other than traffic by small craft across the Straits was on a low scale. A total of 6,500 tons arrived, all of it at PALERMO.

/There was.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

There was no intake to CATANIA while traffic at MILAZZO and MESSINA consisted only of vessels from other Sicilian ports, and is not therefore classified as intake.

C. As a result of the heavy daylight raid on NAPLES on July 17 further substantial damage has been caused to installations and communications. Preliminary reports show that the marshalling yards are now completely unserviceable owing to numerous craters and derailed trucks, while all the Ry tracks have been severed between the roundhouses and station. The Royal Arsenal which has suffered on many previous occasions, has received additional damage, and numerous fires are seen in oil storage tanks.

3. ENEMY STRENGTHS.

German Divisions.

As was expected there has been a large paper increase in the number of identified divisions. During this year the "paper" total has fluctuated from 310 Divisions in January to 290 Divisions in March and has now risen to a present total of 324 Divisions, the highest ever. This "new high" is accounted for by the fact that it is now known that all the 20 Divisions destroyed at STALINGRAD have been hastily reformed and must once again be included in the total of effective formations. Other formations resurrected include 15 Armoured and Hermann Goering Divisions now identified in SICILY. A few low grade formations have been upgraded while one or two new Divisions have been identified. Numerous and extraordinary expedients have been devised to raise men for the active Divisions. Of the total of 42 training Divisions at least half are also engaged on garrison duties outside the REICH.

This has been done with the deliberate aim of deceiving the GERMANS themselves and creating the illusion that the GERMAN army today is as powerful, if not more powerful, than before. However, there can be no doubt that owing to the known man-power shortage this illusion has been created at the expense of adequate reinforcement for formations which have been engaged on the RUSSIAN front with only brief respites since the summer of 1941. War Establishments of formations are in general lower, the quality of men poorer, their training less thorough; their confidence in themselves and their cause is shaken and even perhaps waning.

4. NOTES ON ENEMY FORCES.

A. German.

3 Gren Regt. 15 Armd Div. Examination of Pa.W. and Paybooks shows that this Regt is made up of 3 March Bns, originally intended for Africa, but now diverted to building up the infantry of the revived 15 Armd Div.

The Pa.Ws show the characteristics which one came to associate with the later arrivals in the African campaign. They are, in large part, either very young or over 30, and included a high proportion of Austrians and Slavs in their ranks. The following are some details regarding the actual Bns of the Regt.

I Bn. Formed from 63 March Bn.

II Bn. On May 20 formed from 65 March Bn. At the beginning of July, this Bn was at CANICATTI. On conversion from 65 March Bn to II/GR3, the Arty personnel were removed to be absorbed into a Div Arty Regt, which has not so far been formed. To make up for the loss of this personnel, a number of Yugoslavs from a special March Bn were incorporated in this Bn. II Bn is of four Coys, each of three Lt. and one Hy. Pls.

III Bn. Formed from 67 March Bn on May 21, 1943. The present organisation of the Bn is of three rifle coys and a Hy coy.

As an indication of the armament of the Bns, the following details are given of the two coys, from which Pa.Ws were taken.

5 Coy. 1 - 3 pls are Lt. pls, each of three secs, each 10 - 12 men and armed /with 2 x MG.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

with 2 x MG 42's. Each lt pl is further equipped with three rifle grenade discharge cups. 4 pl (Hy) consists of (i) two HMG secs, with each one MG 42 on heavy mounting (ii) 2 x 8 cm mortars (iii) 2 x 5 cm A/Tk guns.

9 Coy. Of four pls. 1 - 3 are lt pls, 4 is hy pl. The number of men and MG's in these pls is uncertain. The hy pl has 2 x HMG 42 and 2 x 8 cm mortars. At Coy HQ is one anti-tank gun of uncertain calibre.

13 (Inf.Gun) Coy. Believed to have 7.5-cm inf guns, of which four were allotted to 2 Bn for a recent exercise.

Strength of Coys: 11 Jul 43 :

5 Coy	-	150	
9 Coy	-	160	(has had heavy casualties since)
10 Coy	-	160	
11 Coy	-	160	
12 Coy	-	120	

On 25 Jun 43, 3 Gren Regt moved to the area TRAPANI - PALERMO, where it stayed five days doing training. PW was told by an officer that the real reason for the move was that the few German troops on the island were being shuffled around so as to give the impression that there were far more German troops on the island than was actually the case.

(COMMENT: This move of 3 Gren Regt to area TRAPANI-PALERMO was probably only temporary)

5 Coy contained about 20 Austrians, 5 Alsatians, 6 Poles and a number of Rhinelanders. None of these had the slightest wish to fight, and their one desire was for the war to end so that they could get home to their families when they had been forced to leave to suffer alone. Morale throughout the Coy was low.

2 Sqn 504 Heavy Tank Bn. A PW captured in SICILY has given the following information:-

2 Sqn had four tps, each equipped with four tanks plus one tank for the O.C. Sqn.

It arrived in SICILY with the new organisation of two Mk III and two Mk VI tanks per Tp, which was considered the best proportion. In PIAZZA ARMERINA its eight Mk III tanks were exchanged for eight Mk VI tanks by the HERMANN GOERING Tank Regt, so that from Jun 43 it reverted to the old system of four Mk VI tanks per Tp.

At Appendix 'A' to this Summary is a brief provisional Order of Battle of German forces in SICILY.

/B. Itdhn.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

B. Italian

26 ASSIETTA Div

The following information has been obtained from a PW believed reliable.

General O. of B. agrees with previously published OB. of B., with the exception that the PW was most emphatic that Div was very much under strength and that 29 and 30 Inf Regts had only two Bns each. He gave the Regts as stationed at PANTANNA and near SCIACCA. Div HQ at PANTANNA.

Div M.T. consists of about 50 small trucks.

Bersaglieri

From PW source the following information regarding second line Bersaglieri organisation is of interest.

177 Bersaglieri Regt (525, 526 and 527 Bns) was formed in Feb 43 from the Bersaglieri Regt Depots mainly from 1907 class. It was intended for territorial use only.

Bns had four coys each and HQ platoon. Each coy had 3 platoons; two with 3 LMG and one with 3 M.G.

Normal battalion strength was 600 but 526 Battalion's strength was only 300.

M.T. consisted only of four motor tricycles for battalion.

This Regt has been eliminated in the AGRIGENTO area but other similar formations are likely to be encountered.

616 Auton GaF M.G. Coy

The following information is from a PW of the unit.

Organisation:	HQ Platoon ; three MG platoons ; each platoon three secs.
Armament:	Carbines for all personnel; each sec one M.G
Strength:	W.E. Strength 167 men ; effectives averaging 150.
M.T.	Nil

15 ARMY GROUP INTELLIGENCE SUMMARY No 13 of 23 JULY 43

(a) Sidelined information will not be reproduced in any intelligence summary of formations under this HQ except by special permission.
(b) This Summary will be destroyed within 48 hours of receipt.

---

1. OPERATIONS : 20 - 22 JULY

Hard fighting continues in the area South and South West of CATANIA where we have not been able to make any substantial advance. Prisoners from HERMANN GOERING Division may show no keenness for the fight; it can only be deduced that these prisoners are unrepresentative or only the bad ones surrender since the division as a whole is fighting even better than in TUNISIA. 15 Panzer Division after rather a scrambling rearguard action round LEONFORTE and ASSORO has now arrived on HERMANN GOERING's right flank; some of P.G.R. 3 were caught at LEONFORTE when they put up a very desperate fight but P.G.R. 1, though at the cost of heavy casualties, seems to have reached a position somewhere East of NICOSIA.

The enemy line in the Eastern sector runs from about 5 miles South of CATANIA due West to the DITTAINO and thus along that line to CATENA NUOVA, except for an allied bridgehead at SFERRO. From CATENA NUOVA it strikes North to include REGALBUTO and NICOSIA. SCHMIZ' Battle Group still holds the Eastern end of GOERING's the North Western end of the GOERING front, supported by parachutists and miscellaneous scratch inf bns. 15 Pz Grd Div has probably not yet sorted itself out but may have 1 P.G.R. on its left adjoining GOERING and 3 P.G.R. on the right, still probably a little far forward, while the remainder of 34 Inf Regt, were on 22 Jul moving North up the CESARO - SAN FRATELLO road to find a little peace in this as yet unthreatened sector and eventually, when reformed and stiffened, to prolong the line to the sea.

In the West a two-pronged pincer movement by 7 Army has had some sweeping success. Moving forward with great speed against considerable difficulties including most extensive demolitions of the already meagre and unmetalled communications in this sector the Southern arm of the pincer captured CASTELVETRANO on 21 Jul and the Northern arm entered PALERMO on 22 Jul. In two successive days fell the great military airfield developed so long and lavishly to ensure command of the SICILIAN narrows and the capital of the island itself.

The bag in prisoners in the West is not yet known, nor the exact fate of the divisions there. It seems almost certain that 28 AOSTA Div and the two Coastal divisions, 202 and 206, will shortly cease to exist. 26 ASSIETTA seem to have escaped, at least in part, to fight another day. Part at least of 30 Regt, was directed on PALERMO where it may have shared the fate of the capital but it seems that the majority of the division, accompanied by II Bn 6 Inf Regt of AOSTA, made for the ALIMENA area where prisoners were taken from all the divisional units. It seems reasonable to conclude that the division is trying to make its way into the MESSINA strip by the road running parrellel to the Northern coast road and air reports tend to confirm this. It has had some losses (possibly by desertions mainly, since it does not seem to have been involved in heavy fighting) which are believed to include the whole of its Blackshirt Legion.

The arrival of XIV Corps HQ has been followed as was expected by at least part of another division. I Bn 15 Gren Regt has been identified in the general area of REGALBUTO. This is one of the two regiments in 29 Panzer Grenadier division which has been located for some time in Southern ITALY (the other is 71 Gren Regt). Only the one Bn has so far been identified in action but since a division of this nature would scarcely be split up and used for piecemeal reinforcement one must expect to find the whole regiment and possibly

/soon .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

seen the whole division arriving in SICILY. When they arrive the enemy will have the equivalent of nearly four German divisions and say half of an Italian division to hold a land front of about 51 miles and a sea front of about a hundred miles. No account is here taken of 213 Coastal Division which if it behaves like the other coastal divisions will need considerable German stiffening and even they will be more of a danger than an assistance. German troops mixed in with Italians run the risk of being encircled by the failure of their allies on the flanks.

2. ENEMY COMMUNICATIONS

Detailed study of damage at ROME following the attacks of Jul 19 shows that the weight of the attack fell on the LITTORIO and LORENZO Marshalling Yards, where heavy damage was caused to rolling stock, trucks, railway installations and industrial plant in the vicinity. At the LORENZO yard, 4 trains have been burnt out, and another 5 are seen to be burning. Very severe damage has also been caused to the freight depot and to a large locomotive shop, while a viaduct at the Western Exit has been holed in two places.

At the LITTORIO yards, at least 50 direct hits were scored on trucks or rolling stock, including one which destroyed the main arteries to the marshalling yards. It is estimated that the yards have been 50% temporarily blocked. The locomotive Depot has also been severely damaged.

No damage has been caused to the Vatican City or to any historic buildings in ROME.

The already overstrained line from NAPLES to REGGIO was further damaged by a raid on the important junction of BATTIPAGLIA on 21 Jul. The line from here to REGGIO was severed, and damage caused to rolling stock. At SALERNO too, the track to BATTIPAGLIA has been destroyed at several points. These raids are likely to have a very useful effect in impeding the flow of traffic to the MESSINA straits. It is considered that they will have caused a considerable dislocation of the programme of reinforcements and supplies to SICILY.

3. DISTRIBUTION OF AXIS FORCES IN EUROPE

At Appx "B" will be found a map showing distribution Axis forces in Europe. German forces are classified as:

(a) Offensive. Includes all armoured, SS, Motorised, Light and Mountain Divs and Field Army Inf Divs in the series 1 - 400.

(b) Defensive. Comprises low category Inf Divs in the 700 series, L of C (SICHERUNG) Divs, Frontier (GRENZWACHT) Divs, training and reserve divs and so-called, Field Training (FELDAUSBILDUNG) Divs.

(c) Adm Divs. All stationed in GERMANY and include ERSATZ Divs and 24 Adm Divs z.b.v.

Italian forces are graded:

(a) Field Divs. Include the solitary armoured, a few Mot and all the mobile Inf Divs.

(b) Coastal Divs. Low grade territorial divs with primary role of Coast and Beach Defence.

The lay-out of Axis divisions in Europe at the present time reflects the essentially defensive nature of the enemy strategy. For the first time he is confronted with a situation where his dispositions are governed not by his own offensive plans, but by the threats and potential threats of the Allies. This involves on the part of the High Command a careful allocation of troops in such a way that these threats, if they develop can everywhere be met with enough forces to

/ensure .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ensure a reasonable chance of defeating them.

In RUSSIA it would seem that this has meant finally moving on to the defensive. Despite an increase since the Spring in the number of Divs on the Eastern front there has not been an increase in the striking power of the Army, since most, if not all, the divisions there are below establishment. The enemy probably hopes to maintain sufficient forces to defend his present line of hedgehog positions along the front against any RUSSIAN attacks without himself embarking on any offensive on the scale of the past two summers.

Certainly forces which would normally by now have been sent to RUSSIA have not gone there. They have instead been sent either to the BALKANS or ITALY, or have remained in the West to guard against any attempt there. The reinforcement of the BALKANS has been in progress since the early Spring, and the move of divisions into Southern GREECE continues. The recent campaign against the partisans has clearly been conducted with a view to releasing forces for the more threatened areas of the South. How far the Axis has succeeded in eliminating the partisans remains to be seen, but that there is still an apprehension of the threat to the Mediterranean areas other than SICILY is clear from the words of SERTORIUS on Jul 13. "The 10 divs which the enemy is estimated to have landed in SICILY is not half the total of the forces which he has been concentrating in the Near East and North Africa. Hence he is in a position either to throw everything he has into SICILY or to attack another part of the European Southern front with troops as strong, or perhaps stronger, than those already employed in SICILY".

To meet these threats, troops have already been withdrawn from the West. For the first time the Garrison in FRANCE and the Low Countries has dropped in the middle of the summer "invasion period". This is a result of the despatch of an armoured division to the BALKANS and of the reinforcement of ITALY and SICILY, where there are now 6 German divisions and 16 Italian divisions. There is also believed to be a German division in SARDINIA as well as 3 Italian In face of the growing threat to ITALY this may not represent the full total of divisions which will find their way South.

Meanwhile, it is unlikely that the Garrison of the West will fall much below the present total of 34 divisions for some time to come. Not unless, and until, Allied moves show clearly that there is no threat to NORWAY will the garrison there (now at the high level of 11 divisions) show any appreciable reduction.

Thus the Axis forces today are delicately balanced to meet all threats. The real danger lies in the possibility of the balance being upset by an attack either in the East or the West greater than the enemy has appreciated. Then, in an effort to stabilise the position, the Axis may find the effects of the losses of two years fighting in the East decisive.

At Appx "A" is a Location List of identified German Divisions.

4. ENEMY ORGANISATION

(a) ITALIAN

(i) 207 Coastal Div

Brig Gen August LAURUSCHK, Commanding General 207 Coastal Division stated that his division consisted of two regiments of three battalions each, 10 Bersaglieri Regt (see note below) 12 x 8.4 7[illegible] 12 100-mm and 12 149-mm guns.

(ii) 10 Bersaglieri Regt (Col STOLET)

10 Bersaglieri Regt has been reported by ToW as destroyed in the AGRIGENTO area. It consisted of 35, 73 and 74 Bns formed from Depot troops. Composition of Bn was 3 companies and HQ platoon. Armament of companies:

One platoon with 6 L.M.Gs
" " " 3 Mod. 37
" " " 3 Breda 20-mm
" " " 3 47/32 A.Tk guns

/This.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

[illegible] is the Old North Africa 1942 organisation, and the regiment may have been destined for that theatre.

(iii) 18 Complement Bn ASSIETTA Div

This unit which was captured at S. SPINA on Jul 16 is a new identification. The Bn has a low scale of Inf armament.

One P.W. a 1st Lieut, was recalled to service in May 43 and had not yet been issued with all his uniform and was still partly dressed in civilian clothes. He could not obtain issue of a revolver, and was given a rifle deficient of magazine. Spares for M.G. could not be obtained over the last eight months.

(iv) 131 Tank Regt (Col [illegible])

Regiment consisted of 101 and 102 Battalions. 101 Bn had its companies detached as autonomous units. It had HQ company with 3 or 4 R.35 tanks and 2 L6 tanks acting as radio stations.

1, 2 and 3 companies each divided into 3 platoons with 5 tanks each, and HQ platoon with one tank for the O.C. Total number of tanks per company was 16 (R.35), and Bn total is 54.

DETAILS OF R.35

Armament: R.35 is armed with co-ax 37-mm gun and 7.5-mm M.G.

Radius of action: On roads 80/90-km.
Cross-country 50/60-km

Speed: 22-km.p.h.

Ammunition carried: 72 A.P. rds; 30 rds HE, for M.G., 2400 rds in magazines of 150.

Spares: Spares could not be obtained, with the result that broken-down tanks only were used to supply the required parts. This cannibalisation process gradually reduced the number of these tanks available. The rubber on the bogey wheels was so worn out that the track was practically on metal.

Engine: Subject to overheating. Tank had to be stopped quite frequently in order to cool the engine.

Radio: Platoon and company commanders' tanks only were provided with an RF 2 set. Battalion HQ had two L6 tanks acting as radio centres.

Crew: One driver and one gunner.

Part of 101 Battalion has been destroyed.

(v) 1 Autonomous Mortar Bn (Maj MESSINA)

Battalion consisted of 101, 102 and 103 companies.

Organisation: Three Companies in Battalion of 960 men.
Four Platoons in Company of 320 men
Three sections, each one mortar in Platoon of 80 men

It is to be noted that 4 Platoon of each company is the HQ Platoon and is without automatic weapons. There is one 81-mm Mortar per section making a total of 27 Mortars per Bn. Mortars were usually carried by the troops

/themselves .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

themselves, but for long distances they had a cart for each platoon. Each munition bearer, 15 in all, carried six rds.

(b) GERMAN

The following information has been obtained from PsW and captured documents.

(i) 15 Armd Div

(a) 1 P.G.R.

1 Bn, Arrived in SICILY as 1/P.G.R. NAPLES.

PsW from II Bn give the composition as three companies instead of four; each company has 18 L.M.Gs, 2 H.M.Gs, 2 x 8,1-cm Mortars and one A.Tk rifle 41. II Bn has suffered 40% casualties up to 10 Jul.

Organisation I Bn as for II Bn. 13 Company had 6 x 7.5 cm A.Tk. guns (two in support II Bn); 14 Company had 12 7.5-cm A.Tk guns.

(b) 2 P.G.R.

PW states I Coy had 3 x 7.5-cm guns.

(30 Corps I.S. 569)

(c) 215 Tank Bn

From mid-Jun, 2 Coy 504 Tank Bn was attached to 215 Tk Bn, but was detached early in Jul, and attached to 90 Lehr Regt.

215 Tk Bn consisted of HQ Company, four tank companies, a Workshop company and a R.O.F. Section. According to a more recent PW, 215 Tk Bn now consists of three companies of approximately 22 tanks each. All Mk IIIs and Mk IVs.

The tanks of 13 Bn, including the Tigers of 504 Bn when incorporated in 215 - bore a white star with a black "C" superimposed ("C" being the initial of the Bn commander).

(ii) HERMANN GOERING

Armd Div

(a) 1 P.G.R.

PW from 1 Company states I Bn was cut to pieces in area GELA 10/11 Jul, and had 50/70 men 17 Jul; he states II Bn was encircled at CAL 'GIRONI 14 Jul and had heavy casualties.

(b) 2 P.G.R.

The regt consists of HQ company and three battalions, with similar organisation. Each bn is of four coys (three rifle and one heavy). In I Bn, 4 coy is stated by PW to have three platoons.

I (Inf gun) Platoon with 4 x 7.5-cm Inf guns (all knocked out).
II (Eng) Platoon. 24 men in three sqds (each one L.M.G.) used as assault engineers (NOT PIONEERS) as bridging equipment was left in ITALY.
III (Super Heavy Mortar) Platoon with 4 x 15-cm NEBELWERFER Mortars (no amn)

II Bn has 5, 6 and 7 (Rifle) Companies and 8 (Heavy) company. Each Rifle Company consists of three light platoons and one heavy platoon. Each Light platoon consists of three sections, with each two L.M.Gs, 42 and Platoon HQ (W/T operator and two runners). Each Heavy Platoon consists of a light inf gun section, with two 7.5 Inf Guns and Heavy Machine Gun section, with four H.M.Gs. With

/Two inf gun.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the Inf gun section there is an O.P. and the necessary telephone operators. 8 Coy was the heavy coy and was organised into an A.Tk platoon, a heavy mortar platoon and an engineering platoon. The A. Tk platoon had, when in NAPLES, four 5-cm A.Tk guns. At NAPLES these were replaced by A.Tk guns of a larger calibre. PW is not sure whether they were 7.5-cm or 8.8-cm. The heavy mortar platoon was equipped with six RUSSIAN 12-cm mortars, carried on small STEYR lorries. The engineering platoon is believed only to have been used for bridge-building and sapper activities. 5 company strength 13 Jul 43 ; 120 - 130 all ranks. It had heavy casualties on this date. All unit vehicles bore the HG Div emblem: a clockface with a green pointer, the pointer painted green to indicate the Inf arm.

(c) H.G. Tank Regt

III (Assault Gun) Battalion was V/Arty Regt HG until the end of Jun.

504 Tank Bn

This bn originally consisted of HQ Company and two heavy tank coys. 1 Coy went to AFRICA with its TIGER tanks and was lost. 2 Coy moved to SICILY in Apr 43 with its TIGER tanks and early in Jun moved from TRAPANI area to SALEMI and here it temporarily became part of 215 Tank Bn, providing a heavy platoon of TIGER tanks in 3 and 4 coys of 215 Tank Bn. Early in Jul it was set up again as an independent company, regaining its TIGER tanks. On 13 Jul 43, when its 3 Platoon went into action, it was still an independent Coy although it was said to be attached to HG Tank Regiment.

According to PW, 2 Coy, 504 Tank Bn consisted of HQ and four platoons. Each platoon had four Mk VI Tiger tanks. With Coy HQ, there was a MK VI Tiger Tank in which the Coy commander rode. There was also a repair section ('I' Trupp) in the company, which was equipped with a crane truck ("wrecker") and a workshop truck. According to a PW, 2 Coy had a strength of 150 all ranks. Each tank had a crew of five. As far as PW knew there were no spare crews. In the action on 13 Jul 43 four Tiger tanks of 2 Coy were definitely damaged, and possibly a fifth. This left 2 Coy with a total of 12/13 tanks.

(d) H.G. Arty Regt

A PW gives the organisation of this regt as:-

I Bn	(US Bn)	- three troops (US Bty)	of 4 x 105-mm guns/hows LFH18)
II "	"	" " "	of 4 x 150-mm hows (SFH18)
III "	"	" " "	of 4 x 105-mm guns (LFK18)
IV "	"	" " "	of 4 x 105-mm guns/hows (LFH18)

(e) H.G. Recce Unit

PW states that 6 Coy is A.Tk coy with 8 x 7.5-cm S.P. A.Tk guns on Mk II tank chassis.

(COMMENT: It is possible that PW means the Czech T38 chassis. This equipment was not in North Africa)

Original strength: 210/220; has suffered heavy casualties and lost two guns (these may possibly be the 12 TDs claimed by our forward troops on 15 Jul at H 6552).

(f) H.G. Eng Bn

This Bn moved to SICILY at the end of Jun. 2 Coy arrived a few days later (2 Jul) and was on its way to join the Bn at PALERMO when the whole unit was ordered to move to CATANIA. From CATANIA the bn moved to

/CAJATGIRONE.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

CALTAGIRONE and then moved to GELA area when the Allied landing was made. Here it was used chiefly in an inf role, though some mines were laid by it.

Its organisation is as follows:

Battalion consists of HQ Coy and four coys.

1, 2 and 3 coys were inf companies with three light and one heavy platoons. The light platoon consisted of three sections, with one N.C.O. and ten men, equipped with 2 machine Guns 42. The heavy platoon had one heavy mortar section with 2 x 8-cm Mortars and three heavy M.G. sections with each one H.M.G. (MG 34 and MG 42). 4 Coy was known as an Assault Coy (STURMKOMPANIE). It consists of two platoons, one with the heavy projector and the other with Flame Throwers. 1 Platoon had three M.T.Ws each with six heavy projectors built in at the sides. 2 Platoon had two M.T.Ws each with one, or possibly two, heavy Flame Throwers.

According to PW 4 Coy did NOT exist in the old HG Eng Bn. He had never heard of 5 Coy or 6 Coy. During the engagement at GELA 3 Coy had NO 8-cm Mortars as it had had to give them up to an Inf unit.

2 Coy strength - 180
4 Coy strength - 60/70

There were only three men instead of six, on the H.M.Gs in 2 Coy. At GELA fugitive Italian soldiers were impressed as Nos 4 - 6 (for carrying amn). They fled. Personnel of the Bn were, according to PW, everything else but the volunteers they are alleged to be. They were men drafted from all branches of the services; from Air Force ground personnel from construction bns, Signals, A/Tk etc. There was a fair proportion of ex-RUSSIA personnel. Few of them were the do-or-die type and even fewer intended to die for the Leader and Fatherland. Few of the personnel of 2 Coy had been trained in Engineer duties.

The tactical sign on Bn vehicles was a white clock face with a black pointer indicating the number of the coy.

(iii) Paratps

(a) 3 Parachute Rifle Regiment

PsW from 2 Bn give the following organisation - four coys (5 - 8), each six L.M.Gs, 2 light Mortars and 2 A.Tk rifles, 41. Was allotted 3 x 5-cm A.Tk guns (no amn abandoned FRANCOFONTE) and some Assault Arty by HG Div.

(b) 1 Para Arty Regt

PsW from 1 Troop give the organisation of 1 Bty as 4 x 10.5-cm LG 2 (each with a crew of four men) and Inf section (Staffel) of 32 men with 6 L.M.Gs and a signals section. Original strength 120 men (of whom 30 were left behind in FRANCE). 1 Troop left AVIGNON in 13 Gliders. Several Gliders crashed or were shot down en route and two guns were lost. PW states that I Bty is the only one in existence. II Bty was lost in AFRICA and never replaced.

(iv) Independent Units

(a) 923 Fortress Bn

This is the former 125 z.b.v. March Bn which was renamed about 21 Jun 43. Up to this date it had been equipped for RUSSIA and was standing by to leave. Quite suddenly the RUSSIAN kit was withdrawn, personnel were issued with tropical kit and the new name, 923 Fortress Bn became official.

/On 28 Jun.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On 28 Jun 43, 923 Fortress Bn moved to SICILY It arrived on 5 - 6 Jul 43 and was stationed successively at MESSINA, SANTA TERESA and CALTAGIRONE. About 12 Jul 43 2 and 4 Coys of the Bn left CALTAGIRONE and went to GELA area where they took up posns. 1 and 3 Coys remained at CALTAGIRONE. The Bn was attached to HG Div for rations.

The Bn is of four similar Coys, numbered 1 - 4. Each coy consisted of three light platoons and one heavy platoon. The light platoon was of three sections of 1 N.C.O. and 10 men with two M.Gs 42. The heavy platoon had one M.G. sec with two H.M.Gs 42 and one heavy Mortar section with two heavy (8-cm) Mortars. There were no A.Tk weapons in the coy but some of the men were A.Tk personnel and had been told that A.Tk weapons were on the way. 4 Coy strength on the 12 Jul was 145 - 150. Of the total Bn personnel, 253 were from LORRAINE.

(b) 69 (REGGIO) March Bn

This Bn was identified with 200 Special Bde (SCHMALZ). PW gives organisation as HQ Coy, three Rifle Coys and a Heavy Coy. The latter has 180 men with 4 H.M.Gs, 2 Heavy Mortars and 3 A.Tk rifles 41.

5. ENEMY EQUIPMENT

PANTHER TANK

A captured Italian document dated 24 May 43, dealing with strengthening of bridges in SICILY gives the accurate data of the PzKw IV and PzKw VI tanks.

The following particulars are also given for the "PANTHER" Tank:

Length	22ft 0½in
Width	10ft 10½in
Height	9ft 8in
Weight in action	43 - 44 tons
Track width	2ft 2in

Track length on ground is given as 12ft 11½in, the same length as that quoted for the PzKw VI Tiger. No details of armour or armament are given.

COMMENT

This tank has not been identified in North Africa, and as far as is known, has not been in action on the RUSSIAN front.

The specifications of the "Panther" tank is not yet clear but it seems probable that it may be armed with a high velocity gun of 7.5-cm calibre, and that its design has been influenced to no small extent by the RUSSIAN T 34 Tank.

The following specifications of the PzKw VI TIGER are given for comparison:

Length	20ft 4in
Length including guns	27ft 0½in
Width (Road track)	10ft 6in
" (Cross country track)	11ft 9in
Height	9ft 5½in
Weight	56-tons.

COPY NO. 2

15 ARMY GROUP INTELLIGENCE SUMMARY No. 14 of 6 AUG 44.

(a) Sidelined information will not be reproduced in any intelligence summary of formations under this HQ except by special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

1. OPERATIONS 23 JULY - 5 AUG.

The enemy were allowed only a short respite in front of CAMPOLI and none on the Northern Sector. We have maintained constant pressure all along the line combined with a concentrated thrust at the centre which has obliged him to abandon CAMPOLI and exposed him to the danger of a split between the two halves of his line.

When the Germans discovered, apparently to their surprise, that we were temporarily unable to press forward from the ARIELLO Bridge, they organised for defence along the line of the DIVIANO and the TROIGNI river and then from TROIGNI itself North to the sea west of SAN VALENTINO. Already, however, by 27 July, the enemy was looking for a more permanent line. This line, which a captured document of Hermann Goering Div calls the Brückenkopf position, runs from the sea 3 kms North of ACRIELLO due West to include DILUCIVILLE and ADLINO; the further course is uncertain but from enemy behaviour it appears to be extended to include TROIGNI and thence presumably to run North to the Coast as before. Hermann Goering Div had prepared two intermediate lines to be occupied on the way back, one including and one excluding CAMPOLI and both pivoting on the strong hill position of CERVARIETE. This plan for an orderly withdrawal was frustrated by the strength of our attack on CERVARIETE. Though reinforced by 3 Para Regt, probably the best German troops on the island, CERVARIETE was stormed after fierce fighting and ADLINO is now directly threatened. It is reported that the enemy seem to be thinning out the ARIELLO garrison in front of ADLINO, although its loss would interpose the mass of XIII between the two halves of the enemy line. It is early as yet to forecast the fall of ADLINO, but it is clear that the enemy must already be thinning out a withdrawal behind ENNA.

Further North, the enemy continue to defend TROIGNI with great determination. If he is to attempt to hold a line in front of SAN VALENTINO and CHERRO, he must keep us at a safe distance from the road joining the two which is the only possible lateral communication on this part of the front. In the TROIGNI fighting the mainstay of the defence is PGR ENS; this Regt is fighting with very great determination, but is known to have had the most severe losses. HERMANN appears to be in support immediately in rear and his HQ was shown by D/F to be about 5 kms SW of CHERRO; III Bn has been identified about 5 kms North of TROIGNI. In the same area is 15 PGR of 29 Pzgt Div with 71 PGR between it and the coast. One Bn of 15 PGR is South of TROIGNI and 382 PGR is also split with I Bn North and to South of the town.

Other identifications are rather disjointed as might be expected in a withdrawal. HQ 1 Para Div 3 Para Regt on its right and 4 Para Regt on its left; it was intended, circumstances permitting, to put both Regts in a sector of their own on the East Coast but the break through at CATENANUOVA prevented this plan. The REINHARDT who for so long bore the brunt of the battle have been withdrawn to reform on the ADLINO - TROINE road. The fact that the German Tanks have not played a great part in the battle is not surprising in view of the terrain but it is interesting to note that small detachments of them, usually about three in number, have been used well forward as SP Arty to assist the forward infantry. It does not appear that they have had any particular success in this role.

It appears.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

It appears that a certain thinning out of non-essential elements has taken place. Evidence is slight but on night 2/3 Aug, there was a reference to what may have been rear HQ 6 Army moving back to the Mainland and on 5 Aug, D/F put the mobile HQ of 15 Pz Div in the toe of ITALY. Both these could well be dispensed with; 6 Army HQ is of little use now and the ground is unfavourable for a recce unit. The attempted flight of 500 Recce Unit from Capo ZOPPO suggests a parallel. These moves should not be pressed to suggest that the Germans have already begun to evacuate. They must appreciate that they will be shortly pressed back behind the PO by the splitting of their line at ADRIATIC but everything still suggests that they will continue to put up as tough a delaying action as possible confined by the fact that the further back they go the more their line is shortened.

A postscript should be added on the Italians. Contrary to what was suggested in IS No.15, it appears that parts of 26 ASSIETTA Div succeeded to escape into the Maddalena; at least Div HQ is there with General ROMITO taking further ineffective effort to discover the exact whereabouts of his own troops and his allies. Prisoners have been taken in the ANCONA area from both 5 and 6 Inf Regts. However PWs agree that very large numbers of men have deserted; the high proportion of Sicilians in the formation has facilitated the process and many of ROMITO's troops are probably peacefully tilling their fields at the present. 26 ASSIETTA is also stated by prisoners to have been reduced to about 40% of its original strength and, as in the case of all Italians, recent political events will have reduced its fighting value to a very low level. A recent Italian prisoner made the sardonic unusual statement that the morale of the front line troops was very high; the reason for this, he added, was that all were convinced the war was already lost.

2. POLITICAL SITUATION IN ITALY.

There are no really reliable reports of conditions in ITALY and it is dangerous to speculate on the present situation in the country. A few broad outlines can be given. When Maresciallo BADOGLIO assumed supreme power, his first acts were directed solely to measures ensuring internal security; lip service was paid to the principle that ITALY would remain faithful to the Alliance and continue the war at GERMANY's side, but it is clear that the main role laid down for the troops in ITALY was not so much defence against external aggression as the preservation of order and public services and the prevention of riotous assembly. (The latter is defined as the gathering together of more than three persons). The Army has other tasks as well; with the abolition of the Fascist State and the dissolution of all Fascist Party organs, a great part of the administration and countryside machine, presumably under direct Army control, will be set to fill the gap. With all these intensely practical and essential tasks on hand, the Italian Army can scarcely be expected to give much attention to a task evidently regarded as inevitably by all Italians, the defence of the home country. It is true that during the lull in front of CATANIA, General AMBROSIO's communiques took on a rather more cheerful tone and the nerveuriel Italian temperament may have allowed itself some fleeting hopes; the reaction is likely to be all the more serious, but it must be allowed that the period of comparative freedom from disaster has given time to the Germans to take necessary military dispositions and to prevent a collapse outbreak of anarchy in ITALY. But no Italian doubts that the sacking of MUSSOLINI's fall is that peace must be made, if possible on honourable terms, if not, on any terms possible.

The Italian Press and Radio is now "under entirely new management" and London and Rome are having some little trouble in thinking up new political system cobbling the best of the "Corporate State" with the old Italian tradition of Liberalism". Most of them find it easier to abuse the Fascist leaders for "hiding themselves out of the mire and for discarding the sacred "Statuto", the Constitution; the latter line rather hits at the King, whose oath is to the constitution.

Apart from.....

15 ARMY GROUP INTELLIGENCE SUMMARY No.15 of 13 AUG 43.

(a) Sidelined information will not be reproduced in any Intelligence Summary of formations under this HQ except by special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

-0-0-0-0-0-0-0-0-0-0-0-0-0-0-0-0-0-0-0-0-0-

1. OPERATIONS 6 - 12 AUG.

The enemy has continued to withdraw and has not made any attempt to do more than impose delay. It looks as if he no longer intends to hold any definite line in SICILY, like the bridgehead position on ETNA position but intends to carry out one continuous withdrawal movement until he reaches the other side of the Straits. This movement, however, is a very slow one and full use is being made of the difficulties of the ground, assisted by demolitions. We have been able to do little to speed up the enemy's withdrawal or to encircle any of his troops except in the North coast where sea-borne landings have produced a satisfactory number of prisoners and considerable acceleration of the enemy's backward movement.

On 6 Aug TROINA was captured, on 7 Aug ADRANO, and the converging advance on RANDAZZO was well under way. On 8 Aug CESARO and TROINA fell but the great road junction at RANDAZZO was still in enemy hands on the evening of 12 Aug. HERMANN GOERING Div was responsible for the defence of the TROINA road with its one remaining H.C. Grenadier Bn, 3 Para Regt, II Bn 382 PGR, the RANCIO Bn and the invaluable H.C. Eng. Bn; the advance of 7 Army from CESARO was opposed by 15 PG Div with 104 PGR and I Bn 15 PGR in the ETNA Battle Group and to the North of the road FULLRIEDE'S 129 PGR with possibly II Bn 71 PGR under command. This has been the main centre of interest; on the North coast 29 PG Div has been pulling back either to conform with the withdrawal of the centre or as a result of the successful landings at SAN FILARCO D'ALLENZIO on 8 Aug and at BROLO on 11 Aug. 71 PGR remains on the right, apparently with IBn forward and IIIBn well back. II and III Bns 15 PGR have also been identified on the North coast together with 29 Eng Bn. The corridor East of ETNA, where the enemy has been steadily but apparently unhurriedly falling back, is defended by 4 Para Regt and 115 PGR (KOMMER) plus the scratch CAMMIN Bn formed from GAF ground staff. From a captured map it appears that 4 Para and 115 have been retiring by alternate bounds, the stage which has apparently been reached at the moment puts 115 PGR on a line along the general line of the CS Northing from I.CASTIGLIONE (S.9705) to just North of RANCIO with a salient in the middle bulging Southwards for about 2 kms while 4 Para is concentrating in the area C.LAMBUNO SW of MONTE.

The enemy tanks have not been much in evidence which is not surprising in view of the country and they appear to have been split up over the front in support of the infantry in a mobile role. A divisional order of H.C. Div on 1 Aug orders 1 Sqn of H.C. Tank Regt to move to RANCIGLIONE to be at the disposal of General STAHEL who commands the Northern coast defences "in a coastal defence role". It was probably from this Sqn that the tanks were drawn which were encountered by the 7 Army landing near SAN FILARCO D'ALLENZIO. 1 Bn H.C. Tank Regt, less 1 Sqn remains however in divisional reserve behind the right flank of the div.

There is.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

There is further evidence on evacuation. It appears that some part at least of 6 Army remained behind when what appears to have been rear army was evacuated as reported in IS No.14 (it is also possible that what moved on 2 Aug was rear LIVORNO Div). On 12 Aug a station was located at PALMI which may be HQ 6 Army. On 11 Aug it is possible that ASSIETTA Div HQ and HQ 29 Inf Regt left for the mainland. As far as the Germans are concerned our evidence so far mainly concerns 15 P.G. Div. On 5 Aug it appears that a recce party was organising a collecting point for the div at SANTA ANNA (D.6471); next day it was clear that some of the Div Signals Bn 999, was then on the mainland but not, apparently, Bn HQ. On 7 Aug D/F showed a unit of 15 PG Div to be on the mainland but it was a unit hitherto unidentified. More interesting are the steps being taken to smooth the way for evacuation on this side of the Straits. On 5 Aug the Engr Bn was investigating the possibility of a "traffic circuit" which was to run from FONDACO at D.253606 along the North coast road to TORRE DI FARO, down the East coast to SANTA AGATA, thence inland via D.657320 to PALIAZZO (D.317585) and so back to FONTANA by the road through GESSO. The report states that concentration areas both sides of TONO (D.3765) are thought favourable and a petrol dump is necessary in the SAN NICOLA area (D.2960). It seems clear that 15 PG Div is going to use FARO as its point of embarkation. This is referred to in another place as "Ferry No.1" which is a suitable number for what must be the most Northerly of the crossings.

We know less about H.G. Div but a captured Div Order dated 2 Aug states that one bn of II Bty and two bns of IV Bty will be detached and evacuated to the mainland with 10 r. ..g. while on 10 Aug a representative of 1 bn of I Bty was already established at PALMI. It is a little strange that so large a part of the artillery should leave so early.

MESSINA STRAITS EVACUATION.

Landing craft which have hitherto been employed in rushing over supplies and reinforcements to SICILY are now engaged in the reverse process. The withdrawal of forces has not begun suddenly. MT since 5 Aug has shown an increasing number of LC arriving at beaches on the East side of the Straits with deck cargo, indicating that a beginning was being made. When selecting evacuation points it does not seem unreasonable to suppose that those points which have proved most suitable for beach to beach operations whilst bringing over reinforcements and supplies will in turn be used for "export". For the last six weeks the main ferrying effort has been concentrated in the area North of MESSINA to TORRE DI FARO. From a purely ferrying point of view this area has several advantages. The Straits are narrowest in this area, beaches are suitable for loading MT direct onto barges and there are numerous small piers. A main road runs the whole length of the coast and there are numerous approaches from the road onto the beaches. From a military point of view this area is furthest from the front, allows a maximum concentration of Flak cover for embarkation, and is comparatively safe at least from Naval interference by day. Points observed to have been in constant use in this area and beaches in their vicinity are TORRE DI FARO, CANZIRRI, SANTA AGATA, PORTICATELLO, PARADISO, PACE and SALVATORE DEI GRECI. Although there has always been a steady lighter traffic from ports South of REGGIO to various ports between MESSINA and RIPOSTO where some 10 LC were seen operating in this area on 11 Aug, it seems unlikely that this route will continue to be operated in view of the increasing nearness of the front and ever increasing danger from naval interference. It is confidently expected that points North of MESSINA to TORRE DI FARO will be those from which the major evacuation effort will be made. Some evacuation may be carried out from the North Coast.

Despite the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Despite the fact that there are numerous signs that evacuation has in fact begun, it cannot be said that the tempo of lighter traffic has noticeably increased. The number of craft resent, particularly miscellaneous small craft seen on the beaches, has increased, but the activity of larger craft such as LC and SIEBEL Ferries does not show an appreciable increase.

This might in part be accounted for by the fact that whereas hitherto it is believed that the enemy has done little night ferrying and he may now be attempting more, presumably occasioned by the increased scale of Allied air interference, which has resulted in the sinking of a steadily increasing number of craft, and also by a natural desire to conceal as far as possible the rate and extent of withdrawal. Therefore, it seems likely that some night ferrying is in fact going on. Despite this however it must be remembered for the last 6 - 7 weeks there has been a constant flow of men, equipment and supplies across the Straits and mere reversal of this process would of itself not arouse suspicion if it were not for the fact that LC with deck cargoes are now invariably seen arriving on the Eastern shores of the Straits.

At the present time, it is believed that the enemy has at least some 20 LC and 15 SIEBEL ferries operating in the Straits in addition to numbers of smaller craft. This is by no means the limit of craft which could be called on, as it does not include craft observed operating from NAPLES to harbours on the North Coast of SICILY and the North CALABRIAN coast.

The rate of evacuation, it is believed, will not be limited by the numbers of craft available, but rather by the rate of delivery of men and equipment to the evacuation points and to the extent of the effort made to remove equipment. A captured operation order from H.G. Division throws some light on this problem. This order clearly lays down that each man is to take his own weapons and ammunition and more if he can carry it. No specific orders are given for loading MT and equipment; only details of how best to destroy what cannot be taken across. It is also known that a carefully prepared traffic circuit has been laid down apparently for delivery of troops to beaches in area TORRE DI FARO - C.PIZZIRRI - SANTA AGATA, with a "return" route on to the main North-coast road. It would appear to be generally realised that, whatever the official intentions are, evacuation must finally be limited to men with light weapons.

Assuming that in the main this will be the case and, (taking all likely known "hinderances" into account) it is estimated that a maximum of some 15,000 men can be ferried across daily. Theoretically, this total could be much increased, but to achieve even this figure the enemy will have to accelerate the present rate of daylight activity or operate at night. This figure does not take into account the numbers of men who may be filtered across the Straits in small boats. Local Italian owners of small craft are, however, most unlikely to be willing to run the gauntlet of Allied fighters and bombers. The size and capacity of any armada of small boats will depend on the extent to which the Germans themselves can procure and operate them.

3. ENEMY SUPPLIES AND COMMUNICATIONS.

A. SICILY.

LC continue to bring cargoes down from NAPLES, but it has been noted that they are tending to put in at ports on the N.CALABRIAN coast in particular VIBO VALENTIA, and few are actually proceeding down as far as MESSINA itself. For the rest, hospital liners have been putting in regularly at MESSINA and are carrying their wounded up to N.ITALIAN ports, particularly LEGHORN.

B. MAINLAND.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

B. MAINLAND.

There has been some improvement in the railway situation in S.ITALY, as a result of intensive efforts made to repair air-raid damage. Latest reports show that there are now through lines at most of the important junctions S. of NAPLES. BATTIPAGLIA, FOGGIA and REGGIO are all open, but NAPLES was still blocked on 8 Aug, the last date for which a report is available. Details regarding traffic are scanty but such evidence as there is suggests that it is still on a minor scale.

4. ENEMY ORGANISATION.

MESSINA DEFENCE SYSTEM.

From a captured O of B revised to 31 May, the following points of interest are noted.

The garrison consists of the following main units:-

119 Coastal Regt. (HQ S.FILIPPO INFERIORE).
370 Coastal Bn. (HQ S. MARGHERITA).
371 Coastal Bn. (HQ GAZZINI.).
442 Coastal Bn. (HQ MESSINA.).
503 Coastal Bn. (HQ CASTANEA delle FURIE).
158 How. Bty. (HQ S. MARGHERITA).
(12 Hows.149/19: 4 Hows. 155/14).

6 Hilbert Legion, consisting of 30 Tps with a total of 30 CD guns, 38 AA/CD and 61 AA.

NOTE:- The recently identified 88 mm. Btys are not included in the O of B, so the gun totals will be greater.

5. AXIS FORCES IN MEDITERRANEAN.

(a) GERMAN FORCES IN ITALY.

The following German divisions are known to be in ITALY, 3 Pz Gr. Div, North of ROME, 16 Pz Div, BARI - BRINDISI area, 26 Pz Div SALERNO or CALABRIA and elements of 1 Para Div in the NAPLES area. The following divisions may also be in North ITALY, 24 Pz, 60 Pz Gr and 156 (or 158) Reserve Divisions; the two former having been previously reported as earmarked for ITALY. Further divisions are apparently on the move: 386 Pz Gr and 715 Inf Divs are reported as earmarked for ITALY, while 113, 343 and 76 Inf Divs have left their former locations in FRANCE. It does not necessarily follow that all these Divs are going to ITALY as it is thought that still more German Divisions will be required in the BALKANS in order to take over effective control in the event of an Italian surrender.

The indications are, however, becoming clearer that, whatever decision ITALY makes, GERMANY is preparing to resist any Allied attack on ITALY and is already moving in the necessary forces.

(b) WITHDRAWAL OF ITALIAN FORCES FROM FRANCE.

It is reported that 58 LEGNANO and 40 TORINO Divs have returned to ITALY from S.FRANCE.

(c) SPREAD OF GERMAN CONTINGENTS.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(c) SPREAD OF GERMAN COMMITMENTS.

The reports of GERMAN troop movements into ITALY and the withdrawal of ITALIAN troops from FRANCE, have important implications. The GERMAN garrison of FRANCE will presumably either have to be increased or further stretched to cover the areas vacated by the Italians, while the transfer to ITALY of most, if not all, of the GERMAN Divisions mentioned above will use up most of the remaining reserves of GERMAN formations. This reserve was formed by the re-formation in FRANCE of divisions wiped out at STALINGRAD. It has often been stated that, owing to known GERMAN man-power shortage, the re-creation of these divisions had been carried out at the expense of adequate reinforcements for divisions in RUSSIA. This statements is supported by a recent report from the RUSSIAN General Staff that GERMAN Divisions in RUSSIA are on an average approximately 40% under W.E.

APPENDIX "A"
to 15 ARMY GROUP INTELLIGENCE
SUMMARY No 15 dated 13 Aug 43

SECRET

Enclosure to Div Order No 31/43 Secret, of 2 Aug 43

DIRECTIVE.

for future Movements and Battle Actions in SICILY.

1. No demolitions and no road blocks are to be manned by Italian personnel. Officers i/c battle groups are responsible for the enforcement of this.

2. Every German soldier who is forced to take to the mainland must be in possession of infantry weapons. Apart from revolver and bayonet he will carry a rifle, machine pistol or LMG, with ammunition. In the case of sections, 1 HMG or mortar. These weapons are tickets for the ferry. Without those mentioned, soldiers will ruthlessly be prevented from crossing.

3. No Italian, whether civilian or soldier, may interfere in any way with the movements of the German armed forces. All Italian motor vehicles and heavy weapons will be removed from the roads ruthlessly. This does not apply to units which, as part of the Division, have proved their worth in battle and carry on in the fight.

4. Isolated remnants of formations, platoons and sections of any description, are to be put under command of local units. They will be made to form part of the current movement. Out-of-date orders are no longer valid.

5. Any MT, weapons or equipment that cannot be transported across are to be completely demolished. Destruction by fire is strictly forbidden, since fires and traces of burning are liable to attract the attention of enemy aircraft, both by day and by night. Blowing-up is the most effective method of destruction, and will be applied to weapons as a matter of principle. MT will be destroyed so as to put them out of action for a long time at least. (They will be blown up, magnetos removed, tyres slashed, the engine smashed, or the whole vehicle run over a cliff).

6. The most rigid discipline is the main condition for the success of all future movements. Anyone not co-operating will be shot. Examples of individuals always work wonders.

7. All Traffic Control organisations come under direct orders of Div HQ. Whoever does not comply with regulations is subject to disciplinary action, vide para 6.

8. Roads which, because of enemy action have been blocked (bomb craters or demolished houses), must be made passable as quickly as possible, or diversions created and flagged by drawing on the civil population and PW.

9. All ranks will carry haversack rations for 24 hours as well as iron rations.

15 ARMY GROUP INTELLIGENCE SUMMARY No. 16 of 19 AUG 43.

(a) Sidelined information will not be re-produced in any Intelligence Summary of formations under this HQ except by special permission.

(b) This Summary will be destroyed within 48 hrs of receipt.

-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-

1. OPERATIONS 13 - 17 AUG.

(a) Operations on land during this period present no features of particular interest. Assisted by the mountainous terrain and the many demolitions the enemy skilfully disengaged and transported a large portion of his remaining troops across the Straits of MESSINA. It appears that his withdrawal was certainly hastened by our pressure and particularly by the amphibious operations carried out on both coasts but in general it can be said that the withdrawal from SICILY was well carried out.

On 13 Aug RANDAZZO fell, and the German forces holding this town withdrew Northwards up the FRANCAVILLA road, apparently reaching the T junction with the North Coast road just before it was cut by 7 Army's rapid advance in this Sector. After this their withdrawal East on this road was very hasty and 7 Army made practically no contact with the enemy up to the end. Opposition to 8 Army's advance as well was restricted to small but determined rearguards covered by demolitions. Shortly before midnight on 16 Aug patrols from 7 Army entered MESSINA and by next day the city was firmly in our hands. According to the German Radio the last German troops left SICILY at 0700 hrs on 17 Aug. The last to leave, they say, was General HUBE who is described as C.O.C. 29 P.G. Div but in fact is believed to be commanding 14 Corps. It is, however, true that 29 P.G. Div has added to its STALINGRAD laurels the honour of forming the rearguard in SICILY.

CALABRIA is now the enemy's front line and it is important to establish what are his new dispositions there. Apart from 14 Corps evacuated from SICILY it is known that 26 Armoured Div is in CALABRIA. On 15 Aug a unit of the Div mentioned MONTAURO (Z 1819) and MONTAURO Station which is on the coast South of STALETTI. On 16 Aug another unit of the Div reported an air raid on SCALEA (T 53). It looks as if the Division was fairly widely spread out. Further North there is 16 Armoured Div somewhere in South ITALY and 3 P.G. Div in North ITALY. 2 Para Div is believed to be in the NAPLES area. The chain of Command is obscure as yet. 14 Corps HQ apparently got away reasonably intact but another Corps HQ has now turned up. An Italian source on 18 Aug refers to a "German 2nd Corps" at SALA CONSILINA (O 3500). It is not known what troops this Corps will have under command or whether it has brought any divisions with it. As for the forces removed from SICILY it is as yet too early to make an estimate but we must expect that a total of up to 50,000 have been evacuated. This is an overall figure, excluding wounded but including Flak and Services and must be treated as an approximation merely.

(b) ITALIAN COASTAL REGTS.

It is interesting to note that 146 Coastal Regt has apparently succeeded in keeping the identity of at least its HQ, having retreated all the way from the South. It appears that the Coastal Formations, where they have been able to escape, are joining in the evacuation as comparatively organised entities, whereas at the beginning of the operation it looked as though they would merely disintegrate. It is probable that 213 Coastal Div HQ is among the fortunate ones.

2. MESSINA STRAITS EVACUATION.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. MESSINA STRAITS EVACUATION.

The evacuation, preliminary stages of which had commenced as early as Aug 1, was completed by the morning of the 17th. A captured document shows the following timetable; starting on 1 Aug Hermann Goering Div, 12 Aug 15 P.G. Div and on 15 Aug 29 Pz.Gr. Div. The build up of LC and Siebels in anticipation of the end had been going on from the last week in July. By 1 Aug approximately, 20 LC and 15 Siebels were operating and there was no subsequent startling changes in the numbers of craft in the Straits area. An increase in the number of very small craft of the fishing smack type did however become apparent about 7 Aug, and as many as 50 of these were present in the Straits during the last days of the evacuation. Whether the appearance of these arose from the spontaneous desire of their Italian owners to assist in a smaller though no less hazardous DUNKIRK, or whether it resulted from the Germans requisitioning all they could lay their hands on and manning them themselves, must be left to the researches of a future GIBBON. In any case, the brunt of the evacuation definitely fell on the LC and Siebels, which as anticipated, operated almost entirely through the beaches between MESSINA and TORRE di FARO. Of the two train ferries, only the smaller one appears to have assisted in the evacuation although both were still present in the Straits on the 15th. The smaller operated from MESSINA harbour itself to SAN GIOVANNI. Cargoes were probably entirely personnel. The withdrawal was begun sufficently early to permit the evacuation of equipment. Tanks and MT were seen loading on to Siebels and F. Boats and it is clear that guns and other pieces of equipment have also been removed. Ferrying was almost certainly carried on by night, and will have been assisted by the brilliant moonlight.

How far the evacuation was completely successful and to what extent Allied air and naval forces were able to impede it, is not yet known. It seems doubtful whether any serious losses will have been incurred in transit. The shortness of the crossing, the difficult nature of the targets involved and the murderous AA barrage across the Straits, said to be the heaviest outside the RUHR VALLEY, have precluded any spectacular results. Moreover, the very nature of the Straits precluded the use of naval forces except by night. It may be however that considerable casualties were inflicted upon the concentration of men and materials on the beaches.

3. ENEMY SUPPLIES & COMMUNICATIONS.

The decline, not to speak of the fall, of the Roman Empire having progressed one stage further, interest now focusses on the mainland. Briefly the position to date here is that very serious dislocation has been caused by our air attacks to the enemy railway system South of NAPLES, particularly in CALABRIA. To overcome this the enemy has fallon back on the use of sea traffic along the West Italian coast to points on the CALABRIAN peninsula. So far as road transport is concerned his capabilities will be governed by his MT position which is thought to be far from satisfactory.

Railways.

Since the last Summary, further reports have indicated heavy damage to the railway at CATANZARO. This is one of the key junctions in CALABRIA, and attacks upon it have certainly contributed to the growing railway constipation here. That all is not well in this area is confirmed by the great congestion observed on 15 Aug, in the 15 mile stretch between MELITO and GALATI in the toe. Here one train was reported every 2 miles by our pilots, and there were probably as many as 300 trucks in the railway yards near MELITO. These trains may well have been present in connection with the evacuation, although the area concerned is some distance South of the main points of disembarkation. However, the fact that there was such a concentration of rolling stock along an area seriously exposed to our air attacks suggests an inability on the part of the enemy to disperse his traffic in this part of the world. This must almost certainly have resulted from the Allied air attacks.

Sea Traffic.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Sea Traffic.

With intake to SICILY at a standstill, landing craft and tanker lighter traffic from NAPLES has been directed to ports along the N.CALABRIAN coast. VIBO VALENTIA in particular is known to have been very active. With SICILY in our hands the weight of Allied air and sea attack may soon render this port untenable and, like MILAZZO during the latter stages of the SICILIAN campaign, it may fall into complete disuse. There are, however, alternative harbours along the coast S of NAPLES. PIZZO, a little further North than VIBO, has had a small turnover of small craft for some time and there has lately been evidence that the harbour of SCALEA, approximately half way between NAPLES and REGGIO, is being used by small craft to an appreciable extent. As many as 10 F-lighters and 7 supply barges were seen there on 13 Aug. It may well be that the enemy will consider using this and other small harbours not too near the Sicilian bases for the unloading of goods, thence dispersing them by road.

4. RE-FORMING OF STALINGRAD DIVISIONS.

(a) The extent to which the Germans felt it necessary to re-constitute as rapidly as possible, presumably on account of morale, divisions wiped out at STALINGRAD is shown by the following statement by a PW.

On 1 Mar 43, 372 Inf Div was renamed 29 Mot Div. There was a sorting out of personnel, about one third in PWs Regt being replaced by survivors from the German 29 Mot Div destroyed at STALINGRAD and by leave personnel. 1/48 Inf Regt became 15 Gren Regt.

(b) Balkans.

In spite of rumours which are reported as being current among Italian garrisons in GREECE, there appears to be no prospect of an immediate Italian collapse there, nor of Italians turning on the Germans. On the contrary G.O.C. 11th Army informed all forces under his command on 3 Aug that the Italian High Command was continuing the war side by side with the Germans. The Italians in general appear to be waiting upon events at home and refraining from any action which might compromise them, either now or in the future in the eyes of the Germans or the patriots.

5. GENERAL.

(a) ITALIAN PRESS REACTIONS.

The following extract comes from BUDAPEST Morse News for 10th Aug 43.

The Italian Press does not conceal the gravity of ITALY's present position. The POPOLO DI ROMA openly declares that it would be both stupid and useless to try and conceal that the situation is grave in ITALY. This paper continues; "While it is undeniable that the downfall of Fascism was brought about by developments in the war situation, it is untrue that the downfall of Fascism will involve the ending of the war. The BADOGLIO Government has assured us of the consoling fact that a system based on oppression has come to an end. It has promised to re-establish freedom.

It cannot, however, assure us of the re-conquest of [redacted], LIBYA and the MEDITERRANEAN Islands. The military legacy of Fascism has survived the destruction of the system itself, and this we cannot eliminate so easily as we have the single-party system and the Chamber of Corporations.

The enemy, who has always maintained war against Fascism and not against the Italian people, seems willing to alleviate our position.

Hitler has declared that he thinks it an advantage for his troops to fight several thousands of kilometres away from German frontiers. Fortunately for them, German people can recall this statement without disappointment.

The Italian people.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The Italian people, however, in addition to sharing the fate of the German people in enduring bombing raids on the civilian population, is faced with enemy armies on Italian soil.

This is the cause of the extreme gravity of ITALY's position. The Italian Government is confronted with immense responsibilities - that of opposing the most daring military operation that any government has ever had to face.

(b) GERMAN FIGHTER PILOT MORALE.

(a) The following is from a PW. He stated that in the week preceding his capture 19 pilots were lost from his Gruppe, leaving only 18 serviceable aircraft on July 12. Further he stated, that at the beginning of July a special order of the day was issued by Major General GALLAND stating that the following conditions must be fulfilled by all GAF fighter pilots in the MEDITERRANEAN Area.

(i) An enemy must be shot down, or

(ii) Hits must be visible in the A/C to show that the pilot had been engaged in combat, or

(iii) The pilot must be shot down himself.

In future no excuses would be accepted and a pilot who did not fulfil one or more of these conditions would be made the subject of an immediate Court of Enquiry with a Court Martial to follow. It was further expected of each formation of fighters who took off that they would shoot down at least one enemy aircraft.

(b) According to a prisoner, Reichsmarschall GOERING recently issued the following order of the day to the GAF fighter units in the MEDITERRANEAN Area. "Together with the Fighter Pilots in FRANCE, NORWAY and RUSSIA, I can only regard you with contempt. I want an immediate improvement and expect that all pilots will show an improvement in fighting spirit. If this improvement is not forthcoming, flying personnel from the Kommodore downwards must expect to be reduced to the ranks and transferred to the Eastern front to serve on the ground". As a result of these proclamations a strong feeling of defeatism is prevalent amongst fighter units, and many pilots, including Staffel-Kapitans, have been heard to say that it is better to become prisoners than return to base to face a court martial.

NOTE: Whether or not these two orders were in fact issued it is significant that GAF Fighter Pilots believe they were.

6. ENEMY EQUIPMENT - ITALIAN.

PW gives the following information regarding the AUTOBLINDA 40 C. (N.M).

Armament	-	1 x 75 mm. 1 x 20 mm. 1 x 8 mm Breda.
Speed	-	On roads up to 100 km. per hour. Cross country up to 50 km. per hour.
Range	-	Maximum over roads 400 km.

Comment: While the data given seems to be optimistic, PW who was a Lt. in Tank Instruction Centre at VERONA, claims that the figures for speed and range are substantially correct, and this armd car is better than anything produced in either the German or the British Army. The letters N.M. stand for "Nuovo Modello". The armd car is a 4-wheeler only.

7. APPENDIX. - At Appendix "A" is a Note on the new German Tank "PANTHER".

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

APPENDIX "A" TO 15 ARMY GROUP
INTELLIGENCE SUMMARY No. 16 OF
19 AUG 43.

NOTE ON THE NEW GERMAN TANK "PANTHER".

(NOTE:- The following details of the new German tank "Panther" are still somewhat indefinite; but as it is expected in service very shortly, the present indications of its characteristics, although as yet unconfirmed, may be useful).

1. There are indications that German tank production is being concentrated on two types of tank. One of these is the heavy Pz.Kw.VI, of which type "H" has already been in action in North Africa and Russia. The other, which is probably the more important of the two, is a new medium tank known as "Panther" and occasionally referred to as the Pz.Kw.V. The establishment for medium tanksqns equipped with Panther tanks or intended to be so equipped (m.Panz.Kp. "Panther") is known to have been in existence for some months. The tank has not yet, however, been in action in very large numbers, though one report from a good source refers to its successful use in recent fighting on the Russian front. Whether or not the Germans are yet in a position to employ this tank on a really large scale, there is little doubt that they ultimately intend that it should take the place of the Pz.Kw. III & IV.

2. The general design of the Panther tank is believed to be based on that of the Russian T.34. Features common to both tanks are reported to include a low contour, well sloped armour, and a high power/weight ratio. The German tank, however, is understood to have a three-man turret, an engine and transmission of German design, and many differences in mechanical detail.

3. The following general specification of the Panther tank is based on information so far collated, but is still subject to confirmation:-

Weight:	34 to 38 tons.
Crew:	5
Armament:	One high-velocity 7.5 cm. gun and one M.G. co-axially mounted in turret; probably no M.G. in hull.
Armour:	Front 80 - 100 mm. Sides 60 - 80 mm.
Engine:	Believed interchangeable with that on Pz.Kw.VI i.e. an unsupercharged 21 litre Vee 12 petrol engine developing a maximum B.H.P. of 642, though more than one report has mentioned the possibility of a similar engine fitted with an exhaust driven supercharger.
Dimensions:	Uncertain, but see 4 below.
Performance:	Maximum speed 30 - 35 m.p.h. Gradient 38 degrees. Radius of action (roads) 78 miles.
Intercommunication:	External: R.T., W.T., flag, etc. Internal: Intercomm. telephone.

An Italian document.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

An Italian document concerned with bridge strengthening gives the weight in action as 43 - 44 tons, but this is now believed to include a safety margin.

The duties of the crew are the same as in Pz.Kw.III, IV and VI, namely, comd, gunner, and loader in the turret, and driver and wireless operator in the hull.

There is little doubt that the 7.5 cm. gun has a better performance than the 7.5 cm. Kw.K.40 at present in use in Pz.Kw.III, but it is not yet clear whether it is the tapered bore 75 cm. Kw.K.41 or an improved parallel bore gun. It is of course possible that both types may be used.

It is suggested that the same plate thickness as are already in production and employed in the armour of the Pz.Kw.VI may be used for the Panther as follows:-

Front Armour:	Vertical plates.	102 mm.
	Sloping Plates.	82 mm.
Side Armour.	Vertical Plates.	82 mm.
	Sloping Plates.	62 mm.
Top and Belly Plates.		26 mm.

Owing to the extensive use of sloping plates, the vertical areas on the front requiring 102 mm. armour are likely to be very small.

4. The exact dimensions are not known, but there is little doubt they are within the following limits, and they are probably close to the lower figure in each case.

Length:	19ft. 10 ins	- 22 ft. 5½ ins.
Width:	9 ft. 10 "	- 10 " 10 3/4 ins.
Height:	7 " 10 "	- 9 " 8 ins.
Track Width:	1 " 8½ "	- 2 " 2 "
Length of Track on ground:	12 " 6 "	- 12 " 10½ ins.

The upper figures in each case are taken from the captured Italian document already referred to and are believed to include a safety margin of approximately 10% in most cases. The lower figures correspond with those for the Russian T.34, except in the case of the track width, where the lower figure is about 2 in. less than for the Russian track. The tracks are expected to be interchangeable with the narrower of the two types used on the Pz.Kw.VI, which is approximately 1 ft. 2 ins wide.

5. A P/W who has provided much detailed information on this tank states that its construction does not follow the standard German practice. The hull and front superstructure, according to this P/W, form a single unit in the Panther instead of two separate units bolted together, as in the Pz.Kw.III & IV. This would be a logical development if the front plate of the superstructure is in one piece with the glacis plate, as in the T.34.

The same P/W states that the vision arrangements in the Panther are much better than those in the T.34 and that:-

(a) The turret traversing gear is probably electric, as in the Pz.Kw.IV, though it may possibly be hydraulic, as in the Pz.Kw.VI.

(b) The suspension is slightly different from that on the T.34; P/W is uncertain in what respects, but suggests the use of torsion bar springing and possibly overlapping bogie wheels, as in Pz.Kw.VI.

(c).....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(c) A multi-plate dry clutch is fitted. P/W also refers, however, to the possible fitting of a Fottinger hydraulic coupling as an alternative.

(d) An eight speed semi or fully automatic gear box will probably be fitted, though the retention of a simple 4-speed gear box as in the T.34 has been considered.

(e) The Panther tank is practically gas-tight, but this merely came about by chance.

In connection with the above statements, it should be borne in mind that this P/W probably had access to the Panther tank only while it was still under development. He had no knowledge of the extent to which the Panther has been prepared for wading, but it is unlikely the Germans will have neglected this in their design.

(The above is an Extract from AFHQ Publication dated 3 Aug 43).

15 ARMY GROUP INTELLIGENCE SUMMARY No.17 of 25 AUG 43.

(a) Sidelined information will not be re-produced in any Intelligence Summary of formations under this HQ except by special permission.

(b) This Summary will be destroyed within 48 hrs of receipt.

-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-

1. GENERAL.

It is obvious that important German military movements are taking place in ITALY - re-shuffling in the South and reinforcement in the North - but it is not possible yet to draw an exact picture of the results of these movements. We know a little more about dispositions in the South. Both 29 P.G. and GOERING Divs have been moving; the former apparently to the area of the Gulf of GAETA where MTB had a report centre at SESSA (M.9492) on 20 Aug, while GOERING Div Engineers were at LOCRI on 18 Aug and other elements at COSENZA on 19 Aug and SOVERATO on 20 Aug. A petrol dump for the GOERING Div was stated to be at CASTROVILLARI on 20 Aug, so that it appears that the Division is moving North out of CALABRIA. Of the original 14 Corps, therefore, only 1 Para Div and 29 P.G. Div have not been heard of; the former suffered very heavy casualties, the latter nothing like so heavy. Someone must be left to hold the toe, since 26 Pz Div does not seem to have moved down at all, and it looks as if 29 P.G. Div, with or without 1 Para Div, will again have the post of honour as it did in SICILY. From available information on casualties it looks as if the division evacuated about 6,000 men across the Straits and adding in such elements as never went to SICILY (for instance the Tank Bn and Recce Unit) it may have a strength of about 10,000. 1 Para Div can probably not muster more than 3,500 men; unless the enemy appreciates an immediate danger of attack the division is likely to be withdrawn to reform, possibly in the NAPLES area where its sister formation, 2 Para Div is believed to be.

We have then 29 P.G. Div located in the toe with 26 Pz Div to its North. The latter, as stated in our last Summary, has elements as far South as MONTAURO (Z.1819) and as far North as SCALEA (T.53). This is defence in depth with a vengeance and suggests that the Germans envisage the defence of CALABRIA as a slow withdrawal on the lines of the defence of the North Eastern corner of SICILY, with the sea flanks sufficiently covered to nullify the effect of landings similar to those carried out in the later phases of that withdrawal.

Italians have 31 Corps in CALABRIA; 31 Corps with its HQ at CATANZARO. Under command are 104 [illegible] NOVA Div, 211 [illegible] 212 Coastal [illegible] and what remains of the MESSINA Command. It is doubtful if these forces have any military value in the present situation except for the effect they may have on the nerves of their German comrades. The forces from SICILY are apparently being decently wound up and the puppets put back in their boxes. 6 Army HQ has gone off to VERONA to reform alongside ARIETE in that home of lost causes. 16 Corps HQ have left for SPEZIA. Generals GOTTI, SCHREIBER and CHIRIELEISON of 213 Coastal Div, ASSIETTA Div and LIVORNO Div respectively were to report to 31 Corps HQ on 23 Aug, presumably for railway warrants and possibly a change of headgear. They certainly have no troops to command and there is little reason why they should be given any more.

A correction should be made in IS No.16. "the "Second German Corps" then referred to at SALA CONSILINA is almost certainly II FLIEGERKORPS as the Army formations of that number are otherwise engaged.

Organisation - GERMAN.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. Organisation - GERMAN.

A. PARATROOP TROOPS.

The following information is provided by a PW believed reliable.

(i) 7 Air Corps. PW stated that it was misleading to say that 7 Air Corps consisted of two para divs. These were so small and incomplete that he rounded to him more of a joke than anything else.

(ii) 1 Para Div. According to PW the following units are part of 1 Para Div: a Div Sigs Section, a Div Arty Unit and a Div MG Bn, 3 and 4 Para Regts.

(iii) Div Arty Unit. According to PW, the div arty unit (he did NOT call it a Regt) consisted of two batteries, one of which was equipped with 10.5 cm Paratroop Hows (L.G.2) and the other with 7.5 cm Paratroop Hows (L.G.1). He confessed, however, that his knowledge in this respect was hazy. He could give no details of strength, organisation or armament. He knew that part of these units had been in SICILY.

(iv) Div M.G. Bn. PW was positive about this unit. It is an independent unit within the div and consists of three coys armed exclusively with Hy M.Gs. These are either sub-allotted to div units as required or used in force in support of them.

(v) Div Sigs Section (DIVISIONSNACHRICHTENZUG). PW insisted on the title and stated that the Div Sigs Section consisted of two units, each of coy strength. He claimed that the two coys had been used as infantry right from the start and that by 15 July 43 they had been reduced to a total strength of 20 men and one 2/Lt. They were then withdrawn.

(vi) 4 Para Regt. PW stated, that it had had heavy losses in RUSSIA, was below strength and did not contain more than 50% of its original personnel. 4 Para Regt consists of three bns, 13 Coy and 14 Coy.

(vii) 1 Bn. 1 Bn had at the start of operations four coys, of which 1 - 3 were rifle coys and 4 Coy was a Hy coy. The organisation of the rifle coys was three light pls and one heavy pl. Light Pls consisted of three sections with two L.M.Gs. and 12 men. Heavy Pl had one Heavy MG and one Heavy Mortar.

4 Coy had four Heavy MGs and four Heavy Mortars. This was the W.E. In RUSSIA it had had as many as eight MGs. In SICILY, owing to casualties, it was progressively reorganised. On 17 July it had two Heavy M.Gs, two L.M.Gs. and one Heavy Mortar. By 2 Aug all these weapons had been lost.

(viii) 2 Bn. PW stated that 2 Bn was much under strength. It had been a Ski Bn in RUSSIA.

(ix) 13 Coy. 13 Coy, 4 Para Regt, contains four 10.5 cm Super-Hy Mortars.

(x) 14 Coy. 14 Coy is the A.Tk Coy. It contains some 7.5 cm A.Tk guns and some guns of smaller calibre, without muzzle-brakes, but which PW cannot specify more exactly.

PW last had contact with 1 Bn on 4 Aug. He estimated its strength on that date as follows:-

2 Coy.....50 men.
3 Coy.....40 - 50 men.
4 Coy.....30 men, 7 NCOs. and 1 Officer.

PW also spent some time with 9 Coy on 4 Aug, and says it has a strength of about 50 men only. He had NO information about 1 Coy.

In MANCE the emblem of 1 Para Div was a black ring surrounded by a red ring and inside it a black arrow outlined in red pointing obliquely downwards from right to left.

B. HERMAN GOERING .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

B. HERMANN GOERING Tank Regiment.

A PW from H.Q. Tank Regt provided the following information.

(i) Organisation.

3 Bn H.Q. Tank Regt, consisted of 9, 10 and 11 Tps, each with HQ and three Secs.

(ii) Armament and Strength.

Each Tp had seven 7.5 cm Assault Guns, each with a crew of five men. These were distributed as follows:-

HQ Sec under Tp Comd .....1 Gun.
Three gun secs, each.....2 guns.
There were 9 LMGs to each Tp.
The Total strength of 9 Tp was approximately 100 all ranks.

(iii) Ammunition.

The Tp carried 70 to 80 rounds per gun, normally comprising HE and AP shells in about equal proportions; the proportion of HE to AP would, however, vary slightly, according to the Tps task.

3. MAIN METHODS - ITALIAN.

Staff Work.

The following notes on a slip of paper were found in the waste paper basket of the Mayor of CASTIGLIONE.

(1) Hail to the Star Spangled and Stripe/Hail to the Union Jack.
(2) Welcome to our Garden SICILY.
(3) Welcome to our City CASTIGLIONE.

4. ITALY SUPPLIES AND COMMUNICATIONS.

Reports of the arrival of further German formations in ITALY make it clear that despite the change of shirt GERMANY still feels it in her interest to continue the defence of Italian territory. This support will entail the movement into and within ITALY of further GERMAN formations, and the maintenance of a lengthy L of C. Consequently, Italian communications assume a far greater importance than hitherto. Attention focuses principally on the railways which are now being methodically attacked by the Allied Air Forces.

The ITALIAN rail network is extremely vulnerable since except in the industrial area of the LOMBARDY plain the network is not extensive and is ill equipped with adequate alternative routes along which traffic can be diverted. Hence the blocking of one particular junction has a paralysing effect on railways over a whole section of the country. Furthermore, the alternative routes are in most cases quite incapable of carrying the weight of traffic thrown upon them by the blocking of the main lines.

This state of affairs is best illustrated at BOLOGNA and PISA. Through these two junctions must pass all traffic from Northern to Southern ITALY. If these junctions are blocked there can be no through traffic from the Northern network to Central and Southern ITALY.

The two West Coast main lines PISA - LEGHORN - ROME - NAPLES, and BOLOGNA - FLORENCE - ROME - NAPLES are the two main railway arteries of the country. These lines are also the main routes for traffic to S.E. ITALY as the East Coast line from ANCONA Southwards is only single track.

The blocking.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The blocking of the main lines out of ROME forces all traffic to be diverted via a complicated and inadequate single line network further inland, while at NAPLES the blocking of the by-pass junctions not only closes the main line South but also the main East - West line via BENEVENTO and FOGGIA. Successful attacks on BENEVENTO can also close this line. The second main East-West link is through BATTIPAGLIA to TARANTO; this route also provides an alternative route to the toe through SIBARI and CATANZARO. BATTIPAGLIA is of extreme importance, as the closing of this junction paralyses the entire South Western circuit BATTIPAGLIA - METAPONTO - SIBARI - CATANZARO - REGGIO - PAOLA - BATTIPAGLIA.

On the East coast the blocking of FOGGIA paralyses most of the South Eastern network, while complete paralysis would follow if BATTIPAGLIA and the NAPLES by-pass junctions were simultaneously blocked.

Even this brief outline is sufficient to show that by successful attacks on certain junctions it is possible to paralyse the railway system of a whole section of the country.

Attacks on Communications.

Allied air attacks against railway communications in ITALY have been continuing for several months, and already considerable dislocation is known to have been caused.

The most noticeable effect has been produced by attacks on the junctions along the main West Coast lines, which has forced the enemy to increase the use of small craft along the coast South of NAPLES. Recent attacks have again centered mainly on the network around and South of NAPLES. SALERNO, BATTIPAGLIA, VILLA LITERNO, AVERSA, CASERTA, CANCELLO and SAPRI have all been attacked by day or by night in the last week, the first two junctions having received the main weight of the offensive. BENEVENTO and FOGGIA have also been heavily attacked. The enemy's sensitiveness to these attacks is shown by the fact that during the recent attack on FOGGIA enemy fighter reaction was greater than experienced for some time. Upwards of 70 enemy aircraft were encountered.

Intruder and long-range fighter attacks have been continued against trains, stations, etc. These attacks have cumulatively disorganising effect. Engines, wagons and freight are destroyed and Stations shot up. Furthermore, the stagnation caused by the blocking of junctions is likely to provide an increasing number of targets in the form of stationary trains, etc, while the diversion of rail traffic to the roads in Southern ITALY will also provide road targets for long range fighters.

Present state of the Railways as a result of recent attacks.

The bombing of the ROME marshalling yards temporarily closed all lines but the repairs should now have restored the situation. The constant attacks on the NAPLES by-pass junctions keep this important network in a constant state of disorganisation. It is probable, however, that some through working is usually possible, but on a scale insufficient to cope with requirements. Further South the junctions of SALERNO and BATTIPAGLIA appear to be blocked. The present situation at FOGGIA and BENEVENTO is not known. In the Toe, the railway is believed blocked at SAPRI, REGGIO, CATANZARO and SIBARI.

General Effects.

The dislocation caused by Allied bombing attacks on the Italian railway system will throw a heavy strain on the German MT Columns and on Coastal shipping. The disadvantage of being forced to move large quantities of supplies by road are well known; and it will take large fleets of German trucks to move even part of the supplies immobilised owing to railway dislocation. This state of affairs would of itself be bad enough if there were an abundance of MT. On the contrary, however, there is evidence that the Germans are suffering from a general shortage of MT.

The dislocation.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The dislocation of the railway system South of NAPLES has already forced the Germans to rely mainly on coastal shipping, (mostly by landing craft) for the movement of supplies to SICILY, which presumably will have to be continued for the supplying of troops in CALABRIA and Southern ITALY generally. The effective bombing of PISA and BOLOGNA might force the enemy also to increase coastal shipping North of NAPLES. West coast harbours and shipping are vulnerable to Allied Air and Naval attacks and the small harbours at VIBO MARINA, GOLFA - TAU[illegible] and SCALEA have already been subjected to heavy Allied air and naval bombardment. Their fate will be shared by other harbours which the enemy is found to be using. The importance which is attached to the use of these harbours is shown by the increased flak protection which has lately been given them. The total of small craft sunk along the West Coast is steadily mounting.

The combined effects of the attacks on railways will be not only to block and disorganise the German L of C but also to impede the mobility of German formations. Formations themselves can move by road but supplies and even much of the heavier equipment would if possible be moved by rail.

Whereas in GERMANY repairs can be quickly effected and necessary improvisations quickly organised, such is not the case in ITALY. It can be fairly assumed that anything which appears to further German interests and increases the likelihood of ITALY becoming a German battleground will be distasteful to the Italian public.

There is ample evidence that repairs are slow and it is certain that it is mostly German initiative which ensures that they are effected. All this entails more and more German control and a consequent worsening of ITALO-GERMAN relations.

NOTE: A map of the Italian railway system South of ROME is being prepared. It is regretted that it is not available for issue with this Summary but will be attached to Summary No 18.

5. MAIN DISPOSITIONS

GERMANY

Spread of German Commitments in the West

It now seems reasonably certain that all Italian Divisions are leaving or are about to leave S.E. FRANCE. To take their place the following German Divisions are reported to have moved into this area - 336 Mot Div, 76 and 715 Inf Divs and 158 Reserve Div. These divisions were previously thought to be en route to ITALY (See Summary No 15) but it now seems more likely that they will remain for the time being in S.E. FRANCE in place of the evacuated Italian Divisions. They include however two offensive divisions which would be readily available for transfer to ITALY if called for. It is now reported that of 113 and 343 Infantry Divisions in FRANCE both previously reported as on the move, the former is destined for RUSSIA, while nothing further is known of the latter. A Division, believed to be SS Div 10, has moved from the North to fill the gap left in S.W. FRANCE by the departure of 386 Mot and 715 Inf Divisions.

Train movements towards S.E. FRANCE during the past few weeks have been sufficient for further divisions to have arrived in this area in addition to those mentioned above, and it must be assumed that some have crossed into ITALY.

The necessity for occupying the area vacated by the Italians will cause a further stretch of German strength in FRANCE and absorption of Reserves.

/Total.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Total German Formations in FRANCE and LOW COUNTRIES

Insufficient evidence is as yet available to enable a balance to be struck as to the exact present strength of German Divisions in FRANCE and the LOW COUNTRIES. As was stated in the preceding paragraph these have undoubtedly had to be spread to include hitherto Italian occupied FRANCE; with consequent re-shuffle in other areas. The small reserve of divisions reformed in FRANCE has almost certainly been further drawn on and divisions sent to ITALY while at least two have gone to RUSSIA (113 and 291 Inf Divs).

On the credit side 389 and 94 Inf Divs ex STALINGRAD Divs are now known to have been reforming in the ST. LO and LORIENT areas respectively. 189 Reserve Div is reported to have arrived in FRANCE from the BALKANS. It seems most unlikely that the previously published total of 38 Divisions (incl 16 Defensive) and 4 CAF Field Divisions has increased. The total is now thought to be less and the number of Defensive Formations greater.

STALINGRAD Divisions

With the identification of 94 and 394 Inf Divs reforming in FRANCE all the 20 Divisions reported wiped out at STALINGRAD have been re-identified. The STALINGRAD list was 14, 16, 24 Armoured, 3, 29 and 60 Motorised, 100 Light, 1, 44, 71, 76, 94, 113, 295, 297, 305, 371, 376, 384 and 389 Infantry Divisions.

D. ITALIAN

Italian Divisions

Evidence suggests that the Italians imitating their German masters are reforming the following Divisions out of the remnants of the ten divisions of the 8 Army which were withdrawn from RUSSIA in early 1943. 8 Army HQ itself has been reconstituted at PADUA and 9 PASUBIO Div is reforming in the PARMA area. 52 TORINO Div is undergoing the same process near UDINE and to bring up its strength is cannibalizing units of 159 VENELO Div (GORIZIA). There are also indications that 157 NOVARA Div is being absorbed into a revived 2 SFORZESCA Div. Of the Alpine Divs, it is possible that 2 TRIDENTINA and 3 GIULIA are being reformed at MERANO and UDINE respectively.

There are no reliable indications of moves or impending moves of Divisions from the BALKANS to ITALY, but it seems certain that all Divs from Southern FRANCE are returning. Of these 58 LEGNANO and 48 TARO Divs, which were previously reported to have returned to ITALY (See Summary No 15) are now reported to be in the North.

Italo - German situation in N. ITALY.

The return of divisions from FRANCE to ITALY together with the reformed 8 Army Divisions raises the strength of the Italian Army in Northern ITALY to a possible 12 Divisions, plus an Alpine Group. This comes at a time most opportune for the Italians, and is likely to cause some embarrassment to the Germans. The present political and military situation in Northern ITALY appears extremely complex and delicate. On the one hand there will be the German troops arriving with the express but presumably veiled purpose of occupying as much as possible of Northern and Central ITALY for the purpose of safeguarding the German L of C to the South and of preparing defence positions. On the other hand there will be a hostile, war-weary and demoralised industrial population vainly expecting peace at any moment. On top of this there are some 12 divisions most of whom will consider themselves lucky to have returned safely to ITALY and to be spared the fate of their co-patriots in the BALKANS despised by the Germans and hated by a hostile population. They will doubtless have hoped to find themselves rid of their German masters and are likely to resent anything that savours of German occupation of the North. The presence of these divisions, reinforcing public dislike for the Germans, may make a German attempt at occupation of Northern ITALY extremely difficult without at least a show of force. It is likely to tax German diplomatic, political and

/military .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

military ingenuity to the limit.

General

(i) Regarding the reformation of 132 ARIETE Armoured Div, a report of unknown reliability suggests that the Germans have provided the Italians with 100 tanks for a new Armoured Division. This is considered improbable though the Italians may have received some German tanks for training purposes.

(ii) It is reported that 12 SASSARI Div is now in the UDINE (UDINE) area. The four Divisions in the ROME area are thus now possibly disposed as follows:-

21 GRANATIERI di SARDEGNA Division .....ROME
10 PIAVE (Mot) Division .....OLIVANO ROMANO
103 PIACENZA Division .....LITTORIA
12 SASSARI Division .....UDINE

(iii) Coastal Divs

The following identifications have been made :-

203 Division in CAGLIARI area.
209 Division in BARI area.
210 Division in LECCE area.
227 Division in LITTORIA area.

It is possible that there is a further Division in Northern SARDINIA.

5. BALKANS

The defence of the PELOPONNESE appears to have become a German commitment. 65 German Corps has been identified with its HQ at VERIA, while the Italian divisions formerly in this area are moving North. Reinforcements including 1500/2000 German Infantry have been reliably reported moving to the IONIAN islands; there is however no evidence that control of these islands has passed out of Italian hands. Evidence that ITALY is still nominally responsible for command of Axis forces on the mainland West of the PINDUS is found in a recent order from Eleventh Army to 104 JAEGER Division to cancel mass evacuation of 16 villages which the latter had ordered as a reprisal for the capture of nine Germans.

6. RECALL OF ITALIAN WORKERS

According to a reliable report all Italian workers in GERMANY and the Occupied Territories have been ordered to return to ITALY by 31 August. Those working in GERMANY itself, numbering 270,000, are known to have been returning home in groups over the past two months, the departure of large numbers from KIEL, DANZIG, LINZ and VIENNA receiving much publicity in the Press; but this is the first mention of the return of workers from the occupied territories, and it is assumed that the order applies only to those engaged on work contracts and not to those who have been resident in those countries over a period of years.

7. MORALE.

An Italian, who was in the NAPLES area on July 20th, states that the Neapolitans were overjoyed at the news of the bombing of ROME.

8. ENEMY EQUIPMENT

PANTHER TANK

Further to Appendix "A" of Intelligence Summary No 16 dated 19 Aug.

/The following...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The following particulars have been received from the SOVIET General Staff on the latest German Tank - the PANTHER.

DIMENSIONS

Overall length (without gun)	-	22 ft 7½ ins
" width	-	11 ft 2½ ins
" height	-	9 ft 6½ ins
Turret Ring	-	5 ft 5 ins
Track width	-	2 ft 2 ins
Track length on ground	-	13 ft 5½ ins
Pitch of track	-	6 ins

ARMOUR

All angles given from vertical

Front Armour

Turret	-	100-mm - Vertical
Upper Front	-	85-mm - at 57°
Lower Front	-	75-mm - at 53°

Side Armour

Turret	-	45-mm - at 25°
Upper Side	-	45-mm - at 42°
Lower Side	-	45-mm - at Vertical
Top and Belly	-	17-mm

ARMAMENT

The armament consists of 1 x 75-mm gun and 1 M.G. coaxially mounted.

AMMUNITION

75 rounds are carried for the gun. (M.G. ammunition not specified).

ENGINE

600 H.P. MAYBACH.

SUSPENSION

Front sprocket, rear idler and eight bogies overlapping (rim to rim), similar to the TIGER.

SPEED

Maximum speed 30 M.P.H.
Average speed 15 M.P.H.

T.S. AIREY,
B.C.S. (I).

-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-

1. GENERAL.

It is obvious that important German military movements are taking place in ITALY - re-shuffling in the South and reinforcement in the North - but it is not possible as yet to draw an exact picture of the results of these movements. We know a little more about dispositions in the South. Both 15 P.G. and GOERING Divs have been moving; the former apparently to the area of the Gulf of GAETA where HQ had a report centre at SESSA (U.9492) on 20 Aug, while GOERING Div Engineers were at LAGRI on 18 Aug and other elements at COSENZA on 19 Aug and SOVERATO on 20 Aug. A petrol dump for the GOERING Div was stated to be at CASTROVILLARI on 20 Aug, so that it appears that the Division is moving North out of CALABRIA. Of the original 14 Corps, therefore, only 1 Para Div and 29 P.G. Div have not been heard of; the former suffered very heavy casualties, the latter nothing like so heavy. Someone must be left to hold the line, since 26 Pz Div does not seem to have moved down at all, and it looks as if 29 P.G. Div, with or without 1 Para Div, will again have the post of honour as it did in SICILY. From available information on casualties it looks as if the division evacuated about 8,000 men across the Straits and adding in such elements as never went to SICILY (for instance the Tank Bn and Recce Unit) it may have a strength of about 10,000. 1 Para Div can probably not muster more than 3,500 men; unless the enemy appreciates an immediate danger of attack the division is likely to be withdrawn to reform, possibly in the NAPLES area where its sister formation, 2 Para Div is believed to be.

We have then 29 P.G. Div located in the toe with 26 Pz Div to its North. The latter, as stated in our last Summary, has elements as far South as MONTAURO (Z.1819) and as far North as SCALEA (T.53). This is defence in depth with a vengeance and suggests that the Germans envisage the defence of CALABRIA as a slow withdrawal on the lines of the defence of the North Western corner of SICILY, with the sea flanks sufficiently covered to nullify the effect of landings similiar to those carried out in the later phases of that withdrawal.

The Italians have a Corps in CALABRIA; 31 Corps with its HQ at CATANZARO. Under command are 104 MANTOVA Div, 211 and 212 Coastal Divs and what remains of the MESSINA Command. It is doubtful if these forces have any military value in the present situation except for the effect they may have on the nerves of their German comrades. The forces from SICILY are apparently being decently wound up and the puppets put back in their boxes. 6 Army HQ has gone off to VERONA to reform alongside ARIETE in that home of lost causes. 16 Corps HQ have left for SPEZIA. Generals GOTTI, SCHREIBER and CHIRIELEISON of 213 Coastal Div, ASSIETTA Div and LIVORNO Div respectively were to report to 31 Corps HQ on 23 Aug, presumably for railway warrants and possibly a change of headgear. They certainly have no troops to command and there is little reason why they should be given any more.

A correction should be made in IS No.16. The "Second German Corps" then referred to at SALA CONSILINA is almost certainly II FLIEGERKORPS as the Army formations of that number are otherwise engaged.

Organisation - GERMAN.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. Organisation - GERMAN.

A. PARACHUTE TROOPS.

The following information is provided by a PW believed reliable.

(i) 7 Air Corps. PW stated that it was misleading to say that 7 Air Corps consisted of two para divs. These were so small and incomplete that it sounded to him more of a joke than anything else.

(ii) 1 Para Div. According to PW the following units are part of 1 Para Div: a Div Sigs Section, a Div Arty Unit and a Div MG Bn, 3 and 4 Para Regts.

(iii) Div Arty Unit. According to PW, the div arty unit (he did NOT call it a regt) consisted of two batteries, one of which was equipped with 10.5 cm Paratroop Hows (L.G.2) and the other with 7.5 cm Paratroop Hows (L.G.1). He confessed, however, that his knowledge in this respect was hazy. He could give no details of strength, organisation or armament. He knew that part of these units had been in SICILY.

(iv) Div M.G. Bn. PW was positive about this unit. It is an independent unit within the div and consists of three coys armed exclusively with Hy M.Gs. These are either sub-allotted to div units as required or used in force in support of them.

(v) Div Sigs Section (DIVISIONSNACHRICHTENZUG). PW insisted on the title and stated that the Div Sigs Section consisted of two units, each of coy strength. He claimed that the two coys had been used as infantry right from the start and that by 15 July 43 they had been reduced to a total strength of 80 men and one 2/Lt. They were then withdrawn.

(vi) 4 Para Regt. PW stated, that it had had heavy losses in RUSSIA, was below strength and did not contain more than 50% of its original personnel. 4 Para Regt consists of three bns, 13 Coy and 14 Coy.

(vii) 1 Bn. 1 Bn had at the start of operations four coys, of which 1 - 3 were rifle coys and 4 Coy was a hy coy. The organisation of the rifle coys was three light pls and one heavy pl. Light Pls consisted of three sections with two L.M.Gs. and 12 men. Heavy Pl had one Heavy MG and one Heavy Mortar.

4 Coy had four Heavy MGs and four Heavy Mortars. This was the W.E. In RUSSIA it had had as many as eight MGs. In SICILY, owing to casualties, it was progressively reorganised. On 17 July it had two Heavy M.Gs, two L.M.Gs. and one Heavy Mortar. By 2 Aug all these weapons had been lost.

(viii) 2 Bn. PW stated that 2 Bn was much under strength. It had been a Ski Bn in RUSSIA.

(ix) 13 Coy. 13 Coy, 4 Para Regt, contains four 10.5 cm Super-Hy Mortars.

(x) 14 Coy. 14 Coy is the A.Tk Coy. It contains some 7.5 cm A.Tk guns and some guns of smaller calibre, without muzzle-brakes, but which PW cannot specify more exactly.

PW last had contact with 1 Bn on 4 Aug. He estimated its strength on that date as follows:-

2 Coy.....50 men.
3 Coy.....40 - 50 men.
4 Coy.....30 men, 7 NCOs. and 1 Officer.

PW also spent some time with 9 Coy on 4 Aug, and says it has a strength of about 50 men only. He had NO information about 1 Coy.

In FRANCE the emblem of 1 Para Div was a black ring surrounded by a red ring and inside it a black arrow outlined in red pointing obliquely downwards from right to left.

B. HERMAN GOERING .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

B. HERMANN GOERING Tank Regiment.

A PW from H.G. Tank Regt provided the following information.

(i) Organisation.

3 Bn H.Q. Tank Regt, consisted of 9, 10 and 11 Tps, each with HQ and three Secs.

(ii) Armament and Strength.

Each Tp had seven 7.5 cm Assault Guns, each with a crew of five men. These were distributed as follows:-

HQ Sec under Tp Cond .....1 Gun.
Three gun secs, each.....2 guns.
There were 9 PWs to each Tp.
The Total strength of 9 Tp was approximately 100 all ranks.

(iii) Ammunition.

The Tp carried 70 to 80 rounds per gun, normally comprising HE and AP shells in about equal proportions; the proportion of HE to AP would, however, vary slightly, according to the Tps task.

3. ENEMY METHODS - ITALIAN.

Staff Work.

The following notes on a slip of paper were found in the waste paper basket of the Mayor of CASTIGLIONE.

(1) Hail to the Star Spangled and Stripe/Hail to the Union Jack.
(2) Welcome to our Garden SICILY.
(3) Welcome to our City CASTIGLIONE.

4. ENEMY SUPPLIES AND COMMUNICATIONS.

Reports of the arrival of further German formations in ITALY make it clear that despite the change of shirt GERMANY still feels it in her interest to continue the defence of Italian territory. This support will entail the movement into and within ITALY of further GERMAN formations, and the maintenance of a lengthy L of C. Consequently, Italian communications assume a far greater importance than hitherto. Attention focuses principally on the railways which are now being methodically attacked by the Allied Air Forces.

The ITALIAN rail network is extremely vulnerable since except in the industrial area of the LOMBARDY plain the network is not extensive and is ill equipped with adequate alternative routes along which traffic can be diverted. Hence the blocking of one particular junction has a paralysing effect on railways over a whole section of the country. Furthermore, the alternative routes are in most cases quite incapable of carrying the weight of traffic thrown upon them by the blocking of the main lines.

This state of affairs is best illustrated at BOLOGNA and PISA. Through these two junctions must pass all traffic from Northern to Southern ITALY. If these junctions are blocked there can be no through traffic from the Northern not to Central and Southern ITALY.

The two West Coast main lines PISA - LEGHORN - ROME - NAPLES, and BOLOGNA - FLORENCE - ROME - NAPLES are the two main railway arteries of the country. These lines are also the main routes for traffic to S.E. ITALY as the East Coast line from ANCONA Southwards is only single track.

The blocking.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The blocking of the main lines out of ROME forces all traffic to be diverted via a complicated and inadequate single line network further inland, while at NAPLES the blocking of the by-pass junctions not only closes the main line South but also the main East - West line via BENEVENTO and FOGGIA. Successful attacks on BENEVENTO can also close this line. The second main East - West link is through BATTIPAGLIA to TARANTO; this route also provides an alternative route to the toe through SIBARI and CATANZARO. BATTIPAGLIA is of extreme importance, as the closing of this junction paralyses the entire South Western circuit BATTIPAGLIA - METAPONTO - SIBARI - CATANZARO - REGGIO - PAOLA - BATTIPAGLIA.

On the East coast the blocking of FOGGIA paralyses most of the South Eastern network, while complete paralysis would follow if BATTIPAGLIA and the NAPLES by-pass junctions were simultaneously blocked.

Even this brief outline is sufficient to show that by successful attacks on certain junctions it is possible to paralyse the railway system of a whole section of the country.

Attacks on Communications.

Allied air attacks against railway communications in ITALY have been continuing for several months, and already considerable dislocation is known to have been caused.

The most noticeable effect has been produced by attacks on the junctions along the main West Coast lines, which has forced the enemy to increase the use of small craft along the coast South of NAPLES. Recent attacks have again centered mainly on the network around and South of NAPLES. SALERNO, BATTIPAGLIA, VILLA LITERNO, AVERSA, CASERTA, CANCELLO and SAPRI have all been attacked by day or by night in the last week, the first two junctions having received the main weight of the offensive. BENEVENTO and FOGGIA have also been heavily attacked. The enemy's sensitiveness to these attacks is shown by the fact that during the recent attack on FOGGIA enemy fighter reaction was greater than experienced for some time. Upwards of 70 enemy aircraft were encountered.

Intruder and long-range fighter attacks have been continued against trains, stations, etc. These attacks have a cumulatively disorganising effect. Engines, wagons and freight are destroyed and Stations shot up. Furthermore, the stagnation caused by the blocking of junctions is likely to provide an increasing number of targets in the form of stationary trains, etc, while the diversion of rail traffic to the roads in Southern ITALY will also provide road targets for long range fighters.

Present state of the Railways as a result of recent attacks.

The bombing of the ROME marshalling yards temporarily closed all lines but the repairs should now have restored the situation. The constant attacks on the NAPLES by-pass junctions keep this important network in a constant state of disorganisation. It is probable, however, that some through working is usually possible, but on a scale insufficient to cope with requirements. Further South the junctions of SALERNO and BATTIPAGLIA appear to be blocked. The present situation at FOGGIA and BENEVENTO is not known. In the Toe, the railway is believed blocked at SAPRI, REGGIO, CATANZARO and SIBARI.

General Effects.

The dislocation caused by Allied bombing attacks on the Italian railway system will throw a heavy strain on the German MT Columns and on Coastal shipping. The disadvantage of being forced to move large quantities of supplies by road are well known; and it will take large fleets of German trucks to move even part of the supplies immobilised owing to railway dislocation. This state of affairs would of itself be bad enough if there were an abundance of MT. On the contrary, however, there is evidence that the Germans are suffering from a general shortage of MT.

The dislocation.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The dislocation of the railway system South of NAPLES has already forced the Germans to rely mainly on coastal shipping, (mostly by landing craft) for the movement of supplies to SICILY, which presumably will have to be continued for the supplying of troops in CALABRIA and Southern ITALY generally. The effective bombing of PISA and BOLOGNA might force the enemy also to increase coastal shipping North of NAPLES. West coast harbours and shipping are vulnerable to Allied Air and Naval attacks and the small harbours at VIBO MARINO - COLIA - TAURO and SCALEA have already been subjected to heavy Allied air and naval bombardment. Their fate will be shared by other harbours which the enemy is found to be using. The importance which is attached to the use of these harbours is shown by the increased flak protection which has lately been given them. The total of small craft sunk along the West Coast is steadily mounting.

The combined effects of the attacks on railways will be not only to block and disorganise the German L of C but also to impede the mobility of German formations. Formations themselves can move by road but supplies and even [illegible]h of the heavier equipment would if possible be moved by rail.

Whereas in GERMANY repairs can be quickly effected and necessary improvisations quickly organised, such is not the case in ITALY. It can be fairly assumed that anything which appears to further German interests and increases the likelihood of ITALY becoming a German battleground will be distasteful to the Italian public.

There is ample evidence that repairs are slow and it is certain that it is mostly German initiative which ensures that they are effected. All this entails more and more German control and a consequent worsening of ITALO-GERMAN relations.

NOTE: A map of the Italian railway system South of ROME is being prepared. It is regretted that it is not available for issue with this Summary but will be attached to Summary No 18.

5. ENEMY DISPOSITIONS

A. GERMAN

Spread of German Commitments in the West

It now seems reasonably certain that all Italian Divisions are leaving or are about to leave S.E. FRANCE. To take their place the following German Divisions are reported to have moved into this area - 386 Mot Div, 76 and 715 Inf Divs and 158 Reserve Div. These divisions were previously thought to be en route to ITALY (See Summary No 15) but it now seems more likely that they will remain for the time being in S.E. FRANCE in pl[illegible] of the evacu[illegible] Italian Divisions. They include however two offensive divisions which would be readily available for transfer to ITALY if called for. It is now reported that of 113 and 343 Infantry Divisions in FRANCE both previously reported as on the move, the former is destined for RUSSIA, while nothing further is known of the latter. A Division, believed to be SS Div 10, has moved from the North to fill the gap left in S.W. FRANCE by the departure of 386 Mot and 715 Inf Divisions.

Train movements towards S.E. FRANCE during the past few weeks have been sufficient for further divisions to have arrived in this area in addition to those mentioned above, and it must be assumed that some have crossed into ITALY.

The necessity for occupying the area vacated by the Italians will cause a further stretch of German strength in FRANCE and absorbtion of Reserves.

/Total.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Total German Formations in FRANCE and LOW COUNTRIES

Insufficient evidence is as yet available to enable a balance to be struck as to the exact present strength of German Divisions in FRANCE and the LOW COUNTRIES. As was stated in the preceding paragraph these have undoubtedly had to be spread to include hitherto Italian occupied FRANCE; with consequent re-shuffle in other areas. The small reserve of divisions reformed in FRANCE has almost certainly been further drawn on and divisions sent to ITALY while at least two have gone to RUSSIA (113 and 294 Inf Divs).

On the credit side 389 and 94 Inf Divs ex STALINGRAD Divs are now known to have been reforming in the ST. LO and LORIENT areas respectively. 189 Reserve Div is reported to have arrived in FRANCE from the BALKANS. It seems most unlikely that the previously published total of 38 Divisions (incl 16 Defensive) and 4 CAF Field Divisions has increased. The total is now thought to be less and the number of Defensive Formations greater.

STALINGRAD Divisions

With the identification of 94 and 394 Inf Divs reforming in FRANCE all the 20 Divisions reported wiped out at STALINGRAD have been re-identified. The STALINGRAD List was 14, 16, 24 Armoured, 3, 29 and 60 Motorised, 100 Light, 1, 44, 71, 76, 94, 113, 295, 297, 305, 371, 376, 384 and 389 Infantry Divisions.

D. ITALIAN

Italian Divisions

Evidence suggests that the Italians imitating their German masters are reforming the following Divisions out of the remnants of the ten divisions of the 8 Army which were withdrawn from RUSSIA in early 1943. 8 Army HQ itself has been reconstituted at PADUA and 9 PASUBIO Div is reforming in the PARMA area. 52 TORINO Div is undergoing the same process near UDINE and to bring up its strength is cannibalising units of 159 VENETO Div (GORIZIA). There are also indications that 157 NOVARA Div is being absorbed into a revived 2 SFORZESCA Div. Of the Alpine Divs, it is possible that 2 TRIDENTINA and 3 GIULIA are being reformed at MERANO and UDINE respectively.

There are no reliable indications of moves or impending moves of Divisions from the BALKANS to ITALY, but it seems certain that all Divs from Southern FRANCE are returning. Of these 56 LEGNANO and 48 TARO Divs, which were previously reported to have returned to ITALY (See Summary No 15) are now reported to be in the North.

Italo - German situation in N. ITALY.

The return of divisions from FRANCE to ITALY together with the reformed 8 Army Divisions raises the strength of the Italian Army in Northern ITALY to a possible 12 Divisions, plus an Alpine Group. This comes at a time most opportune for the Italians, and is likely to cause some embarrassment to the Germans. The present political and military situation in Northern ITALY appears extremely complex and delicate. On the one hand there will be the German troops arriving with the express but presumably veiled purpose of occupying as much as possible of Northern and Central ITALY for the purpose of safeguarding the German L of C to the South and of preparing defence positions. On the other hand there will be a hostile, war-weary and demoralised industrial population vainly expecting peace at any moment. On top of this there are some 12 divisions most of whom will consider themselves lucky to have returned safely to ITALY and to be spared the fate of their co-patriots in the BALKANS despised by the Germans and hated by a hostile population. They will doubtless have hopes to find themselves rid of their German masters and are likely to resent anything that savours of German occupation of the North. The presence of these divisions, reinforcing public dislike for the Germans, may make a German attempt at occupation of Northern ITALY extremely difficult without at least a show of force. It is likely to tax German diplomatic, political and

/military .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

military ingenuity to the limit.

General

(i) Regarding the reformation of 132 ARIETE Armoured Div, a report of unknown reliability suggests that the Germans have provided the Italians with 100 tanks for a new Armoured Division. This is considered improbable though the Italians may have received some German tanks for training purposes.

(ii) It is reported that 12 SASSARI Div is now in the FORMIO (CADEA) area. The four Divisions in the ROME area are thus now possibly disposed as follows:-

21 GRANATIERI di SARDEGNA Division .....ROME
10 PLAVE (Mot) Division .....OLIVANO ROMANO
103 PIACENZA Division .....LITTORIA
12 SASSARI Division .....FORMIO

(iii) Coastal Divs

The following identifications have been made :-

203 Division in CAGLIARI area.
209 Division in BARI area.
210 Division in LECCE area.
227 Division in LITTORIA area.

It is possible that there is a further Division in Northern SARDINIA.

C. BALKANS

The defence of the PELOPONNESE appears to have become a German commitment. 65 German Corps has been identified with its HQ at VITINA, while the Italian divisions formerly in this area are moving North. Reinforcements including 1500/2000 German Infantry have been reliably reported moving to the IONIAN islands; there is however no evidence that control of these islands has passed out of Italian hands. Evidence that ITALY is still nominally responsible for command of Axis forces on the mainland West of the PINDUS is found in a recent order from Eleventh Army to 104 JAEGER Division to cancel mass evacuation of 16 villages which the latter had ordered as a reprisal for the capture of nine Germans.

6. RECALL OF ITALIAN WORKERS

According to a reliable report all Italian workers in GERMANY and the Occupied Territories have been ordered to return to ITALY by 31 August. Those working in GERMANY itself, numbering 270,000, are known to have been returning home in groups over the past two months, the departure of large numbers from KIEL, DANZIG, LINZ and VIENNA receiving much publicity in the Press; this is the first mention of the return of workers from the occupied territories, and it is assumed that the order applies only to those engaged on work contracts and not to those who have been resident in those countries over a period of years.

7. MORALE.

An Italian, who was in the NAPLES area on July 20th, states that the Neapolitans were overjoyed at the news of the bombing of ROME.

The following particulars have been received from the SOVIET General Staff on the latest German Tank - the PANTHER.

DIMENSIONS

Overall length (without gun)	-	22 ft 7½ ins
" width	-	11 ft 2½ ins
" height	-	9 ft 6½ ins
Turret Ring	-	5 ft 5 ins
Track width	-	2 ft 2 ins
Track length on ground	-	13 ft 5½ ins
Pitch of track	-	6 ins

ARMOUR

All angles given from vertical

Front Armour

Turret	-	100-mm	- Vertical
Upper Front	-	85-mm	- at 57°
Lower Front	-	75-mm	- at 53°

Side Armour

Turret	-	45-mm	- at 25°
Upper Side	-	45-mm	- at 42°
Lower Side	-	45-mm	- at Vertical
Top and Belly	-	17-mm	

ARMAMENT

The armament consists of 1 x 75-mm gun and 1 M.G. coaxially mounted.

AMMUNITION

75 rounds are carried for the gun. (M.G. ammunition not specified).

ENGINE

600 H.P. MAYBACH.

SUSPENSION

Front sprocket, rear idler and eight bogies overlapping (rim to rim) idler to the REAR.

SPEED

Maximum speed 30 M.P.H.
Average speed 15 M.P.H.

-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-O-

1. GENERAL.

It is obvious that important German military movements are taking place in ITALY - re-shuffling in the South and reinforcement in the North - but it is not possible as yet to draw an exact picture of the results of these movements. We know a little more about dispositions in the South. Both 15 P.G. and GOERING Divs have been moving; the former apparently to the area of the Gulf of GAETA where EMS had a report centre at SESSA (M.9492) on 20 Aug, while GOERING Div Engineers were at LAORI on 18 Aug and other elements at COSENZA on 19 Aug and SOVERATO on 20 Aug. A petrol dump for the GOERING Div was stated to be at CASTROVILLARI on 20 Aug, so that it appears that the Division is moving North out of CALABRIA. Of the original 14 Corps, therefore, only 1 Para Div and 29 P.G. Div have not been heard of; the former suffered very heavy casualties, the latter nothing like so heavy. Someone must be left to hold the toe, since 26 Pz Div does not seem to have moved down at all, and it looks as if 29 P.G. Div, with or without 1 Para Div, will again have the post of honour as it did in SICILY. From available information on casualties it looks as if the division evacuated about 8,000 men across the Straits and adding in such elements as never went to SICILY (for instance the Tank Bn and Recce Unit) it may have a strength of about 10,000. 1 Para Div can probably not muster more than 3,500 men; unless the enemy appreciates an immediate danger of attack the division is likely to be withdrawn to reform, possibly in the NAPLES area where its sister formation, 2 Para Div is believed to be.

We have then 29 P.G. Div located in the toe with 26 Pz Div to its North. The latter, as stated in our last Summary, has elements as far South as MONTAURO (Z.1819) and as far North as SCALEA (T.53). This is defence in depth with a vengeance and suggests that the Germans envisage the defence of CALABRIA as a slow withdrawal on the lines of the defence of the North Eastern corner of SICILY, with the sea flanks sufficiently covered to nullify the effect of landings similiar to those carried out in the later phases of that withdrawal.

The Italians have a Corps in CALABRIA; 31 Corps with its HQ at CATANZARO. Under command are 104 MANTOVA Div, 211 and 212 Coastal Divs and what remains of the MESSINA Command. It is doubtful if these forces have any military value in the present situation except for the effect they may have on the nerves of their German comrades. The forces from SICILY are apparently being decently wound up and the puppets put back in their boxes. 6 Army HQ has gone off to VERONA to reform alongside ARIETE in that home of lost causes. 16 Corps HQ have left for SPEZIA. Generals GOTTI, SCHREIBER and CHIRIELEISON of 213 Coastal Div, ASSIETTA Div and LIVORNO Div respectively were to report to 31 Corps HQ on 23 Aug, presumably for railway warrants and possibly a change of headgear. They certainly have no troops to command and there is little reason why they should be given any more.

A correction should be made in IS No.16. The "Second German Corps" then referred to at SALA CONSILINA is almost certainly II FLIEGERKORPS as the Army formations of that number are otherwise engaged.

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. Organisation - GERMAN.

A. PARACHUTE TROOPS.

The following information is provided by a PW believed reliable.

(i) 7 Air Corps. PW stated that it was misleading to say that 7 Air Corps consisted of two para divs. These were so small and incomplete that it sounded to him more of a joke than anything else.

(ii) 1 Para Div. According to PW the following units are part of 1 Para Div: a Div Sigs Section, a Div Arty Unit and a Div MG Bn, 3 and 4 Para Regts.

(iii) Div Arty Unit. According to PW, the div arty unit (he did NOT call it R Regt) consisted of two batteries, one of which was equipped with 10.5 cm Paratroop Hows (L.G.2) and the other with 7.5 cm Paratroop Hows (L.G.1). He confessed, however, that his knowledge in this respect was hazy. He could give no details of strength, organisation or armament. He knew that part of these units had been in SICILY.

(iv) Div M.G. Bn. PW was positive about this unit. It is an independent unit within the div and consists of three coys armed exclusively with Hy M.Gs. These are either sub-allotted to div units as required or used in force in support of them.

(v) Div Sigs Section (DIVISIONSNACHRICHTENZUG). PW insisted on the title and stated that the Div Sigs Section consisted of two units, each of coy strength. He claimed that the two coys had been used as infantry right from the start and that by 15 July 43 they had been reduced to a total strength of 20 men and one 2/Lt. They were then withdrawn.

(vi) 4 Para Regt. PW stated, that it had had heavy losses in RUSSIA, was below strength and did not contain more than 50% of its original personnel. 4 Para Regt consists of three bns, 13 Coy and 14 Coy.

(vii) 1 Bn. 1 Bn had at the start of operations four coys, of which 1 - 3 were rifle coys and 4 Coy was a hy coy. The organisation of the rifle coys was three light pls and one heavy pl. Light Pls consisted of three sections with two L.M.Gs. and 12 men. Heavy Pl had one Heavy MG and one Heavy Mortar.

4 Coy had four Heavy MGs and four Heavy Mortars. This was the T.E. In RUSSIA it had had as many as eight MGs. In SICILY, owing to casualties, it was progressively reorganised. On 17 July it had two Heavy M.Gs, two L.M.Gs. and one Heavy Mortar. By 2 Aug all these weapons had been lost.

(viii) 2 Bn. PW stated that 2 Bn was much under strength. It had been a Ski Bn in RUSSIA.

(ix) 13 Coy. 13 Coy, 4 Para Regt, contains four 10.5 cm Super-Hy Mortars.

(x) 14 Coy. 14 Coy is the A.Tk Coy. It contains some 7.5 cm A.Tk guns and some guns of smaller calibre, without muzzle-brakes, but which PW cannot specify more exactly.

PW last had contact with 1 Bn on 4 Aug. He estimated its strength on that date as follows:-

2 Coy.....50 men.
3 Coy.....40 - 50 men.
4 Coy.....30 men, 7 NCOs. and 1 Officer.

PW also spent some time with 9 Coy on 4 Aug, and says it has a strength of about 50 men only. He had NO information about 1 Coy.

In FRANCE the emblem of 1 Para Div was a black ring surrounded by a red ring and inside it a black arrow outlined in red pointing obliquely downwards from right to left.

2. HERMANN GOERING Tank Regiment.

A PW from H.Q. Tank Regt provided the following information.

(i) Organisation.

3 Bn H.Q. Tank Regt, consisted of 9, 10 and 11 Tps, each with HQ and three Secs.

(ii) Armament and Strength.

Each Tp had seven 7.5 cm Assault Guns, each with a crew of five men. These were distributed as follows:-

HQ Sec under Tp Comd .....1 Gun.
Three gun secs, each.....3 guns.
There were 9 LVCs to each Tp.
The Total strength of 9 Tp was approximately 100 all ranks.

(iii) Ammunition.

The Tp carried 70 to 80 rounds per gun, normally comprising HE and AP shells in about equal proportions; the proportion of HE to AP would, however, vary slightly, according to the Tps task.

3. ENEMY METHODS - ITALIAN.

Staff Work.

The following notes on a slip of paper were found in the waste paper basket of the Mayor of CASTIGLIONE.

(1) Hail to the Star Spangled and Stripe/Hail to the Union Jack.
(2) Welcome to our Garden SICILY.
(3) Welcome to our City CASTIGLIONE.

4. ENEMY SUPPLIES AND COMMUNICATIONS.

Reports of the arrival of further German formations in ITALY make it clear that despite the change of shirt GERMANY still feels it in her interest to continue the defence of Italian territory. This support will entail the movement into and within ITALY of further GERMAN formations, and the maintenance of a lengthy L of C. Consequently, Italian communications assume a far greater importance than hitherto. Attention focuses principally on the railways which are now being methodically attacked by the Allied Air Forces.

The ITALIAN rail network is extremely vulnerable since except in the industrial area of the LOMBARDY plain the network is not extensive and is ill equipped with adequate alternative routes along which traffic can be diverted. Hence the blocking of one particular junction has a paralysing effect on railways over a whole section of the country. Furthermore, the alternative routes are in most cases quite incapable of carrying the weight of traffic thrown upon them by the blocking of the main lines.

This state of affairs is best illustrated at BOLOGNA and PISA. Through these two junctions must pass all traffic from Northern to Southern ITALY. If these junctions are blocked there can be no through traffic from the Northern network to Central and Southern ITALY.

The two West Coast main lines PISA - LEGHORN - ROME - NAPLES, and BOLOGNA - FLORENCE - ROME - NAPLES are the two main railway arteries of the country. These lines are also the main routes for traffic to S.E. ITALY as the East Coast line from ANCONA Southwards is only single track.

The blocking.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The blocking of the main lines out of ROME forces all traffic to be diverted via a complicated and inadequate single line network further inland, while at NAPLES the blocking of the by-pass junctions not only closes the main line South but also the main East - West line via BENEVENTO and FOGGIA. Successful attacks on BENEVENTO can also close this line. The second main East-West link is through BATTIPAGLIA to TARANTO; this route also provides an alternative route to the toe through SIBARI and CATANZARO. BATTIPAGLIA is of extreme importance, as the closing of this junction paralyses the entire South Western circuit BATTIPAGLIA - METAPONTO - SIBARI - CATANZARO - REGGIO - PAOLA - BATTIPAGLIA.

On the East coast the blocking of FOGGIA paralyses most of the South Eastern network, while complete paralysis would follow if BATTIPAGLIA and the NAPLES by-pass junctions were simultaneously blocked.

Even this brief outline is sufficient to show that by successful attacks on certain junctions it is possible to paralyse the railway system of a whole section of the country.

Attacks on Communications.

Allied air attacks against railway communications in ITALY have been continuing for several months, and already considerable dislocation is known to have been caused.

The most noticeable effect has been produced by attacks on the junctions along the main West Coast lines, which has forced the enemy to increase the use of small craft along the coast South of NAPLES. Recent attacks have again centered mainly on the network around and South of NAPLES. SALERNO, BATTIPAGLIA, VILLA LITERNO, AVERSA, CASERTA, CANCELLO and SAPRI have all been attacked by day or by night in the last week, the first two junctions having received the main weight of the offensive. BENEVENTO and FOGGIA have also been heavily attacked. The enemy's sensitiveness to these attacks is shown by the fact that during the recent attack on FOGGIA enemy fighter reaction was greater than experienced for some time. Upwards of 70 enemy aircraft were encountered.

Intruder and long-range fighter attacks have been continued against trains, stations, etc. These attacks have a cumulatively disorganising effect. Engines, wagons and freight are destroyed and Stations shot up. Furthermore, the stagnation caused by the blocking of junctions is likely to provide an increasing number of targets in the form of stationary trains, etc, while the diversion of rail traffic to the roads in Southern ITALY will also provide road targets for long range fighters.

Present state of the Railways as a result of recent attacks.

The bombing of the ROME marshalling yards temporarily closed all lines but the repairs should now have restored the situation. The constant attacks on the NAPLES by-pass junctions keep this important network in a constant state of disorganisation. It is probable, however, that some through working is usually possible, but on a scale insufficient to cope with requirements. Further South the junctions of SALERNO and BATTIPAGLIA appear to be blocked. The present situation at FOGGIA and BENEVENTO is not known. In the Toe, the railway is believed blocked at SAPRI, REGGIO, CATANZARO and SIBARI.

General Effects.

The dislocation caused by Allied bombing attacks on the Italian railway system will throw a heavy strain on the German MT Columns and on Coastal shipping. The disadvantage of being forced to move large quantities of supplies by road are well known; and it will take large fleets of German trucks to move even part of the supplies immobilised owing to railway dislocation. This state of affairs would of itself be bad enough if there were an abundance of MT. On the contrary, however, there is evidence that the Germans are suffering from a general shortage of MT.

The dislocation.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The dislocation of the railway system South of NAPLES has already forced the Germans to rely mainly on coastal shipping, (mostly by landing craft) for the movement of supplies to SICILY, which presumably will have to be continued for the supplying of troops in CALABRIA and Southern ITALY generally. The effective bombing of PISA and LEGHORN might force the enemy also to increase coastal shipping North of NAPLES. West coast harbours and shipping are vulnerable to Allied Air and Naval attacks and the small harbours at VIBO MARINA - GIOIA - TAURO and SCALEA have already been subjected to heavy Allied air and naval bombardment. Their fate will be shared by other harbours which the enemy is found to be using. The importance which is attached to the use of these harbours is shown by the increased flak protection which has lately been given them. The total of small craft sunk along the West Coast is steadily mounting.

The combined effects of the attacks on railways will be not only to block and disorganise the German L of C but also to impede the mobility of German formations. Formations themselves can move by road but supplies and even much of the heavier equipment would if possible be moved by rail.

Whereas in GERMANY repairs can be quickly effected and necessary improvisations quickly organised, such is not the case in ITALY. It can be fairly assumed that anything which appears to further German interests and increases the likelihood of ITALY becoming a German battleground will be distasteful to the Italian public.

There is ample evidence that repairs are slow and it is certain that it is mostly German initiative which ensures that they are effected. All this entails more and more German control and a consequent worsening of ITALO-GERMAN relations.

NOTE: A map of the Italian railway system South of ROME is being prepared. It is regretted that it is not available for issue with this Summary but will be attached to Summary No 18.

5. ENEMY DISPOSITIONS

A. GERMANY

Spread of German Commitments in the West

It now seems reasonably certain that all Italian Divisions are leaving or are about to leave S.E. FRANCE. To take their place the following German Divisions are reported to have moved into this area - 386 Mot Div, 76 and 715 Inf Divs and 158 Reserve Div. These divisions were previously thought to be en route to ITALY (See Summary No 15) but it now seems more likely that they will remain for the time being in S.E. FRANCE in place of the evacuated Italian Divisions. They include however two offensive divisions which would be readily available for transfer to ITALY if called for. It is now reported that of 113 and 343 Infantry Divisions in FRANCE both previously reported as on the move, the former is destined for RUSSIA, while nothing further is known of the latter. A Division, believed to be SS Div 10, has moved from the North to fill the gap left in S.W. FRANCE by the departure of 386 Mot and 715 Inf Divisions.

Train movements towards S.E. FRANCE during the past few weeks have been sufficient for further divisions to have arrived in this area in addition to those mentioned above, and it must be assumed that some have crossed into ITALY.

The necessity for occupying the area vacated by the Italians will cause a further stretch of German strength in FRANCE and absorbtion of Reserves.

/Total.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Total German Formations in FRANCE and LOW COUNTRIES

Insufficient evidence is as yet available to enable a balance to be struck as to the exact present strength of German Divisions in FRANCE and the LOW COUNTRIES. As was stated in the preceding paragraph these have undoubtedly had to be spread to include hitherto Italian occupied FRANCE; with consequent re-shuffle in other areas. The small reserve of divisions reformed in FRANCE has almost certainly been further drawn on and divisions sent to ITALY while at least two have gone to RUSSIA (113 and 291 Inf Divs).

On the credit side 389 and 94 Inf Divs ex STALINGRAD Divs are now known to have been reforming in the ST. LO and LORIENT areas respectively. 189 Reserve Div is reported to have arrived in FRANCE from the BALKANS. It seems most unlikely that the previously published total of 38 Divisions (incl 16 Defensive) and 4 CAF Field Divisions has increased. The total is now thought to be less and the number of Defensive Formations greater.

STALINGRAD Divisions

With the identification of 94 and 394 Inf Divs reforming in FRANCE all the 20 Divisions reported wiped out at STALINGRAD have been re-identified. The STALINGRAD list was 14, 16, 24 Armoured, 3, 29 and 60 Motorised, 100 Light, 1, 44, 71, 76, 94, 113, 295, 297, 305, 371, 376, 384 and 389 Infantry Divisions.

4. ITALIAN

Italian Divisions

Evidence suggests that the Italians imitating their German masters are reforming the following Divisions out of the remnants of the ten divisions of the 8 Army which were withdrawn from RUSSIA in early 1943. 8 Army HQ itself has been reconstituted at PADUA and 9 PASUBIO Div is reforming in the PARMA area. 52 TORINO Div is undergoing the same process near UDINE and to bring up its strength is cannibalizing units of 159 VENETO Div (GORIZIA). There are also indications that 157 NOVARA Div is being absorbed into a revived 2 SFORZESCA Div. Of the Alpine Divs, it is possible that 2 TRIDENTINA and 3 GIULIA are being reformed at MERANO and UDINE respectively.

There are no reliable indications of moves or impending moves of Divisions from the BALKANS to ITALY, but it seems certain that all Divs from Southern FRANCE are returning. Of these 58 LEGNANO and 48 TARO Divs, which were previously reported to have returned to ITALY (See Summary No 15) are now reported to be in the North.

Italo - German situation in N. ITALY.

The return of divisions from FRANCE to ITALY together with the reformed 8 Army Divisions raises the strength of the Italian Army in Northern ITALY to a possible 12 Divisions, plus an Alpine Group. This comes at a time most opportune for the Italians, and is likely to cause some embarrassment to the Germans. The present political and military situation in Northern ITALY appears extremely complex and delicate. On the one hand there will be the German troops arriving with the express but presumably veiled purpose of occupying as much as possible of Northern and Central ITALY for the purpose of safeguarding the German L of C to the South and of preparing defence positions. On the other hand there will be a hostile, war-weary and demoralised industrial population vainly expecting peace at any moment. On top of this there are some 12 divisions most of whom will consider themselves lucky to have returned safely to ITALY and to be spared the fate of their co-patriots in the BALKANS despised by the Germans and hated by a hostile population. They will doubtless have hoped to find themselves rid of their German masters and are likely to resent anything that savours of German occupation of the North. The presence of these divisions, reinforcing public dislike for the Germans, may make a German attempt at occupation of Northern ITALY extremely difficult without at least a show of force. It is likely to tax German diplomatic, political and

/military .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

militia ingenuity to the limit.

General

(i) Regarding the reformation of 132 ARIETE Armoured Div, a report of unknown reliability suggests that the Germans have provided the Italians with 100 tanks for a new Armoured Division. This is considered improbable though the Italians may have received some German tanks for training purposes.

(ii) It is reported that 12 SASSARI Div is now in the FORMIO (GAETA) area. The four Divisions in the ROME area are thus now possibly disposed as follows:-

21 GRANATIERI di SARDEGNA Division	ROME
10 PIAVE (Mot) Division	
103 PIACENZA Division	OLIVANO ROMANO
12 SASSARI Division	LITTORIA
	FORMIO

(iii) Coastal Divs

The following identifications have been made :-

203 Division in CAGLIARI area.
209 Division in BARI area.
210 Division in LECCE area.
227 Division in LITTORIA area.

It is possible that there is a further Division in Northern SARDINIA.

C BALKANS

The defence of the PELOPONNESE appears to have become a German commitment. 65 German Corps has been identified with its HQ at VIENNA, while the Italian divisions formerly in this area are moving North. Reinforcements including 1500/2000 German Infantry have been reliably reported moving to the IONIAN islands; there is however no evidence that control of these islands has passed out of Italian hands. Evidence that ITALY is still nominally responsible for command of Axis forces on the mainland West of the PINDUS is found in a recent order from Eleventh Army to 104 JAEGER Division to cancel mass evacuation of 16 villages which the latter had ordered as a reprisal for the capture of nine Germans.

6. RECALL OF ITALIAN WORKERS

According to a reliable report all Italian workers in GERMANY and the Occupied Territories have been ordered to return to ITALY by 31 August. Those working in GERMANY itself, numbering 270,000, are known to have been returning home in groups over the past two months, the departure of large numbers from KIEL, DANZIG, LINZ and VIENNA receiving much publicity in the Press; but this is the first mention of the return of workers from the occupied territories, and it is assumed that the order applies only to those engaged on work contracts and not to those who have been resident in those countries over a period of years.

7. MORALE.

A civilian, who was in the NAPLES area on July 20th, states that the Neapolitans were overjoyed at the news of the bombing of ROME.

8. EQUIPMENT

The following particulars have been received from the SOVIET General Staff on the latest German Tank - the PANTHER.

DIMENSIONS

Overall length (without gun)	-	22 ft 7½ ins
" width	-	11 ft 2⅝ ins
" height	-	9 ft 6½ ins
Turret Ring	-	5 ft 5 ins
Track width	-	2 ft 2 ins
Track length on ground	-	13 ft 5½ ins
Pitch of track	-	6 ins

ARMOUR

All angles given from vertical

Front Armour

Turret	-	100-mm - Vertical
Upper Front	-	85-mm - at 57°
Lower Front	-	75-mm - at 53°

Side Armour

Turret	-	45-mm - at 25°
Upper Side	-	45-mm - at 42°
Lower Side	-	45-mm - at Vertical
Top and Belly	-	17-mm

ARMAMENT

The armament consists of 1 x 75-mm gun and 1 M.G. coaxially mounted.

AMMUNITION

75 rounds are carried for the gun. (M.G. ammunition not specified).

ENGINE

600 H.P. MAYBACH.

SUSPENSION

Front sprocket, rear idler and eight bogies overlapping (rim to rim). Similar to the TIGER.

SPEED

Maximum speed 30 M.P.H.
Average speed 15 M.P.H.

A. ENEMY SUPPLIES AND COMMUNICATIONS.

1. Shipping - General.

The general trend of shipping in Western Italian waters is now Northwards. This is particularly noticeable in respect of LC and tank lighters which are now arriving at LEGHORN from the NAPLES area in large numbers. On the 28 Aug, 46 of these craft were present at LEGHORN. By the 31 Aug the total had risen to 57, and on the 2 Sep no fewer than 66 such craft were present.

Merchant shipping, too, is moving North. This is clearly shown if we compare the present totals of shipping at GENOA and NAPLES with those of 17 July. On the latter date there were 113,400 tons of shipping in the NAPLES area, and 159,200 tons at GENOA. But by Sep 1 the NAPLES area had fallen to 23,100 tons, and GENOA had risen to 246,300 tons. Merchant shipping at LEGHORN has remained at much the same level.

Further North still, main interest centres on MARSEILLES where 50 barges are at present being converted into the tank lighter type which has been so popular with the enemy in recent months. A further 12 are converting at LA CIOTAT, while a small number of Siebel Ferries are assembling at ST. LOUIS DU RHONE. At MARSEILLES, too, submarine pens are being constructed, and work is reported to be pushing ahead quickly. Pending their completion, TOULON appears to be the main submarine nest in this area. Six 500 ton U-Boats were present there on 1 Sep.

Available information on the East coast of ITALY indicates that traffic between VENICE and BARI is on the increase. This is probably in part intended to ease the burden of the railways, and indeed offers better prospects of doing so than did similar attempts on the West coast. In the closed waters of the ADRIATIC merchantmen may find a greater degree of safety than they did on the East Coast.

2. Coastal Shipping.

There have been few developments of major importance. The main point of interest has been a decrease of coastal shipping to the small harbours along the West coast of ITALY. After a period of considerable activity during the latter stages of the Sicilian Campaign and for a brief period afterwards, traffic has dwindled to a very low level. This development is not altogether surprising. The main function of sea transport hitherto has been the relief of the sadly dislocated railway system S. of NAPLES. So long as the supply of SICILY was a matter of major importance it can be argued that the use of LC and other small craft for the transport of men and equipment was a worth-while investment although even this makes a poor substitute for rail traffic. However, the situation has now altered. There is no longer such a vital need to supplement the carrying capacity of the crippled railway system, now that it does not appear to be the enemy's intention to make SOUTHERN ITALY a major battleground. Instead of a flow of men and supplies into and through CALABRIA, the process is now reversed. As indicated in Para 1 the area of

Landing craft.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

landing craft activity has in fact moved North of NAPLES. The concentration noted at LEGHORN may in part be accounted for by an intention to resume small craft traffic to CORSICA and SARDINIA, which has been almost reduced to a standstill by the withdrawal of craft for the evacuation of troops from SICILY. However, with fighting now taking place on the Italian mainland and the front likely to move Northwards it would seem that the enemy will now be able to rely mainly on M.T. for the supplying of troops in Southern ITALY, despite the drastic state of the railways. The time taken for loading and unloading, the necessity of harbour clearance by MT and the increasing danger of attacks by allied fighters provide further reasonable explanations of the enemy's apparent decision to give up lighter traffic South of NAPLES.

8. Railway Situation.

Air attacks in the past 10 days have covered the entire Italian network from REGGIO in the toe to TRENTO and BOLZANO in the far North. Results have been in the main highly satisfactory, especially in the area S. of NAPLES. Indeed, it may be assumed that the railway situation is now so bad that no reliance can be placed upon it for the speedy supply, or indeed for the supply at all of army forces in the area. N. of NAPLES, the situation though easier, is still very unsatisfactory for the enemy. North of ROME the line is blocked at CIVITAVECCHIA and further North still PISA has been blocked as a result of the heavy raid of 31 Aug. On the BRENNER, the main lines to BOLOGNA and the LOMBARDY Plain are cut at BOLZANO and TRENTO. Details are as follows.

NAPLES Area.

The main line from NAPLES to REGGIO is completely impassable throughout its length, except along the stretch between SALERNO and SAPRI where BATTIPAGLIA is open. In CALABRIA itself there are no through lines anywhere. East of NAPLES the line NAPLES to FOGGIA is completely impassable. Thus the only possible way by which traffic can proceed South is via the very complicated inland network through AVELLINO and POTENZA to METAPONTO. It is considered that this traffic is only on a minor scale.

ROME Area.

The coast line is now blocked at CIVITAVECCHIA, while the line running South from SULMONA to NAPLES has been cut. At TERNI, traffic appears possible on a very restricted scale, while the junction of ORTE is now open.

N. ITALY.

At PISA, all lines to LEGHORN, FLORENCE and SPEZIA have been cut, thereby seriously affecting the Southward move of troops from FRANCE and North Central ITALY. The traffic from AUSTRIA over the BRENNER has been seriously dislocated by the blocking at BOLZANO of the lines to TRENTO, LAIVES and MERANO, and at TRENTO of the main VERONA - BOLZANO railway. Of particular value is a direct hit on the railway bridge over the ISARCO River, splitting the bridge apart.

(Attn Appendix "A" is a map showing the railway system of Southern Italy).

B. MOVE OF GERMAN DIVISIONS.

1. Further to para 5 of Summary No.17, 389 and 44 Inf Divs are reported to have moved to S.E. FRANCE. 386 Mot Div previously reported to be in this area is now thought to be identical with 3 P.G. Div already known to be in ITALY. The Divisions so far reported to have moved to S.E. FRANCE are 44, 76, 389 and 715 Inf Divs and 158 Reserve Div. Whilst the last three would seem suitable as replacements for departed Italian Formations it is suggested that 44 & 76 Inf Divs, two first class divs, have in fact moved into Northern ITALY.

Numerous reports.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Numerous reports continue to be received of the movement of German troops in and out of FRANCE. Amongst those reported as moving possibly to N. ITALY are 65, 94 and 305 Infantry Divs. Although definite evidence is still lacking, train movements suggest that 24 Pz Div has left FRANCE for N. ITALY. Other possible identifications in N. ITALY include S.S. Adolf Hitler, S.S. Reich and 71 Inf Div (from DENMARK). The latter was reported moving through KLAGENFURT and may now be in the TRIESTE area.

2. German Garrison of FRANCE.

As shewn in the previous paragraph reports of troop movements in and out of FRANCE have been numerous and it is still difficult to state exactly the extent to which the garrison of FRANCE and the LOW COUNTRIES has been reduced. However, it is doubtful if the total of divisions now exceeds 28 as against 38 in June. Exchange of divisions with the Russian front continues. 31 Inf Div is reported to have arrived whilst 113 Inf Div has left (See Summary No. 17 para 5).

3. "The Big Stretch".

The move of German divisions from FRANCE to ITALY clearly demonstrates the apprehension with which the Germans view the opening of a front in ITALY, and the extent to which they are being forced to disperse their formations. 28 Divisions in FRANCE, 17 in the BALKANS, 15 - 20 in ITALY, SARDINIA and CORSICA, 11 in NORWAY, 194 in RUSSIA; these facts speak for themselves. Furthermore, the reserve of formations formed in FRANCE would appear to have been used up. The German Army is now strung out through occupied and hostile EUROPE. Even the advantage of interior lines of communication is offset by the necessity of guarding these against hostile populations, patriot and guerilla forces. Nowhere can the enemy concentrate for attack, or call up further reserves for defence without weakening another sector of the vast European front. As yet there is little evidence of the withdrawal of German divisions from the Russian front and in view of the non-stop Russian offensive it would hardly seem a propitious moment for such withdrawal. However, if the reports of the identifications of S.S. Adolf Hitler and S.S. Reich in N. ITALY are correct, at least two divs have been withdrawn from RUSSIA to ITALY. Despite the unfavourable situation RUSSIA would seem to be the sole source of supply if further divs are required for FRANCE, ITALY or the BALKANS.

Although the total of identified German divisions is theoretically as large as ever this state of affairs is in fact entirely false. It has been reported by the Russian G.S. that the average German division in RUSSIA does not exceed some 60% of its official W.E. Furthermore, it is known that the STALINGRAD divs were in part re-formed by the cannibalisation of other divs. The gravity of the German man power shortage already acute before the STALINGRAD and TUNISIAN defeats is clearly reflected in this state of affairs.

4. German Strategy.

There are indications both from the recent fighting in ITALY and in RUSSIA that German strategy is taking a more sober and cautious line. GERMANY can ill afford further Stalin and Tunisian debacles. It may be that sound military direction has gained the ascendancy over blind political intuition. We have already witnessed the disappearance overnight of Fascism in favour of a semi-military government without any immediate collapse of the entire internal political situation of ITALY. Perhaps it is not impossible that Nazism might go the same way and with the same ease.

C. DEFENCES - ITALIAN.

The pillboxes encountered in SICILY were generally of poor quality. They were not reinforced except where it was considered desirable to strengthen the structure e.g. where flooring formed the roof of an underground chamber it was strengthened with quarter inch steel rods but there were no reinforcement walls.

Pillboxes were in.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Pillboxes were in three main types.

Type "A".

Circular wall eighteen inches thick, with a roof two feet thick, of squared random rubble, either built on a concrete raft sunk six inches into the ground or with the wall sunk eighteen inches into the ground. Loopholes were twelve inches high, three feet wide in the front and eighteen inches wide in the rear.

Type "B".

Material was similar to the above but wall and roof were five feet thick with the wall sunk between two feet and three feet six inches into the ground. Loopholes were two feet high and six feet wide in the front, stepped back to two feet wide in the rear.

Type "C".

These were the best encountered. Internal diameter was fourteen feet, with a circular wall four feet high surmounted by a domed roof, rising to nine feet six inches high, externally. The wall was five feet thick, with the roof tapering from the same thickness over the wall to three feet six inches in the centre. The concrete was of very coarse aggregate pebbles and unwashed sand, coated with half an inch of very fine concrete made from granite chippings, further topped by ten inches of rough brick masonry. All was camouflaged with shrubs.

In some instances with this type the concrete was sunk twelve feet below ground level and an underground chamber constructed.

(Source:- R.E. Intelligence).

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Apart from these official and semi-official reactions there are various likely stories from neutral press services which deserve recording. One is of riots in the Northern industrial cities, and this has been confirmed by Axis Arabic broadcasts, which explain that there are many Communists in these parts. Interestingly enough, the German Radio has rather tended to spread these stories, perhaps intending to frighten the Italian bourgeoisie with accepting German military occupation as an insurance against Bolshevism. Another story is that the Germans have occupied ISTRIA with the important ports of TRIESTE, POLA and FIUME. This would be a reasonable precautionary measure to guard the flank of the Balkans. In the same area, Slovene unrest and activities by partisan bands are reported.

3. GERMAN MILITARY SITUATION IN ITALY AND THE BALKANS.

ITALY. There have as yet been no reliable reports of the movement of German formations, either in or out of Italy, since the political crisis of 26 July. There are however unconfirmed reports that the Germans have occupied ISTRIA, including the ports of FIUME, TRIESTE and POLA. This is credible, as it seems likely that with the Allies strongly established in SICILY and faced with the possibility of Italian surrender, the Germans will not entertain hopes of holding Southern and central ITALY, but withdraw Northwards. Whatever line the Germans decide to hold in ITALY it is essential that they should also control ISTRIA both to safe-guard their flank, and the L of C from Northern Italy into the Balkans. There are numerous unconfirmed reports of German troops "pouring over the Brenner". These are certainly exaggerated but, if German envisages fighting in Northern Italy, this movement may be connected with the formation of the necessary bases. In view of a possible Italian surrender, the situation regarding the eight Italian Divisions in S.E. France, and the safeguarding of the right flank of a Front in North ITALY may well be causing the Germans some anxiety. The Italians will presumably be anxious for the return of these divisions whose safe conduct might be bargained for against the facilitation of German withdrawal Northwards and the placing of the Italian Fleet outside our grasp. It seems likely in any case that as in ISTRIA Italian control in SE France will be replaced by German. The arrival of further German formations in Italy from France must also be expected.

BALKANS. Despite the presence of some 30 Italian divisions in the Balkans German control has been extended and strengthened in the last six months. The total German strength has increased from a total equivalent of 8 to an equivalent of 19 divisions. There is now virtual German military and political control of CROATIA which was originally organised in June 1941 as an independent kingdom under Italian protection. At least one German division has moved from Yugo-Slavia into Albania, where no German formations had hitherto been identified. Since 1939, Albania has been considered as part of metropolitan Italy and garrisoned solely by Italian troops. Similarly in Western Greece and the Peloponese German and Italian formations have been interspersed. The interspersion in Western and Southern Greece is ostensibly to bolster up Italian formations and strengthen resistance to a possible Allied invasion, which it appears the Axis fears might also take place in these areas. However, in the light of recent political developments in Italy, the purpose of the whole German policy in the Balkans can be seen more clearly. The increase of German control and re-disposition of formations would now seem to be nothing else than part of the German plan to continue to control the Balkans in the event of Italian surrender.

There is every indication that in spite of the strain of increased military and administrative commitments, which would be imposed on the Germans in the event of an Italian collapse, the Germans will attempt strenuously to deny the Allies a further foothold in Europe.

As Italian power in the Balkans fades, another Axis satellite is playing a bigger part in the losing game. The Bulgarian area of occupation in Greece has been extended to include the whole of Macedonia and Thrace, excluding Salonika, while, in Yugo-Slavia it is reported that Bulgarian troops have been in action against MIHAILOVIC in the PRISTINA Area.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

4. ENEMY DISPOSITIONS AND STRENGTHS - SICILY.

(a) German.

It is estimated that there is a nominal total of 30 German infantry battalions (including engineer and recce battalions employed in an infantry role) covering the 60 mile front of the ETNA position. They appear at present disposed between the sectors of this front as follows:-

1. Hermann Goering Sector - ACI CASTELLO to incl ADRANO - 13 Bns.
2. 15 Pz Div Sector: Excl ADRANO to incl. TROINA - 10 Bns.
3. 29 Pz Gren Div Sector: Excl. TROINA - S.AGATA. - 7 Bns.

A number of the units included in the above total of 30 must by this time be battalions in name only. It is known that, of the original 3 Pz Gren Bns of Hermann Goering Div, only one now retains a separate existence, and the three bns of PGR KORNER (115 PGR) may now have been reduced to two, which also include the remnants of 904 Fortress Bn. Although we have no positive evidence of a similar re-organisation in the other two Regts of 15 Pz Div, it is more than possible, in view of their consistently heavy engagement in rearguard actions over the past fortnight, that in their case also two or more battalions have been amalgamated. Both 3 and 4 Para Regts have been involved in extremely fierce fighting. 3 Para Regt still retained its three battalion organisation on 1 Aug, but recent prisoners statements make it improbable that the effective strength of the Regt is more than one up-to-strength battalion. It is therefore considered unlikely that the German infantry strength amounts to more than the equivalent of 25 effective battalions.

German dispositions from NW to SE are believed to be as follows:-

N.Coast - excl TROINA.	29 Mot.Div.Area.	(71 P.G.R. (II & III/15 P.G.R. (1 Bn of FULLRIEDE ex 15 Armd Div. (I/382 P.G.R.
Incl. TROINA - ADRANO.	15 Pz Div Area.	(1 P.G.R. (ENS). (Remainder of FULLRIEDE (behind 1 P.G.R.). (I/15 P.G.R. ex 29 Mot Div. (II/382 P.G.R.
ADRANO - E.Coast.	H.G. Div Area.	(HG Pzr.Bn. (N of ADRANO). (3 Para Regt. (923 Fortress Bn. (CAIA Bn. (104 Reggio Bn. (I/P.G.R. 2 (II/P.G.R. 115 (I/P.G.R. 115. (4 Para Regt.

FIUMEFREDDO - PAULUS Battle Gp. (See Para 6).

(b) Italian.

Army and Corps Troops.

There have been few identifications of Army and Corps Troops. It is possible that a total of about four btys have emerged into the MESSINA triangle.

Divisional Troops.

28 AOSTA and 26 ASSIETTA Divs do not appear to have had specified areas allotted to them yet, but are [illegible] S.FRATELLO - ADRANO; what evidence there is suggests ASSIETTA to the North and AOSTA to the South.

Probable strengths: four weak bns each; three btys each.

NOTE. Constant reports of desertion especially of Sicilians by the wayside may well have reduced these strengths further.

4 LIVORNO Div.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

4 LIVORNO Div: remnants, barely a bn strong, previously in the REGALBUTO area, now probably destroyed. Div HQ GALA D 0747

Coastal Tps

It is not yet known how much of 213 Coastal Div and the bns in the CATANIA area has been destroyed since the capture of the city, but it is probable that any that have escaped are of negligible fighting value. Disposed along the Eastern and Northern Coasts and MESSINA are some eight bns and perhaps ten btys.

Miscellaneous

Two tactical gps each about 1000 strong, still exist; one at BARCELLONA, the other at LINGUAGLOSSA.

In addition, there may be remnants, Ind. M.G. Coys etc. totalling approximately two bns.

ENEMY SUPPLIES AND COMMUNICATIONS

With the virtual blockade of Sicilian harbours still in enemy hands to all but small craft, attempts to disrupt enemy supplies have focussed during the past fortnight upon the railway lines running Southwards to the toe and heel of ITALY. Heavy and repeated attacks have been made on the railway junes of CATANZARO, SALERNO, FOGGIA and BATTIPAGLIA, while the raids on REGGIO and SAN GIOVANNI have virtually brought rail traffic to a standstill at these latter ports. NAPLES has again been severely hit. Further North, the railway junc of BOLOGNA main centre, through which all traffic from the BRENNER has to pass, has sustained major damage in the marshalling yards and sidings.

Amid the mass of reports received of detailed raid damage, it is difficult to assess accurately the strategic effects of these attacks. Nevertheless, it may be said that as a result of the raids made during the past month, the railway lines running South from NAPLES have sustained damage, which has materially effected the movement of supplies to SICILY by these routes. The constant disruption of traffic at SALERNO, BATTIPAGLIA and FOGGIA, has produced bottlenecks which have hindered the onward despatch by rail of supplies reaching NAPLES.

One result of this has been the development of sea traffic by small craft between NAPLES and the Straits. Landing Craft have been observed at various points on and off the West Coast of ITALY and there can be little doubt that by bringing cargoes from NAPLES to the Straits they are being used to relieve some of the strain on the railway line. Nevertheless the cargo carried by an L.C. is at the most 80 tons so that even if 20 L.C. were employed wholly on this task, their total contribution would be only 1600 tons of supplies every 6 days, allowing two days for the trip each way, and two days for loading and unloading. On the other hand one single railway train would carry an average of 500 tons supplies, so that the use of lighters is a very inadequate substitute for an efficiently working railway line.

Meanwhile, in the Straits area, Siebel Ferries and L.C. continue to be active all along the coast between VIBO-VALENTIA and Capo SPARTIVENTO on the mainland, and between TORRE di FARO and RIPOSTO in SICILY. Recent photographic cover shows a higher proportion of dock cargo carried by these vessels, and there are some grounds for believing that shipments to SICILY latterly have consisted of supplies and equipment rather than personnel. The two train ferries are still present in the Straits, but show only spasmodic signs of activity. Indeed, in view of the great destruction at the termini at both sides of the Straits, their raison d'etre has virtually disappeared and in face of the growing threat to MESSINA, they may well be withdrawn from the Straits.

6. ENEMY ORGANISATION - CONTD.

H.G. Div.

Captured documents show that the previous division of H.G. Div into two battle groups (with the addition of a number of units extraneous to the Div - notably 2 P.G.R. from 15 Arrd Div) under the command of SCHMALZ and OEHRING has now given place to a fresh orientation, given below.

This fresh Division into battle groups exists, in its entirety, only on paper. The course of battle has prevented the setting-up of the battle groups completely on the lines laid down. VON DER HEYDE reported by PWs to have been killed, and his battle group, if it still exists, must be under another name. In the PRUSS Gp, CREL P.G. 3 is with REINHOLZ and not KLUTT. II/302 PGR is in the TROILA sector, well away from SCHMALZ and 90% Fortress Bn has been absorbed by 115 PGR.

Only PAULAS' group, guarding the bridges near FIUMEFREDDO, is probably complete as laid down.

7. Enemy Methods.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

7. NEW METHODS.

(a) Changes of Title - GERMAN.

Recently captured documents show that the German High Command's policy of reconstituting destroyed units and formations is still being pursued.

Several of the component parts of 15 Armd Div have been given titles reviving memories of the Division's past in AFRICA; the following are the only ones known to date, but others may follow:-

2 P.C.R. (KOMMEN.) is now called 115 P.C.R.
Arty Regt, Sicily is now called 33 Arty Regt.

(b) Camouflage.- German.

The most interesting discovery has been of two sniper suits in disruptive pattern.

The clothing comprises two tunics, one having a helmet cover to match. They are of good cloth printed with disruptive patterning of various colours. The tunic which has the matching helmet cover is made up of a close weave cloth with an elastic inset at the waist. It can be used either the normal way or inside out. The outside pattern has a background of green, the inside of brown. The helmet cover is carefully made, also double-sided, with elastic insets and hiding-hooks. The second tunic is of twill, tailored on the usual lines, and of general green colour disrupted with brown.

Both tunics blend well with the general foliage, but they both have the weakness of still revealing characteristic outlines, as they both fit closely to the body.

ITALIAN.

(a) A special camouflage group, employed solely on camouflage work, has been identified on the strength of 6th Army. It consists of one officer and 8 O.Rs.

Materials provided for the group consisted for the most part of paint and string nets with grass garnishing.

(b) The study of camouflage so far encountered in SICILY confirms the impression that there has been an improvement in enemy methods, no doubt due to German prompting.

Pillboxes.

Care has been taken to blend these into the general ground pattern.

In several cases, in the PACHINO area, pillboxes were covered with complete huts made of straw. One pillbox overlooking a road junction between PACHINO and ROSOLINI was an actual small house, reinforced with concrete and having a weapon slit just above ground level.

Examples seen in the PALAZZOLO area were roofed with straw and sited on slopes in the vicinity of limestone outcrops, which made them difficult to recognise. They had straw "blinds" to cover the weapon slits.

One pillbox noted and photographed near ROSOLINI was sited against a wall, and an attempt had been made with paint to simulate the stone-pattern of the wall.

Many of these pillboxes were given away by the poor siting of their defensive wiring. Instead of being sited to blend with the ground pattern, wire was often haphazardly across fields, thereby giving away, to the air photographer, many otherwise excellent positions.

Gun Positions.....

THIS PAGE IS UNCLASSIFIED

0248

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Gun Positions.

Of the gun positions studied, half were covered by overhead Italian grass-garnished nets, while the other half had no overhead cover, the guns themselves being covered with brushwood and similar natural furnishings. Generally, gun positions were poor, being given away by tracks, etc., and poor camouflage. Here and there, however, a good site was found. Such a one was a single gun position near MALAZZOLO. Here the pit was dug out of an embankment at the side of the road and had a low overhead cover of Italian grass-garnished nets with the furnishing picked out with boughs etc.

One A.A. gun is worthy of comment. This was sited in a recently cut cornfield below CASTIGLIA, on a forward slope. There were several stacks of straw in the field and a further stack had been constructed around the gunshield. This simple treatment was, from all appearances, successful.

15 ARMY GROUP INTELLIGENCE SUMMARY No 19
of 25 SEP 43.

(a) Sidelined information will not be re-produced in any Intelligence Summary of formations under this HQ except by special permission.

(b) This Summary will be destroyed within 48 hrs of receipt

---

1. GENERAL

The past week has seen the consolidation after bitter fighting of our bridgehead in the SALERNO GULF and the beginning of the exploitation. The delay imposed upon our advance into ITALY has so far been no more than a temporary one but it has undoubtedly enabled the Germans to prevent our exploiting fully the situation created by the defection of the Italians. The fact that the Germans have been able to carry out against little resistance the disarmament of the Italian forces and to obtain control of nearly all the strategic points in Central and Northern ITALY is due very largely to the promptness and vigour of the resistance made to our landings in the SALERNO area. In this sense the Germans may claim with some justification to have won if not a victory at least an important success over us. The point has not been overlooked by German broadcasters. It is a useful weapon with which to soften the announcement of subsequent withdrawals.

With the rapid advance of the 8th Army and the steady build up of our forces over the beaches the balance of forces has now turned against the enemy and his position in the SALERNO area has become untenable. The withdrawal, which he has now initiated by the readjustment of his Eastern flank and the re-distribution of his forces, must be more than a local one. The eight divisions commanded by KESSELRING are by themselves inadequate to assure the defence of a position astride the peninsula and it is unlikely at

/this stage .....

THIS PAGE IS UNCLASSIFIED

0250

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

this stage that the gaps will by filled by bringing down divisions from the North. The possibility of further Allied landings North of our present position which has already deterred the enemy from moving down the whole of 3 and 15 P.G. Divisions to the SALERNO area still applies and must be more than ever present in the enemy's calculations since his evacuation of SARDINIA and CORSICA. Formidable as the total of 20 German divisions in ITALY may appear, they will not be sufficient for the simultaneous tasks of guarding a long and vulnerable coastline and providing a force adequate to hold a line East to West across the waist of ITALY. In addition to the purely military aspect of the situation the Germans are faced with the problem of internal security. The disarmament of the Italian armed forces and the repression of open disturbances among the civilian population have settled only the immediate problem. It is unlikely that the Germans either wish or are in a position to extend these measures to include the complete occupation of Central as well as Northern ITALY. The administrative problems involved would require the employment of additional forces at the very moment when GERMANY's situation on all fronts makes necessary the utmost economy in the use of her manpower.

These considerations suggest strongly that the Germans do not intend to undertake more than delaying actions in Southern and Central ITALY. The evidence so far available is insufficient to show which of the possible defensive lines in the North the enemy will attempt to hold. If however, the present dispositions of his forces may be taken as a guide, it is unlikely to be South of the line RIMINI - LEGHORN.

2. LOCATION OF GERMAN DIVISIONS IN ITALY.

The distribution of German divisions not identified in the present fighting is believed to be as follows:-

(a) Central ITALY

Area North of NAPLES	-	15 P.G. Div
Area ROME - CIVITA VECCHIA	-	2 Para Div & 3 PG Div

(b) Northern ITALY

PIEDMONT	-	343 and 371 Infantry Divisions
LIGURIA and N. TUSCANY	-	76, 94, 305 Infantry Divisions. 24 Panzer Division Elements 90 Panzer Grenadier Division.
LOMBARDY	-	16 and S.S. Adolf Hitler Panzer Div. Unidentified Panzer Grenadier Division. 65 and possibly one other Infantry Divisions. Elements S.S. Division Das Reich.
TRENTINO	-	44 and possibly one other Infantry Divisions.
VENEZIA	-	71 Infantry Division.

/3. ENEMY SUPPLIES .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3a. ENEMY SUPPLIES AND COMMUNICATIONS

Supply Routes into ITALY

The most important German supply line is now the railway from AUSTRIA into N ITALY over the Brenner pass. Along this linepasses the bulk of the supplies for the 19 German divisions now in ITALY. There are two other main routes into N ITALY: One from FRANCE the other via YUGO-SLAVIA. The former can hardly be considered an alternative route for supplies from GERMANY to ITALY, as it would necessitate a detour around SWITZERLAND through FRANCE. The N East route provides, however, an alternative link with GERMANY via VIENNA, LUBLJANA, and TRIESTE. During the period 12 July - 19 August 57,000 tons of petrol and crude oil are reported to have reached ITALY by this route. Despite the fact that the Germans must be mainly dependent on the Brenner route the normal capacity of this line is more than adequate to provide sufficient tonnage for daily maintenance for the entire German force and also permit of a reasonable rate of build up of stocks.

The pre-eminent importance of the Brenner route is therefore obvious. It is, however, a vulnerable bottleneck. The first attack on this vital German life line was made on 1 Sep and resulted in serious damage to the railway bridge over the river ISARCO at BOLZANO, which it was estimated reduced the capacity of the Brenner line by 75% for about two weeks. Besides the railways into North ITALY it is possible for GERMANY to stop supplies from the South of FRANCE to N. West Italian ports. It is not thought however, that this will ease the German maintenance problem to any extent, as the depots from which any supplies will be drawn will almost certainly be in Southern GERMANY.

German Action in ITALY to Secure L of C

With the announcement of the Italian surrender to the Allies, the Germans immediately put into operation what was obviously a prearranged plan to seize control of the communications in Northern and Central ITALY. The object of this plan was to secure the L of C of German formations fighting in Southern ITALY, and to ensure the security of the German North Italian base; both vital to the German Army for the future conduct of the war in ITALY. At the same time, and with the same object, the Germans took control of the ports of GENOA, SPEZIA, LEGHORN, CIVITAVECCHIA, VENICE, TRIESTE, POLA and other smaller harbours, and seized the merchant shipping present. The mere occupation of railway stations and dockyards by a few hundred German soldiers and sailors is not however sufficient to ensure their continued working on German behalf.

Road and Railway Transport Problems

The main difficulty confronting the Germans at the present time will be the problem of forcing or persuading the Italians to operate the railways at all. There have been numerous and apparently reliable reports that strikes and go slow tactics have resulted in at least stagnation and in some areas complete stoppage of the Northern Railway System. It is also reported that Italian railway officials have attempted to obstruct by refusing to hand over wagons to German Army. That the Germans appreciate the seriousness of the situation is shown by a report that they have brought their own railway personnel into ITALY to ensure the working of the railways. It must be assumed that to whatever heights Italian obstinacy may rise, the Germans will succeed in operating the railways to an extent sufficient to satisfy their own needs.

The main German base in North Italy is now reported to be at VERONA. This is on the direct route from GERMANY, via the BRENNER, and is also one of the largest rail centres of N. ITALY. Presumably the Germans can operate the railway as far as VERONA with their own personnel and equipment direct from AUSTRIA. The main railway operating problem will be the transfer of trains

/from the Northern .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

from the Northern network onto the central network South of PISA and BOLOGNA; and further South from ROME to NAPLES.

Owing to the pre-occupation of the Allied airforces with close support with operations in the SALERNO area the much battered Italian railway junctions except in the NAPLES/have had a short breather in which to execute repairs. Hence the present state presents a slightly less sorry picture than in recent weeks. In the North the main line to GERMANY via the BRENNER is now open again.

/areas

At the Southern end of this line the marshalling yards at VERONA have shown considerable activity. On 16 Sep considerable activity was also observed at PADUA which might indicate that the North East route via TRIESTE was operating. It has however, been reported that the Southern line into N. ITALY via TRIESTE has been cut by Italian and Great action between LUBLJANA and TRIESTE.

At PISA and BOLOGNA through lines are working and slight activity has been observed in the marshalling yards. The two main West coast lines PISA - ROME are open as well as the lines BOLOGNA - FLORENCE - ROME. On the latter route the marshalling yards at AREZZO and TERNI showed considerable activity on 16 Sep. The East coast line is blocked at PESCARA as a result of recent heavy attacks. This line has been used increasingly in recent weeks and the blocking of the line will cause serious delays. The ROME yards are all functioning and recent reconnaissances have revealed fair activity. All the junctions in the NAPLES area are in a permanent state of dislocation owing to repeated attacks and it is unlikely that there is more than an improvised skeleton service of trains operating in the whole area. The line to the East via BENEVENTO remains blocked.

Whilst the BRENNER line has shown considerable activity and there appears to be fair activity South of BOLOGNA and PISA the indications are that there is still little movement of trains from Northern to Central ITALY via BOLOGNA and PISA which form the links between the two systems.

The present evidence suggests that the chaotic internal situation in Northern and Central ITALY with sporadic uncontrolled fighting between Germans and Italians throughout the country may make it dangerous and difficult for the Germans to organise either road or rail transport unless vulnerable points are guarded and road convoys escorted; this at least until they get a grip on the situation. Furthermore, the Germans are known to be suffering from a general shortage of M.T. and are unlikely to have large numbers of M.T. Columns available for moving large tonnage of supplies from the North to Central ITALY. There is evidence that the Germans hope to alleviate this position by taking over Italian Army M.T., but in this they are meeting a lot of opposition from Italian troops who are sabotaging the vehicles.

Shipping:

Despite what appears to have been fairly quick action by the Germans the latter did not prevent the bulk of the Italian fleet escaping and the remainder scuttling itself. The Germans succeeded in seizing most of the active merchant shipping in the North Italian Ports and reconnaissance has revealed only a few merchant vessels scuttled; apart from deliberate German blocking of NAPLES by scuttling vessels at the quayside. It is likely, however, that although vessels have not been scuttled many will have been sabotaged or deserted by their crews. Shortage of crews, not ships, is likely to handicap the German use of Italian shipping. Since the start of the present operations little activity has been observed at either GENOA, SPEZIA. At LEGHORN and PIOMBINO there has been considerable activity connected mainly in the evacuation of Germans from SARDINIA and CORSICA. Some of the traffic at LEGHORN, however, has been coastal traffic between GENOA, LEGHORN and CIVITAVECCHIA: and there has been the usual concentration of small craft.

15 ARMY GROUP INTELLIGENCE SUMMARY No.18 of 5 SEP 1943.

(a) Sidelined information will not be re-produced in any Intelligence Summary of formations under this HQ except by special permission.

(b) This Summary will be destroyed within 48 hrs of receipt.

-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-

A. ENEMY SUPPLIES AND COMMUNICATIONS.

1. Shipping - General.

The general trend of shipping in Western Italian waters is now Northwards. This is particularly noticeable in respect of LC and tank lighters which are now arriving at LEGHORN from the NAPLES area in large numbers. On the 28 Aug, 46 of these craft were present at LEGHORN. By the 31 Aug the total had risen to 57, and on the 2 Sep no fewer than 66 such craft were present.

Merchant shipping, too, is moving North. This is clearly shown if we compare the present totals of shipping at GENOA and NAPLES with those of 17 July. On the latter date there were 113,400 tons of shipping in the NAPLES area, and 159,200 tons at GENOA. But by Sep 1 the NAPLES area had fallen to 23,100 tons, and GENOA had risen to 246,300 tons. Merchant shipping at LEGHORN has remained at much the same level.

Further North still, main interest centres on MARSEILLES where 50 barges are at present being converted into the tank lighter type which has been so popular with the enemy in recent months. A further 12 are converting at LA CIOTAT, while a small number of Siebel Ferries are assembling at ST. LOUIS DU RHONE. At MARSEILLES, too, submarine pens are being constructed, and work is reported to be pushing ahead quickly. Pending their completion, TOULON appears to be the main submarine nest in this area. Six 500 ton U-Boats were present there on 1 Sep.

Available information on the East coast of ITALY indicates that traffic between VENICE and BARI is on the increase. This is probably in part intended to ease the burden of the railways, and indeed offers better prospects of doing so than did similar attempts on the West coast. In the closed waters of the ADRIATIC merchantmen may find a greater degree of safety than they did on the East Coast.

2. Coastal Shipping.

There have been few developments of major importance. The main point of interest has been a decrease of coastal shipping to the small harbours along the West coast of ITALY. After a period of considerable activity during the latter stages of the Sicilian Campaign and for a brief period afterwards, traffic has dwindled to a very low level. This development is not altogether surprising. The main function of sea transport hitherto has been the relief of the sadly dislocated railway system S. of NAPLES. So long as the supply of SICILY was a matter of major importance it can be argued that the use of LC and other small craft for the transport of men and equipment was a worthwhile investment although even this makes a poor substitute for rail traffic. However, the situation has now altered. There is no longer such a vital need to supplement the carrying capacity of the crippled railway system, now that it does not appear to be the enemy's intention to make SOUTHERN ITALY a major battleground. Instead of a flow of men and supplies into and through CALABRIA, the process is now reversed. As indicated in Para 1 the area of

Landing craft.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

landing craft activity has in fact moved North of NAPLES. The concentration noted at LEGHORN may in part be accounted for by an intention to resume small craft traffic to CORSICA and SARDINIA, which has been almost reduced to a standstill by the withdrawal of craft for the evacuation of troops from SICILY. However, with fighting now taking place on the Italian mainland and the front likely to move Northwards it would seem that the enemy will now be able to rely mainly on M.T. for the supplying of troops in Southern ITALY, despite the drastic state of the railways. The time taken for loading and unloading, the necessity of harbour clearance by MT and the increasing danger of attacks by allied fighters provide further reasonable explanations of the enemy's apparent decision to give up lighter traffic South of NAPLES.

7. Railway Situation.

Air attacks in the past 10 days have covered the entire Italian network from REGGIO in the toe to TRENTO and BOLZANO in the far North. Results have been in the main highly satisfactory, especially in the area S. of NAPLES. Indeed, it may be assumed that the railway situation is now so bad that no reliance can be placed upon it for the speedy supply, or indeed for the supply at all of army forces in the area. N. of NAPLES, the situation though easier, is still very unsatisfactory for the enemy. North of ROME the line is blocked at CIVITAVECCHIA and further North still PISA has been blocked as a result of the heavy raid of 31 Aug. On the BRENNER, the main lines to BOLOGNA and the LOMBARDY Plain are cut at BOLZANO and TRENTO. Details are as follows.

NAPLES Area.

The main line from NAPLES to REGGIO is completely impassable throughout its length, except along the stretch between SALERNO and SAPRI where BATTIPAGLIA is open. In CALABRIA itself there are no through lines anywhere. East of NAPLES the line NAPLES to FOGGIA is completely impassable. Thus the only possible way by which traffic can proceed South is via the very complicated inland network through AVELLINO and POTENZA to METAPONTO. It is considered that this traffic is only on a minor scale.

ROME Area.

The coast line is now blocked at CIVITAVECCHIA, while the line running South from SULMONA to NAPLES has been cut. At TERNI, traffic appears possible on a very restricted scale, while the junction of ORTE is now open.

N. ITALY.

At PISA, all lines to LEGHORN, FLORENCE and SPEZIA have been cut, thereby seriously affecting the Southward move of troops from FRANCE and North Central ITALY. The traffic from AUSTRIA over the BRENNER has been seriously dislocated by the blocking at BOLZANO of the lines to TRENTO, LAIVES and MERANO, and at TRENTO of the main VERONA - BOLZANO railway. Of particular value is a direct hit on the railway bridge over the ISARCO River, splitting the bridge apart.

(See Appendix "A" is a map showing the railway system of Southern Italy).

B. MOVE OF GERMAN DIVISIONS.

1. Further to para 5 of Summary No.17, 389 and 44 Inf Divs are reported to have moved to S.E. FRANCE. 386 Mot Div previously reported to be in this area is now thought to be identical with 3 P.G. Div already known to be in ITALY. The divisions so far reported to have moved to S.E. FRANCE are 44, 76, 389 and 715 Inf Divs and 158 Reserve Div. Whilst the last three would seem suitable as replacements for departed Italian Formations it is suggested that 44 & 76 Inf Divs, two first class divs, have in fact moved into Northern ITALY.

Numerous reports.....

THIS PAGE IS UNCLASSIFIED

0255

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Numerous reports continue to be received of the movement of German troops in and out of FRANCE. Amongst those reported as moving possibly to N. ITALY are 65, 9[illegible] and 305 Infantry Divs. Although definite evidence is still lacking, train movements suggest that 24 Pz Div has left FRANCE for N. ITALY. Other possible identifications in N. ITALY include S.S. Adolf Hitler, S.S. Reich and 71 Inf Div (from DENMARK). The latter was reported moving through KLAGENFURT and may now be in the TRIESTE area.

2. German Garrison of FRANCE.

As shown in the previous paragraph reports of troop movements in and out of FRANCE have been numerous and it is still difficult to state exactly the extent to which the garrison of FRANCE and the LOW COUNTRIES has been reduced. However, it is doubtful if the total of divisions now exceeds 28 as against 38 in June. Exchange of divisions with the Russian front continues. 31 Inf Div is reported to have arrived whilst 113 Inf Div has left (See Summary No. 17 para 5).

3. "The Big Stretch".

The move of German divisions from FRANCE to ITALY clearly demonstrates the apprehension with which the Germans view the opening of a front in ITALY, and the extent to which they are being forced to disperse their formations. 28 Divisions in FRANCE, 17 in the BALKANS, 15 - 20 in ITALY, SARDINIA and CORSICA, 11 in NORWAY, 194 in RUSSIA; these facts speak for themselves. Furthermore, the reserve of formations formed in FRANCE would appear to have been used up. The German Army is now strung out through occupied and hostile EUROPE. Even the advantage of interior lines of communication is offset by the necessity of guarding [illegible] against hostile populations, patriot and guerilla forces. Nowhere can the enemy concentrate for attack, or call up further reserves for defence without weakening another sector of the vast European front. As yet there is little evidence of the withdrawal of German divisions from the Russian front and in view of the non-stop Russian offensive it would hardly seem a propitious moment for such withdrawal. However, if the reports of the identifications of S.S. Adolf Hitler and S.S. Reich in N. ITALY are correct, at least two divs have been withdrawn from RUSSIA to ITALY. Despite the unfavourable situation RUSSIA would seem to be the sole source of supply if further divs are required for FRANCE, ITALY or the BALKANS.

Although the total of identified German divisions is theoretically as large as ever this state of affairs is in fact entirely false. It has been reported by the Russian G.S. that the average German division in RUSSIA does not exceed some 60% of its official W.E. Furthermore, it is known that the STALINGRAD divs were in part re-formed by the cannibalisation of other divs. The gravity of the German man power shortage already acute before the STALINGRAD and TUNISIAN defeats is clearly reflected in this state of affairs.

4. German Strategy.

There are indications both from the recent fighting in ITALY and in RUSSIA that German strategy is taking a more sober and cautious line. GERMANY can ill afford further Stalin and Tunisgrad debacles. It may be that sound military direction has gained the ascendancy over blind political intuition. We have already witnessed the disappearance overnight of Fascism in favour of a semi-military government without any immediate collapse of the entire internal political situation of ITALY. Perhaps it is not impossible that Nazism might go the same way and with the same ease.

C. DEFENCES - ITALIAN.

The pillboxes encountered in SICILY were generally poor quality. They were not reinforced except where it was considered desirable to strengthen the structure e.g. where flooring formed the roof of an underground chamber it was strengthened with quarter inch steel rods but there were no reinforcement walls.

Pillboxes were in.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Pillboxes were in three main types.

Type "A".

Circular wall eighteen inches thick, with a roof two feet thick, of squared random rubble, either built on a concrete raft sunk six inches into the ground or with the wall sunk eighteen inches into the ground. Loopholes were twelve inches high, three feet wide in the front and eighteen inches wide in the rear.

Type "B".

Material was similar to the above but wall and roof were five feet thick with the wall sunk between two feet and three feet six inches into the ground. Loopholes were two feet high and six feet wide in the front, stepped back to two feet wide in the rear.

Type "C".

These were the best encountered. Internal diameter was fourteen feet, with a circular wall four feet high surmounted by a domed roof, rising to nine feet six inches high, externally. The wall was five feet thick, with the roof tapering from the same thickness over the wall to three feet six inches in the centre. The concrete was of very coarse aggregate pebbles and unwashed sand, coated with half an inch of very fine concrete made from granite chippings, further topped by ten inches of rough brick masonry. All was camouflaged with shrubs.

In some instances with this type the concrete was sunk twelve feet below ground level and an underground chamber constructed.

(Source:- R.E. Intelligence).

D. APPENDIX.

SUBJECT:- Lessons from 'HUSKY'

15AG/9004/ G (Air).

30 Aug 43.

TO: G (Trg)
T.A.F.

Ref 15 AG/2001/7/G (Trg) dated 26 Aug 43.

1. The following remarks on Air Support Control during 'HUSKY' are offered in addition to those of EIGHTH ARMY.

2. LOADING OF TENTACLES.

Failure to make adequate shipping bids for tentacles was a reflection on the state of air support training of formations who did not appreciate their function; this particularly applies to those cases where tentacles were shut out and left in N. Africa.

3. CODES & CIPHERS.

The same difficulty of distribution in a modified form was encountered on the Main Air Sp Control Net. The problem would be simplified if a secure code or cipher with a uniform key could be supplied for use on all air sp control nets.

4. BOMBLINE.

(a) The provision by EIGHTH ARMY of a progressive series of forecast bomblines for use on 'D' day if all communications failed proved of value and appears essential in an operation of this nature if direct support is available at an early stage.

(b) EIGHTH ARMY forwarded bomblines throughout the operation which were consistent and appeared to reflect faithfully the movements of forward troops. The definition of the bombline as the predicted line of forward troops for the next two hours is now well understood by both the Army and the Air Forces; it should be adhered to and any temptation to offer 'fancy' bomblines resisted i.e. the forwarding of two 'bomblines' , one an estimate of troops positions and the other a 'safe' line.

5. LANDMARKS & RECOGNITION.

There were few reports of the use of artificial landmarks or the use of smoke for recognition of our troops or indication of targets. Past experience indicates that the display of initiative by ground troops in these matters always has its reward, especially when there is any danger of confusion between our troops and the target.

6. AIR LIAISON OFFICERS.

The provision of A.L.O.s with the P38 groups whilst employed tactically would have assisted considerably and every effort should be made to provide them on similar occasions in the future.

7. AIR RECONNAISSANCE.

The following are points in brief from a report by A.L.O. 40 sqn S.A.A.F.

(a) Tac/R was controlled throughout by EIGHTH ARMY; it was found that this was best achieved by detaching an A.L.O. from the sqn to Main H.Q. EIGHTH ARMY where he was responsible for allotting Tac/R tasks under the direction of G (Ops).

I. ENEMY SITUATION

The enemy line is for the moment stabilized and a continuous front runs right across the peninsula. On the West 14 Pz Corps has under command 15 P.G., Hermann Goering and 3 P.G. Divs in that order inland from the coast, all disposed behind the line of the VOLTURNO. 15 P.G. Div extends about as far inland as GRAZZANISE, H.G. Div to a few miles short of CAIAZZO and 3 P.G. Div's left boundary, which is also the Corps Boundary, runs roughly in the area of ATOROSI. 76 Corps continues the line with 26 Pz, 29 P.G., 1 Para and 16 Pz Divs, again in that order from South to North. Boundaries here are more difficult to ascertain but from PW identifications it seems likely that 26 Pz Div's Northern boundary is the ISERNIA - VINCHIATURA road, 29 P.G. extends to the area of CAMPALESA and the boundary between 1 Para and 16 Pz Divs is the 60 Northing; all the above are approximations.

It will be seen that all the divisions of 10 Army are now in the line except for 2 Para Div which has the responsibility of guarding ROME. This thickening up with two new divisions, 3 and 15, may reflect the weakness of the divisions already engaged and indeed these divs have been continuously engaged for a long time and have been seriously reduced in strength. But taken in conjunction with the violence of the counter-attack by 16 Pz Div at TERMOLI we must consider the possibility that the Germans have decided to put a halt, of what intended duration we cannot say, to their continuous withdrawals. We are approaching the narrowest part of the peninsula and the MINTURNO - VASTO line which the Germans reconnoitred before the Italian Armistice. Some 10 kms behind the present enemy line in the North runs the river TRIGNO, backed by a high ridge of mountains. Italian military authorities describe it as the strongest line in ITALY. From a study of the map the next line back, the line of the river SANGRO, looks even stronger, the mountains are still higher and the gorge more pronounced. It may be indeed that the TRIGNO is rather too near the present front line and it is doubtful whether the Germans have yet been able to start work on the defences which are necessary even with the strongest natural line. On the other hand there are reports of digging, with forced Italian labour, at CASTEL DI SANGRO at the headwaters of the river of the same name, and if that be the final line the TRIGNO may be used only to give time for the digging to be carried further. It is not clear how this line is to be linked with

/the West .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the West Coast line based on MINTURNO. The GARIGLIANO gives an obvious sheet anchor for the coastal portion, after that it is a question of blocking at some convenient points the MIGNANO defile and the upper waters of the VOLTURNO; the line in this sector is not so strong as on the enemy's left but it includes plenty of hilly, not to say mountainous, country and can be made to link up well with the SANGRO line. It must be remembered that the troops of 14 Pz Corps who will hold this part of the front include two fresh divs and the Hermann Goering Div which has a good reputation and a heavy scale of armament. Finally, there remain the coastal flanks, both the Adriatic and the Tyrrhonian. As far as we can see at present there are no forces available in 10th Army to guard the coasts, but certainly they must be guarded. If the Germans are to stand in Central ITALY KESSELRING must find some troops, from ROMMEL's Army or elsewhere, to protect himself from a sea-borne landing.

We have sketched out a possible line for the enemy to hold if they have decided to hold a line in Central ITALY; it remains to ask have they so decided ? and if so why ?. To neither question can a definite answer be given. To the former one can reply that there has been in the last few days a definite feeling from forward reports that the enemy's attitude was stiffening and the orders to 16 Pz Div - a tired and depleted div, be it noted which was being withdrawn from the line - to recapture TERMOLI at all costs show that the enemy is beginning to realise he can go too far in his withdrawals. If the decision to stand has been taken, one fact shows definitely that it represents a sudden change of plan; the evacuation of CORSICA. It can scarcely be believed that if the Germans had all along intended to stand in Central ITALY they would of their own free will have surrendered to us an outflanking position so far in their rear. The reasons for this decision are easier to find, though they must be sought more in the realm of politics and psychology than in military science proper. Continuous withdrawals which have now gone on without a break for eleven months from ALAMEIN via TUNIS to NAPLES, are bad for the morale of the troops and the home country and for the prestige of German army. A more serious blow to prestige would be the loss of ROME: the name of ROME still counts for something in the world, apart from its more particular associations for the Catholic world. Moreover if the Germans can continue to control the greater part of ITALY, including the capital, there will be some chance of the "National Fascist Republican Government", at present rather a puny child, gaining some semblance of life and if it did it would take a great deal of the administrative burden off German shoulders. If the Germans retired to North ITALY the revivified Duce would hardly be worth the trouble of taking with them. Finally there are some more purely military reasons why the Germans should stand; first to deny us the use of the ROME area airfields and secondly to give more time to prepare a line in North ITALY. It seems from all accounts that the Germans have had even more trouble than they expected both from the "Communists" of the Northern industrial towns and more particularly from the Slovenes in the North East. They may even have been so impressed by these movements, especially the latter, as to feel some apprehensions for their Northern line; another rising on the scale of the present one at a time when Allied troops were close at hand and available to give more immediate support might be too reminiscent of the Gloucesters at ABOUKIR.

We must wait and see how the battle goes on the lower VOLTURNO and the Adriatic Coast in the next few days. All the evidence we have so far indicates hearty digging by the enemy in rear of his present positions and there is no sign as yet of a continuous prepared line. If the enemy continues to stiffen his resistance and if he brings up fresh troops to guard his sea flanks we shall know that a stand is intended.

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLY AND COMMUNICATIONS

(a) Capacity of Main Routes into ITALY.

Information from official Italian sources shows that prior to the Armistice the Brenner route was operating up to two-thirds of normal peacetime capacity, while the lines from the East and West dropped to a lower scale of activity. This would seem more indicative of the importance of the Brenner route, than of any inability to operate the other lines. As was stated in the previous Summary the Brenner route alone is capable of a daily tonnage more than adequate for the supply and maintenance of the present German forces in Italy. This is in fact an understatement, as even allowing for some non-military traffic and working unimpeded at its pre-Armistice capacity the Brenner line alone could cope with a daily tonnage sufficient to supply and maintain a force at least twice as large as the present German forces in Italy. Furthermore the daily capacity of the Brenner represents about 50% of the total daily intake capacity of the railways leading into Northern Italy. It would appear therefore that the Germans are in fact in a strong position as regards the supply and maintenance of their forces in Italy. Nevertheless as was pointed out in the previous summary, the Brenner route is extremely vulnerable; in the first heavy Allied air attack on BOLZANO the main line railway bridge over the ISARCO River was damaged and it is now known that as a result the line was closed for 40 hours and restricted working was necessary for some 14 days. This bridge was again hit in a raid on 4 October. The Germans must therefore reckon with repeated interruptions on this line due to bombing, despite some protection afforded by the Alpine winter weather. It seems reasonable to assume therefore that the Germans will be forced to rely more than hitherto on the less direct North Eastern route from AUSTRIA for the supply and maintenance of troops in Italy.

Neither this route nor that from France is any more secure. The main line to AUSTRIA through LJUBLJANA and TRIESTE is being constantly interrupted by guerrilla action; while in the west the coastal line is reported to have been blocked by Italian action at FREJUS in S.E. FRANCE. Here one end of a tunnel having been blocked the other end was demolished after a troop train had entered the tunnel. The Mount Cenis route into SWITZERLAND is still reported to be closed as a result of guerrilla action. These instances are symptomatic of the difficulties which the Germans are up against in maintaining their L of C into Italy. The closing of the Swiss routes, while not affecting the flow of military supplies would throw onto the other lines the burden of transporting industrial supplies, such as coal which the Germans will have to continue to supply, even on a reduced scale, and for the transport of which they will, as hitherto, rely on the routes via SWITZERLAND. The general conclusion must be that the total capacity of the routes leading into Italy is such that, despite all the difficulties set out above the Germans should be able to supply and maintain as many or more divisions as can possibly be expected or needed. Sustained attacks on the Brenner however could reduce the daily intake capacity into Italy by as much as 50%. Quite apart from the nuisance and dislocation caused by blocking the main route South from Germany the more threat of such consequences will almost certainly compel the Germans to despatch further forces into N.E. Italy and Slovenia to ensure the security of the North Eastern routes, if they have not already done so. The western route from France would presumably only be used for supply and maintenance in the last resort as it involves a wide detour around SWITZERLAND.

/(b) Present .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(b) Present State of Italian Railways and German L of C.

Recent reconnaissance of the principal Northern railway junctions has revealed considerable activity. On 5 October some 70 train lengths were observed in the Milan Marshalling yards; on the other hand the Marshalling yards at PISA and BOLOGNA, the main transfer junctions for the Northern and Central railway systems although not extensively damaged by recent raids still do not reveal great activity. Further South reconnaissance of CIVITAVECCHIA, FLORENCE, ORTE, TERNI and SULMONA has shown a fair state of activity. Activity in the ROME yards has fallen off and the main line South is still probably blocked at FORMIA.

In general it appears that the railways have recovered from the immediate post armistice chaos, aided by Italian indifference, the arrival of German railway operating personnel, and a show of force. Present evidence suggests that the reports of civil resistance to the Germans and of chaotic conditions in the Northern towns were at least highly coloured if not grossly exaggerated. The reports of guerrilla successes against the railways in the North East and Slovenia are doubtless likewise exaggerated but nevertheless the state of affairs here is undoubtedly far more serious, and we may expect the Germans to react sharply to this threat.

Italian official information confirms the view that the main German depots are now all in North Italy; which would account for the limited rail activity from the North to Central and Southern Italy. These lines presumably only have to handle the current supply and maintenance of formations in Central and Southern Italy.

There can be little doubt that the German supply situation has eased considerably. Only limited use has been made as yet of the coastal shipping route from GENOA and LEGHORN to CIVITAVECCHIA; and coastal shipping activity has hitherto provided a reliable indicator to the state of the road and rail L of C. It must be admitted that the Germans through prompt action, and bluff aided by Italian indifference have avoided a crisis which might well have jeopardised their whole position in Italy. Failure to secure the L of C through Central Italy would certainly have hastened a withdrawal Northwards, but whatever the German intentions in this respect may be they should not now be governed by uncertainty as to supply and maintenance.

(c) Shipping

After the frantic M/V and L.C. activity in connection with the evacuation of CORSICA, a lull has now fallen on enemy shipping movements. As reported elsewhere activity along the West coast has been desultory and there is little evidence of any organised supply traffic to or from West Coast ports. Movement in Adriatic waters has been equally slight. It is very likely the Germans are taking advantage of this lull to refit and repair their small craft which must by now be feeling the effects of 4 months almost uninterrupted activity in West Italian coastal waters. In this connection it may be noted that 30 L.C. are at the present time being fitted out at TOULON. Larger shipping is also sheltering in ports well away from the battle areas. GENOA, VENICE and TRIESTE between them contain 80% of the total shipping in Italian waters.

Information regarding the port of NAPLES throws an interesting sidelight on the difficulties involved in the effective destruction of a large port. The pre-Armistice capacity of NAPLES was in the nature of 8,000 tons per day. By Oct 1, when we entered the town, P.R. had revealed that the harbour had been rendered entirely unserviceable owing to quay side demolitions and the scuttling of vessels at their berths. Yet by 12 Oct it is anticipated that the Allies will be able to pass some 3,500 tons per day through the port. This means that despite the worst the Germans could do to the port, it is working again at 48% capacity after only 12 days.

3. ENEMY EQUIPMENT

(a) German Tk and A/Tk Equipment

Some details of the newest German Tk and A/Tk equipment appear in the notebook of an officer of 64 PGR who attended a course in May this year.

(i) The following new weapons are identified.

7.5 cm Kw.K L. 43 (1s) - firing a 6.8 Kg projectile. M/V 385 (? metres per sec).

8.8 cm Pak 43/41

7.62 cm Pak 43

5 cm Kw.K L. 42 - firing a 2.06 kg projectile. M/V 685 (? metres per sec).

8.8 cm Pak on SP chassis

HORNET

The two latter are forms of SP a/tk guns evidently intended to be put into service alongside the TIGER and PANTHER tks.

(ii) Particulars of other recently identified a/tk weapons are:

7.5 cm Kw.K 42

	100 m	500 m	1000 m
Penetration at normal (type of amn not stated)	150mm	124mm	100mm

7.5 cm Pak 41 is confirmed as a tapered-bore gun, tapering from 7.5cm to 5.5cm, with a M/V of 1260 metres per sec.

(iii) Hollow charge amn is said to have no effect on spaced armour. It is not to be used if AP amn is available, and is only "Ersatzmunition".

(iv) The following quotation confirms that the PANTHER was produced to beat the T.34, from which it is developed. The basic armour appears to be 80 mm.

"The T.34 is superior to the Mk IV owing to the inclination of the armour plates (30° as against the Mk IVs 80°). Our PANTHER with 35° armour inclination and 80 mm armour is superior to the T.34."

(b) Mark IV Tank

Two Mark IV L tanks, captured 10 September, had a thin steel plate skirting of about 5 mm bolted to the sides and covering the top of the tracks. The skirting extended to the base of the turret to allow all round traverse.

/(c) 7.5 cm .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(c) 7.5 cm KWK 40 Mounted on a Mark III Chassis

A 7.5cm SP gun has been captured. It consists of a long barrelled 7.5cm gun fitted with a muzzle brake and mounted on a Mark III chassis. The turret is fixed but completely covered in, with about 30 - 40 mm top armour. The gun is set slightly to the left, while an MG 34 is mounted to the right. The turret is low, so that it is possible that the great length of the gun relative to the chassis may cause it to be mistaken for a Mark VI. But the chassis is that of a normal Mark III.

On one 7.5cm SP gun there was attached an armoured skirting, which stretched from the top of the bogies to just below the top of the turret, leaving only the commander's turret visible. The skirting consisted of a number of plates, 3 ft by 4 ft, loosely bolted together by a slot and hook arrangement. The plates had been shot away on the example found, revealing two spare lengths of track, which were being carried on each side against the body of the hull between the bogies and return rollers.

4. APPENDICES

At Appendix "A" is "Economic Effects of the Collapse of Italy".

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ECONOMIC EFFECTS OF THE COLLAPSE OF ITALY

Economically, the break up of the Axis is unlikely to have very serious effects upon Germany. Indeed the Germans may well find that the defection of their ally has appreciably eased their supply and transport difficulties, since Italy, far from being a self supporting partner, represented a continuous drain upon German economic resources. A profit and loss account of the result of the break between Italy and Germany may help in an assessment of the new situation.

A. Savings accruing to Germany as a result of Italy's collapse.

(a) Coal: Up to now Germany has been providing Italy with about 12,000,000 tons of coal annually or 5% of her total coal production. While she cannot entirely stop coal exports to Italy, she will now be able to reduce them drastically, confining supplies to what is necessary for essential military purposes and for the maintenance of any Italian industries of importance. From the transport point of view the gain is considerable. It is estimated that some of the 300 German locomotives and 15,000 trucks which have been employed on coal traffic to Italy will now be released for other purposes.

(b) Oil: 1 - 1½ million tons of oil from ROUMANIA and HUNGARY have been supplied to Italy annually. Here again Germany will effect a substantial gain by a sharp reduction of these supplies.

(c) Industrial Goods: Approximately ½ million tons of iron and steel manufacturing machine tools and machinery have had to be sent to Italy every year.

(d) Copper, Nickel and Tin: Italy was completely dependent on Germany for supplies of these. Although the quantities involved were small — 10 - 15,000 tons of copper, 3 - 4,000 tons of nickel, and between 500 and 1000 tons of tin, Germany could ill afford to spare any of them.

(e) Rubber: Owing to the slow development of the Italian synthetic rubber industry, the Germans have had to provide Italy with about 10,000 tons of Buna and a small quantity of natural rubber per annum. Because of the non-arrival of blockade runners from the Far East, Germany's own rubber position has become latterly very precarious, particularly in view of the recent air raid damage to Buna plants. In view of this the saving of 10,000 tons of rubber per annum must be accounted no small gain.

(f) Wheat: As the Italians have come nowhere near to achieving self sufficiency in foodstuffs, the Germans have had to supply 300 - 350,000 tons of wheat and grain in the past year alone to Italy. We may expect Germany to show very little concern in the future over the feeding of Italians, so that this economy represent a complete gain to the Reich.

(g) To maintain the Italian explosive industry some 10,000 tons of TNT have been despatched to Italy each year from Germany

(h) Finally there is the incalculable gain resulting from the release of transport, labour and fuel hitherto used for transport of these and other less essential materials, such as wood pulp from Scandinavia to Italy. It is estimated that the equivalent of at least 28,000 trains a year have been engaged solely in the supply of goods to Italy. What this means to the over burdened German railway system is difficult to overestimate.

/B. Losses .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

B. Losses Suffered by Germany as a Result of the Italian Collapse

(a) 250,000 tons of sulphur supplied annually to Italy from Sicilian production. In addition, Italy has provided Germany with about 200,000 tons of Pyrites a year. Together these exports represent about 40% of Germany's total sulphur resources. This loss may affect German rayon and staple fibre production, as the greater part of the sulphur imported is used in these industries.

(b) 1500 tons of Italian silk imported annually. Italy is by far the greatest silk producing country in Europe and Germany took 70% of her annual crop. The loss of this means that German silk imports will be down to ⅓ of what they were prior to the armistice. This must be accounted a serious loss.

(c) 4000 tons of Boracic acid per annum. Italy is the only source of natural boracic acid in Europe, and about 80% of her total produce has been taken by Germany annually. This is used in the manufacture of optical and heat resisting glass.

(d) 1,125 tons of mercury per annum. This represents about 45% of Germany's total mercury imports. The remainder comes from Spain. While Spain can provide all Germany's needs, both German shortage of foreign currency and Allied political pressure on Spain will furnish hindrances to the adequate supply of this product. An uninterrupted supply of mercury is of vital importance to the chemical-electrical industries and thus to the entire German war effort.

(e) Some 40,000 tons of zinc and 10 - 15,000 tons of bauxite per annum. These represent about 7% and 10% of total German supplies respectively appreciable quantities in view of the unsatisfactory position in regard to these minerals.

(f) 500,000 tons of fruit annually. This is hardly an economic loss of importance, although it has been reported that the ensuing reduction in lemonade supplies has greatly increased beer consumption throughout the Reich.

The above represents a purely economic profit and loss assessment. The conclusion which can be drawn is that although Germany has indeed suffered some losses of considerable importance, these are not such as to have an immediate or crippling effect. On the other hand the savings resulting from Italy's collapse are very appreciable, and in German eyes will doubtless outweigh the economic effects of the losses.

From the manpower point of view, it is estimated that prior to the armistice there were about 275,000 Italian workers in Germany of which about 75,000 were agricultural workers, and most of the remainder miners and other skilled workers. Some repatriation was going on prior to the armistice, but the process has now been reversed and a considerable number of the Italian armed forces have been sent to labour in Germany. It seems likely that the number of Italians now working in the Reich will be in excess of 300,000.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

NAPLES harbour has been inactive since 8 Sep and the Germans have now started to block the harbour by sinking vessels in the berths. On 20 Sep one cruiser, two liners, two torpedo boats, two tankers, 18 merchant vessels and several small craft had been scuttled and there appeared to be only eight berths available in the port. Movement of the remaining vessels in NAPLES BAY suggests that it is intended to employ some of these for the obstruction of these berths. Two dry docks have been damaged and the floating dock probably damaged as a result of this work of destruction. Explosions and palls of smoke rising from the city have been reported and there seems little doubt that the Germans are carrying out a scorched earth policy.

L. C., Supply barges and German munition transports, vessels of some 1000 tons and classed as naval vessels, have been engaged in coastal traffic between GENOA - SPEZIA - LEGHORN - CIVITAVECCHIA. It is suggested, therefore, that once again the Germans intend to fall back on coastal shipping to maintain their L of C. Landing craft will creep down the coast to unload at small harbours. Larger vessels will, however, be unable to come further South than CIVITAVECCHIA for want of a port. Once again the delay of double trans-shipment for a short sea carry (LEGHORN-CIVITAVECCHIA 150 Miles) must be accepted in order to maintain a precarious L of C.

Supply Bases and Stocks

The main German supply base in ITALY both for the N. AFRICAN and SICILIAN campaigns was NAPLES. The base for SARDINIA and CORSICA was at LEGHORN while in recent months a North Italian base has been started at VERONA. The extent of German stocks at NAPLES is not known, but once the Germans are forced North of NAPLES it is thought that they will be mainly dependent on supplies direct from N. ITALY. The LEGHORN base has, it is presumed, only been catering for the 1½ divisions in SARDINIA and CORSICA, and is therefore likely to be insufficiently stocked to maintain some 8 divisions, most of which will be engaged in active operations.

The North Italian base was apparently started as soon as the decision was taken to send further formations to ITALY, and in theory it should by now hold adequate stocks to maintain all German forces in ITALY at their present scale of activity. There is however ample evidence that the normal railway working via the BRENNER was by no means maintained during August and there is every reason to suppose the rate of build up may be well behind schedule. Nothing is known as yet as to what stocks the Germans have seized from the Italian Army. Some have certainly been sabotaged by the Italians; for example a large amount of oil was seen covering the harbour at both LEGHORN and NAPLES. Previous to the present destruction at NAPLES by the Germans large dockside fires were observed; suggesting that the harbour oil storage tanks had been fired.

Conclusions

Until the Germans succeed in organising rail, road and coastal traffic from the North on a firm basis the whole German L of C in ITALY will be extremely precarious, but it must be assumed that the Germans will succeed in at least organising a flow of supplies sufficient for the basic needs of German armed forces. Nevertheless the German position in ITALY is not sufficiently strong to permit complete disregard for civil requirements. Like it or not the Germans will find themselves faced with the problem of feeding a starving population. Even while the fighting continues in the present areas current supplies will have to be brought by rail and sea from N. ITALY. In N. AFRICA and SICILY German formations were continually operating on a hand to mouth existence although shortages were not such as to impede front line operations. This situation is almost certain to continue in South and Central ITALY but in view of the transport difficulties and the larger forces to be supplied, the effect on the fighting formations may be more noticeable.

At Appendix "C" is a map of the Railway System in Northern ITALY.

/Situation .....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

4. SITUATION IN TE BALKANS AS A RESULT OF THE ITALIAN SURRENDER.

GREECE & AEGEAN

Events in GREECE since the armistice have shown that German arrangements to cope with the situation by taking over important points and disarming the Italians have on the whole made progress. VECCHIARELLI in ATHENS undoubtedly helped by playing his troops into German hands with a series of orders giving the Germans more and more control; and most Italians on the mainland and nearby islands can now be considered as virtual prisoners. Some of those who have volunteered to fight for the Germans may be allowed to keep their arms to do so; the majority will probably be used as labour gangs where their natural talents will be better employed than as soldiers. It is probable that the Germans will be anxious to reduce the number of such useless mouths at an early date and at least partial evacuation of disarmed Italians from the BALKANS to the North is likely.

In the AEGEAN, CASTELROSSO is in our hands, and we are in touch with the garrisons of COS and LEROS. RHODES, SCARPANTO, CRETE, and a number of lesser islands including KYTHNOS, KEOS, AMORGOS, NAXOS, SERIPHOS, KYTHERA and ANTI KYTHERA have passed into German control; whilst reports from SAMOS suggest that the Italian garrison of 6,000 rejoiced at the armistice, and that the situation there is capable of exploitation. There have been some ridiculous incidents including the presentation of an ultimatum by the senior of the nine German O.Rs on ANTI KYTHERA to the officer commanding its Italian garrison of 100 followed by the latter's immediate surrender.

The German take over in CRETE is reported to have been accomplished without undue trouble. Some of the Italians are believed already to have been evacuated to GREECE and the Italian commander's only object will probably be to get himself out of the island in the opposite direction, namely into British hands. At SCARPANTO also the newly arrived German battalion had no difficulty in asserting itself. In fact the only Italo-German clash in the AEGEAN appears to have been on RHODES.

On morning of 9 September the Germans asked for control of the port of RHODES and were refused it. They agreed to withdraw to the centre of the island but attacked the Italians in the afternoon. The latter, leaving the majority of their scattered defence units in situ, withdrew into a ring some 3 miles from RHODES town. The town was shelled and dive bombed; each hit, according to the Governor and C in C, Admiral CAMPIONI, chipping a piece off his heart. By noon on 11 September he had capitulated.

On paper that part of 50 REGINA Division which constituted the garrison of RHODES was a formidable affair. It was close on 35,000 strong, and, on our latest evidence, had no less than 450 field, anti-tank, coastal and heavy anti-aircraft guns, sited all over the island. Neither in spirit nor in concentrated strength however, did it prove equal to General KLEEMAN's Stuka-division, which is now known to be only 6,000 strong.

The most pressing German needs in the AEGEAN would appear to be reinforcements for RHODES including coastal and anti-aircraft gunners to man the guns left by the Italians; the evacuation of Italians, as soon as shipping permits, from RHODES and other islands likely to be operational. Finally the Germans must find close on a division to garrison those islands such as SYROS, SAMOS and LEROS, not yet accounted for, as the Italians will probably hand them over to the first comers.

ALBANIA and YUGOSLAVIA

The picture is equally confused. Elements of 4 Italian Corps

/ in Northern ....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in Northern ALBANIA and of 14 Italian Corps in MONTENEGRO had not yet surrendered by 11 and 14 September respectively. But TIRANA had fallen by the 10th and the Germans are reported to have reached the coast at DURAZZO by 11 September.

100 and 118 German Jaeger Divs, which have been held in reserve in Southern YUGOSLAVIA for some weeks, have now been joined by 297 German Division which was identified the area MITRONICA (SERBIA) in early September. Strong elements of 118 are believed to have moved to the MONTENEGRIN - ALBANIAN border and either 100 or 297 is now believed to be in ALBANIA.

Thus confronted by three German Divisions, the Italians' resistance will doubtless be short lived.

Along the coast further North the Germans also have the situation in hand. SS PRINZ EUGEN Division is reported to have occupied the area DUBROVNIK - IMOTSKI. Troops believed to be of 114 Jaeger and 373 Germano-Croat Divisions have occupied SPLIT, SIBENIK, KNIN and ZARA, and there are reports of German SS in GOSPIC and LUBLJANA.

Such Italian and patriot resistance as the Germans have met in their drive coastwards has been uncoordinated. Their first object was doubtless the occupation of ports, airfields and other key points. With this achieved they must now consider the disposal of the Italians. Some may be retained for dilution with the garrison at points of secondary importance in the Partisan area or for use on ancillary duties. The alternative for the Italians would appear to be German prison camps. In neither case is the prospect alluring.

GENERAL

Von WEICHS who was first reported in SE EUROPE in mid August, is now confirmed as German C in C SUEDOST. He has a force including *sixteen German divisions and seven regiments, and for the present he can count on the BULGARIANS and to a lesser extent on some CROATS for local defence. In the last few days he has shown at RHODES that there is no change in Germany's strategy in the Eastern Mediterranean which remains based on the strong "outer ring". His resources though not excessive may be sufficient for his present defensive tasks.

* This total excludes two local SS Divisions which however are not apparently considered as part of the German Army.

(Adapted from M.E. Weekly Review)

5. GERMAN FORCES IN RUSSIA

There have been some changes in German command in RUSSIA, and a new 8th Army has been identified in South RUSSIA.

Following is a list of the German Army Groups, Armies, and Commanders in RUSSIA.

GENERAL

Arrangements for Troop Movements in FRANCE

An interesting sidelight on the German arrangements for the movement of troops from the West is given in a report from FRANCE that in the West region alone the Germans usually hold 4,000 wagons formed into some 80 trains which stand without engines in readiness of normal troop movements or a military emergency.

Protection for Railway Engines

As a consequence of the sustained RAF attacks on trains in FRANCE and the Low Countries not only do trains have an A.A. Wagon but it is becoming a regular practice to armour the cabs of locomotives. Experiments are being made in the complete covering of engine and tender, but this is considered unpromising owing to the weight; some 4,000 French locomotives are being fitted with cab armour.

Damage at PLOESTI

Reconnaissance photographs of the Roumanian oil refineries show the following results of the attacks on 1 August.

> A refinery with annual capacity of 485,000 tons was so severely damaged that almost complete re-building would be necessary before it could resume operation, while two of the largest refineries was damaged sufficiently to put them out of action for a short period. At least 100,000 tons of oil is estimated to have been lost by destruction of storage tanks. It is also reported that the second largest refinery with an annual capacity of 1,500,000 tons was put completely out of action but so far it has not been possible to obtain photographic cover of this plant. General dislocation and damage to the complicated machinery of the various plants may be worse than is apparent from photographs.

THIS PAGE IS DECLASSIFIED IAW EO 13526

6. ENEMY EQUIPMENT

7.62 cm F.K. 39 (Field Gun)

Information has been received of a new type of 7.62 cm. gun in use by the Germans. According to reports so far received, the nomenclature of the gun is the 7.62 cm. F.K. 39 (Field Gun).

The gun is fitted with a double baffle muzzle brake similar to that used on the 7.5 cm. Pak 40. The recuperator is fitted above the tube and the buffer below.

The gun is mounted on two pneumatic rubber tyred wheels and is provided with a shield. From photographs examined, it appears that the wheels are removed when in action and the gun rests on two box split trails.

The breech is of the vertical sliding block type.

The following particulars have been received:-

Calibre	7.62 cm.
Rifling	32 Grooves RH
Length of Rifling	215 cm.
Length of Barrel	299 cm.
Length of Barrel including breech ring	320 cm.
Length including muzzle brake	348 cm.

The sight drum is calibrated for the use of A.P. 40 and 39 rot ammunition. Some cartridge cases found near the equipment were stamped 7.5 cm. Pak 40 with 7.62 cm stencilled on the side. It appears therefore that the gun is used as an anti-tank gun rather than a field piece.

Penetration figures for the 8.8 cm A.P. 40 Round

The following penetration figures have been estimated by the ORDNANCE BOARD for the 8.8 cm A.P. 40 round.

Firing against HOMOGENEOUS ARMOUR

RANGE YDS	NORMAL MM	30% MM
Point Blank	210	154
500	182	126
1000	157	103
1500	135	84.8
2000	115	69.7

THIS PAGE IS DECLASSIFIED IAW EO 13526

MINE DETECTOR, MODEL TEMPELHOF 41

A document describing a new type of mine detector has been found. So far no specimens have been obtained.

The following is a translation of the description of the mine detector given by the captured document.

Model TEMPELHOF 41

The mine detector is portable and works on H.F. principle.

A. Parts

Spindle shaped transmitter, fixed frequency with corrector for temperature. D.L. 11 Valve and detector with connecting cable ending in a plug with waterproofed lead.

Handle in four jointed sections each 45 cm long. Receiver with 2 D.L. 11 Valves, 1 D.F. 11 valve, fixed frequency, Voltmeter for testing batteries, anode and filament batteries, attachable loudspeaker and connecting cable ending in a joint with a tone control. The whole may be contained in an infantry pack.

B. Instructions for Use

The apparatus is switched on by plugging the cable from the receiver into the detector coil plug. The tone control will be set so that the loudspeaker produces the tone of greatest volume by turning the control to the right. When metal is approached the note will rise in pitch. The effective detector surface is outlined in yellow.

C. Battery Testing

When the apparatus is working, the voltmeter shows the strength of the filament battery. The reading should never be below 1 volt. By pushing a button the meter registers the anode strength. On a 90 volt connecting cable the reading should never be allowed to drop below 70 volts. The normal life of both batteries used intermittently is approximately 100 hours.

D. Valve Changing

The valve in the detector brush can be removed by loosening the upper cover and unscrewing the base-cap. The receiver valves may be removed by opening the cover of the receiving set.

E. Correction of Frequency

The corrector on the detector brush is brought into play when owing to variations of temperature it is impossible to set the loudest tone by means of the tone control. In this case the tone control is set at its mean and the corrector is adjusted by means of special key supplied, until the desired tone is obtained.

F. At Appendix "A" is diagram of the mine detector, Model TEMPELHOF 41.

10.5 cm l.F.H. 18 Gun-How. on Mark II Chassis (Sd.Kfz. 124)

A specimen of this equipment has been identified at D.275612. An illustration is attached at Appendix "B".

The gun was a normal 10.5 cm. l.F.H. 18 gun-how. with a muzzle brake fitted on by means of a clamp. It fired the following ammunition:-

H.E. F.H. Gr.
H.E. Semi-Stool F.H. Gr. Stg.
Hollow Charge 10 cm. Gr. 39 rot HL.

The armour protecting the gun was 10 mm thickness.

The chassis appeared to be identical with the Mark II, with the exception that there were only three (not four) return rollers.

The height of the equipment was approximately 8 ft. 1 in.

On the left of the gun shield was stencilled ST GEFR ABNDT; the figure 10860 was painted beneath.

On the left side armour were painted the following identifying details:-

Sd Kfz 124 (special Vehicle Type 124).

Gesamtgew 11.5t(Total weight - 11½ tons).

Ve. Kl. Ib. (5th Class - Q Branch).

Comment

This equipment may solve the mystery of the alleged S.P. 88's several times reported on the northern coastal sector but never confirmed.

7. APPENDICES

At Appendix "A" is diagram of the mine detector, Model TEMPELHOF 41.

At Appendix "B" is an illustration of the 10.5 cm l.F.H. 18 Gun-How on Mark II Chassis (Sd Kfz 124).

At Appendix "C" is a map of the Railway System in Northern ITALY.

At Appendix "D" is a map showing the distribution of German divisions in EUROPE.

15 ARMY GROUP INTELLIGENCE SUMMARY No 21
of 21 OCT 43

(a) Sidelined information will not be re-produced in any Intelligence Summary of formations under this HQ except by special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

I. ENEMY SITUATION

The forcing of the VOLTURNO line introduced no radical change in the situation on the front. The enemy defended the river line with great vigour but was always careful to withdraw in time any force which seemed in danger of encirclement; thus HERMAN GOERING Division, which had been able to maintain its strong positions opposite CAPUA without great difficulty, fell back finally to conform with 15 and 3 P.G. Divs who had been less successful. As a result the enemy still presents a connected front running in a fairly straight line from sea to sea. In the wild country East of the Appennines the enemy withdrawal has again been slow; 26 Pz Div in particular is fighting stubbornly; it has the most important role at the moment since the vital ISERNIA road junction is in its area. 29 P.G. Div is not being quite so determined; its morale is lowest and it has suffered very heavy casualties.

It is clear that the enemy's attitude is stiffening all along the line and if we can credit an Italian source stated to be very reliable reinforcements are on the way. This source states that after a heated argument between ROMMEL and KESSELRING (whose long and unsuccessful collaboration in AFRICA certainly generated enough heat to last till now) two divisions were released from the North to support 10th Army. This gives 10th Army 9 Divisions in the line and one in reserve (2 Para Div, in the general area of ROME) which is a formidable force considering that the difficult nature of the country will allow of fairly restricted divisional fronts. Certainly the despatch of reinforcements makes it almost certain that a decision to stand South of ROME has been taken though the actual numbers facing us may not rise in proportion since it may be expected that one or other of the present rather battered formations will pass for a time into reserve. From reports of troops arriving in the PESCARA - CHIETI area it appears that one division is intended to strengthen the Adriatic flank; it would be reasonable to allot the other to 14 Corps but there is as yet no news of any reinforcements there.

There is a strong possibility that ROMMEL's two divisions will be shortly replaced. Two divisions, 371 and 60 FELDHERRNHALLE, are reported in the French Riviera in the area between NICE and MODANE and it seems more likely that they are in transit than that they are intended to strengthen the already adequate garrison of the sector. They may well have had to wait for the disrupted communications between FRANCE and ITALY to be repaired. On the other hand a deserter from 21 P.G.R. of 24 Pz Div, stated that his Regt had entrained at FLORENCE about Sep and it was generally believed it was destined for RUSSIA; this is supported by an Italian report of two divisions being sent from North Italy to

RUSSIA .....

THIS PAGE IS UNCLASSIFIED

0285

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

RUSSIA though it is unlikely that more than one division can be spared if a Panzer Division is to go.

II. ENEMY SUPPLIES AND COMMUNICATIONS

Supply Routes

Returning Italian diplomatists have reported that the lines BOLOGNA - FLORENCE, and the line FLORENCE - ROME via AREZZO are entirely given over to German military traffic and operated by German Officials. This line which is the main line through central ITALY to the South is electrified and is therefore presumably the main German route for the supply and maintenance of their troops in the South. Supplies for the West coast will be routed through ROME whilst those for formations in the central sector are presumably routed via TERNI and SULMONA to a railhead probably in the area ISERNIA - VENAFRO. It has also been reliably reported that the East Coastline (at least as far as RIMINI) is also given over to German military traffic and controlled by German Officials. This line provides direct rail communications with troops on the East coast and also an alternative route to the centre via PESCARA and SULMONA. The line from RIMINI to PESCARA is certainly in use for troop trains as during the last week the airforce has daily reported the successful straffing of trains along this line resulting in the usual scenes of panic and chaos. South of PESCARA transport appears to be mostly by MT. The capacity of the lines, at least as far as PESCARA and SULMONA, is more than adequate for the supply and maintenance of formations in the line. South of SULMONA however there is only a single track and the route is extremely tortuous; consequently much of the movement will be by road.

Present state of the Railways.

Reconnaissance of 14th showed that the ISARCO river bridge at BOLZANO had again been repaired and that the line was once more open. In ISTRIA and SLOVENIA the Germans are reported to have reacted strongly to the threat to the Security of the N. Eastern routes into ITALY and to have taken energetic military measures to bring the area under control, nevertheless latest reports indicate that the main line TRIESTE - LUBLANJA is still interrupted.

As a result of extremely bad flying weather reconnaissance of the Northern railway junctions has not been possible on a large scale. However such meagre reports as are available show that the considerable activity reported last week has been maintained. As was stated in the previous paragraph the East Coast route has been very active; and has suffered for it. The most notable increase of activity was observed at ROME on the 14th. The ROME marshalling yards had previously shown only slight activity; but on this date some 65 train lengths were observed, many of which were mixed coaches and goods wagons and were probably troop trains. This view is supported by the fact that this increased activity coincides with reports of arrival of further formations South of ROME.

Shipping

Owing to bad weather little useful reconnaissance has been possible. However on 15th GAETA harbour was seen to have been partly destroyed, and the remainder prepared for demolition. A start has also been made with the blocking of SPEZIA harbour, where two block ships have already been sunk. However low the Germans may rate their chances of holding us in Southern and Central ITALY this seems to be an early admission of ultimate failure.

In the Adriatic .....

THIS PAGE IS UNCLASSIFIED

0286

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In the Adriatic little activity of interest has been observed in the Italian ports. On the Dalmatian coast however the situation is still far from favourable from the German point of view. German control still does not extend beyond the ports, nor does it extend to the islands along the coast; which are mostly in partisan hands. In the last week one German tanker and one Italian M/V were captured and a third ship sunk by British naval forces in this area while a fourth vessel was sunk by fire of coastal guns from one of the islands. With the control of the main railway through YUGOSLAVIA to the Eastern BALKANS being constantly interrupted due to guerilla activity the German L of C in this theatre is far from secure. The present situation is indeed one of a choice of two evils. If vessels hug the coast and sail under shelter of the islands they are liable to be fired upon; and some ships have already been lost as a result of such action; if they put further out to sea they run the risk of British interference, which has already proved effective. Consequently if the German L of C to GREECE and the AEGEAN is to be secured we may expect action against some of the partisan held islands. Further South the islands of CORFU and CEPHALLONIA have already been secured.

III. ENEMY EQUIPMENT

SELF PROPELLED NEBELWERFER (PANZERWERFER)

A PW from 21 Battery 56 Pz Werfer Regt has disclosed the existence of yet another "Secret Weapon".

It appears to be an S.P. version of the 15-cm Nebelwerfer 41.

Following are particulars given by PW:-

The "Weapon" consists of ten barrels arranged in two sets of five. Calibre 15-cm.

The "vehicle" is a half ton light semi-tracked vehicle, fully armoured. The armour is 5-mm thick and serves to protect the crew from "shrapnel".

The weapon is mounted on a turret having a 360° traverse.

A door is provided in the vehicle through which the weapon is "fed", this door must be closed before firing due to tremendous flash.

One M.G. is mounted on the turret, and a second door provided for the crew.

These guns are guided from an O.P. through an observer and fire control officer.

Ammunition

The following types of ammunition are used:-

(a) Fragmentation type - similar to Artillery shell (HE ?) Range of fragmentation - radius 200 - 300 metres.

(b) Gas shell.

(c) Bacteria shell (PW - not much is known about this).

(d) KAELTEGESCHOSS (Liquid air shell). Supposed to freeze the body for about a minute.

(e) Compressed air shell - PW believes this shell is just a fantasy.

An ammunition lorry carries 40 rounds of ammunition.

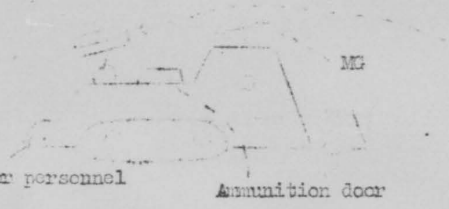
This weapon can .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

This weapon can be used for direct and indirect fire.



Range - direct fire - 50 Metres
Range - indirect fire - 8000 Metres

Rate of fire from a battery of eight PANZERWERFERS is claimed to be 80 rounds in 3 - 4 seconds.

Every precaution is being taken to keep information concerning this weapon from Allied hands.

PW's battery - the only one in Italy was only provided with fragmentation shells (HE).

Design of SP Pz Werfer

LWK (light ½ track)
Speed - 60 km per hour
Max speed - 80 km per hour

Tactical Signs:

THIS PAGE IS UNCLASSIFIED

Comment

The equipment might well exist but it is evident that PW is either not familiar with the equipment or has tried to lead the Interrogator "up the garden path". Should the report about the thickness of armour be correct (5-mm) then it would seem that a half-ton vehicle would be gravely overloaded. A 5-ton or 8-ton half-tracked vehicle would seem more probable. The 15-cm Nebelwerfer 41 is 6 not 5 barreled whereas the 21-cm has 5 barrels, but it would be possible to have two sets of 5 barreled 21-cm Nebelwerfer mounted on a 5 or even 8-ton half-tracked vehicle plus an M.G. mounted on top of the superstructure.

HE, Smoke and Gas shells are known to exist for both the 15 and 21-cm Nebelwerfers. Compressed air, Liquid air and Bacteria shells have so far proved a myth.

APPENDIX "A"
to 15 ARMY GROUP INTELLIGENCE
SUMMARY No 21 dated 21 Oct 43

GERMAN MORALE

Since CSI is largely devoted to taking in other people's washing, we must be particularly chary of sweeping assertions about the German Morale. In this connection there is a tendency to make too much of prisoners' statements. To be a prisoner is not yet to be typical. A man on capture is either angry with himself or with somebody who has blundered or he is despondent. Neither mood gives a fair taste of the morale of the unit he has left.

The German army in ITALY has obviously been told to destroy everything which may be of use to us. The instructions to the Goering Engineers are comprehensive enough: "Destroy: bridges, stations, water, gas and electricity, works, factories, mills. Mine: roads, houses and entrances to villages". Apparently the soldiery goes beyond them to pay off private grudges, to indulge in private loot and, in some instances (horribly well authenticated), in sexual murder. The Command has clearly realised that an army in retreat sets a peculiar problem of morale. The remedy, partial only, is to represent the holding of bounds in that retreat as successes in themselves. A unit is ordered to hold a position until a specified date. It is successful and the soldiers, now knowing no other victory, feels satisfied he has done a good job. If, as was recently asserted, the German soldier in ITALY now 'believes in withdrawal as he once believed in victory', it is because the need for withdrawal and the best way to do it have been explained to him. He does the job properly and the private satisfaction of efficiency is buttressed by the public approval of comprehensive destruction. So long as the German soldier is ordered to avoid heavy engagements and meanwhile to lay waste the land, it may scarcely be expected that his morale will flag. Mercenaries throughout the centuries must have longed for such amiable instructions. Moreover, despite the immense casualties, there are still many German soldiers with five to eight years' service; some even longer. Routine, discipline and a merited tradition of efficiency override personal grievances, lack of air support and distrust of Hitler. Further Nazi doctrine is still artificially inseminated by weekly political instruction. Pep talks may be an annoyance but in default of better information they keep the soldier in line by their sheer monotony.

The German soldier is as sentimentally nostalgic about his wife as he is regularly unfaithful to her. Great trouble was paid always in North Africa to arrange regular leave and to ensure punctual delivery of mail. Stallion leave is apparently still granted from ITALY but letters have been more infrequent, probably due to the damage to homes in Germany and the persistent interruption of the railway services in ITALY which may have caused the mail to be set aside while more important commodities come South. 1 Parachute Division's mail is apparently still in ROME. The close family feeling upset by these interruptions may make a German soldier worried about his relatives, but fear of reprisals on them if he voices defeatist views usually makes him keep the grudge to himself. It may leave him dissatisfied; it has not yet made him inefficient.

Those German soldiers who still believe in victory have two main reasons besides sheer stupidity for their opinion: they have accepted the propaganda about the shortened line - in RUSSIA as in ITALY - and they are still liable to fall for the old "secret weapon" gag. The continued production of excellent weapons and up-to-date equipment gives the German soldier confidence in his arms and adds to the ease with which he may be made to believe in the next secret weapon. These soldiers on the other hand who desert because the game is no longer worth the candle have, in

recent .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

recentcases, walked over because their parents or wife and children have been killed and they are no longer interested in defending a Germany which represents to them not a home but a graveyard.

The average soldier, as difficult to find as the average man in peacetime (because he is the same person) probably falls between these two schools. Fear of the consequence of defeat, sheer disciplined routine, a tradition of efficiency and a confidence in his weapons override the worry about his home and the annoyance of being deserted by the Luftwaffe. In ITALY there is a further reason for getting on with the job without belly-aching. Fighting the "plutodemocratic" armies in ITALY and looting the local population as a sideline is better than the alternative. The biggest fear of the German soldier in ITALY is an order to return to RUSSIA. However unpleasant and ubiquitous our aircraft, however worrying the lack of or bad news from home, this is not the Eastern Front.

The German Army was beaten in the last war in the field. That defeat was made easier by the worsened morale due to the bad news from home. This time the news from home will be worse (and here is the chance for propaganda) and it will eventually seep into the German soldier's conditioned psychology. Leave may eventually be too dangerous to grant. The feeling, however, that decisions on national policy are none of his business, the habit of almost instinctive obedience to whatever folly or bestiality is ordered, (a ritual which marks the German as so different from the British soldier) is not yet undermined. The fear of defeat demands its postponement.

APPENDIX "B"
to 15 ARMY GROUP INTELLIGENCE
SUMMARY No 21 dated 21 Oct 43

Army Order of the Day
10 Army High Command
The Commander in Chief

Army Headquarters, 18 Sept 1943.

Army Order of the Day

The Battle of Salerno has been fought.

The enemy lost: Almost 5,000 prisoners, 165 tanks and armd vehicles, 58 guns, 234 heavy infantry weapons, thousands of light weapons, and army equipment of all types. We must add this his high casualties in blood.

Success to ours !

In its importance it will bear fruit in the further conduct of the war on Italian soil.

My thanks go first of all to our brave soldiers. Once again has German soldiery proven its superiority over the enemy. Leadership and soldiery of our troops again have proven their high standard

The 16th Panzer Division had to face the first onslaught of the enemy. Through its enduring defensive battles, it laid the foundation for the employment of the remaining units of the army.

The commanders and units of the Southern sector, after a splendid evacuation of CALABRIA, were able to reach the battlefield despite the distances and supply difficulties involved. Thanks to their untiring energy and initiative in the ensuing heavy defensive and offensive fighting, they have shown the enemy again what it means to fight German soldiery.

Command and units in the Northern sector, at the risk of weakening their positions along the coast, denied the enemy in hard battle the full use of the Port of SALERNO. Through this, the enemy was deprived of one of his most basic requirements for his operation. Despite difficulties, the Supply services successfully safeguarded and removed all valuable supplies during the withdrawal.

Every one knows that the Luftwaffe has done all within its power to assist the hard-fighting ground troops.

With pride we mourn our dead. Their sacrifice was the source of our victory.

But after battle, a new resolve. Fuehrer and Fatherland remain confident that the 10th Army will fight to the very last and anticipates the opportunity to deal the enemy another blow.

To the Fuehrer Victory - Heil !
Commander in Chief:
(Signed) Von Vietinghoff
Col-General.

-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION.

Captured documents show that on 14 Oct H.G. Division was withdrawing to a position called BARBARA. Prisoners from 76 Corps have also referred to the BARBARA position so it can be taken that this is a line running right across the peninsula. On the 14 Corps front its position is pretty clear; it is the line of hills starting with MONTE MASSICO and running from there via TEANO and VAIRANO, at which latter there appears to be a strong point; from VAIRANO the line is not given but the loss of PRATELLA presumably means that the valley of the upper VOLTURNO will be blocked not further forward than PRESENZANO. After this the great mass of the MATESE mountains interposes between the two Corps. The BARBARA line on the 76 Corps front would most naturally be the line of the TRIGNO which rises just North of the Mountains and flows in a Northerly direction through difficult country. If this is so the BARBARA line is already in danger at several points; 8th Army have crossed the TRIGNO near its mouth and 5th Army's capture of ROCCHETTA and PRATELLA threatens TEANO and the upper VOLTURNO respectively. It is likely therefore in view of the above and in view of the lack of defence works so far visible that BARBARA is not the final line. There is more evidence now accumulating that what one prisoner calls."the winter line" will rest on the SANGRO and the GARIGLIANO.

In the North the question is bound up with reinforcements and reliefs. 65 Infantry Division was reported by the Italians as having come South and we have now identified 145 Infantry Regt of that division in position behind the SANGRO and probably part of the Div Arty Regt. An Italian source reports seeing much horse-drawn arty in the Eastern coastal sector; this would fit 65 Division which is an ordinary infantry division. Also in this area is 1 Para Regt presumably also engaged on the same task of preparing defences. We have had very little contact with 29 P.G. Division for the last three days which may suggest that it is thinning out to the rear positions; certainly it needs a rest badly. The Northernmost defences are already taking shape; Photo/R. of 25 Oct shows a continuous defensive line under construction West of the SANGRO between C.4305 and 3500.

On the West Coast.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On the West Coast the other division of the two which came from ROMMEL to MESSERLING is believed to be 305 Infantry Division (APWO WIS 60); this division was previously in LIGURIA which is the most likely area to be drawn on since there are no operations in progress as there are in the North East, and Southern FRANCE can quickly supply replacements. If any further divisions are to come South (and prisoners from 15, H.G., 29 and 16 Divisions all state that they are expecting to be relieved) it is likely that they would be drawn from the same area. As to the position they are to hold there is little more evidence. There are reports of defences being dug at MIGNANO, which blocks the defile on the main road to ROME and an A.Tk ditch between ROCCARAVINDOLA (H.0929) and MONTERODUNI (H.1424) blocking the road to the head waters of the VOLTURNO above VENAFRO; these positions tie in with the GARIGLIANO line on the coast (See I.S. No.20). On 14 Corps sea flank the aid of nature has been enlisted and the dykes have been cut round TERRACINA and on the coast North of MONTE CIRCEO; the bullfrog of the Pontine Marshes can see his most advertised achievement undone to defend his capital.

2 Parachute Division is still in the ROME area and a recent prisoner reports that it has four regiments, 2, 5, 6 and 7. It is said to have suffered casualties both at the hands of the Italians in the taking of ROME and also in the rescue of MUSSOLINI. Italian reports speak of S.S. troops in ROME in some strength; these are unlikely to come from Adolf Hitler Division or from the unidentified S.S. Division in the area of ISTRIA - SLOVENIA so they may have come from the Bde REICHSFUEHRER S.S. which was evacuated from CORSICA. Another evacuated division, 90 P.G., appears to have shifted East to the area of FORLI and TREVISO.

2. ENEMY SUPPLY AND COMMUNICATIONS.

Supply Routes.

An Italian source who left BOLOGNA early this month reports that the Germans were routing trains for the East coast from VERONA (the main N.Italian base) via FERRARA and RIMINI thus by-passing BOLOGNA. This was due not only to the damage caused by air-raids but also because the Germans considered this junction an obvious target and did all they could to by-pass it. This would account for the fact that FR of BOLOGNA has seldom revealed any very high degree of activity.

It has been reported that South of ANCONA the Germans have been making extensive use of the road VISSO - TRIPONZO - TERNI, even prior to the recent blocking of the railway Southwards from ANCONA to PESCARA. The use of this road would seem to suggest that much of the supplies forwarded via the East coast have been transported South from ANCONA by road, and that the railway has only been put to limited use. Road movement from ANCONA to TERNI (and presumably South to SULMONA) would further suggest that the East coast route has also been used for moving not only supplies destined for troops on the coast, but also to relieve the strain on the main central railway and at the same time avoid some of the more obvious target junctions.

State of the Railways.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

State of the Railways.

Besides the interruptions caused by the bombing of bridges which is dealt with in the succeeding paragraph, other rail targets have been attacked. ANCONA yards were attacked on the 20th and the main line blocked by debris; three days later an ammunition train exploded with exceptional violence as a result of a direct hit. This junction is probably still blocked. Considerable havoc was caused in the TERNI yards on the 19th, but a through line was open a few days later. The marshalling yards at FLORENCE revealed considerable activity on 23rd and were bombed on the 25th; results as yet unknown. The marshalling yards at PISTOIA were bombed on the night of 24/25. The east coast line South of ANCONA has probably come off worst in recent attacks and it is doubtful if it is now used to any great extent. However during the last week all the main lines south of LEGHORN, FLORENCE and ANCONA were blocked. Some of the repairs will take more than a few days to execute. It may be fairly said that railways in Central ITALY had a bad week. In the N.East the line TRIESTE - LJUBLJANA is still reported to be cut owing to partisan activity but the line to VIENNA via TARVIS and KLAGENFURT is believed to be functioning normally. Considerable Northward traffic was reported recently through TARVIS.

Attacks on Roads and Bridges.

During the past week our bombing effort has been in part directed to attacking individual communication targets in the form of rail and road bridges, and in one case a viaduct. The difficulties of destroying bridges by air attack are well known, but although only a percentage of attacks carried out were successful, nevertheless the combined effort was extremely satisfactory and resulted in the main lines ROME - LEGHORN, ROME - FLORENCE and ANCONA - PESCARA being effectively blocked, and traffic on the main North South roads in area ORBETELLO thrown into some confusion.

With one exception targets were all located on short sectors of the three main railway lines as follows:-

1. LEGHORN - ROME line between GROSSETO and CIVITAVECCHIA.

Damage in this sector was confined mainly to the ORBETELLO area. A direct hit was scored on the MONTALTO di CASTRO railway bridge halfway between ORBETELLO and CIVITAVECCHIA, and the TALAMONE railway bridge North of ORBETELLO has sustained damage; considerable destruction was done to the track near this bridge. The railway line has also been cut South of ORBETELLO by many direct hits on the track near CAPALBIO and CHIAROME. Damage to the three road bridges in this sector is also reported, although in all cases traffic can either by-pass or still make use of the bridge, considerable confusion and dislocation to road convoys almost certainly ensued.

2. FLORENCE - ROME line between ORVIETO - ORTE.

An attack on the railway bridge 9½ miles SE of ORVIETO resulted in direct hits, rendering the line impassable to traffic. In addition further direct hits have caused a partial collapse of the rail embankment. North West of ORVIETO a railway bridge was demolished.

3. ANCONA - PESCARA line.

A railway bridge North of PEDASO was demolished by direct hits. Further South an attack on a railway bridge near GROTTAMARI probably succeeded in cutting the railway line but no damage was caused to

the bridge.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the bridge. A night attack on the road and railway bridges at GIULIANOVA resulted in the destruction of the railway bridge and damage to the road bridge.

A raid on a railway viaduct N. East of TERNI made on 21 Oct proved unsuccessful.

Shipping.

Although coastal traffic has been confined almost entirely to L.C. and supply barges operating between GENOA, LEGHORN, PIOMBINO, SAN STEFANO, CIVITAVECCHIA, NETTUNO and ANZIO, this has been brisk and there are signs that it is increasing. Sustained attacks on the railways will certainly cause a sharp rise in this traffic. Coastal traffic on the East has as yet only been slight due largely no doubt, to a general shortage of small craft in the ADRIATIC. On the West coast M/Vs. continue to arrive at GENOA from Ports further South and the tonnage seen on 20 Oct had reached a total of 266,000 tons. The intention is almost certainly to evacuate as much as possible of this tonnage Westwards to the French ports as the Allies advance Northwards. Much of it may in fact be scuttled, as with an ever decreasing Mediterranean seaboard under Axis control the supply greatly exceeds the demand; furthermore there is reported to be a shortage of crews. Great repair and constructional activity of small craft has been observed at most of the West coast ports.

Port demolitions continue, and were almost complete at GAETA on the 22nd, while preparations for blocking LEGHORN are proceeding. The hull of an obsolete 5000 ton Cruiser and a 3000 ton M/V are being placed alongside the harbour boom ready to be moved into position for sinking. On the East coast demolitions have been carried out at ORTONA the only harbour South of ANCONA on the Axis occupied East coast capable of taking any vessel larger than an L.C. We may however expect to see a development of lighter traffic along the East coast to relieve the railway which has now almost ceased to function. On 21st three barges were seen unloading at SAN BENEDETTO del TRONTO.

General.

There have been numerous reports of Germans in ITALY requisitioning and removing large numbers of horses Northwards. The Germans who still have Infantry Divisions equipped with a large amount of horse transport have undoubtedly suffered large losses in animals in RUSSIA and are probably as much in need of remounts as of tanks and guns.

3. ENEMY PERSONALITIES.

General-major HEIDRICH.

A British officer who was entertained to dinner by General Heidrich shortly after the TERMOLI landing (in which he was taken prisoner) gives this account of the GOC, 1 Parachute Division.

General Heidrich.....

THIS PAGE IS UNCLASSIFIED

0295

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

General Heidrich is about 45 years old. In appearance he startlingly resembles Mr. Churchill, and he said we that other British officers have remarked on this fact; the resemblance is heightened - I did not enquire whether he did it on purpose - by the cigar he is always smoking. His grey unpleasant eyes give an impression of ruthlessness that belies his corpulence. In the morning, in his pyjamas, he is a terrible sight. He spoke no English, and our entire conversation was conducted through an interpreter.

It is difficult to say how far his conversation was meant to draw me out and how far it represented his real views. He did not suggest that Germany would win the war, but seemed to envisage a compromise peace between Germany and Russia, perhaps in the Spring; then, England would hasten to make a compromise also or, after trying to invade in the West and suffering appalling casualties, would recognise that loss of life on such a scale could not be tolerated, and would in turn be forced to compromise. He was very emphatic on the heavy casualties we would suffer in any attempt to open a second front. He also trotted out the Yellow Peril, saying that in twenty or thirty years' time, Europe would be fighting for her life against the hordes of Asia; could not Britain and Germany patch up their differences before it was too late, and set about arming in real earnest for the next war ?.

General Heidrich said that the TERMOLI landing was perfectly timed. Had we landed one night earlier, we should have been unable to inflict any casualties, as there was no one in TERMOLI. A landing a night later would have bumped a very strong position, as reinforcements were already under orders to join the garrison. His own H.Q. had been in TERMOLI, and he apologised for not offering me wine; he had had to abandon his cellar together with much of his kit. The day after the landing, his intercept station had picked up a sitrep from our forward formation, reporting the capture of a German Colonel, who afterwards turned out to be only Major Rau. Heidrich was very merry with this mis-identification, asking me with enormous joviality - "Can't your troops identify a German officer yet ? Fancy making Rau a Colonel ! He's a good major, but no better".

The General expressed great admiration for a captured British pamphlet on discipline, which he had had translated and distributed in his division. I was able to return the compliment by mentioning his own pamphlet on the employment of parachutists which had been translated and distributed to the British Army after we had captured it in CRETE. Heidrich said he particularly admired the British as opponents and said that he made a point of entertaining to dinner all British parachutist officers captured by his division. He seemed to have got it into his head that I came from the Airborne Div, for he asked me whether I knew certain officers from that Division who he had entertained. When I said I could not answer any questions on military topics, he gracefully changed the conversation to subjects of general interest, and apologised for the dinner, saying it was rather a scratch meal but "we live a hand-to-mouth existence these days. There are more important things for transport than food, so we more or less live on the country".

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 23
of 4 Nov 43

(a) This Summary will NOT be distributed below H.Qs of Army Corps. Sidelined information will not be reproduced in any Intelligence Summary of formations under this H.Q. except by special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

1. ENEMY SITUATION

The thrust by 5th Army at the junction between 14 and 76 Corps has upset 14 Corps' defensive programme and the BARBARA line has been abandoned. On 1 Nov the enemy had abandoned TEANO and our patrols were thrusting to the summit of MONTE MASSICO; further North our troops are pressing in to the entrance to the MIGNANO defile. It was probably this last threat which decided the enemy to withdraw off the fine defensive position of MONTE MASSICO; since he had already blown the GARIGLIANO bridges behind this position the only route of supply or eventual withdrawal was the lateral road behind the ridge of hills running up towards MIGNANO. For this reason we must expect him to try and hold the roads through ROCCAMONFINA and GALLUCCIO until he has completed thinning out from the Southern end of the line, and after this he will probably abandon the mountain mass of S. CROCE and withdraw his right wing behind the GARIGLIANO.

It is still not certain which is to be the next position for 14 Corps now that BARBARA has gone. Italian reports speak of a winter line from GAETA to CASSINO but surely they are using loose expressions. There seems no good reason why the Germans should allow us into the plain of the SACCO, centering round PONTECORVO, when they can hold us in the MIGNANO defile and from such evidence as we have of enemy defensive preparations it seems that he does in fact intend to deny us access to this plain; we have reports of diggings at CASTELFORTE (G.8500), on the hill in the loop of the river at G.9000 and at MIGNANO. From CASTELFORTE Southwards flooding and demolitions will strengthen the line of the GARIGLIANO.

In the middle of this withdrawal re-grouping is going on in 14 Corps. Prisoners from 3 PG Div stated that on about 27 Oct I Bn 8 PGR and I/29 PGR with some of the divisional artillery were relieved and moved back to the area of CASSINO. They did not know what formation had relieved them, it is obvious however, from the units mentioned that a relief of the entire division is taking place and its sector will have to be taken over by at least an equivalent formation, possibly one of the infantry divisions from the North. There is also clearer evidence that Hermann Goering Div is at last to get the relief it has been promised so long; on 1 Nov

.....the Eng Bn.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the Eng Bn were reconnoitring a rest area and billets in the area of SEZZE (G.2222). It is not certain, however, that the enemy strength in the area will be raised by these reliefs; a prisoner from the 305 Inf Div which now appears to be arriving to reinforce 14 Corps (its Recce Unit is already here) speaks slightingly of the combat efficiency of the Div and the low state of training of the new drafts of which it is made up.

On 76 Corps front we have at last a complete picture from photographic reconnaissance of the SANGRO Line (details in para 2). The name is slightly misleading as far as the centre of the line is concerned since here it abandons the river to move back Westwards behind the CASOLI - PRESCOCOSTANZA road, following the abrupt and precipitous slope of the MONTAGNA DELLA MAIELLA. This is a very strong line by nature and the defences, even in their present stage of development, are described as formidable in the Northern sector. Moreover in contrast with 14 Corps front we are not yet anywhere in contact with 76 Corps winter line and are indeed experiencing some difficulty in crossing the TRIGNO.

There is no important change from last week in the enemy dispositions on the front in Eighth Army sector. 129 Recce Unit have moved to the North coast to the area of CASALBORDINO (H.4893) but otherwise very little has been heard of 29 PG Div. The Recce Bn has probably been detached from its Div for coast watching duties.

2. ENEMY DEFENCES ON THE SANGRO LINE

The final stage of the SANGRO line has at last become clear. A series of successful Ph R's, the last flown on 29 October, shows the main line running in a Southwesterly direction from the coast NORTH-EAST of FOSSACESIA (C 3905) to the area NORTH of CASOLI (H 2491), whence it roughly follows the lateral road to CASTEL DI SANGRO (H 0954) and ALFEDENA (H 0348).

At present the line appears to be strongest in the coastal sector. It consists of well dug trenches running SOUTH-WEST from the coast for four miles and lying to the SOUTH of the FOSSACESIA - LANCIANO (H 3702) road almost as far as the 37 Easting grid. In addition a considerable number of weapon pits has been dug and wiring appears to be in progress in the area H 4105. The line in this sector runs close to the top of the ridge giving good observation over the SANGRO plain. It is situated mainly in plantations with a number of houses to the rear which may be used as strongpoints. Although demolition of houses in front of the line has begun no trees or hedges have yet been cleared. As the line of trenches for the most part runs under trees it is not possible to state in every case what may be expected in the way of weapon pits and other fortifications. As the line continues further SOUTH-WEST it becomes more disconnected. In certain areas large organised localities can be clearly distinguished amongst the general patchwork of diggings and weapon pits. SOUTH of the road between SAN MARIA (C 3601) and CASTELFRENTANO (H 2998) there are three strongly defended areas, one with a frontage of some 2,500 yards and the other two approximately 1,000 yards each.

Behind them are patches of diggings in considerable depth, as much as three kilometres in one instance. All are fairly regularly spaced at intervals of approximately one kilometre. If these are

....developed.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

developed the line is likely to assume formidable proportions in this area. EAST of GUARDIAGRELE (H 1898) are a further two strongpoints consisting of weapon pits and diggings, sited on the slopes to the SOUTH of the secondary road which runs WEST from the main road at H 2698 to GUARDIAGRELE. SOUTH-EAST of this area, almost halfway between CASOLI (H 2390) and GUARDIAGRELE is another area of defences stretching from H 2393 to H 2593. Although this is continuous it has little depth. Between this last defended area and the localities in the vicinity of CASTELFRENTANO there are numerous scattered areas of diggings and weapon pits amongst which no clear-cut pattern can yet be traced. They are mainly sited to the east and west of the road running north from H 3090 to H 2898. Although these do not appear to be strong at present it is probable that they will eventually prove to be a continuation of the series of strongpoints in the CASTELFRENTANO area, since it is obviously essential to guard an area in which lies one of the main approaches to this line and an important river crossing. Little or no activity has been seen to the SOUTH-WEST of the 20 Easting grid until the area NORTH of PESCOCOSTANZO (H 0765) is reached. Along this stretch of some 23 or 24 kilometres the enemy will probably take up positions NORTH of the road, on the SOUTH-EAST slopes of the MAIELLA massif. Such positions as he intends to prepare in this area may very well be left until last since the terrain in itself is so formidable. The mountains rise very abruptly from the valleys and are extremely steep. Their slopes moreover are deeply incised by torrents which flow in very deep ravines with almost vertical sides, certainly impassable to mechanised transport and probably even infantry.

In the area of PESCOCOSTANZO it is clear that the enemy intends to take advantage of this ground which is favourable to him. Defences have so far only been located across the river valleys which are the obvious and easiest lines of advance. At H 0769 two pillboxes and diggings have been located whilst at H 0467 an anti-tank ditch has been scarped out of the hills on either side of the road running into the mountains up the river valley. At the road bottleneck near RIVISONDOLI (H 0462) the low flat ground has been mined whilst defences are positioned on the hillside so as to enfilade North-bound traffic. NORTH of CASTEL DI SANGRO where the road runs into a defile defences have been positioned on a hill near the river crossing at H 0854 whilst near ALFEDENA (H 0348) at the beginning of yet another defile anti-tank ditches and diggings have been located.

Forward of his main position a line of outposts has been constructed. Between the coast and road it runs parallel to the main line, some three kilometres forward of it at the foot of the slope which runs down to the plain near the mouth of the SANGRO. In this area the defences consist chiefly of trenches and weapon pits and at present are not very thick on the ground. SOUTH-WEST from the main road the defences become less definite in character and finally identifiable only as diggings. They are sited very close to the river and follow the branch which runs SOUTH from H 3090. Between the river crossing at H 3090 and H 2886 no activity other than the demolition of bridges on the secondary road

.....to the EAST .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

to the East of the river has been discovered. From the area H 2885 to VILLA SAN MARIA (H 2871) diggings re-appear at very widely spaced intervals, but beyond this point only a few isolated areas have been found, included in which are diggings to the SOUTH-EAST of BORRELLO (H 2568), an anti-tank ditch astride the road at H 2962 and a further area of diggings at H 3262 near the sharp road bend EAST of CASTIGLIONE (H 3762). It is quite evident that the enemy will use his outpost line merely as a delaying position. As soon as we seem likely to force a crossing of the river he will retire to his main defences where he will enjoy the advantages of ground and well constructed positions.

3. ENEMY ORDER OF BATTLE - NORTH ITALY

The following table gives the present state of the German Order of Battle in ROMMEL's Command. It will be noted that 65 and 305 Inf Divs have been deleted as they are now known to have come South to 76 and 14 Pz Corps respectively. SS Pz Div Adolf Hitler has been identified by its divisional sign in the TRIESTE area; it is likely that the division was merely passing through NE ITALY and may be leaving the country altogether since an Italian source states that two divisions, one of which is 76 Div, are due to leave for RUSSIA. On the other hand the presence of 371 Inf Div in the TRIESTE area, as reported from vehicle signs, appears to mean the arrival of this division in ITALY, by a rather roundabout route from FRANCE. It should be noted that 60 Feldhernhalle Div is still waiting on the French frontier in the MENTON area with SS Panzer Div 10 ("KARL DER GROSSE") further West. Drafts of the latter are believed to have already entered ITALY.

ROMMEL's Command (Army Group B)

Nothing is known of Army and Corps organisation. At the time of the capitulation the Italians stated that LXXXVII Corps was in LIGURIA. It is still believed to be at ACQUI.

HQ Army Group B	Area LAKE GARDA
157 Reserve Division (Mountain)	Possibly BERGAMO
Unidentified Mountain Group	Area BRENNER
76 Infantry Division	Area GENOA) Form presumably
94 Infantry Division	Area SPEZIA) LXXXVII Corps. One of these divisions may be moving southwards.
90 P.G. Division	Area TREVISO
S.S.Brigade Reichsfuhrer	Possibly North of ROME
18 Panzer Division	Possibly SLOVENIA
S.S. Panzer Division A.Hitler	Area TRIESTE
371 Infantry Division	Area TRIESTE, possibly in transit
71 Infantry Division	Area UDINE
44 Infantry Division	Probably area PADUA
162 Infantry Division	SLOVENIA
Unidentified Infantry Division	SLOVENIA
Unidentified S.S.P.G.Division	SLOVENIA
389 Infantry Division	Unplaced, possibly central LOMBARDY.

.....In addition to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In addition to the above, Police and Flak units are almost certainly established in and about the main industrial centres.

4. ENEMY L OF C AND COMMUNICATIONS

There have been several reports that as a result of the cutting of rail communications north of ROME a considerably lengthened road carry has been forced on German M.T. columns. CHIUSI, FICULLE, ORTE and ORVIETO have been mentioned as railway off loading points. Whilst most of the principal supply depots are believed to be North of ROME, it is certain that much of the supplies for the forward depots south of ROME now has to be lifted by road from the places mentioned above. In cannot however as yet be said that rail interruptions have caused any appreciable increase of coastal shipping.

The narrow gauge railway from the East coast line to SULMONA via PALENA is reported to have been in use, at any rate up to about mid October, when there were 2-3 trains nightly to PALENA which was the railhead. Although this line will be affected by the recent blocking of the ANCONA-PESCARA line, since it joins the main line south of PESCARA at ORTONA, it can still be used to transfer inland supplies offloaded from barges and lighters at ORTONA or FRANCAVILLA.

A report from an Italian source states that KESSELRING's Chief Q.M. is a Dr ERNST. ERNST is reported to be an Austrian and a staunch anti-Nazi and is even said to have attempted to cross to the Allies about the time of the armistice and the SALERNO landings. ERNST is further reported to be extremely pessimistic about Germany's chances of success. The report does not state if ERNST was also Q.M. in AFRICA; but even assuming he is not the same Q.M. whose ships unsuccessfully attempted to run the gauntlet of the Allied torpedo bombers, he will have had headaches enough supplying German troops in SICILY and Southern ITALY with a long L of C under constant Allied sea and air attack. It would not be surprising if such a task made ERNST gloomy; being a sufficiently senior officer he may well realise that there is little hope of relief or respite from this state of affairs despite the German grip on N. ITALY. Nevertheless, due no doubt to careful and persistent over-indenting, shortages have been mainly local and have never been such that it can be said that the conduct or course of operations was affected.

Shipping

(a) Italian West Coast

The Northward move of shipping which has been apparent since the fall of SICILY has come to a halt in the past ten days and for the first time there has been a slight decrease in tonnage at the harbours of GENOA and LEGHORN. This is explained by the departure of L.C., Barges and a very small number of M/Vs to ports further South, mainly CIVITAVECCHIA, S. STEFANO and PIOMBINO. The traffic is on a moderate scale, and is probably carrying fuel and ammo to the rear areas of 10 Army. The M/Vs however, are nearly all

...plying between.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

plying between GENOA and PIOMBINO and are probably engaged on the iron ore trade. Some craft may also be used to remove damaged equipment from the 10 Army area. It should be remembered that traffic along this coast can easily be increased at short notice if this is thought necessary. There are at present in Italian West coast ports alone at least 63 L.C. and 81 barges of which only about 20% are being used. In addition 10 more barges have just been completed at MARSEILLES and a further 70 are under construction.

Demolitions at GAETA are now complete and there has been no activity there for over a fortnight. In view of the flooding in the NETTUNO area it is very doubtful whether this harbour too is likely to be of much future value to the enemy. The loss of these harbours and the damage sustained at CIVITAVECCHIA as a result of our air raids may cause the enemy to start developing fresh harbours on the W. coast, and it would not be surprising to find new ports of call being used by the Germans for their supply traffic.

(b) Italian East Coast

There is no sign of any traffic developing from VENICE and TRIESTE down the East coast, although this may not be long in starting. The main East coast harbours have however either been demolished or prepared for demolition. PESCARA has been demolished and preparations have been made for the destruction of ANCONA. While these demolitions do not render the use of harbours impossible, they do however limit their use to A.S.V's and small craft. If, then, the traffic develops it will probably, like that on the West coast, consist mainly of L.C. and A.S.V's with the possibility that ordinary M/Vs may proceed as far as ANCONA there either transferring their cargoes on to M.T. or smaller craft.

State of Railways

The main lines to ROME remain blocked at the points given in our last Summary; railways in general have suffered no subsequent major interruptions.

Adriatic Communications

By taking the islands covering the approaches to SIBENIK the Germans have made a start in the process of securing the islands along the Dalmatian coast so as to safeguard their coastal L of C to the BALKANS. We must expect further action of this kind since reports from YUGOSLAVIA reveal that on 26 Oct the railway system was well nigh completely out of action. The main line from SUSAK to ZAGREB via KARLOVAC is reported to have been thoroughly destroyed; although the Germans are now guarding the sector SUSAK-OGULIN, (the sector threatened by the Partisans) and endeavouring to effect repairs. The line from KARLOVAC North West to LJUBLJANA is also destroyed in many places and out of action. The biggest blow of all from the German point of view must be the interruptions to the main line ZAGREB-BELGRADE between GRADISKA and BROD. It is not surprising that the Germans are reported to be making desperate efforts to effect repairs as quickly as possible. The line is the main German supply link to GREECE and AEGEAN and it is of vital importance. Practically all the internal and lateral lines leading from the main LJUBLJANA-ZAGREB-BELGRADE-NISH line are cut, the sole exception being the line STALAC-KRALJEVO-SARAJEVO to DUBROVNIK. SPLIT is reported cut off from all communications; the

.....railway is cut.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

railway is cut and Partisan guns control the DRVENIK Channel and probably the Southern approaches. Seaplanes, possibly bringing supplies have been shot down in the SPLIT area.

Adriatic Shipping

The lull succeeding the Italian Armistice has to some extent broken and there has been a small traffic from TRIESTE and FIUME down the Dalmatian coast. Unlike the Italian traffic this has consisted entirely of M/Vs most of which have been proceeding to ZARA. A very limited amount of shipping has proceeded to SIBENIK and SPLIT, but since 23 Oct nothing is known to have arrived at the latter port, probably because the Partisan control of the islands adjoining SPLIT is making the use of the port a hazardous proceeding. On the other hand, the garrisons supplies may be running low owing to the unsatisfactory nature of the land L of C. To overcome this dilemma it is possible that the Germans will either attempt to run the gauntlet of the hostile islands and put in at SPLIT, or alternatively put in at the neighbouring port of SIBENIK and try to get supplies through to SPLIT by land.

5. GERMAN ORDER OF BATTLE

S.S. PRINZ EUGEN DIV

A source, considered reliable, has provided the following information about the above division.

The S.S. Prinz Eugen was formed in SERBIA at the end of 1942 on the basis of a Mountain division. German circles disclosed that it was a new type of division still in the experimental stages, and that its establishment allows it to be used in any theatre of war. The personnel was recruited in SERBIA. There is also a sprinkling of German other ranks in addition to all officers and NCO's who are sworn Nazis. The total strength of the division is said to be 24,000 of two brigades each of four battalions. The strength of a battalion is 1500 all ranks, some infantry are lorry borne. Great attention has been given to the artillery which is pack, horse-drawn and motorised and equipped with the latest guns. The guns are of all calibres including a high proportion of 88 m/m. The division also has a tank battalion equipped with not more than 30 light HOTCHKISS tanks which are in very poor condition. It is not known if these will in the near future be replaced. The transport is very new.

" The G.O.C. is Gen FLESS. He is an Austrian from INNSBRUCK who, in the last war, was a Colonel in the KAISERJAGER Regiment - age 65/70.

T.S. AIREY,

-o-o-o-o-o-o-o-

1. ITALY SITUATION

We are now in contact with the line on which the enemy intends to stand along almost its whole length. In the north 8th Army has reached the SANGRO along its upper course and it can scarcely be long before we clear out the mountainous area on its upper reaches and appear before CASTEL DI SANGRO and ALFEDENA. On 5th Army front we appear to have actually broken in to at least the forward areas of the winter line to judge by the violence of the enemy counter-attacks.

It now seems likely that the MIGNANO Defile, or rather the hills overlooking it, were intended to form the forward line of the enemy winter positions and the main position lies further back, in the CASSINO area, based perhaps on the line of the FIUME RAPIDO. This is to be deduced from the fact that we met no "battle outposts" or "advanced positions" on our advance to MIGNANO and we have been able to capture both the village of MIGNANO itself and the high ground West and North West of it. It is true that we met with stubborn opposition both here and in the mountains above VENAFRO and the enemy continues to counter-attack with great violence; furthermore as will be seen he has again reinforced his line in the VENAFRO sector. On the other hand a recent prisoner has stated that the present front line is the BERNHARDT position and behind it is another called the VIKTOR line, presumably in the CASSINO area. The probable conclusion is, therefore, that the enemy intended to hold the present line until the line behind was completed, that he was hustled back on to it sooner than he expected and that he is now counter-attacking in order to give time for the completion of the VIKTOR position.

In the meantime the regrouping to which reference was made last week is continuing on both fronts. On 76 Corps front 29 P.G. Div has apparently been at least withdrawn; a prisoner from 71 P.G.R. on 7 Nov confirmed that 15 P.G.R. left some time ago and his own unit was then withdrawing. The Division was to concentrate in reserve somewhere in the rear of the front: the prisoner spoke vaguely of the ROME area. 26 Armd Div has been transferred to 14 Corps front; on 7 Nov

.....we had RHQ

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

we had RHQ of 93 Arty Regt moving to CASALATTICO (G.7735) with II Bty at VILLA LATINA (G.8634). On 7 Nov, 9 P.G.R. was identified in the line in the area North of VENAFRO where its 2nd Coy in one attempt to infiltrate lost 56 killed and 21 PWs. The Regt made two further counter-attacks on the morning of 8 Nov and was again thrown back with very heavy losses. In the meantime Div H.Q. had moved to just North of ACQUAFONDATA (G.9627). 76 Div is left therefore with 1 Para and 65 Inf Divs in the SANGRO line and 16 Pz Div, which has just withdrawn through 65 Div. It is possible that 16 Pz Div, for all its need of a refit, may remain in Corps reserve, probably on the Adriatic flank. This is a very weak force with which to hold so long a front, and 65 Div does not appear to be a very powerful formation. Eighth Army's appreciations of its latest adversary is: "Over twelve months preparation has sent this division into battle with equipment pitifully out-moded to-day: its latest machine gun is the 34, its heaviest mortar (at least in 145 Regt) the 5 cm and its anti-tank gun apparently the 3.7 cm, abandoned in AFRICA in October 41. And three deserters in one day is a measure of the small determination behind those arms". It should be added that the division has only two infantry regts and one of these, 145 I.R., appears to be holding a front of about 10 miles.

1 Para Div, seriously under strength as it is, has to hold a front of 25 miles though it must be admitted that a great deal of this consists of precipitous mountain slopes. It is possible that the division may be going to get some assistance, particularly in artillery, of which it must be short, as an escaped Canadian officer recently saw "a considerable number" of pack mountain batteries in the areas of SAN DONATO (G.0545), LA [illegible] (G.9543) and ALVEDENA. Some of these, of course, might belong to 305 Div, the parachutists right hand neighbour. 1 Para has also under command I Bty 93 Arty Regt (possibly only temporarily) and a Recce Bn, possibly 26 Recce Unit.

On 76 Corps front 94 Inf Div has come into the line on the coastal flank. Its arrival was heralded by two deserters who we hope will represent the general morale of the division; they state that there are two regiments in line, 274 on the coast and 276 further North, as far as about G.9014. The division has had a delayed and interrupted journey from the GAETA area, owing to destruction of railways by air attacks. 15 PG Div remains in the line, for all its former hope of relief, as the next division North; its boundary with 3 PG Div, as shown on a captured map, runs from between MICHELE and GALLUCCIO through AQUINO (G.2522). 3 PG Div has been rather unsuccessful of late and PWs speak of low morale in the division; the critical situation has not allowed of its being relieved and it is now holding the exits from the MICHELE defile. H.G. Div does, however, appear to have gone out; we have had no contact with it since reaching the present position and further elements of the division are reported as arriving in the SEZZE area. 26 PZ Div, which has now come into the line North of 3 Div from 76 Corps front has already been dealt with; it was certainly the best division

-0-0-0-0-0-0-0-0-0-

1. ENEMY SITUATION

Operations this week have been mainly centred on 14 Corps front and have taken the form of fierce struggles for mountain positions. On the whole the enemy's front still holds, though he has lost many of his forward positions, such as MONTE ROTONDO and the high saddle East of S. PIETRO INFINE and regained others such as MONTE CAMINO. For the moment weather and the necessity for re-grouping imposes a pause.

The enemy thought that when he got back to the winter line he would be able to hold it with reduced forces and re-group his mobile divisions in their shelter to form a reserve striking force. Instead he has been involved in very stiff fighting and has had to throw back into the line formations which he had hoped to refit. Last week on 7 Nov, 26 Armoured division had to be rushed across from 76 Corps front to stem the breach which was developing North and West of VENAFRO; this week the danger point has shifted back to the MIGNANO Defile and the S. PIETRO pass where our capture of the high ground from H.0014 to H.0017 threatened yet another breach in the line. As a result 29 P.G. Div has been brought back and 15 P.G.R. came up from CASSINO on the night of 12 Nov to go into action above SAN PIETRO. These counter-attacks failed and we still hold the high ground. Further South II Bn 104 P.G.R. came up from 15 P.G. Div to stiffen the line facing MONTE ROTONDO and there is now some indication that III Bn of the same Regt may also be operating on 3 P.G. Div front. All this shows that the High Command have no great opinion of 3 P.G. Div which has now had to be bolstered up by two other divisions and a battalion of a third. Nor do we think much of 3 P.G. Division; although it is the freshest of all the motorised divisions, having first come into action on the VOLTURNO, it has so far distinguished itself only by the particularly brutal massacre of civilians at CAIAZZO. And now it looks as though it is to be relieved, though out of its turn, since 103 Recce Unit has a date for the relief - not before the 18th or 19th at the earliest. Presumably the division is to be relieved by 29 P.G. though the latter must have had only a very short time for refit as it only went out of the line on 76 Corps front some time about 7 Nov.

On 76 Corps front things have been much quieter. It looks as though 16 Pz Div is to remain in the line, possibly split up into battle groups to support 65 Inf Div. At any rate 79 P.G.R. is apparently going to remain on the latter's right, being in the CASOLI area where it can also watch the boundary between it and 1 Para Div. The Germans are always sensitive about boundaries, both ours in attack, when they like to make them their objective, and their own in defence, and it may be that the main body of the division will be with 79 P.G.R. There is probably, however, some sort of a battle group, based on 64 P.G.R., to assist on the left flank of 65 Div and to watch

...the coast.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the coast in its rear.

The position is clearer in the rest of ITALY. It looks as though we are going to have a unified command if we can believe frequent reports from sources described as good by the Italians that KESSELRING has taken over the command of all troops in ITALY. ROMMEL, according to the same report, has been restricted to the BALKANS. In LIGURIA we have again three divisions, 334, 356 and 371, to replace 76, 94 and 305 and presumably they also come under 87 Corps H.Q. 157 Reserve division is still believed to be in the North and 90 P.G. Div in the North East, TREVISO area. There is also one unidentified division recently arrived and the DOEHLA Mountain Brigade, probably still looking after the BRENNER. 44, 71, 88 (still rather doubtful) and 162 Divs are operating in JUGOSLAVIA. The members of the divisions alone tell the story; ITALY is no longer receiving first class infantry divisions, it gets low category divisions which need reforming, for it is doubtful if 334 division, for instance, is yet back to even the moderate form it showed in TUNISIA. North ITALY is in fact replacing FRANCE to some degree as the convalescent depot for shattered formations.

2. ENEMY SUPPLY AND COMMUNICATIONS

Despite the fact that the enemy has obviously suffered serious inconveniences owing to the blocking of the two East coast lines and the two main West coast lines, from LEGHORN and FLORENCE to ROME; it is not considered that this will have reduced the daily tonnage of supplies brought South for the supply and maintenance of 10 Army. The lines still open and the use of coastal traffic which has increased somewhat during the last two weeks are capable of providing a sufficient daily tonnage. Indeed worked to their capacity the railways alone should be sufficient. Nevertheless it seems probable that the enemy has reserved the PERUGIA-TERNI line for supply of formations in the centre and on the left of his line; whilst formations on the West coast and South of ROME were being supplied by coastal traffic from LEGHORN to CIVITAVECCHIA and thence by rail to FROSINONE and AVEZZANO. Recent raids on CIVITAVECCHIA will doubtless have hampered this system. The alternative is to unload lighters further North at PIOMBINO or SAN STEFANO or make use of the AREZZO-TERNI loop line to bring the trains South to ROME. The former will clearly not be very acceptable, as the main West coast line is still blocked South of PIOMBINO and SAN STEFANO, consequently supplies will have to be moved South by road, which is clearly uneconomical. Nevertheless some slight increase of lighter traffic to these ports may be expected. The alternative would seem preferable, and, unless there are difficulties unknown to us, there seems no reason why the PERUGIA-TERNI line should not be able to handle sufficient traffic for the whole daily supply and maintenance of 10th Army, helped out if necessary by some M.T. lift; especially since recent operations have undoubtedly reduced daily supply and maintenance to a minimum. Furthermore it is unlikely that air attacks will entirely prevent the enemy using CIVITAVECCHIA for lighter traffic. It is possible however that should the tempo or scope of operations increase considerably over a protracted period the enemy might find himself in some supply difficulties with communications in their present state.

The building up of reserves should not be unduly impeded by the present rail situation, as most of the C in C South depots are North of the present rail interruptions. The railways would have to be effectively blocked further North to achieve this. Judging by our

....experiences.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

experiences in AFRICA where the enemy's supply situation was always from hand to mouth and must have been a perpetual Q.M's nightmare, it would be most dangerous to assume that his withdrawal Northwards will be hastened by supply difficulties.

Railways

General

The three main lines South from BOLOGNA are still cut, although repairs are everywhere now in progress. Traffic is thus necessarily on a restricted scale, and the main activity centres on the by-pass line via PERUGIA and TERNI, through which traffic both from the FLORENCE-ROME and the E.Coast lines is being diverted. In N. ITALY all junctions are believed open and traffic is everywhere brisk. In the areas nearer to the front, recent photographic cover is too scanty to permit of any satisfactory conclusions. The only up to date cover is of AVEZZANO where traffic is on a very reduced scale. However, as pointed out in the last Summary, it is probable that the Germans are in fact using their railways for supply purposes right up to the front.

Details

(a) PISA-ROME LINE

This is still cut at MONTALTO and North of ALBINIA. North of these breaks traffic is on a negligible scale and there is little activity at either PISA or GROSETTO. The damage caused in an earlier attack on GROSETTO has now been repaired and both tracks are probably open. South of the breaks there has been moderate rail traffic between CIVITAVECCHIA and ROME, mainly engaged in the removal of stores from CIVITAVECCHIA harbour.

(b) FLORENCE-ROME LINE

This is still cut North of ORVIETO and CHIUSI. Traffic is however by-passing the break by going down the loop-line through PERUGIA and TERNI, rejoining the main line again at ORTE. All lines are open on the by-pass although traffic does not seem to be very heavy.

(c) E. COAST LINE

This is still blocked at three points South of ANCONA and there is probably only a very restricted local traffic in this region. Traffic coming down from PADUA and BOLOGNA to ANCONA is being diverted from a point just North of ANCONA on to the same loop-line down to TERNI thence South to AQUILA and SULMONA.

(d) NORTHERN JUNCTIONS

Photographic cover of these has been scanty recently but what there is reveals that traffic is on a moderate to heavy scale with marshalling yards fairly heavily laden. Typical loads are:

PADUA	11 Nov	1500 waggons
PIACENZA	10 Nov	520 "
MESTRE	7 Nov	600 "

A recent report on BRENNER traffic states that since the re-opening of BOLZANO on 11 Oct, about 16 trains a day have been running in each direction. The BRENNER working at normal capacity can carry 72 trains each way daily and even before the Italian Armistice was operating 60 trains

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

daily in both directions. Even though at the present time it is operating at less than 20% of capacity, this however, when taken in connection with intake by other routes is more than sufficient to meet the present needs of the Germans.

Shipping

Nowhere is there any appreciable change to record. On the West Coast the usual procession of lighters and LC is finding its way to CIVITAVECCHIA, but it is possible that the recent air attacks on the port will make the enemy chary of using it on the heaviest scale of the past few weeks. We may now find shipping putting into other small harbours further up the N coast such as PIOMBINO and SAN STEFANO. On the East Italian Coast activity is at a complete standstill and there is no evidence of any arrivals at harbours on this coast. The DALMATIAN coast also shows only restricted activity with a slight turnover at ZARA. There are still no signs of any attempts to run shipping into SPLIT, although as the Germans regain control of the neighbouring islands it is to be expected that shipping activity to the port will once more be resumed.

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 26.

OF 1 DEC, 43.

(a) This Summary will NOT be distributed below H.Qs of Army Corps. Sidelined information will not be reproduced in any Intelligence Summary of formations under this H.Q. except by special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

Until the night of 27 Nov when 8 Army's attack on the Northern flank began, the German winter line has not been seriously threatened in the last fortnight but they have not been able to reap much advantage from this quiet period. Some reliefs have taken place but they have scarcely strengthened the position. First to go was 3 P.G. Div from 14 Corps front, relieved by the half-rested 29 P.G. Div. Next 16 Pz Division was gradually withdrawn from 76 Corps front, a battalion at a time; prisoners from its last remaining units had heard that the division was to leave the country and the spectre of another winter on the Eastern front was having its effect on morale. However 76 Corps could not be left with only 1 Para and 65 Inf Divs and so 26 Pz Div, which had been rushed across to 14 Corps to meet the danger of a break-through at MIGNANO, was sent back again to the Eastern flank to come in between the other two divisions. At least we know that 9 P.G.R. and apparently all the divisional artillery have moved across and Div H.Q. was moving from ATINA on 29 Nov, presumably to take command. Finally, on 28 Nov, we have a prisoner who stated that 44 Inf Div (Hoch und Deutschmeister) has arrived on 14 Corps front and apparently is coming in between 29 P.G. and 305 Inf Divs, where II Bn 131 Inf Regt has already been identified in the area H.0226. This division has up to the present been engaged in operations against the Partisans in SLOVENIA. It has begun its tour of duty in the line by yielding some ground in the area N.W. of VENAFRO, probably however voluntarily as we are now meeting stiffer resistance there.

The result of all these changes is that there is now only one armoured division in the line, 26 Pz, and it is not yet known whether that has brought its tanks with it. The enemy has apparently decided that armoured formations have no role to play here, though we met a few tanks at MOZZAGROGNA - not more than half a dozen as far as is known.

It is too early as yet to assess the course of operations but it appears that on the Adriatic coast we have broken right into the enemy winter line by the capture of MOZZAGROGNA, SANTA MARIA and FOSSACESIA. This was the most developed part of the enemy defences on 76 Corps front and a break-through here would have serious consequences for the defence of the rest of the line. The total strength of divisions in the line has remained the same as the arrival of 44 Div has balanced the withdrawal of 16 Pz but the question of reserves is obviously difficult. The fact that 26 Pz Div has had to shuttle to and fro between the two Corps shows the uneasy situation; 3 P.G. and Hermann Goering Divs are indeed available in a crisis but the former has only just been pulled out after a very unsatisfactory showing and may possibly be needed elsewhere. Hermann Goering remains the last really disposable reserve and so long as the main thrust to ROME remains on the West Coast it is not likely to be moved. Some form of "long-stop" is clearly required on the East Coast and it would be reasonable to expect the enemy to bring down one, or part of one, of the divisions of his fast

...depleting reserve...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

depleting reserve in North ITALY for this purpose. The identification of 361 Inf Regt of 90 P.G. Div in the area North of SANTA MARIA appears to show that North - Eastern ITALY is being drawn on; it remains to be seen whether it will be followed by the rest of the division.

2. ENEMY SUPPLIES AND COMMUNICATIONS.

ITALY

The weather has fought well and consistently for the enemy; and has considerably softened the blows which we have been able to direct against his communications; the number of attacks which have actually got home being considerably less than those planned and baulked by bad weather. For the same reasons it has been impossible in many cases to obtain information as to the results of attacks carried out. The enemy's supply situation would not appear to have undergone any marked change; and it must be assumed that, aided by the weather, the general state of communications is not worse than it has generally been during recent months.

All the routes into Northern ITALY are reported to be consistently busy. Traffic from the East still appears to be confined mainly to troops; while the BRENNER and LARVIS routes are confined to supplies. Coal traffic appears to have revived as by early November 15 - 16 coal trains a day were reported arriving from GERMANY via SWITZERLAND. This is surprisingly high since it represents a tonnage nearly equal to the daily average pre-war lift. The reason for this is not clear for although there are German military requirements to be met, Italian civilian and industrial requirements will have fallen considerably. GERMANY will not provide coal for Italian homes, but only for essential railway needs and for industries working for German account. However this sudden increase of coal traffic may in part be accounted for by the fact that there had been a long period of almost complete cessation of this traffic to ITALY.

That GERMANY'S present mood is one of ruthless exploitation of her satellites and allies alike cannot be in doubt. Already in Central ITALY the Germans appear to be removing all military and industrial equipment and plant. This process will presumably be extended further Northwards as the battle nears the PO Valley. Removals from Northern ITALY may even now be in process. Reports suggest that in many cases skilled workers accompany the plant they operate. From Central ITALY removals are even reported to include 50 Trolley buses which were supposed to be destined for WARSAW.

Railways.

Recent attacks have again been concentrated on the three main railways into Central ITALY. The line RIMINI - ANCONA was attacked at FANO-SENIGALLIA and FALCONARA. Hits were claimed on the bridges but detailed results are unknown. The marshalling yards at RIMINI were also twice attacked but results are not believed to have been good. On the West the railways bridge over the ORICOME river was twice attacked, also the marshalling yards at GROSSETO, and bridges at ALBINIA. The latter attack is reported to have been very successful. Attacks planned against the FLORENCE - ROME line were baulked by weather. As a result of these attacks the main East-West Coast lines are probably cut but the main central FLORENCE - ROME line still working.

Shipping

CIVITAVECCHIA has been rather severely damaged by air raids. However, this port continues to be used and supplies are undoubtedly being moved South from the main West coast railway line to PISA, which probably

...remains cut.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

remains cut North of CIVITAVECCHIA. Apparently no effort has been made to relieve the situation at CIVITAVECCHIA by using the more Southerly harbours of NETTUNO and ANZIO. Shipping continues to move South from GENOA, SPEZIA and LEGHORN via PIOMBINO and SAN STEFANO.

On the Italian East coast PR does not indicate any appreciable amount of active shipping at ANCONA and harbours to the South. However, small vessels are probably continuing to put in at these ports.

On the Dalmatian coast bombing attacks were made on SIBENIK on 27 and 28 Nov and on 28 Nov ZARA and DUBROVNIK were hit. These raids have damaged harbour installations. A merchant vessel was probably sunk at SIBENIK and other shipping damaged. Most of the Dalmatian shipping apparently centres around ZARA and SIBENIK and to a lesser degree, SPLIT. South of SPLIT at DUBROVNIK, DURAZZO and VALONA there is little shipping activity.

-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

There has been very little change in the enemy's dispositions to meet our attack as it has developed. This is reasonable enough since he was already at full stretch. The rest of 90 P.G Division followed 361 down the East coast to meet 8th Army's attacks and it has shown the stubbornness in defence of its more famous African namesake. On 5th Army's front a battle group of Hermann Goering division has been put into the line in the 15 P.G. sector, but too late to prevent the loss of the dominating feature of MONTE CAMINO. So far only four battalions of 44 Div have been identified in the line, I and II of 131 Regt and II and III of 134 Regt. To judge by the other infantry divisions in 10 Army the division should have either two three-Bn or three two-Bn Regts; prisoners from the other two seem to confirm the presence of 132 Regt but it has not yet been definitely identified and it may never appear. The only other reinforcements which have arrived are two independent mountain battalions which are operating on the Eastern slopes of the MAIELLA range, 3 and 4 Hochgebirgsjaeger Battalions. They appear to have been formed from I Bn 98 Mtn Regt of 1 Mtn Div which was withdrawn from GREECE in October and expanded into two bns in AUSTRIA with the aid of drafts from local depots.

We have therefore in the line at the moment ten divisions and two independent battalions. Of the divisions 65 Inf has had heavy losses, including over one thousand prisoners, and was at one time entirely withdrawn from the line, though when our pressure continued strong it had to be put back in again on the right of 26 Pz Div. 15 P.G. Div has also had serious losses in the fiercely fought engagements which ended in its being driven from MONTE CAMINO back across the GARIGLIANO. In 14 Corps reserve is part of Hermann Goering less a battle group of at least two Inf bns and some artillery which has already been committed; Div H.Q. and the Engr Bn who fought so well in SICILY are still believed to be in the area FONDI - ITRI. In the ROME area is XI Fliegerkorps which has some parachutists and 3 P.G. Div. The latter may possibly be moving to the area North of ROME and may have to do some coast watching though the normal penalty for failure to hold the line in ITALY, so 44 Div were told, is immediate despatch to the Russian front. A horrible threat, they thought this, and most unfair.

Another piece of information on the organisation of command in ITALY has come in from a captured document; 90 P.G. Div, when it was still in North ITALY in the VENICE area, was under command of 14 Army. Presumably this has replaced Rommel's Army Group B (Rommel himself has been reported by the German wireless in DENMARK) and Kesselring, as supreme Wehrmacht Commander in ITALY, has on the Army

.....side two armies.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

side two Armies, 10 and 14. XI Fliegerkorps may come under him direct or it may be under 10 Army.

14 Army has rather a scratch lot of divisions. (It is rather a scratch formation itself; formed in 1939 on mobilisation, it was disbanded after the Polish campaign and has not been heard of since). Its best formations are, as might be expected, in North Eastern ITALY and ISTRIA where are 71, 162 and possibly 88 Inf Divs. (371 division, which was previously believed to be in that area, is now reported from a reliable source to be operating in CROATIA and taking part in the offensive on BIHAC). 188 Reserve Mtn Div has been reported at BELLUNO (North of TREVISO) but its sister Mountain Reserve Div, 157, is now believed either never to have entered ITALY or to have subsequently left since it is now definitely identified over the French border in the area of ANNECY - AIX LES BAINS. For the rest there are 334 and 356 Divs on the West coast, 22 G.A.F. Div, lately in BELGIUM, now identified in the BRESCIA area, and an unidentified division believed to be forming in the RIMINI area. This makes seven divisions all told and there are also two brigades, DOEHLA on the BRENNER and Reichfuehrer SS if it is under command and if it has not yet expanded to a division. Even these figures may be too high as we are not sure about the boundary in the North between the commands of Kesselring and von Weichs.

If the N.E. divisions are not to be touched, and there is no evidence that the situation in that vital area has appreciably improved, there does not look much chance of 14 Army being able to provide any useful reinforcements for 10 Army. But the latter is fully stretched and weakened by recent losses, and if Kesselring's influence with the Nazi leaders was strong enough to give him victory over Rommel in the competition for the Italian Command, it should be strong enough to bring him some acquisition of strength even in the present difficult state of affairs on the Russian front. It would be reasonable therefore to expect that he should receive some help in the way of reinforcements which would also enable him to withdraw some of his mobile divisions from their present unsuitable employment in the Appenines. It is doubtful if, after his experience with 65 Division, he would be grateful for another new-formed infantry division. When the first Mountain Jaeger troops came in it looked as though 1 Mtn Div, to which they had belonged, was on its way here from JANNINA, but though it has certainly left GREECE it now appears that it merely threw off a detachment for ITALY and all we have so far are two independent bns. There have, however, been frequent reports of mountain troops arriving in ITALY which can probably not be connected with these two bns; for instance a report of the end of November, admittedly an unreliable one in many details, reports the H.Q. of a Mountain Division at PARMA. Whatever the facts about this may be it would be as well to expect some kind of reinforcement for 10 Army if they are to carry out their professed intention of holding South of ROME throughout the winter.

2. ENEMY SUPPLIES AND COMMUNICATIONS

The past 10 days have been marked by stepped up air raids against enemy ports and at least one highly successful night attack by surface ships on shipping along the Italian East coast.

CIVITAVECCHIA has continued active. In addition to the usual lighter and auxiliary sailing vessel traffic, a munition carrier and a small M/V had arrived by 1 Dec, the first sizeable ships to reach this port since a M/V was sunk there on 13 Nov. On 7 Dec the port was attacked by a large number of medium and fighter bombers

.....in several raids....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in several raids. Results of these raids are thought to have been excellent. CIVITAVECCHIA was also bombed successfully though not so heavily, on 8 Dec, night 8/9 Dec and 10 Dec. It has also been subjected to night intruder raids. On 8 Dec SAN STEFANO was heavily attacked by heavy bombers, many hits and explosions being observed.

The enemy's reaction to these raids is not yet known. However, since the West coast railway is cut North of CIVITAVECCHIA, he must continue to move his shipping as far south as CIVITAVECCHIA if he is to make effective use of his sea route to get supplies to 10 Army. Whether or not he is able and willing to keep this route open despite damage to harbour installations and loss of shipping remains to be seen. If he loses CIVITAVECCHIA the enemy will be forced to use PIOMBINO 100 miles to the North or very possibly LEGHORN as unloading ports.

Between ANCONA and ports to the South, shipping is undoubtedly not as active as at CIVITAVECCHIA. However it would appear to be considerably greater than indicated by photographic reconnaissance. On the night of 2/3 Dec destroyers operating between ANCONA and SAN BENEDETTO bagged 5 auxiliary sailing vessels; these two ports were also bombarded the same night.

On the Dalmatian coast ZARA and SIBENIK are thought to remain the most active ports. There has also been a considerable increase in the number of small craft in the SPLIT area. Their presence here, however, was probably connected with preparations for an attack on the SPLIT Islands, which the enemy has been expected to launch for some time. SIBENIK was raided on 3 Dec with good results, and a number of small craft has been sunk or damaged in the SPLIT area by air attack. South of SPLIT at DUBROVNIK, KOTOR and DURAZZO there is still very little active shipping.

RAILWAYS

General

Since the last summary bad weather has restricted attacks on railway targets. Raids have however been carried out on all the main lines and several interruptions to traffic have been effected. It has also been possible to make some assessment of earlier attacks on the main supply routes. North of the area PISA-RIMINI all routes are believed to be open, but traffic has not been on a very large scale.

Details

(a) W. Coast Line. This may still be blocked N of CIVITAVECCHIA at ALBINIA where in an attack on the railway bridge on Dec 1 three direct hits were scored. Heavy attacks have also been made on CIVITAVECCHIA and on the CECINA and VADO river bridges South of LEGHORN, but it has not been possible to determine the results. The most active railway station on the line South of LEGHORN appears to be PIOMBINO. A possible explanation of this is that the Germans are loading some small craft at this harbour rather than at LEGHORN prior to sending them down to CIVITAVECCHIA.

(b) FLORENCE-ROME Line. Several attacks have been made on this line, but again weather has precluded satisfactory assessment of results. A heavy attack on AREZZO on 2 Dec is believed to have been very successful and probably interrupted through traffic for some time. ORTE, PONTASSIEVE and the bridge at ORBETELLO have also been raided, but it is probable that the line

.....is now once more....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

is now once more open throughout.

The by-pass line through PERUGIA and TERNI was attacked at TERNI on 9 Dec. Further raids on TERNI have had to be cancelled owing to the bad weather in this area.

(c) E. Coast Line. All lines were blocked at RIMINI in a highly successful attack on 27 Nov and were still shut on 1 Dec. The East coast line is almost certainly still closed at GIULIANOVA as a result of a very heavy attack by medium bombers on 9 Dec which succeeded in scoring direct hits on the rail and road bridges.

Northern Junctions MILAN alone shows any great activity at the present time. PR of GENOA has revealed only a small turn-over of traffic while at BOLOGNA through working is still restricted by the extensive damage in the station and marshalling yard area..

On the BRENNER route it is reported that traffic continues at a regular rate of some 16-20 trains per day each way. This represents about 25% only of the normal BRENNER peace time working capacity. Nevertheless if even this low rate can be maintained the BRENNER route alone should be adequate to meet the daily requirements of the German forces in ITALY. At the same time coal traffic through SWITZERLAND is being developed. It is reported that the Swiss have now agreed to let 16 coal trains a day pass through from GERMANY to ITALY, and the brisk traffic at MILAN suggests that some traffic is now coming through from CHIASSO. Northbound traffic via CHIASSO is still on a comparatively small scale, and is probably engaged on the removal of captured war material from ITALY.

3. BALKANS

(a) GREECE

During the first days of Dec, German motorised columns from KHARDITSA operating some 30 Kms to the West captured and burned a number of mountain villages. Garrison duties in KHARDITSA have been taken over by troops of Ralli's Quisling government. EDES is reported to be in control of the region JANNINA - METSOVO which was until its departure the responsibility of 1 Mtn Div based on JANNINA. It is not clear from this report if the towns are in EDES hands, but this is unlikely.

(b) YUGOSLAVIA

Partisans under Major Apostolski are reported to be in control between the towns of SKOPLJE, TETOVO, DEBAR and PRILEP. The town of KICEVO was captured by this force on 2 Dec.

The Germans have made determined efforts to secure their line of communications between MONTENEGRO and Southern SERBIA. German forces from SJENICA at the end of November attacked and occupied the town of PRIJEPOLJE and later captured PLJEVLJA. The possession of PLJEVLJA will considerably facilitate movement from NOVI PAZAR - SJENICA to NIKSIC KOTAR and North South movement to and from ALBANIA. At the same time reports of troop movements from MOSTAR to the East have been received. Elements of Prinz Eugen Mtn Div were reported to be concentrating at NEVESINJE 20 Kms to the East of MOSTAR preparatory to a drive on GACKO with the intention of clearing the GACKO - DUBROVNIK road. In fact the Germans are

.....driving into .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

driving into Eastern BOSNIA from both East and West.

On 5 Dec the Germans launched an attack from SINJ and IMOTSKI in the direction of LIVNO on the road which runs NE from SPLIT to join the main BANJA-LUKA SARAJEVO road at D. VAKUF. It is not clear which troops are taking part in these operations; the most likely would appear to be elements of 118 Lt.Div with H.Q. in IMOTSKI and 264 Inf Div based on DRNIS with a Regt in SINJ. It is worth recalling that at the end of November a similar operation was undertaken by a Battle Group consisting of 1 Bn 892 P.G. Regt less one coy (264 Inf Div), 11 Coy 741 Inf Regt, 114 Lt Div H.Q. KNIN, 1 Tp Lt. Inf Guns and 6 Tp 264 Arty Regt. The operation was under command 892 P.G. Regt and started from SINJ to which the Germans returned at the conclusion of operations. The present drive seems to be on a larger scale and the Germans have met with some success. LIVNO was captured on 6 Dec and occupied by 1000 men with 10 tanks. On the same day a similar force captured TOMISLAVGRAD. The Partisans were then massing for a counter attack, but further details are lacking.

To the North Partisans captured the town of CAZM. after a fierce battle lasting 36 hours, much booty was taken and heavy casualties inflicted on the mixed German and USTACHI garrison. A three day battle is reported to have taken place between Partisans and elements of the SS Nordland Div between the towns of GLINA and PETRINJA during which the Germans were driven back towards SISAK. A bridge over the river was damaged by the Partisans.

A new German offensive from KARLOVAC and OGULIN in the direction of BIHAC is reported; details are lacking but it can be presumed that troops taking part belong to 901 P.G. Regt, an independent Regt which is reported to have some French tanks.

(c) DALMATIAN ISLANDS

The situation on the Islands has undergone considerable improvement in the last few days. The long awaited attack on BRAC, KORCULA and MLJET has not materialised, presumably because the forces earmarked for these operations, SS Mtn Div Prinz Eugen, 118 Lt Div and 264 Inf Div have had their hands full on the mainland. The Partisans continue to land troops on the coast to test the enemy strength and to harrass the already overworked German garrisons. Landings by Partisans are reported between BIOGRAD and VODICE (North of SIBENIK) and near TROGIR. Other parties landed on the island of ZUT and KORNAT.

KRK and CHERSO are reported to be lightly held by the Germans. Reports of the German evacuation of KRK do not appear to be founded on fact; what may well have happened is that the original assault force has returned to the mainland leaving a garrison force behind. RAB, PAG and the smaller islands of OLIB, SILBA, IST and probably MOLAT are in Partisan hands together with the coastal strip NOVI to the south of GRIKVENICA to inclusive JABLANAC. ULJAN and PASMAN off ZARA are likewise reported to be occupied by the Partisans while an unconfirmed report states that the outer islands of DUGI, RAV. and IZ have been brought under Partisan control. Reports that ZARA has been evacuated by the German garrison can be discounted.

The SIBENIK Group presents a rather more confused picture; it is believed that with the possible exception of ZIRJE they remain in enemy hands. DRVENIK - CIOVO and the smaller islands near SPLIT have been captured by the Germans thus ensuring the sea passage to SPLIT.

.....SOLTA, BRAC,.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

SOLTA, BRAC, HVAR, KORCULA, VIS and MLJET remain in Partisan hands though the latter two are only lightly held. Partisan H.Q. appreciate that an attack will be launched on BRAC or KORCULA and possibly both in the near future. The respite offered by the German preoccupation elsewhere has been used by the Partisans to put their defences on a sounder footing. The PELJESAC peninsula together with the islands of SIPAN LOKUO and KOLECEP to the North of DUBROVNIK are occupied by German forces.

(d) COMMUNICATIONS

The railway between KNIN and BIHAC has been abandoned by theGermans owing to repeated sabotage by the Partisans. This is a single line railway of slight importance as a good road runs almost parallel to it for the entire length. The line FIUME-KARLOVAC-SISAK has been damaged in a number of places but is still being used by the Germans. Attacks by Partisans on the LJUBLJANA ZAGREB line and in particular at ZIDANI MOST have caused much delay in traffic; details are lacking. Other raids were made on NOVO MESTO and KOCEVJE, now held by the USTACHI.

(e) GERMAN ORDER OF BATTLE

V SS CORPS has now been identified with H.Q. at MOSTAR. This Corps presumably controls 181 Inf Div at DUBROVNIK, SS Mtn Prinz Eugen at MOSTAR and 118 Jaeger Div at LIVNO.

XV MTN CORPS

Has moved from BANJA LUKA and was variously reported to be going to SIBENIK and BIHAC. The latter would appear to be more suitable and latest reports point to this being its new H.Q. 371 Inf Div has been identified in operations in CROATIA between KARLOVAC and BIHAC.

A recent arrival is 901 P.G. Regt,believed to be an independent Regt and to have a number of French tanks,based on KARLOVAC.

1 Mtn Div which was based on JANINA has moved out of GREECE, its present location is unknown.

4. APPENDICES

At Appendix 'A' is a translation of captured German documents on the behaviour and treatment of prisoners of war. At Appendix 'B' is a translation of a captured document entitled "Combat Experience with British and American troops".

THIS PAGE IS DECLASSIFIED IAW EO 13526

APPENDIX "A"
to 15 ARMY GROUP INTELLIGENCE
SUMMARY No. 27 dated 14 Dec 43

BEHAVIOUR OF PRISONERS OF WAR

Two recently captured German documents pay tribute to the reticence of British and American Prisoners of War under interrogation and give proof of the value and effectiveness of thorough and regular instruction in the proper behaviour to be adopted by any soldier in the event of capture.

The second document underlines the value to the interrogator of all documents, including personal papers, and the importance therefore of destroying them at the earliest possible moment.

-o-O-o-

1. Extract from Special Order signed by Major General ZIEHLBERG, G.O.C. 65 Inf Div:-

"I have myself witnessed the interrogation of British soldiers who have received excellent training in security. Although threatened with the death penalty, they gave nothing away under interrogation. To all questions they replied simply, "My orders are to give only my name, rank and number", adding, "A German soldier in my position would not answer these questions either."

Thorough training must be given to our own soldiers in order to ensure the same attitude on their part."

2. 15 Pz Gren Div. Div HQ, 13.11.43

Subject: Handling of Prisoners of War

In the last few days there have been numerous cases of prisoners taken by forward troops being delivered to the PW collecting point minus all documents and personal belongings. According to the statements of the prisoners all these things - including paybooks were taken from them by troops immediately after their capture.

Apart from the fact that plundering of prisoners is unworthy of a German soldier, such conduct increases considerably the difficulties of interrogation and with it the procuring of important data for our own commanders and troops.

In consequence of the great reticence of British and American soldiers in their speech, the articles and papers which the prisoner has upon his person often provide the only opportunity for the interrogator to open up a conversation with the prisoner. Moreover a prisoner, who has had all his belongings taken from him, is as a rule obstinate, annoyed and still less disposed to talk than he would otherwise be. Further, almost all letters and papers provide details about a prisoner's unit, and are during interrogation an effective means of verifying and, where necessary, rectifying a prisoner's statements.

Troops will, therefore, be definitely instructed, that under no circumstances are any articles and especially papers to be removed from prisoners.

It is requested furthermore that before prisoners are transferred to the PW collecting point, they should be given a label on which the place and time of capture are briefly indicated.

For Div. Comd.

APPENDIX 'B'
to 15 ARMY GROUP INTELLIGENCE
SUMMARY NO.27 dated 14 Dec 43

COMBAT EXPERIENCE WITH BRITISH AND AMERICAN TROOPS

Generally speaking, the British are superior to us in three respects :

(1) Air superiority

(2) Superiority in material

(3) Superiority in naval units

On the other hand the German soldier feels superior in combat and especially in the quality of his weapons.

PARTLY MOTORISED UNITS

Our opponent makes use of very strong artillery. The English and Americans waste no ammunition, but proceed methodically so that when a target is recognised, it is brought under fire until it is wiped out. They take on one target after another. Therefore: camouflage and yet more camouflage, never let anything give one away; there must be no relaxation of watchfulness by day or by night (relief of sentries to be carried out with care). There must be no movement, even when the positions are not under fire. The enemy works continually with arty spotting aircraft and employs phosphorous and smoke bombs. The former will set fire to surrounding buildings and objects. Therefore prepare and occupy alternative positions. The enemy makes full use of well trained snipers. Arty fire makes a lot of noise, but its effect is not horizontal but in an upward direction (area covered by fragmentation up to 300-m). Our opponent has very careful observers and makes much use of air recce. He makes much use of flare shells, which burst in the air, spread out like a three fingered crown, giving off smoke and fall on the target. Even when there is no firing care must be taken.

Obstacles must be covered by fire by day and night (i.e. minefields, barbed wire etc.,). Put alarm signals into effect, organise units in depth, carry out immediate counter attacks (these are especially effective). The Americans are more nervous and on the alert than the English. Overconfidence and carelessness in our own troops must be discouraged. The enemy uses every available means. He drives his troops to the limit, if in this manner he can save blood and material. Make secure even the most difficult country. Every man must have his weapons to hand. Our opponent even dresses up in civilian clothes and tries to make prisoner. The equipment of his patrols (10-50 men) is very strong and good (rubber soles, a practical uniform with 25 pockets, 2 pistols and a machine pistol, silk maps).

TANKS

Appearance of the Gen Sherman and the Gen Lee. Note: The Sherman has a rounded shape, about equivalent in fighting value to the Mk IV Long, a Rolls Royce engine with a good exhaust and has rubber grips, so that it can overcome steep slopes. The Gen Lee with several turrets is inferior to the Mk IV in combat value. The Tiger and Panther are superior to all American and English tanks.

.....Up till now.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Up till now there has been no evidence of a strategical large scale use of tanks. Employment is in groups of 6 - 10. They do not advance alone but generally behind lorried infantry. In combat they do not advance alone, but support the troops as arty.

Use of tanks to obtain a rapid breakthrough or mobile employment have not up to now been observed.

AIR

Employment on a large scale of twin-engined American machines. Attacks in several waves of 20 - 24 machines. Aiming is poor. Troops must be trained to engage aircraft. The English use a machine which is similar to the Fieseler-Storch. Armoured underneath, it does not like the 20 mm AA shell. Deceive the enemy as long as possible as to the main line of resistance, use the heavy weapons only at short range, especially when all weapons can fire (LMG, Mortars etc.,). Do as much damage as possible to Recce troops, so that the enemy loses valuable information and suffers heavy losses. Build shelters for protection against arty for all personnel. Fire comes down mostly on reverse slopes, but sharp declines are not secure as his howitzers can cover a large box area. The American soldier does not know why he is fighting in Europe. For him the chief enemy is JAPAN. He is taken prisoner easily, is very talkative, but absolutely uncommunicative on military matters. German Ps.W. should give only their F.P.Ns. rank and home address. They should throw away their pay-book, defend themselves with "hands and feet, toes and fists". The English broadcast in clear the disclosures of German prisoners over the radio to all units. Culpable capture is a crime and a dishonour and entails a court-martial and the death penalty at the end of the war.

The English wireless set is small, light and easily transportable over long distances. W/T range up to 15 Kms. The German D.Apparatus on the other hand is heavy, its range is only 4 Kms and it can be easily D/F'd. It suffers from disturbances from other transmitters. Remove the transmitter further to the rear and use line from there to the command post. Do not call for arty support for every task (economy of munitions), use the heavier weapons (M.M.Gs. Hy Mortars A/Tk Guns, Inf guns). Bring the A/Tk guns into position at night, fire rapidly and pull out again.

In spite of the enemy's temporary superiority on the sea and in the air, great results can be achieved by brave hearts and clear heads.

1. ENEMY SITUATION

8 Army's advance along the Adriatic coast has continued to meet the most stubborn enemy resistance which reached a peak in the protracted and desperate defence of ORTONA. Reserves and reinforcements have been used unsparingly and often seemingly with recklessness in an attempt to block each successive break in this sector of the winter line. The counter-attacks of 90 P.G. Div have however proved a no less costly policy than the passive defence tactics followed by 65 Div and it in turn has had to withdraw its battered remnants behind a screen provided by 1 Para Div. The extent to which the enemy has been stretched is shown by the identifications of 3 Bn 6 Para Regt and elements of a Para Training Bn, snatched in haste from the ROME area to fill a gap NE of ORSOGNA. Even 65 Div has, pending the arrival of its relief, been called upon to take over a less active part of the line between ORSOGNA and GUARDIAGRELE. The enemy has shown much greater determination in defence in the past week than on any previous line, probably in the hope of wearing down our attack, preventing the conservation of a fresh mobile force capable of exploiting a break-through, and thus turning our attack into an expensive battle of attrition. Such a decision would have been dangerous had it not been backed by the assurance of the arrival of reinforcements. These have now arrived in the shape of 334 Inf Div, the first elements of which have been identified in the ORSOGNA area where according to prisoners they relieved elements of 65 Div about the 22 Dec. 334 has only recently completed its re-formation and we have as yet had no opportunity of testing its fighting efficiency. As an Inf Div however, it is unlikely to have received preferential treatment either in the matter of men or of equipment. According to its first prisoners, the division, apart from Regtl A.Tk Coys and the Recce Unit, is entirely horse-drawn.

After a period of some confusion 76 Corps Order of Battle is again assuming clearer lines. From the coast to approximately CANOSA we now have the bulk of 1 Para Div - only R.H.Q. and 3 Bn 4 Para Regt appear to remain in the ORSOGNA area; South of CANOSA to excl ORSOGNA is 26 Pz Div; South again from ORSOGNA to PENNAPIEDIMONTE is 65 Div, in process of relief by 334 Div, and with

.....3 and 4 Mtn Bns.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3 and 4 Mtn Bns covering the right flank down to the MAIELLA Massif. In reserve is 90 P.G. Div apparently engaged at the moment in preparing the enemy's next delaying position behind the FORO. Whether 334 has been surrendered by 14 Army in exchange for 65 Div or whether the latter will also remain as reserve for 76 Corps is not yet clear, but prisoners from 334 say they saw parts of 65 Div going North.

On 14 Corps front, apart from limited withdrawals after heavy fighting from the high ground North of MIGNANO, the enemy has continued to dig his toes in and to develop his defences behind the GARIGLIANO. Behind this stubborn defensive front reliefs have been in progress. Repeated reports of the movement of a mountain formation into Central ITALY have been substantiated by the appearance of 5 Mtn Div. Both of its Inf Regts - 85 and 100.- have now been identified in the line between the 34 and 26 Northings. From these locations it looks as though 5 Mtn is to take over the greater part of 44 Div's sector as well as part of 305's. 305 is thus left free to extend its front Northward to cover the RIVISONDOLI - SULMONA road after the transfer of 1 Para Div to the Adriatic coast, while 44 Div sidesteps South to relieve 29 P.G. Div. The move is a reasonable one, since it gives 5 Mtn Div a sector suitable to its character and makes possible the withdrawal of a further motorised division into mobile reserve. 14 Corps will therefore be left with five divisions and a regt group of Hermann GOERING in the line and one and a half divisions in reserve, unless 29 P.G. Div is to be taken away in exchange for 5 Mtn.

When its reshuffle is complete 10 Army will therefore have a total of eight and a half divisions in the line with two and a half in reserve, i.e. 90 P.G. on 76 Corps front and 29 P.G. plus half Hermann GOERING on 14 Corps front.

In reserve at longer notice is 3 P.G. Div, still in the area of ROME and believed, together with the elements of 2 Para Div which did not accompany the latter to RUSSIA and possibly drafts for the planned new Para Div, to be under command XI Fliegerkorps. There is some evidence that XI Fliegerkorps may also include at least elements of an L of C Division under its command. A recent Italian report mentions the arrival of low category reserve troops in the area CIVITA CASTELLANA and these may be connected with the reported departure of 23 trains of Slovak troops from BREST-LITOVSK with destination ITALY. Neither report however suggests that the new arrivals will be used on more active tasks than guard duties and internal security.

In Northern ITALY, apart from the departure South of 334 Inf Div already mentioned, no changes in the enemy's strength and dispositions have been reported. The diminishing strength of 14 Army thus amounts to six divisions besides the two brigades, DOEHLA and SS REICHFUEHRER, the latter in process of expansion to Divisional stature, and possibly elements of another division in ISTRIA: an equivalent all told of seven and a half divisions. This diminution may be made up if, as seems possible, 65 Inf Div takes the place of 334 Div when its relief is completed.

Dispositions in 14 Army are believed to be as follows:

.....LIGURIA Area .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

LIGURIA Area (87 Corps)	ACQUI
356 Inf Div	SPEZIA-LECHORN
UPPER ITALY	
22 GAF Field Div	BRESCIA
Mountain Brigade DOEHLA	BOLZANO
188 Reserve Mountain Div	BELLUNO
ISTRIA & SLOVENIA	
71 Inf Div	
162 Inf Div	
? elements 88 Inf Div	
RIMINI - PIOMBINO	
SS Bde Reichfuehrer (expanding to Div)	LEGHORN
Unidentified Div forming	RIMINI

It is to be noted that, from captured documents, it appears that 51 Mountain Corps, G.O.C. Gen FEURSTEIN, is commanding in Central ITALY and a General WITTHOEFT is commanding rear area in Upper ITALY; these two commands presumably administer the divisions given above except for the Istrian divisions but it is not entirely clear which divisions are under which command.

2. ENEMY SUPPLIES AND COMMUNICATIONS

General

The enemy may count himself fortunate that operations on the Italian mainland started in the autumn, since despite ample protection from the winter weather we have been able to inflict serious damage on his rail and sea communications, imposing interruptions and a degree of dislocation which, although as yet insufficiently sustained to cause him vital harm, have undoubtedly brought about a critical situation at times, and have created something of a "hand to mouth" supply situation.

There is much evidence that sabotage both organised and otherwise has lately been on the increase and saboteurs have made most useful attacks on railways and caused delays at times when we have been unable to strike owing to bad weather.

At sea the enemy has continued to rely mainly on small craft moving down the coast, protected by extensive minefields; although in the Adriatic naval forces have had some success against ASVs between ANCONA and BENEDETTO. Air attacks on ports have however succeeded in restricting port operations and reducing port capacities.

In general it may be said that the enemy has been forced to spread his effort. Instead of being able to concentrate solely on the use of one or two railways which would meet his total requirements he has been forced to distribute the work between road, rail and sea; with consequent dispersion of effort and increased use of equipment. Nor is this the sole effect of our efforts. The enemy is known to be short of MT, and the

....constant rail.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

constant rail interruptions must keep an amount of much needed MT busy on long distance road lifts. That this is a real handicap to the enemy has been clearly demonstrated by his persistent use of railways wherever possible even right into the forward areas.

RAIL SITUATION

A carefully planned assault on the enemy's entire rail network during the past fortnight has been largely frustrated by weather. The greatest success has been obtained on the frontier areas, and it has been possible to attack all the main lines into ITALY with the exception of the MONT CENIS and the Swiss routes at least once. The BRENNER has been bombed on three separate occasions, twice at INNSBRUCK, twice at BOLZANO and once at AVISIO South of BOLZANO. Results have been very satisfactory on all occasions and photographs show that the greatest dislocation has been caused on the INNSBRUCK-BOLZANO sector. It is thought that these attacks have probably reduced BRENNER traffic even below the small total of 15-20 trains per day reported in Summary No. 27.

On the Franco-Italian coast line, considerable success has been achieved. Here attacks have been directed on to specific targets such as bridges and the ANTHEOR VIADUCT. An attack on the VAR bridge, West of NICE on 18 Dec was in particular very successful and probably caused interference to traffic which may not yet have been fully overcome. The dislocation will have been aggravated by further attacks on IMPERIA on 23 Dec and a successful raid on the RECCO Viaduct near GENOA on 27 Dec. It is likely that there has been very little through traffic between MARSEILLES and GENOA since about 18 Dec. These attacks, however, though useful in impeding local movements of forces between FRANCE and ITALY cannot be accounted of such value as the raids on the BRENNER which is the main supply route from GERMANY.

The TARVISIO line which is the second important supply route into ITALY has also been attacked near the Austro-Italian frontier at the DOGNA Viaduct. It is doubtful however whether this raid effected more than a temporary interruption to traffic.

In the Central Italian area weather has interfered on a serious scale with operations. While attacks on the BOLOGNA-FLORENCE line have been scheduled on seven occasions, it has only been possible to attack on two occasions. The most satisfactory day was Dec 19 when a successful attack was made on the FLORENCE-ROME line at AREZZO and three good raids were carried out on the TERNI by-pass at PERUGIA, FOLIGNO and TERNI. These raids undoubtedly caused serious, if temporary, dislocation on this important supply route and may have had the additional effect of causing part of 334 Division to make the last portion of its journey from the North by road. Since Dec 19 it has been possible to hit the central network on only one occasion, viz Dec 26 when the twin junctions of PISTOIA and PRATO were raided.

Italian sources have indicated that the EMPOLI-SIENA line is being extensively used by the enemy and this was attacked on 27 Dec at POGGIBONSI but results are not thought to be good.

On the West coast line a fairly successful attack was carried out on CECINA, South of PISA on 24 Dec.

.....Attacks on the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Attacks on the E Coast line have been confined to fighter-bomber attacks on traffic in the area South of ANCONA. Italian sources confirm that the railway bridge over the TORDINO near GIULIANOVA was destroyed on 10 Dec and is now being repaired. As a result SAN BENEDETTO or PORTO D'ASCOLI is now the railhead. All stores, munitions and troops proceed from there by road. Tanks are all unloaded at SAN BENEDETTO.

To sum up, appreciable dislocation has been caused on the BRENNER line on three occasions, but this route is probably open by now. The Franco-Italian coast line, if it is open at all, is working only on a very restricted scale. All other lines are probably open, although satisfactory earlier dislocation was caused to the central network at a period when 334 Div and possibly elements of 5 Mtn Div were moving down to the front.

SHIPPING

General

During the past two weeks there has been no appreciable change in the shipping situation on either the Italian East or West coasts. Along the Dalmatian coast the period has been marked by enemy operations against the islands between SPLIT and DUBROVNIK.

Details

(a) Italian West Coast

CIVITAVECCHIA is still thought to remain the chief unloading point for supplies destined for the German 10th Army. Small ships undoubtedly continue to proceed South to CIVITAVECCHIA from northern ports by way of LEGHORN, PIOMBINO and SAN STEFANO. Air attacks on CIVITAVECCHIA have been continued: during the past two weeks at least 6 fighter-bomber raids were made on this port. Apparently our air effort, apart from damage to ships and port facilities, has forced the enemy to disperse his shipping to some extent as a small number of active landing craft have again been observed at NETTUNO and ANZIO south of CIVITAVECCHIA.

(b) Italian East Coast

Not much shipping activity has been observed in the area from ANCONA south. However it is believed that at least some supplies for 10th Army are brought in to ANCONA and SAN BENEDETTO, and possibly GIULIANOVA. On 15 Dec a coaster was attacked and probably destroyed by our surface craft between ANCONA and BENEDETTO and occasionally small vessels have been sighted and attacked by our aircraft. According to a civilian report, believed to be reliable, a small number of schooners are active between ANCONA and BENEDETTO; cargoes are stated to be chiefly rations, but ammunition and fuel are probably also carried.

(c) Dalmatian Coast

On 22 Dec the enemy landed on the island of KORCULA from the PELJESAC Peninsula. This attack was resisted by the Partisans but they have been forced to evacuate the island. This is undoubtedly the first step in the enemy's plan to clean up the islands between SPLIT and DUBROVNIK in order to permit the movement of coastal shipping from the Northern Adriatic to

.....Southern YUGOSLAVIA.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Southern YUGOSLAVIA and ALBANIA. If successful, the enemy will thus relieve, at least to some extent, his currently precarious overland L of C situation in the BALKANS.

The cruiser DALMATIA in moving South from the Northern Adriatic, very probably to support the TORCULA attack, was intercepted and attacked by Allied aircraft just south of PASMAN Island on 19 Dec. Near misses were obtained and she evidently immediately returned north, for shortly thereafter she was reported aground between ZARA and POLA off the island of SILBA; on the night of 21/22 Dec she was successfully attacked by our motor torpedo boats and may be presumed a total loss.

In addition to fighter-bomber sweeps along the Dalmatian coast, ZARA, SIBENIK, and SPLIT have been bombed. A heavy raid on ZARA on 16 Dec is believed to have done considerable damage to the port and to have sunk a good size merchant ship. Our aircraft and surface vessels have also damaged and sunk a number of small ships between ZARA and the PELJESAC Peninsula.

ZARA continues to be the most active port South of POLA, and for the most part only a few small coasters appear to be proceeding any further South. South of the PELJESAC Peninsula between DUBROVNIK and VALONA no appreciable activity has been reported. However, there is some indication from Partisan reports of small ships moving Northward to DUBROVNIK, possibly drawn from heretofore inactive shipping, and destined for use in the SPLIT-DUBROVNIK area.

In general the shipping situation along the Dalmatian coast is not satisfactory from the enemy point of view. However, it is believed that an effort will be made to remedy the present situation in view of the importance of this L of C Also indicative of this are the present inland operations and evidence that escort ships and coasters are being fitted out in the TRIESTE area.

3. BALKANS

ALBANIA

Only local actions have been undertaken by the Germans together with the BALLKOMBETAR against the Partisans. POGRADEC near Lake OCHRID was captured by a mixed German BALLKOMBETAR formation during early Dec and the KUKES area in NE ALBANIA is now under German control. To the South of VALONA the Germans are reported to have started a two pronged drive on BRATAJ on 14 Dec, one along the DUKATI valley to TERBACI, the other along the SHUSHICE valley; TERBACI is reported to have fallen to the Germans on Dec 22.

GREECE

The quarrel between ELAS and EDES is still not healed and clashes are reported between them at various places, but the respective leaders show a more tractable frame of mind and feeling is gradually dying down. German propaganda, by setting these two parties at each other's throat, has reaped a good reward and German troops have been involved in only minor clashes and police duties.

.....In a recent.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On the night 18/19 Dec Allied light coastal forces met a Siebel ferry escorted by 4 R boats between the Island of BRAC and the mainland near OMIS. The Allied MTB outgunned by the heavily armed ferry broke off the gun duel and swinging around succeeded in placing a torpedo into the ferry. This vessel, laden with petrol and troops burst into flames causing the escorting R boats who had dashed to the assistance to catch fire. Two sank, one made off burning and the fourth was not seen. It is unlikely that many, if any, of the enemy troops survived the fierce fire of the petrol. On the same night in the same locality a 200 ft escort vessel was torpedoed and is presumed to have sunk.

The M/V "JADRO" of SPLIT was captured off HVAR by three Partisan armed fishing boats. The JADRO was manned by Ustachi and armed with four MGs and a 20 mm gun on her stern; she had about 150 tons of food in her holds. On the night 19/20 Dec two small enemy schooners were captured by Allied MTB off SPLIT, twelve German naval personnel were captured.

AIR

Bad weather again interfered with operations and most projected strikes on targets in CROATIA and BOSNIA were cancelled. MOSTAR airfield was attacked and 3 a/c damaged on the ground.

Many successful attacks were made on harbours and shipping, most important being an attack on ZARA on 16 Dec by Mitchells; two ships were hit one exploding and a direct hit was reported on a 460 ft vessel anchored off the peninsula. Fires were started in SIBENIK harbour on the same day and numerous small vessels were attacked along the Dalmatian coast.

APPENDIX 'A' - Order of Battle - JUGOSLAVIA and ALBANIA

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In a recent drive in ACHAIA and ARCADIA the Germans rounded up the population at KALAVRYTA and shot 1,470 males over the age of 12 as retaliation for the alleged shooting by ELAS of German P.Ws. Women and children were collected and driven into the school which was then set on fire but they are reported to have escaped by way of the windows. Many villages were burned to the ground including VISKOKA, MEGASPILAION, MAZI and MAZEIKA.

JUGOSLAVIA

The main item of news concerns the German ops against the Dalmatian Islands. The attack on KORCULA commenced during the early morning of 22 Dec with landings at RACISTE and KORCULA town and progressed favourably to the Germans because of weather conditions which prevented the intervention of Allied air support from Italian bases. Operations were brought to an end on 24 Dec by the German occupation of the whole island. It appears that the more seasoned Partisan troops had been evacuated to the mainland and some infiltrated on to PELJESAC before the operation started with the intention of harrassing the German L ofC so that the defence of the island was left to young and less experienced troops.

Elsewhere the situation on the Islands has changed but little. PASMAN is now known to be in enemy hands and lightly garrisoned by a mixed force of Germans and Ustachi. It is not clear which side, if any, is in possession of PAG; reports indicate that a small German garrison is still on the Southern end but it is not known if the Partisans have any troops to the North. DUGI has been occupied by the Partisans but though the enemy has evacuated RAVA no reports of Partisan landings have been received. The Island of IZ is also believed to be a no mans land.

The German offensive in EAST BOSNIA and the SANJAK has petered out. German columns from PLJEVLJA (1 Mtn Div and 2 Brandenburg Regt) moving West together with a push from TUZLA (187 Res Div) to the S.W. and other columns from SARAJEVO (369 Germano-Croat Div), and GACKO (SS Prinz Eugen) moving East were fiercely attacked by Partisans who inflicted serious casualties on the enemy. The Germans succeeded in breaking through, burning villages and looting the countryside in their advance, but if their intention was to bring the Partisans to a pitched battle they failed as partisan activities cropped up in the rear and attacks were made on the enemy columns as soon as they had passed. A striking Partisan success was the capture of BIJELO POLJE, while fighting is reported to be taking place on the outskirts of TUZLA.

In SLAVONIA the Partisans scored important successes. Partisans attacked DJAKOVO on 14 Dec and piercing the defences occupied the railway station where they captured valuable supplies of flour and corn. This town was formerly the H.Q. of 45 Res Gren Regt of 187 Res Div, but since the latter moved south to TUZLA to take part in the East BOSNIA offensive, it is not known whether 45 Res Gren Regt has been replaced by other troops. Political prisoners were liberated and severe casualties inflicted on the enemy before the Partisans were forced to withdraw. The German garrison at VINKOVCI was annihilated and a similar fate befell the garrison at VUCEVCI. The former town is an important junction on the main ZAGREB-BELGRADE railway with connections leading to HUNGARY. No reports have so far been received but it is presumed that the railway was damaged before the withdrawal. GORJANI, a

.....fortified village.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

fortified village between DJAKOVO and MOJICE, was captured by Partisans on 17 Dec.

The German drive in CROATIA from KARLOVAC to BIHAC seems to have come to an end with the arrival of the German 371 Inf at BIHAC; fighting however has broken out further to the North. Partisans are reported to have attacked GLINA and to have retaken a number of places including VONJIC, VRGIN-MOST and TOPUSKO. Fighting continues to be of a hit and run character with the Partisans giving a good account of themselves.

BANJA LUKA, for long a comparatively quiet town finaly held by the enemy, was brought a little nearer to the war about the middle of Dec when the Partisans captured KOLA some 10 Kms to the S.W. in a surprise attack. About 30 Germans were killed and 62 taken prisoner; much war material fell into Partisan hands.

It is now claimed that when the Partisans entered KOCEVJE, 40 Kms N.E. of FIUME, on 10 Dec they killed more than 100 Germans. Further heavy casualties were inflicted on German reinforcements columns and important textile factories and mining machinery were destroyed before they were forced to evacuate the town in face of strong German reinforcements.

Confused reports continue to arrive about the fighting in the LIVNO area but all reports agree on one point in that the fighting is described as fierce. It seems that the Partisans have frustrated all German attempts to advance to the N.E. A British L.O. reports that the enemy is expected to make another drive to clear the road SPLIT-LIVNO, BANJA LUKA, this time from the latter town with a drive to the S.E. In this connection it is perhaps of interest that another enemy column from TRAVNIK entered the town of JAJCE, not, however, before the provisional Government had been evacuated.

In the welter of other Partisan activities the operation in the PODGORICA and CETINJE area, North of Lake SCUTARI, is perhaps the most important: some 200 Germans and 130 Chetniks were killed and booty taken.

COMMUNICATIONS

The Partisans have continued to harass the German supply routes with considerable success.

Reports from British L.O. states that the Rly between DUGO SELO, near ZAGREB, and POPOVACA on the main ZAGREB-BELGRADE line has been destroyed, the same source reports the line KARLOVAC-ZAGREB to be destroyed in a number of places and is not being used by the enemy. Further attacks were made on the OSIJEK-BELGRADE railway causing some damage and delay and the line BROD-VINKOVCI was cut in 8 places. Partisan H.Q. report that the roads ZVORNIK-TUZLA and ZVORNIC-VLASENICE are under Partisan fire.

NAVAL

The old cruiser DALMATIA, formerly the Austrian NIOBE, has reached the end of a career which started in 1895 off the Island of SILBA where she beached after receiving a near miss from Allied a/c on 19 Dec. On 21 Dec 4 torpedos struck her and she is reported to have broken up. She is now a total loss.

Appendix 'A' to
15 Army Group Intelligence
Summary No.28 dated 30 Dec 43

GERMAN ORDER OF BATTLE IN JUGOSLAVIA AND ALBANIA

The supreme command in the Balkans is exercised by Field Marshall von WEICHS, G.O.C. Army Group 'F'. H.Q. BELGRADE.

JUGOSLAVIA and ALBANIA come under command 2 Pz Army. G.O.C. Gen Lothar von RENDULIC. H.Q. BANJA LUKA.

Five Corps H.Qs have been definitely identified :

69 Reserve Corps in SLAVONIA. H.Q. VUKOVAR.
G.O.C. Lt.Gen Erick DENECKE

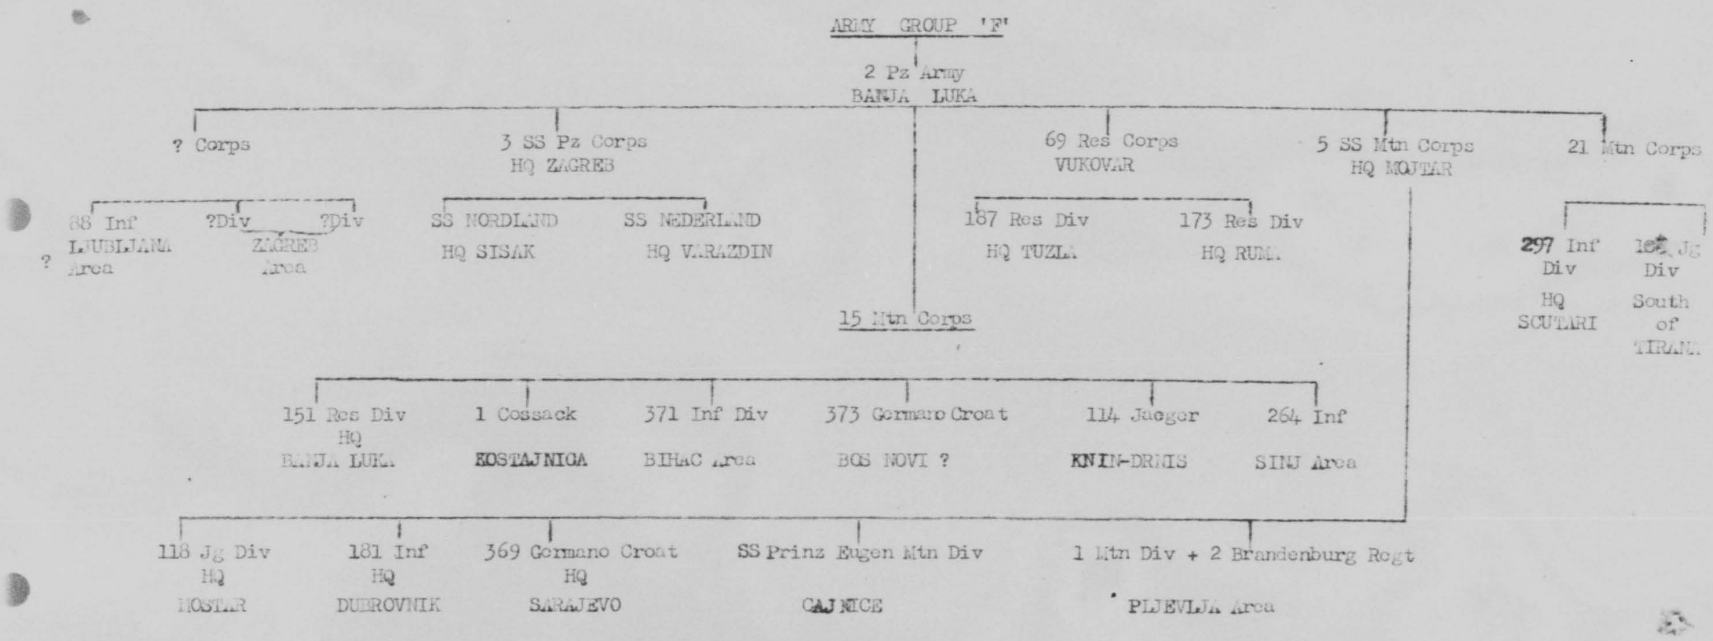
15 Mountain Corps in CROATIA. H.Q. BIHAC
G.O.C. Gen Rudolf LÜTERS

5 (SS) Mountain Corps in BOSNIA. H.Q. MOSTAR

21 Mountain Corps in ALBANIA. H.Q. TIRANA
G.O.C. Arty Gen BADER

3 SS Pz Corps in North Eastern Croatia and Slavonia.
H.Q. ZAGREB.
G.O.C. Lt Gen Felix STEINER ?

This latter Corps controls the SS P.G. Divs NORDLAND and NEDERLAND and has never been engaged in serious operations, it seems that it came to the area to rest and reform after serious losses in RUSSIA though it has of course performed a most valuable function as a garrison. The fact that two new divisions are reported to have arrived in the ZAGREB area recently from GERMANY suggests that the SS formations may be sufficiently reformed to be relieved. We may therefore probably expect another Corps H.Q. to take over command of this area and the two new divisions. It is not clear whether it will also command 88 and 371 Infantry Divisions; the former is now operating in the 15 Mtn Corps area and the continued presence of 88 Inf Div is now rather uncertain.



The chain of command would appear to be as per attached diagram, locations of H.Qs. must not be taken for granted as a number of their formations are now on the move. 373 Germano-Croat has moved out of BIHAC in a North Easterly direction and has been reported in the area BOS-NOVI. 1 Cossack Division is moving in a westerly direction and the SS Mountain Division Prinz Eugen is reported to be moving East to take control of the area South of SARAJEVO. There are some smaller units such as the 901 P.G. Regt an independent regt believed to have some French tks at KARLOVAC and 14 Police Regt at OGULIN, the latter has not been mentioned for some time and must be regarded as dubious identification. 2 Brandenburg Regt is believed to be working with 1 Mtn Div.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in 76 Corps after the parachutists, but it has had little success so far in its attempt to stabilize the situation North of VENAFRO. 305 Div, which links up with 76 Corps has done little so far and 577 Inf Regt, the only divisional infantry with which we have had contact, appears to have had little training and to have an undue proportion of younger men. A bayonet charge on 4 Nov broke up a whole Coy, taking over thirty prisoners.

The direct route to ROME is therefore blocked by a force of five divisions holding between them a front of about 35 miles. An average of seven miles is not excessive for a divisional front in mountainous country even if three of the divisions are below strength and two are comparatively untried and less well equipped. In reserve are two further divisions, H.G. and 29 P.G. Divs, both of which have probably been withdrawn to refit but which could be used in emergency. In ROME itself and its neighbourhood and also certainly guarding the coast is 2 Para Div with HIMMLER'S Own Brigade possibly supporting them. Unless the situation becomes desperate or unless all fear of an Allied landing is excluded these forces will probably not be withdrawn from their present stations.

2. ENEMY DEFENCES - DEVELOPMENT OF THE SANGRO LINE

A Ph.R. of 2 Nov has shown a marked increase in the defences constructed on the high ground to the North and South of RIVISONDOLI (H.0563). The chief centre of activity is apparently on the spur to the North of the road junction at H.0561. Considerable fortifications have appeared on both the Eastern and Southern slopes and all overlook the low ground to the South of RIVISONDOLI where the roads run across the low ground or over the foothills before they enter the bottlenecks formed by the mountains.

The defences consist chiefly of trenches and emplacements for A Tk and automatic weapons together with infantry positions. An A Tk ditch has been dug from H.046660 to the foot of a hill at H.045669. Possibly the ultimate intention is to connect this to the existing ditch at H.046668 since infantry positions have already been dug on the hillside along which both A Tk ditches run. Activity has also been observed on the heights West of ROCCARASSO (H.0760) although only diggings have so far been reported. Further South in the area North of CASTEL di SANGRO (H.0953) it is thought that new minefields have been laid astride the road at H.088556, one consisting of seven rows extending Northwest from the road to a stream at the bottom of the valley and another of six rows running Southeast from the road to a hedge which marks the beginning of rough country and high ground.

South of RIONERO (H.1145) a new strongpoint has been constructed astride the road. This is suspected to consist of MG positions and road blocks and it is unlikely that it constitutes part of the main defence line, but rather a rearguard position such as we have encountered along the whole line of our advance.

3. ENEMY SUPPLIES AND COMMUNICATIONS

Shipping

(a) Italian West Coast

There is little significant change in the position. Traffic is still on a moderate scale at PIOMBINO and CIVITAVECCHIA, the rather high turnover of the former port being partly explained by traffic to ELBA, in addition to the normal coastal shipping from

.....,GENOA and LEGHORN.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

GENOA and LEGHORN. A very small number of L.C. is putting in at S. STEFANO in addition to some E Boats. All the other harbours on the West coast South of LEGHORN are completely inactive. The small port of ANZIO near NETTUNO sustained very heavy damage in a raid on 31 Oct and is likely to be unserviceable for some time to come.

(b) Italian East Coast

Despite the fact that the East Coast Railway line is interrupted at several points South of ANCONA, there is still no sign that the enemy is developing the sea traffic here as a substitute for the land routes. No intake has been seen at East coast harbours in the last week, and it is clear that the enemy feels the dangers of sea traffic are at least as great if not greater than those of the main rail routes.

ANCONA is a good example of the vulnerability of the East coast ports at the present time. This port it will be recalled is the only important undamolished harbour on the East coast South of VENICE. It was the object of a heavy attack on 2 Oct. As a result a Raleolo-class cruiser, one of the latest Italian type, was sunk and extensive damage was caused to quayside installations. This is hardly likely to encourage the Germans to develop shipping traffic in this area. ANCONA is a port of some importance, should it ever be necessary to develop East coast shipping on a large scale, and it is undesirable to allow it to sink into complete stagnation. Despite the absence of confirmatory evidence it is still likely that some traffic will develop at least between VENICE and ANCONA though it may well be on a small scale.

(c) Dalmatian Shipping

There has been very little to report on shipping in this area in the past week. DURAZZO and KOTOR have shown no activity at all, and it is doubtful whether a 3,500 MV reported at SPLIT by the Air Force on 7 Nov was a recent arrival at the port. 2 Siebels are known to have called at DUBROVNIK and these may be proceeding South out of the Adriatic to Aegean waters with a view to mounting an operation against LEROS or other of the Greek islands. At ZARA too there has also been a small turnover of Siebels, some of which have then proceeded South to SIBENIK, thus lending support to the view that their eventual destination will be the Aegean.

Railways

It is reported that the entire Italian railway system is now under German control and is being directed by the Wehrmachtsverkehrsdirektion at BOLOGNA. The lines directly operated by German personnel are stated to include all the main North-South and West-East routes in Northern ITALY. In central ITALY the Germans operate the main line BOLOGNA-FLORENCE-ROME. The BOLOGNA-ANCONA line is stated to be still operated by Italians under German direction. Early in the year, German railwaymen were being trained for service in ITALY, consequently the Germans were probably well prepared for this eventuality; even so the number of men required to staff the German operated lines would be very large and it must be presumed that all the lower grades of employees are still Italian. In RUSSIA the Hauptverkersdirektion DNIEPROPETROVSK employed 5000 Germans and 20,000 Russians: a similar situation presumably prevails in ITALY.

The general state of the railways is unchanged. The traffic over the BRENNER and TREVISO routes into ITALY continues to be heavy; on 13 October a total of 15 trains arrived by the latter route, and this was said to be a typical day's activity. An unconfirmed report states that after six weeks work the MT CENIS tunnel was partially cleared by 20 October and that a single line was operating.

.....A concensus .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

A concensus of evidence indicates that up to 4 October there had been no general resumption of traffic to ITALY via the Swiss routes, while traffic on the VENTIMIGLIA route is stated to consist mostly of reinforcements. In Northern ITALY rail activity does not appear to be on a great scale. A considerable increase which was reported about early October is now known to have probably been accounted for by collecting empty wagons in northern junctions instead of returning them to GERMANY via SWITZERLAND as is the normal practice. A thousand flats, presumably for the transport of guns, tanks etc, were sent from GERMANY to ITALY via SWITZERLAND in early October. In Central ITALY repair work continues on the bridges destroyed on the LEGHORN-ROME, FLORENCE-ROME lines and has been started on the ANCONA-PESCARA line. Repairs to the West coast line should be nearing completion but elsewhere appear less advanced. Since these three main lines have been cut much traffic is certain to have been diverted to the central line PERUGIA-TERNI and FOLIGNO-TERNI and thence South either to join the main VENTIMIGLIA-ROME line again South of ORTE, or via AQUILA to the railheads at SULMONA and CASTEL di SANGRO. AQUILA and TERNI have both been attacked in the last week.

The extent to which the Germans are endeavouring to economise in the use of MT is shown by the following report that, at any rate up to 25 October, the Germans were running two trains daily from CASTEL di SANGRO as far forward as CAROVILLI.

Despite handicaps and longer MT lift occasioned by the blocking of lines North of ROME and on the East coast, it seems that C in C South has not been forced to resort greatly to coastal shipping. The line interruptions should not seriously impede the build up of stocks in central ITALY while the use of MT columns and the central line through TERNI should be more than adequate for the daily supply and maintenance of the forward troops. In general the railway system both into and within ITALY is operating adequately to meet German requirements.

M.S.AIREY,

-o-o-o-p-o-o-o-

1. ENEMY SITUATION

Operations all along the front have been on only a small scale this week, and the enemy has taken the opportunity to get his troops straightened out into more or less the positions he wants. The two main readjustments referred to last week as in progress have been completed or all but completed; 65 Div has been relieved by 334 Div (146 Regt was the last to go), 90 P.G. has been withdrawn into 76 Corps reserve and on 14 Corps front 44 Div has sidestepped into 29 P.G. Div's sector leaving its own former sector to 5 Mtn Div. The centre of the line is thinly held and it is clear that 305 Div has considerably extended its front: in the North 334's sector only comes down as far as the MAIELLA Massif; in the South we know from a captured order that 100 Mtn Regt's Northern boundary is the 30 Northing and II and III Bns of 85 Mtn Regt have been identified South of the 30 Northing so that 5 Mtn Div's sector can scarcely extend further North than the 40 Northing. From here to the middle of the MAIELLA Massif is 45 kms as the crow flies but a glance at the map shows that the chamois would provide a better measure of the distance. And not only is this terrain most mountainous and desolate but from a strategic point of view it leads nowhere; the only two roads in the sector, starting from ALFEDENA and CASTEL DI SANGRO, lead either to the basin of the FUCINO or the high mountains round the GRAN SASSO and both are eminently defensible.

In the North 76 Corps has at last got a reserve. 90 P.G. has been very severely handled but presumably can soon be made up again. 334 Div is up to strength; it has only six infantry bns indeed but this is now apparently normal, at least in ITALY. Where the new defence line is to be is not yet clear; the main body of 1 Para Div is behind the river ARIELLI at the moment with strong outposts forward. There is some digging activity reported behind the PESCARA but a line there would have the

....disadvantage...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

disadvantage of being overlooked by the higher ground South of the river and it is possible that a line behind the TAVO (or SALINE) will be chosen which does not have that weakness. The fact is that as long as 76 Corps can block the road to ROME through POPOLI it makes no difference to 14 Corps' position whether 76 stands North or South of PESCARA. The two Corps are now really fighting separate battles divided by the almost impassable mountain country in between defended by 305 division. Given this it would be an advantage for the enemy to start now to dig really formidable defences well in rear of his present position and trust to a stubborn defence of the ARIELLI, the FORO and the PESCARA to delay our approach until they are completed.

On 14 Corps front the development of the CASSINO line continues. From air photographs defences are visible on both sides of CASSINO itself in considerable depth and the line running North and South though the position is now much more clearly defined. The strongly defended part of the line starts West of S. ELIA in the area of L'OLIVELLA (G.8627) and continues down the West bank of the RAPIDO as far as its confluence with the GARIGLIANO and so to the sea. In the Northern sector of this line, along the slopes of Monte CAIRO, the defences are said by prisoners to include a large number of portable steel bunkers installed by the TODT Organisation. At the Southern end of the line 94 Div apparently has two regiments, 274 and 267, mainly engaged on guarding the coast.

It is not known whether 5 Mountain Div was a great success on the North Russian front but so far its performance has not been inspiring. It has not been engaged in any very large-scale operations but it has provided an unusually high number of deserters for a formation so largely German. Perhaps we shall find Austrians as ready to desert as the subject populations in future and even the Bavarian other ranks appear to be moved sometimes to desert from dislike of Prussian officers. It seems likely that many of the men have been storing up their dissatisfaction with the war for a long time, since no one would be so brave as to desert to the Russians, and are taking early opportunities to come over to an enemy who they think will treat them more kindly. Whatever the reason a satisfactory trickle is still coming in and the enemy too appears to be well aware of the tendency; in fact according to a recent prisoner the O.C. of 3 Coy 85 Mtn Regt, on the occasion of this Coy's first action, wound up his usual speech by saying "I know a lot of you would willingly desert. Well, if you are really determined, I can't do much to stop you".

In Northern ITALY there are indications that 14 Army may be receiving reinforcements. Certainly the garrison's in LIGURIA and the plain of LOMBARDY are very slender and the Germans might well consider a certain thickening up necessary. A variety of reports suggests a definite increase of troops, particularly in the BOLOGNA and FLORENCE areas where previously no formation had been definitely located and on the balance of evidence A.F.H.Q. consider that up to two divisions

....may be....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

may be concerned. It is possible that one of them is an unidentified division which was forming at LIEGE in mid October. This moved to CHEM and is now reported to have left for South Eastern FRANCE or Northern ITALY. Whatever the facts behind those reports it is very probable that the Germans should use the wide plains and good railway communications of Northern ITALY for forming and training new divisions or reforming old ones, whether or not those divisions are intended to fight in ITALY when formed.

2. ENEMY SUPPLIES AND COMMUNICATIONS

A. SHIPPING

There has been no appreciable change in the shipping situation along the Italian coasts since 29 Dec. Shipping at CIVITAVECCHIA appears to have fallen off a little. Landing craft continue active at ANZIO, undoubtedly to avoid a concentration of shipping at CIVITAVECCHIA, which continues to be subjected to air attack. On the East coast activity is still noted at ANCONA and SAN BENEDETTO though on a small scale.

On the Dalmation coast enemy operations against the islands in the DUBROVNIK area continue. On 31 Dec landings were made on KLJEN island, which the enemy quickly overran against very weak Partisan resistance. On 5 Jan the Eastern tip of HVAR island was shelled and small boats were observed standing off the shore. However, no landings were made, presumably because of heavy seas, but a renewed attempt is to be expected and may now be in progress.

Shipping in the SPLIT - DUBROVNIK area continues to increase, undoubtedly as a result of the island operations. Most of the ships are small coastal vessels, though a 5000 ton was reported as far South as the PELJESAC Peninsula. North of SPLIT the situation continues unchanged.

B. RAILWAYS - ITALY

Since the last summary a considerable degree of dislocation has been caused to the rail network of Central ITALY, which is however, beginning to recover by now owing to the respite granted by bad weather. The most successful air attacks of the week have been on RIMINI and against rail targets on the Franco - Italian frontier. RIMINI was attacked on 30 Dec with outstanding results. The marshalling yard has been rendered completely unserviceable for some time to come, and there are still no through lines at this junction, although repairs are in progress. On the frontier very successful attacks were again made on the VAR bridge (nr NICE) and at VENTIMIGLIA on Jan 2. Several direct hits were scored on bridges and there are unlikely to be any through lines for some days again.

On the West coast line, continued fighter - bomber attacks have been made on CIVITAVECCHIA and have succeeded in cutting the main line from CIVITAVECCHIA

....to ROME....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

to ROME. The line is still believed to be cut. This interruption is of considerable value in impeding the removal of supplies being unloaded at CIVITAVECCHIA from L.C. Further North on this line, P.R. reveals that the CECINA railway bridge (South of LECHORN) is still unserviceable as a result of the attack on 24 Dec. At PISA there are now through lines North to GENOA, but traffic to FLORENCE is probably still interrupted.

The central network is now open throughout although temporary interruptions have been caused at both PISTOIA and FOLIGNO since the last summary.

The East coast line, in addition to the interruption at RIMINI is still cut at GIULIANOVA where repairs to the railway bridge have not yet been completed.

In addition to the attacks discussed above, raids have also been made on FERRARA, PADUA and TURIN during the past week, all of which have produced temporary interruptions to traffic.

The overall picture presented by the Italian railway system may therefore be summed as follows. The Franco-Italian frontier line is cut for some time to come. All other frontier lines are open and probably working normally by now, and all junctions North of the general area PISA - RIMINI are open. In Central ITALY both the coastal lines are closed and railway bridges are damaged on both. The important inland supply lines from FLORENCE to ROME and the bypass line via PERUGIA and TERNI are however open.

C. RAILWAYS.-YUGOSLAVIA

From a study of the reports from Partisan and S.O.E. sources it has been possible to form a fairly accurate picture of the present situation on the Yugoslav railways. While some of the information below dates from the end of November, it is not thought that there has been any significant change in the position since then.

The main railway line in YUGOSLAVIA is the LJUBLJANA - ZAGREB - BELGRADE line along which the Orient Express used to travel in pre-war days. This is now the principal German supply route down which supplies coming down to LJUBLJANA from VIENNA are despatched. There are no interruptions of a permanent nature on this route but local hold-ups are constantly arising owing to Partisan activities. Thus in the 6 days 18 Dec - 23 Dec the line was cut in two places by mining and the destruction of a bridge near NOVO GRADISC..

From this line four branch lines run Southwards in the sector between ZAGREB and BELGRADE two of which we know to be extensively used by the Germans. The first is the SUNJA - BIHAC line which supplies enemy forces in the BIHAC area. BIHAC itself is thought to be an important railhead.

The other line runs from BROD to SARAJEVO thence down to MOSTAR reaching the Adriatic coast at DUBROVNIK.

....From SARAJEVO....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

From SARAJEVO there is a connection running East to the BELGRADE - SALONICA line at KRALJEVO. The BROD - DUBROVNIK line though nominally under German control is subject to recurrent interruptions from Partisans particularly in the coastal area between MOSTAR and DUBROVNIK.

The other two branch lines running South from the main LJUBLJANA - BELGRADE railway both go to KARLOVAC, one from a point just East of ZAGREB, the other from SISAK. These are probably not very extensively used. No traffic is able to proceed West from KARLOVAC owing to Partisan control of the railway and very little from KARLOVAC to OGULIN thence to FIUME owing to the local Partisan activity in that area.

The above are the principal railway lines operated by the Germans. The extent to which the Partisans have succeeded in dislocating the railway system of YUGOSLAVIA cannot however be fully appreciated without giving some details of the principal railway lines which are now denied to the Germans thanks to their activities. The most important of these is the KNIN - OGULIN line which runs parallel to the coast between SIBENIK and FIUME. Large stretches of this track have been torn up and it is very improbable that the enemy will ever again be able to use this route. Other lines which are no longer working owing to Partisan control of large sectors of the track are the KARLOVAC - LJUBLJANA, the ZAGREB - KOPRIVNICA, the BANJALUKA - BOSANSKI NOVI, the GACINCI - GSIJUK and the LJUBLJANA - TRIESTE routes. In addition the SISAK - KARLOVAC line if working at all can only be operated with very great difficulty.

On the lines which are operating, railheads have been established at various points, of which BIHAC is the most important. From these points supplies are carried by M.T. to the German forces in outlying districts. These troops located in coastal areas are however supplied by shipping proceeding South down the Dalmatian coast, a large proportion of which puts in at SIBENIK whence a local railway line operates as far inland as KNIN.

3. BALKANS

ALBANIA

There has been little activity of note in ALBANIA. The German drive on BERAT reported in Summary 28 does not appear to have been in any force and has petered out with the German capture of KUC, VUNO and DHERMI during the last days of December. Albanian Partisans clashed with Bulgarian troops and later with mixed German Balkenbetar formations on the S.E PLANINA between the towns of PRIZREN and TETOVO; some casualties were inflicted but reports indicate that fighting was on a minor scale. A split is reported between SKENDER MUCE, BALKAN leader in the DUKATI area about 25 Kms South of VALONA, and the Germans; he is stated to be willing to oppose the Germans and refrain from all aggressive action against the Partisans.

....GREECE....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

GREECE

Fighting is reported in the Mt VERIA area where a German force of about 7,000 men with some A.F.Vs attacked ELAS but was repulsed with heavy losses to the enemy; about 600 Germans were killed while ELAS lost 35 killed and 48 wounded. Another German column which attempted to reach KORFU from SLATISTA was attacked by ELAS and forced to turn back after 7 hours fighting. A slight improvement is to be noted in the EDES - ELAS quarrel but though they have refrained from attacking each other there is little doubt that relations are still strained.

YUGOSLAVIA

DALMATIAN ISLANDS

Reports indicate that HVAR and BRAC are expected to be attacked in the near future. The enemy has brought artillery across from the mainland to DRVENIK and has shelled the island of SOLTA while SUCURAJ on the eastern tip of HVAR was shelled from the mainland on 4 Jan; this may indicate that the Germans intend to make a simultaneous landing on SOLTA, BRAC and HVAR. PAG has been evacuated by the USTACHI garrison but no Partisan landings have been reported; IZ is now in Partisan hands together with ZUT and other islands in the SREDNJI Channel. The enemy have increased their patrol activity in the SILBANSKI Channel between SILBA and OLIB making the sea route to SENJ more hazardous for the Partisans. A German column which attempted to push down the coast from CRIKVENICA to BRIBER was repulsed with heavy losses to the enemy. Fighting on a reduced scale has taken place in East BOSNIA and the SANJAK; the Germans hold PRIJEPOLJE, PRIBOJ and PLJEVLJA with Partisans in BIJELO - POLJE, KOLASIN, BERANE and MOJKOVAC. A clash took place near PLJEVLJA in which the 3rd Bde of the Garibaldi Div (Italian) under command of a Partisan Corps inflicted heavy casualties on a mixed German and USTACHI force and captured some war material and food supplies. The Germans have been forced to switch forces to secure their L of C in the ZAVIDOVICI - TUZLA - ZVORNIK area on the line BELGRADE - BANJA LUKA and reports indicate that a serious attempt to clean up this area by the enemy will be undertaken.

In SERBIA Partisans attacked and captured a railway station near BITOLJ (MONASTIR) killing the enemy garrison and securing booty.

The most important engagement reported during the past week is the Partisan attack on BANJA LUKA. Not only is the town an important road and rail centre but it is believed to be the Headquarters of Gen RENDULIC's 2 Pz Army. Heavy street fighting was reported in the centre of the town on 2 Jan and on 4 Jan the Partisans were reported to have taken three quarters of the town and to be attacking the TRAPPIST Monastery where H.Q. 2 Pz Army is supposed to be located. Gen RENDULIC and his staff are

....stated to be.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

stated to be trapped in the North East of the town. The Partisan success was facilitated by actions further to the North where at BOSANSKA GRADISKA the German garrison consisting of motorised troops was surrounded and held by Partisans on 4 Jan; however, the enemy is reported to have broken out and can be expected to move on B.N.J. LUKA. Heavy German concentrations are reported in PRIJEDOR, BOS NOVI, TRAVNIK and DOBOJ, presumably earmarked for the relief of B.N.J. LUKA, but the Partisans have gone over to the offensive in BOS NOVI and report the ambush and annihilation of a German column near DVOR capturing a great deal of booty. Allied A/C strafed the concentrations at PRIJEDOR.

To the South the fighting in the DINARA Mountains around LIVNO and SUJICA has died down and only sporadic clashes have taken place.

A number of raids were undertaken by the Partisans in the North. VRBOVSKO was captured by Partisans late in December. A sharp engagement took place in the MEDAK area near GOSPIC in mid December when some 150 Germans were killed and the Partisans later claimed that the KORDUN area has been cleared of the enemy.

A German thrust S.W. from NOVOMESTO has been repulsed but fighting is still going on. Partisans captured the small town of FUZINE which is about 15 Kms East of FIUME and repulsed three columns of enemy reinforcements.

ORDER OF BATTLE

A report from Partisan H.Q. states that the SS Divs NORDLAND and NIEDERLAND have left North East CROATIA. No mention is made of III SS Pz Corps H.Q. but it seems likely that the whole Corps has been relieved. 99 Mtn Regt of 1 Mtn Div was reported to be in ZADVIDOVICI near DOBOJ on 20 December but as yet no other indication that 1 Mtn Div is moving North West has been given. 371 Infantry Div, last reported to be in the BIHAC area, entrained in the last days of December at DVOR and SUNJA and is reported to be en route for BELGRADE. This Div is now stated to consist of only 20% Germans (all officers and most NCO's and specialists are German) and 80% Croats who have had 1½ years training in GERMANY. If this report is true, it will be another Croat Legion division in the same series as 369 and 373. An addition to the Order of Battle is 92 Mot Regt reported in SARAJEVO; this appears to be an independent regiment and took part in the SANJAK offensive in December 43. Persistent reports have been received about German reinforcements arriving in the ZAGREB - KARLOVAC area and 367 div has been identified in KARLOVAC. This division is new to the German army list; it will be remembered that the first report of the newly arrived division in the ZAGREB area stated that it had been newly formed in AUSTRIA. Unconfirmed reports place a new div as yet unidentified in the KOCEVJE area and another in the area of NOVOMESTO. These two may be duplications of

....the same division...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the same division but it would appear that at least two new divs have moved into North East CROATIA in the last month or so to take over the area vacated by the SS formations, one of these being 367 div.

AIR

Bad weather again hampered operations but attacks were made on troop concentrations at PALJEDOR and on 4 December at TRAVNIK and DOBOJ. Results were not observed owing to bad weather. SPLIT, ZARA and the Dalmatian coast were again visited and a 6,000 ton ship was hit and left smoking off the North PELJESAC coast. On 30 December a 500 ft ship in ZARA harbour, which had been damaged in a previous raid, was attacked by JU52s. Near misses were scored and hits made on harbour installations. A direct hit on a seaplane detonated some 100 mines on a nearby quay. Near misses are claimed on a large ship unloading in the PROKLJANSKO Lake near SIBENIK and another large ship was attacked in the ULJAN Channel on 27 December. Near misses are claimed.

The enemy has shown a slight increase in air strength over the Dalmatian coast during the last 10 days. On December 30 the Germans carried out their biggest bombing effort against LUCE which was re-captured by the Partisans recently. 15 HS 126s dropped 39 x 110 Kgs; 3 canisters "butterfly" bombs, and carried out strafing attacks from 100 ft.

Appendix 'A' to
15 Army Group Intelligence
Summary No. 29 dated 7 Jan 43.

ANALYSIS OF MOVE OF 5 MOUNTAIN DIV FROM RUSSIAN FRONT TO ITALY.

NOVEMBER - DECEMBER 1943.

Elements of this division began moving from Lake LADOGA area between 20 and 25 November. The intention was to move 100 Mountain Rifle Regiment first, then 95 Mountain A.R., then 85 Mountain Rifle Regt, then 95 Eng Bn, and it is probable that this was in fact carried out. 100 Mtn Regt started to leave on 24 November, and the first elements of 85 Mtn Regt were away five days later although the main body did not depart until about 10 December.

The move from Lake LADOGA to the concentration area South of ROME took approximately 18 days for each train involved. The route followed seems to have been the same for all units involved and was as follows. RIGA - GROTTINGEN (on the Lithuanian - Prussian frontier) - POSEN - LEIPZIG - MUNICH - INNSPRUCK - BOLZANO. At BOLZANO most of the division seems to have left the main BRENNER line, probably because of damage to the line (this will certainly apply to elements arriving after 15 December when the AVISIO Viaduct was hit). From BOLZANO the division was routed to PADUA thence to FLORENCE. Some of it then went down the main FLORENCE - ROME line and some along the PERUGIA - TERNI bypass to the ROME area where elements of the div detrained while others went on to PRIVERNO. The whole div had probably arrived by the last week of 1943.

A study of the actual composition of the trains shows that each consisted of between 30 and 40 goods trucks plus one comfortable passenger coach which carried the officers. This is probably the normal size for a goods train in ITALY and taking an average of approx 10 tons as the load of each truck confirms the view that an average supply train carries approx 400 tons. This is rather less than the 500 tons usually taken as a theoretical capacity of supply trains on other European railways. In the case of 5 Mountain Div there were about 25 men to each truck and approx 2 days to a train. The total number of trains involved in the move is not known, but it is estimated that the entire division and equipment took up some 80 - 90 trains.

1. ENEMY SITUATION

The fighting in Central ITALY is dominated by HITLER's Special Order which was read out to all ranks in the Army on 24 Jan. "The Gustav Line" it reads "must be held at all costs for the sake of the political consequences which would follow a completely successful defence. The Fuehrer expects the bitterest struggle for every yard". It is irrelevant to the military appreciation of the situation which particular political results are worth so dangerous a policy - the more dangerous to an army almost every division of which was previously at STALINGRAD - whether the importance of not losing ROME or merely the avoidance of another German withdrawal at a time when the Russians are also forcing them back at one point after another of the Eastern front. The fact remains that Kesselring has taken all the possible and necessary steps to ensure that Hitler's orders are carried out and the issue between us and him is reduced to its simplest terms.

The Fuehrer's order must have been despatched not long after our landing in the ANZIO area. There is hardly a record in previous military history of a landing on so large a scale obtaining such complete surprise. As in the case of almost all successful surprises this was due in part to the fact that the enemy's attentions had been diverted elsewhere; on the morning on which we landed at ANZIO he had just launched his great counter-attack to recover the ground which he had lost on the Southern end of the GUSTAV line. Our original attack here had hit the 94th Infantry division which was spread out rather widely and, thanks again to a fair measure of surprise, we had succeeded in inflicting heavy losses and capturing valuable positions around LITURNO and CASTELFORTE. Kesselring's reaction was to bring down 90 P.G. div from 8 Army front and 29 P.G. div from the ROME area where it had been resting and refitting after a strenuous period in the line. 90 P.G. div was apparently intended to be relieved by 3 P.G. div, which was 29 P.G. div's predecessor in Army reserve; the move was complicated by the fact that one regimental group, 8 G.R. had had to be rushed

....up to assist...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

up to assist 5 Mtn div which was being driven back across the mountains by the pressure of the French, losing many prisoners and giving up many deserters. On 22 Jan therefore 14 Corps from the West coast Northwards was held by 94 Inf, 90 P.G., 29 P.G., Hermann Goering Pz (which was also involved in the counter attack), 15 P.G., 71 Inf, 44 Inf and 5 Mtn Div strengthened by 8 G.R. from 3 P.G. Div. In the Central sector as far as Mt. MAINELLA was 305 Inf div. On 76 Corps front were 334 Inf, 26 Pz and 1 Para divs. In transit to 76 Corps front was the remainder of 3 P.G. div. In the ROME area and to North were various parachutist elements to be dealt with in more detail later. In the ANZIO area and for 25 miles each side was II bn 71 G.R. of 29 PG div which had come there the day before for a rest and refit after its strenuous fighting as rearguard for the withdrawal to the GUSTAV line in the CASSINO sector.

The enemy's first reaction was to move back from the GUSTAV line such units as could be spared. Hermann Goering div was an obvious choice as it had been used much in the past for just this job of blocking against sudden dangerous penetrations. 104 G.R. was also sent, as the successful defence of the S. ANGELO sector showed that it could be spared. 29 G.R. from 3 P.G. was diverted to the beachhead on its way across from the East and it is probable that the rest of the division, less 8 G.R. and 103 Recce Unit, are also there. 90 P.G. has apparently sent one bn, II/200, but it has not yet been identified in action. Finally 26 Pz Div was removed from the line and though only I/9 P.G.R. has so far been identified the whole division is available to intervene if necessary. These units appear to be under command of 1 Para Corps which was identified as commanding 29 PG div when the latter was in the ROME area. So far the units mentioned have been from the troops with which we were already engaged but new formations were also rushed up from further afield. It appears that the new Parachute division possibly in Central ITALY has progressed far enough to have at least three Regimental H.Qs: 9 Para Regt has been identified from a captured document, 10 and 11 Para Regts from prisoners, and from another document we know that the Battle Group on the left of our beachhead is apparently commanded by Maj GERING, C.O. 11 Para Regt (he has II/200 G.R. under command). There have been other identifications of parachute units in the area, including a Para M.G. Bn and III Bn 1 Para Regt, and it seems likely that 1 Para Div in 76 Corps has been milked of at least two bns. The next formation to be identified was 65 Inf Div from the GENOA area, by a PW from 145 G.R., followed shortly by a PW from 735 Inf Regt, which is part of 715 Inf Div from the GRASSE area in Southern FRANCE. Finally we have prisoners from Recce Units of two further divisions, 356 Inf and 114 Jaeger; the former is in the SPEZIA area and the latter has been moving North from Central DALMATIA since about 7 Jan fighting its way against strong Partisan opposition. It is too early yet to say whether either of these divisions will follow their Recce Units;

.....356 now appears.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

356 now appears to be the only formation on the West coast between the TIBER and the French frontier and may be tied down by that fact, 114 Jaeger on the other hand was reported by Partisan HQ as being bound for North ITALY. It is quite possible that these Recce Units, or Fusilier bns as they are now called, have simply been brought up as the most readily available reinforcements, being motorised; the original move of 356 Recce Unit certainly has no connection with the danger created by our landing as it began to move from GENOA on 13 Jan. The arrival of 114 Recce Unit may be connected with a report of German troops in Jaeger uniform passing through PADUA on 25 Jan, coming from DALMATIA.

We have therefore opposing our beachhead the bulk of Hermann Goering div, 26 Pz div, 3 PG div less one regt, 65 Inf div (less one regt), 715 Inf and 4 Para divs plus a few miscellaneous bns from 15 PG and 29 PG divs and others. It is possible that not all of 26 Pz and 715 Inf bns have yet arrived but their speedy completion must be expected. Dispositions are probably still fluid and our knowledge is certainly incomplete but it appears that on our left we have from the sea to about the 80 Easting 11 and possibly also 10 Para Regt with II/200 under command and a few small units from 29 PG div. 65 Inf is apparently arriving in this sector. East of this group as far as the general area of CISTERNA is 3 PG sector with 104 GR on its left. 715 Inf div may be moving into this sector. From CISTERNA to the sea again is Hermann Goering div, and apparently the first elements of 26 Pz div.. So far the enemy's attitude has been strictly defensive, in which he has had some success, but it must be expected that with this strength becoming available he will pass to the offensive as soon as he considers himself strong enough.

Since the landing the main interest on 14 Corps front has passed to the CAIRO area where we have broken through the GUSTAV line and gained important heights North of CASSINO. 5 Mtn and 44 Inf divs have had heavy losses here and have had to be reinforced by 191 G.R. from 71 Div. The danger for the enemy lies in the fact that a successful advance here turns not only the GUSTAV line on which the Fuehrer has staked his military reputation but also the Adolf Hitler line behind it which seems from its name even more closely bound up with his personal prestige. This switch line apparently runs from above CASSINO to PIEDIMONTE and thence through AQUINO to PONTECORVO. From here it runs across the mountains to FONDI where its Southern end is covered by the marshes and inundations of the LAGO DI FONDI. This line appears to have been designed to meet the danger of a turning movement against the GUSTAV line from the ANZIO area, just such a turning movement as is now in progress. If this movement progresses, especially in the Monte MAIO area, where we already hold Monte IUGA and Monte PURGATORIO, the German positions behind the GARIGLIANO in the S. ANDREA and S. AMBROSIO area should become vulnerable.

On 8 Army front the enemy has made minor changes to compensate for the troops he has lost to the ANZIO sector. 26 Panzer div has been replaced by 577 and 578 G.R. from 305 div and 146 G.R. which never got relieved when 65 Div left

.....for GENOA....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

for GEMONA now seems permanently tied in its old place. The Central sector is left to only two bns of 576 G.R. with the Recce and Inf bns but the nature of the ground here scarcely demands a larger garrison.

2. ENEMY SUPPLIES AND COMMUNICATIONS

ITALY

As the Italian campaign develops the enemy's supply and maintenance situation would seem to be slowly deteriorating. True his L of C is now almost completely secure, as regards internal security, but the winter squalls have brought large explosive and well aimed hailstones.

The object of our attacks has been, and remains, to dislocate the vital railways and thus throw the weight of troop movement and the movement of supplies on to the roads. Not that road movement is any easier to attack than rail transport, but the enemy is known to be in straightened circumstances as regards fuel and M.T. Consequently the enemy continues to make every endeavour to use the railways to the fullest extent, even to run supply trains right up to the forward area.

The movement of supplies can be divided into two stages: first the movement from depots in the Reich or N. ITALY to depots in Central ITALY located chiefly in the area between AREZZO and ROME near to the main FLORENCE-ROME railway; secondly the onward forwarding of supplies from Army depots to the forward area. It appears also that this is as far as possible carried out by rail although it is probable that a greater percentage of MT lift is used in the second stage than in the first. Were it possible to enforce the use of MT throughout for a considerable period the situation would be little short of catastrophic for the enemy.

Coastal shipping cannot be as useful to the enemy to-day as formerly. On the West coast the port of CIVITAVECCHIA, with a normal peacetime capacity of 2400 tons, has been so battered by air attacks that the enemy has made little use of it in the last three months and it is doubtful if it has handled more than an average of some 300 tons daily. The ports of PIOMBINO and SAN STEFANO are believed to have been scarcely used as ports of intake. On the East coast the small harbours of SAN BENEDETTO GIULIANOVA, and CIVITANOVA have been used probably to their fullest extent while there has been some activity at ANCONA. However the total intake via the East and West coast ports is not estimated to be more than a very small percentage of the total daily tonnage moved by rail. It must be admitted however that the low scale of coastal shipping activity must in part be intentional so long as the enemy can still make do with the rail effort, however difficult the working may be. The situation has, however, now deteriorated further for the enemy; latest information indicates that some demolitions have been carried out at CIVITAVECCHIA, presumably as a result of "panic" about the 22nd of last month when the enemy may have feared that our landing was to be made at CIVITAVECCHIA.

.....If so he has.....

-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

As far as enemy strengths and dispositions go the week has revealed no significant changes; his intentions are still bound within the frame of the Führer's order to resist to the last. Opposite the ANZIO bridgehead, however, there is now a marked change of attitude and the enemy has definitely gone over to the offensive. With the force hastily drawn from the main 5 Army front he was able during the first week to block our probings outward from the original bridgehead and when we took the offensive on 30 January he already had sufficient strength in hand to prevent any important break-through. From about 4 February on his counter-thrusts at various points became more violent and on 6 February we evacuated the salient forward of CARROCETO. Up to 8 February no large scale attack had yet been made but the enemy can scarcely delay this much longer.

Identifications have helped to fill out the picture given last week though the main outlines remain. On our left we now know that 65 Div has another infantry regt, 147, presumably formed in the GENOA area as it did not fight on 8 Army front in November. 715 Div has provided PW's from both 725 and 735 Inf Regts and also from the Div Eng Bn; prisoners state that the div is now motorised. It is this division which has been attacking West of the GENZANO - ANZIO road. 3 PG Div still only has 29 G.R. of its own infantry but may also have 104 G.R. under command as I and II Bns have been identified in its sector (III Bn is still back in its old sector). East of 3 P.G. sector there are some elements of 71 P.G: 194 G.R. appears to be in the area roughly F9632 and with it is 171 Recce Unit. Next comes 26 Pz div of which we have now identified all the major units though some of its arty is still on 8 Army front. From CISTERNA to the sea is still apparently the sector of Hermann Goering div though that formation has not been quite so prominent

...., this week.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

this week as last. On the extreme left flank, our extreme right, we have the first SS troops which we have met in action since the Leibstandarte Adolf Hitler at THERMOPYLAE in the spring of 1941; I and II Bns 35 SS P.G.R., II Bn 36 P.G.R., the Engineer bn and IV Bty of the Arty regt of 16 SS PG div have been identified by prisoners. (The number 16 for the new division Reichsfuehrer SS is derived from a captured document). It looks, therefore, as though we are to get the whole of the division here, both the elements which remained in the LECHORN area and the rest of the div which was forming in SLOVENIA. When complete it should probably include at least a bn of tanks and possibly a regt. A recent identification, still not quite certain, places elements of 721 Jaeger Regt also on our bridgehead front. It seems possible that further units from 114 Jaeger div are now gradually appearing; we have already identified the Recce Unit, the Eng Bn and a company of the A.Tk bn though the latter appear to be nearer the GUSTAV line than the bridgehead.

So far we can identify, or assume from the identification of their parent regiment, about 40 Inf Bns opposite our bridgehead. There are also 6 or 7 Recce Units and 5 Engineer Bns which can all be used as infantry. There is one tank bn in 26 Pz div and two in HG div but the latter are weak and may not exceed 40 tanks for the two together. 16 SS Div's tanks have not yet been identified. There are, however, reports from Italian sources believed reliable of more tanks, including large numbers of heavy tanks, which passed through ROME on 2nd and 3rd February and another source mentioned elements of 13 Pz division. The division itself is on the Russian front and it is unlikely that it can arrive here but the two sets of reports suggest that some armoured reinforcements have been received. It is possible, for instance, that just as 26 Pz and 16 Pz divs only brought one bn of their tank regts to ITALY so 13 Pz in RUSSIA may have taken only one bn with it; the other may then have remained in FRANCE, perhaps re-equipping with heavy tanks, and these may have been rushed down to ITALY. So far this is speculation but we should at least be prepared for the possibility of the appearance of an extra tank bn on our front. There have been other movements also in the area North of ROME; on 5 February the rear elements of 90 P.G. reported that they had been instructed by 14 Army to draw rations in future not from 1 Para Corps but from 362 Div. 90 P.G. itself is fighting in the CASSINO area and though its rear elements are fairly far to the rear and almost certainly North of the immediate area of our bridgehead they cannot be very far North. Clearly 362 Div has left RIMINI and come South; probably it will be responsible for the area North of ROME whose sea coast is otherwise entirely undefended as far as we know. And it also looks very much as though 14 Army has come South; it would be reasonable enough to leave 10 Army to deal solely with the defence of the GUSTAV line while the responsibility for counter-offensive against the bridgehead is taken by 14 Army.

On the GUSTAV line the main interest is still around CASSINO and on the ridge of Monte MAJO. In the CASSINO area it now appears that 90 P.G. Div has taken over; its H.Q. is one km S.E. of ROCCASECCA and it has under command, apart from its own units (but less II/200, opposite the bridgehead) 211

.....G.R.,.....

THIS PAGE IS UNCLASSIFIED

0354

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

G.R., 132 G.R., 4 Mtn Bn and one or two bns from 1 Para Div. So far only III Bn 3 Para Regt has been identified here but at least one further parachute bn was moving from 8 Army front on the night 4/5 February. II Bn 134, which has suffered heavy losses, was moved down to 15 P.G's front behind the middle GARIGLIANO. 44 Div as a whole has suffered most severely in the recent fighting and an estimate based on PW reports and making generous allowance for reinforcements with the most unsuitable elements from the divisional rear services gives it a total fighting strength of under 4,500. Further South 15 P.G. apart from the remnants of 134 G.R. has 129 PGR, III/104 and 276 GR under command and its right boundary stretches to include Monte MAJO and Monte ORNITO. 29 P.G. stretches to the LUSENTO river and 94 Div, reduced to a total of four infantry bns and the divisional engineer and recce bns, holds the extreme Southern end of the line.

The issue is clear: if the enemy can eliminate our bridgehead he can reinforce the GUSTAV line with sufficient strength to make it, humanly speaking, entirely secure. If we can break through the GUSTAV line we can eventually join hands with out bridgehead and in the process can probably destroy a large part of 10 Army's weakened divisions. At the moment of writing the thrust West of CASSINO represents the greatest threat to the enemy's daring strategy in Central ITALY.

2. ENEMY SUPPLIES AND COMMUNICATIONS

(a) SHIPPING

(1) ITALY

CIVITAVECCHIA has now passed completely out of the picture as a supply point for enemy forces and has been replaced by SAN STEFANO. This small port will not easily cope with the tonnage formerly split between CIVITAVECCHIA and ANZIO, but no doubt steps will be taken by the enemy to exploit its capacity to the maximum. It is, however, dangerously exposed to Allied air attack, and there is no convenient alternative harbour.

Traffic to PIOMBINO and SAN STEFANO is now restricted to F-boats and supply barges, the 400-ton munition carrier which arrived late January having left early in February. There is considerable activity in both ports, but bad weather, which prevented daily photographic cover, precludes any accurate estimate of the tonnage reaching the enemy forces by this route. In any case it is probably short of 500 tons per day.

On the Italian East coast shipping continues to ANCONA and SAN BENEDETTO on the usual small scale. ASV's form the bulk of the traffic but a munition carrier of approximately 1000 tons reached ANCONA at the end of January.

Movement of ships from Ligurian ports to FRANCE continues at the usual leisurely pace.

.....(2) DALMATIAN COAST...

THIS PAGE IS UNCLASSIFIED

0355

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(2) DALMATIAN COAST

Interest has shifted to the Northern group of islands, where the enemy has made landings on ULJAN, PASMAN and DUGI OTOK, meeting with little Partisan resistance. No doubt he will go on to mop up the other islands of this group; but, as he is unlikely to be able to leave permanent garrisons on more than a few of them and is already reported to have abandoned DUGI OTOK, the potential threat to his coastwise shipping which these islands constitute cannot be said to have been eliminated. More and more he is coming to learn that the attempt to "mop up" Partisans is like trying to pick up a drop of quicksilver with one's fingers.

Shipping activity continues as far South as DUBROVNIK on normal scale, mainly by ASV's and small steamers. Vessels of 1000 tons and above do not venture South of POLA. An important element in this seaborne supply traffic, the traffic in fuel, has been hard hit by the loss during the last fortnight of 3 small tankers, 2 of which were sunk by our air forces and one by light naval forces. The latter have continued to take their toll of medium and small schooners, taking prisoners from the vessels in four cases recently.

(b) RAILWAYS

Since the beginning of the month bad weather has severely restricted air operations over Central ITALY and the enemy has had a chance of at least partially repairing the railway system, all main lines of which were blocked at one or more places on 29 January. However, the bridge at CECINA on the West coast line, which was completely destroyed in December, has not yet been repaired, and the main FLORENCE-ROME line has remained blocked at the bridge North of ORVIETO. Thus the bulk of rail traffic for the ROME area will have been confined to the single track line AREZZO-PERUGIA-TERNI-ORTE, which has a maximum daily peace-time capacity of 24 trains of 250 tons each way as against 72 trains of 500 tons, and 72 trains of 400 tons for the West coast and main FLORENCE-ROME lines respectively. This position will have been aggravated by the cutting of the main lines at TERNI on 5 February. The East coast line was blocked at FANO from 1 to 3 February and it is possible that there was a block at RIMINI as late as 4 February. By 6 February however, the line was definitely open.

Blockage of railways beginning 20 January must have caused the enemy supply situation to deteriorate seriously and forced him to move reinforcements South largely by road. By this time, however, it is estimated that owing to weather restricting our air effort against rail targets he has probably been able to restore his supply position and build up the necessary additional supplies for such offensive action as he may contemplate in the ANZIO area.

3. BALKANS

ALBANIA

Fighting is reported in South ALBANIA, two enemy columns are taking part, one moving South from KELCYRE and the other

.....North from.....

THIS PAGE IS UNCLASSIFIED

0356

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

North from the Greek border at DRIMADES. No details are available but it is thought to be on a minor scale.

It is stated that the Bulgarians are forcibly evacuating some 28,000 Albanians from the SKOPLJE area to the Turko-Bulgarian frontier districts.

GREECE

This has been a week of confused reports, little activity apart from punitive excursions by the enemy and some minor clashes between ELAS and EDES.

Col Zervas has accused ELAS of atrocities in the MIROFILLON area SE of JANINA where it is claimed ELAS put to death about 100 people taken from the nearby villages which had favoured EDES; he further requested the formation of a committee to investigate these crimes. A later report dated 1 February states that an agreement has been reached and both parties had agreed to cease fire at midnight 4/5 February to allow further talks to take place. The terms of the agreement are as follows :

1. The official denunciation of the leaders and followers of EDES who have collaborated or are collaborating with the Germans or with RALLIS.

2. Both Zervas and ELAS forces to remain at positions held on day that hostilities cease until unity is accomplished.

3. To start immediate negotiations for the formation of a single ANDARTE army.

The main German activity appears to have been an anti-invasion exercise on a big scale held near PATRAS in the Peloponnese. It is stated that the enemy expect an Allied landing on the PATRAS-AMALIAS coast and are hastily undertaking defence measures.

JUGOSLAVIA

CROATIA AND SLOVENIA

In fighting which took place along the railway East of LJUBLJANA on 19 to 22 Jan against a regt of PAVELIC's bodyguard the Partisans inflicted 110 casualties.

Fighting has continued on the GOSPIC-SENJ road but with the capture of PERUSIC on February 1 by a force of USTASHI the whole area flanking this highway must be considered as being under enemy control. Nothing further has been heard of the progress of 392 Germano-Croat Div since one of its columns captured BRINJE on 31 January.

DALMATIA

ZEMUNIK near ZARA is reported to be in Partisan hands but the enemy are shelling it from the direction of ZARA. Partisan sources report heavy troop concentrations around the

.....port of TROGIR.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

port of TROGIR. Some 200 MT bearing the Rising Sun and Palm Tree of 92 Mot Regt have been seen and the Partisans appreciate that these troops will be used for an attempt to capture the island of VIS in the near future. Reports of troop movements from the South to ZARA continue to arrive but it is not thought that any major elements are involved.

BOSNIA

It is confirmed that JAJCE was still in German hands on 30 January.

The SS Mtn Div Prinz Eugen is fighting on the HERCEGOVINA-MONTENEGRON border and around GACKO; here again details are lacking.

SERBIA

On 28 January a large Bulgarian force including mortar coys and cavalry occupied a line running from LESKOVAC to LEBANE and MEDVEDJA and the villages to the South with the intention, it is believed, of attacking the Partisans in the RADAN Mts and PISTA river area. It is stated that 5 Bulgarian Divs will take part converging from KURSUMLIJA, PROKUPLJE, NISH and LESKOVAC. Serbian Partisans recently ambushed a German force at NOTIA in GREECE near the Jugoslav-Greek frontier killing 100 and wounding 200 Germans besides capturing much war material.

ORDER OF BATTLE

68 Corps has moved from CORINTH to ATHENS and appears to control troops in ATTICA and possibly further West. 117 Div has moved its HQ to CORINTH and seems to be in command of all field forces in the PELOPONNESE. 5 SS Mtn Corps has moved to SARAJEVO since the heavy RAF raid on MOSTAR on 14 January.

1 Mtn Div is confirmed in the KNIN area and may be moving by easy stages North to ZARA. It is reported that 373 Germano-Croat div is to take over the SPLIT-TROGIR-SENJ area; some officers of this Div were recently seen in SPLIT but no other signs of a move have been reported and the div is confirmed to be now in BIHAC.

162 Inf Div is reported to be guarding the LJUBLJANA-TRIESTE railway and to have elements in NOVO MESTO; a number of TURKESTAN deserters have joined the Partisans from this Div and are now formed into a Partisan Bn.

17 Bulgarian Div has definitely been disbanded; this formation previously had commitments in the KAVALLA area.

H.Q., A.C.M.F. INTELLIGENCE SUMMARY NO.32

OF 16 FEBRUARY 1944

(a) This Summary will NOT be distributed below H.Qs of Army Corps. Sidelined information will not be reproduced in any Intelligence Summary of formations under this H.Q. except by special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

-0-0-0-0-0-0-0-0-

1. ENEMY SITUATION

Since 10 February the enemy in the ANZIO bridgehead has been much less aggressive and the general line there remains unchanged. It has been confirmed by prisoners that operations here are being directed by 14 Army, under the command of Gen MACKENSEN who was last identified commanding First Armoured Army in RUSSIA. H.Q. 1 Para Corps has been located by a captured document at ROCCAFERRATA. Otherwise identifications have been mainly confirmatory; 3 Bn 721 Jaeger Regt is established from prisoners and the only new and surprising identification is 1028 Reinforced Gren Regt which provided two prisoners in the area F 9532, on 13 February.

The enemy's relative quiescence this week in the bridgehead area is due almost certainly to the very heavy losses he suffered during the violent counter-attack of the preceding week. In this 65 and 715 Divs suffered especially, as they bore the brunt of the fighting East of the CARROCETO road and in the immediate area of CARROCETO itself. 3 P.G. Div also had heavy casualties and we know from a captured document that this was accompanied by a serious loss in material. The regimental commander, in fact, states that losses in material are out of all proportion to the casualties in killed, wounded and missing (which he describes as substantial) and that the problem of replacing material is growing more and more difficult, even unsolvable in some cases, which leads to an "insufferable" weakening of combat efficiency. It appears from the document that the regiment is expecting shortly to be withdrawn to a rest area. It seems clear, in fact, that the enemy's first full scale attack on our bridgehead, although it gained some ground, cost him dearly and he is now pausing for regrouping and refitting.

.....On the GUSTAV.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On the GUSTAV line the main interest has been the arrival of reinforcements in the CASSINO sector from 8th Army front. These have all so far been parachute bns from 1 Para Div; I/1, III/3 and III/4 Para Regts have been identified from prisoners and it is believed that there are at least two more in this area which probably include III/1 which has returned from the bridgehead. It is clear that the enemy is determined to defend CASSINO to the utmost.

South of the river LIRI I/115 G.R., which appears to be now permanently separated from H.G. Div, has been put in to strengthen the link between the positions round S. ANDREA and those on MONTE MAJO. The enemy have been making repeated attempts to recapture MONTE ORNITO, whose value as an O.P. they now realise more fully after having lost it. The most interesting identification in this area is of II Bn 194 G.R. at G 8500 on 15 February; the prisoner stated his bn had just returned from the ANZIO bridgehead. This may perhaps herald an attempt to regroup 71 Div; it at least brings its scattered regiments into the same Corps after being divided between two armies. It is possible that the special mention given to 211 G.R. in the German communiqué for 15 February may mean that the regiment is about to be withdrawn after the very heavy losses it has suffered. The fact that 194 has turned up in 29 P.G. Div sector may imply the relief of the latter though it remains to be seen whether in that case it would go to the bridgehead or to the CASSINO sector.

On 8 Army front the enemy continues to develop the FORO line using Italian forced labour and apparently Russian labour bns. Photographs of 10 February show that an almost continuous wire obstacle exists forward of the river from MIGLIANICO to VACRI and possibly on to CASALANDITELLA; there is however little in the way of defences behind it. The main line behind the river has also been considerably strengthened. It is now mined most of the way from FRANCAVILLA to the bridge West of MIGLIANICO and fresh diggings have appeared making a continuous line of trenches and weapon pits for 3,000 yards inland from FRANCAVILLA. The main coast road crossing over the FORO is additionally defended by fresh anti-tank positions about 800 yards West of the crossing and others which have appeared in the East bank. There is wire along the sea front at FRANCAVILLA itself. Further North there is practically nothing to report from air photographs though civilians have spoken of defences behind the PESCARA.

2. ENEMY SUPPLIES AND COMMUNICATIONS

(a) SHIPPING

Absence of photographic cover prevents any estimate of the daily turnover at SAN STEFANO and PIOMBINO during the past week. On 7 February there were 4 F-boats and 5 barges at the former port, and 10 F-boats and 7 barges at the latter. Since then both ports have been repeatedly attacked by Allied aircraft. Apart from the damage caused to port installations, these attacks may stimulate the enemy to seek alternative unloading places in order to avoid concentrating so many craft.

.....in these.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in these small and vulnerable ports. There is, however, only one point between PIOMBINO and SAN STEFANO at which the railway approaches the coast - the very small harbour of FOLLONICA. Hence any alternative supply arrangements in this region are likely to involve a road lift and the attendant duplication of loading and unloading.

On the Italian East coast the usual trickle of supplies reaches SAN BENEDETTO in MSVs.

In DALMATIA the operations against the Northern group of islands off ZARA seem to have petered out with the task half finished. DUGI OTOK was evacuated on 10 February, and only PASMAN and ULJAN remain in German hands. It is likely that a further attempt will be made to clean up these islands, whose potential threat to the enemy's seaborne supply traffic will grow as the Allied armies advance in ITALY.

Shipping activity off the Dalmatian coast continues normally. But Allied aircraft and light naval forces are almost daily sinking one or more of the MSVs or small steamers upon which this traffic mainly depends. In addition a 2,000 ton steamer from POLA was attacked by our air forces near SELIT on 8 February and left ablaze. It is some time since the enemy ventured to send so large a vessel out of relatively safe waters, and his experience will not encourage him to repeat the attempt.

The value of these attacks lies in the fact that they hinder seaborne supply traffic to the coastal garrisons of Southern DALMATIA, whose only other line of communication, the LROD-SARAJEVO-DUBROVNIK railway, is of low capacity and subject to Partisan interruption. With the Allies firmly established in Southern ITALY, the enemy can allow no weakening of this bastion of the European fortress. Therefore he is forced to undertake costly and unprofitable operations in the interior in the attempt to guarantee the security of his landward lines of communication. The effect of such operations is usually short-lived: in the long run it becomes more and more troublesome and difficult for him to maintain the all-important defensive garrisons of the coast.

(b) RAILWAYS

On 7 and 8 February good bombing severely dislocated the Central Italian railway network so that on 9 February all the main approaches to ROME from the North were probably blocked. Since then, however, concentration of air attack elsewhere has given the enemy time to make the necessary repairs, and by 11 February he was probably able to get through all the trains necessary to the maintenance of his forces. As of 15 February only the West coast line can be definitely said to be blocked.

It has been reported that in many places and particularly in the OSTIA and CIVITAVECCHIA areas, the Germans uprooted the electric track rails, despatching the steel to Northern destinations. This report undoubtedly has reference exclusively to the West coast line. It is known that the Germans are, at least to some extent, making use of electric locomotives in ITALY, but presumably traffic on the West coast line is too light to

.....warrant.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

warrant maintenance of the necessary electric power facilities.

3. BALKANS

GREECE

An uneasy peace reigns between EDES and ELAS; hostilities ceased on February 4 after ELAS had launched a general attack across the ARAKTHOS river in spite of the arrangement to cease fire on February 3. A German drive is now taking place with the intention of taking EDES in the rear; in this connection Col ZERVAS has asked ELAS for permission to cross the river ARAKTHOS and thus place that obstacle in the path of the better armed Germans. The reaction of ELAS to this request is not known.

JUGOSLAVIA

SLOVENIA AND CROATIA-SLAVONIA

The Partisans have been extremely busy in sabotaging enemy communications and the following successes have been reported during the end of January. A goods train was mined on the line BAKOVA JARUGA-ZAGREB; the engine and three trucks were destroyed causing 30 hours delay to traffic. On the same line near POPOVAC an express train was mined causing the destruction of the engine and two trucks and a delay of 20 hours; the line was cut at BJEVOVAR in many places. A goods train on the main ZAGREB-BELGRADE line was mined near NOVA GRADISKA wrecking the engine and 30 trucks, and in ISTRIA a train was wrecked between TRIESTE and BUJE on February 4th causing the death of some 50 Germans. The Partisans claim that all major industrial installations South of the railway ZAGREB-LJUBLJANA-TRIESTE together with the lines have been destroyed and the railway stations burnt.

Desultory fighting has taken place S.W. of ZAGREB against troops of 1 Cossack Div, and further to the West around NOVO MESTO and KOCEVJE against elements of 162 Turkoman Div where the enemy are making efforts to keep the roads to SUSAK and FIUME open. 392 Germano-Croat Div has reached the area NOVI-SENJ-BRINJE after having had to fight its way down from ZAGREB. Fighting continues in the BRINJE-JESARJE-LEBAR triangle where more than 130 Germans have been killed, and between SENJ and OGULIN. To the North on February 10 the enemy recaptured KOPRIVNICA near the Hungarian frontier. This town was captured together with the railway junction town of VIROVITICA late in November 43, the latter being retaken by the enemy immediately afterwards.

BOSNIA

Partisan forces are again in control of the villages GORNI VAKUF, KUPRES and KONJIC, scene of the recent German offensive, and have retaken VLASENICA to the East from where they are attacking towards SOKOLAC and SARAJEVO. The area between these two zones is strongly held by the enemy to protect the BROD-SARAJEVO railway but Partisan detachments continue their harassing attacks.

-o-o-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

Ten divisions are now represented opposite our ANZIO bridgehead, and in the last week a most determined effort has been made to eliminate it. This main offensive by 14 Army began on the morning of 16 February with four divisions attacking down the CISTANO - ANZIO road on a front of about five miles. From West to East the units taking part were 65 Div between the 85 and 86 Eastings, 3 P.G. Div with 29 G.R. 309 P.G.R. and 1027 G.R. under command down the main road, 715 Div between the 87 and 89 Eastings and 114 Jaeger Div between the 89 and 92 Eastings. 114 and 715 Divs were rather mixed up in the first attack and the other boundaries are also not entirely clear; 1028 G.R. seems to have been in 114 Div's sector and some elements of 4 Para Div were assisting 65 Div. In general, however, 4 Para and H.G. Divs on the Western and Eastern flanks respectively made only holding attacks. Fighting was very fierce and was assisted by the utmost efforts of the German Air Force. By 18 February the enemy had pressed down this narrow front as far as the 285 Northing and was attacking the "fly-over" bridge at F.862287 but his losses had been very severe. On 19 February the enemy attempted to carry out the second part of his original plan which was to put through two fresh divisions, 26 Pz and 29 P.G. but the breakthrough which would have enabled their mobile divisions to exploit had not been made. Their attack was firmly held and the enemy were forced to give ground. At the same time he tried to widen his salient on the Eastern side by bringing 715 Div round to attack down the railway bed and the POSSO DELLA FICOCCIA towards RADICLIONE (R. 920287). This attack was originally planned for the night of the 18th but the assembly was broken up by our artillery and when it was attempted at first light next morning it met with an Allied attack in force up the road in the opposite direction which took many prisoners. By this time the enemy was in considerable disorder and his forces seriously weakened as is shown by the fact that on 19 February elements of 147, 741, 721 and 725 Regts were all identified between the 90 and 91 Eastings.

By 20 February the enemy's attacks had ceased and the main

.....offensive.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

offensive at the bridgehead can be said to have failed. It won ground but has cost him wholly disproportionate casualties. But we cannot expect that he will permanently go over to the defensive for too much depends on the issue. It has already been made a matter of prestige; the defeat of the first Allied landing attempt in 1944 would be a good augury for a year which is bound to see others. From a purely military point of view at ANZIO we are certainly containing ten German divisions with a force about half their number and unless the bridgehead is eliminated we shall continue to contain them for any weakening would at once revive the threat to the rear of 10 Army. We must expect the enemy to resume the offensive again when he has rested and replenished his formations. An indication of his probable intentions is given by the identification of elements of Hermann Goering divisions in the area F.9831 and of 362 Division on the Eastern flank; probably the former will be the spearhead of the new attacks.

There have been one or two new identifications; from the point of view of German manpower 1028 G.R. is an interesting phenomenon. Prisoners state that it is formed of two training bns which were apparently intended for 15 P.G. Div but were sent into action after a very short period of training as an independent formation; they expressed great indignation at being put straight into the line as they had been given to understand that their training had only begun. 1027 G.R. (reinforced) is a more obscure unit and nothing is known yet of its exact composition or nature. 309 P.G.R., I and III bns of which have been identified, is the renamed Infantry Lehr Regt. This is an independent regt normally stationed at the Infantry School at DOEBERITZ where it demonstates tactics and experiments with new weapons. It was hastily removed from DOEBERITZ on 7 February, rushed down to the bridgehead and put straight into action under command of 3 P.G. Div. The regt is said to have 24 Assault Guns attached. The arrival of this formation shows clearly the complete lack of a proper strategic reserve in GERMANY itself. Prisoners from 36 SS P.G.R. made a strange impression; they were all youths of about 17½ years old, of poor physique, low mentality and deficient training. They had not volunteered for the SS (one had violently protested against his enrolment) but had been drafted straight in; they say that the entire class of 1926 from rural districts had suffered the same fate which will certainly account for the phenomenal recent expansion of the SS. Quality, however, seems to have suffered.

On the GUSTAV line CASSINO has still been the main centre of interest and the Germans continue to put up a most bitter and violent resistance in which battalions of 1 Para Div have played a leading part. Further South 29 P.G. Div, which is now identified opposite the bridgehead, has been relieved by the elements of 71 Div which came from there (194 G.R. and the div tps). On 19 February the enemy made a full scale attack to recapture Monte ORNITO, whose importance was referred to last week, employing I and II/194, II and III/129, I/104 and I/115 G.R. The attack was a costly failure and 112 PWs were taken, including three Coy Commanders. It appeared from prisoners taken there that 115 G.R. has returned finally from H.C. Div to its parent formation, 15 P.G. Div, which it has not been with since SICILY and is to be amalgamated with 129 G.R.; the new regt will take the number 115 as being associated with the memories of 15 Pz Div in AFRICA.

.... On Eighth Army....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On Eighth Army front at the beginning of the week there were in line the first and second bns of both 3 and 4 Para Regts and it appears that these too may be leaving. Between 18 and 20 February II/3 Para was making rather leisurely arrangements to withdraw from the line. On night 20/21 February, according to a PW from II/146 (formerly III/146), his bn was moved up from the ARIELLI area to near TOLLO where it allegedly relieved a unit of 4 Para Regt. It is reasonable to assume that these remaining elements of 1 Para Div will join the rest of the division in the CASSINO area where it will be again concentrated after a month of separation. It is not yet clear what is going to replace them though there are slight indications of the presence of elements of 90 P.G. Div on 8 Army front. In that case the relief might take the form of a direct change-over; 90 P.G. has had a very hard time at CASSINO and its casualties are known to be high, particularly in 200 G.R.

2. ENEMY SUPPLIES AND COMMUNICATIONS

(a) SHIPPING

On the Italian West coast, SAN STEFANO continues to be the principal port of intake. Photo recce of CIVITAVECCHIA has revealed no sign of activity. There has been insufficient photo cover this week to enable an estimate of intake to be given, but on 20 February there were 4 F-Boats, 4 barges and 2 coasters present at SAN STEFANO; on 19 February PIOMBINO (a staging point on the voyage to SAN STEFANO) had 12 F-boats and 4 barges, and the turnover of F-boats and barges at SPEZIA has been fairly heavy. All this suggests a slight increase in daily intake, which for some weeks has apparently been in the neighbourhood of 200 tons. At the same time, the air attacks carried out against SAN STEFANO by day on 16 February and during night 16/17 February, must have served as a warning to the enemy of what will happen if he continues to put all his eggs in one basket. So it is probable that some attempt will be made to reduce the concentration of shipping in SAN STEFANO by providing an alternative port.

In connection with this coastal traffic, it is interesting to note that ITALY's manganese production, which amounted immediately before the war to 60,000 tons per annum, is mainly concentrated in Southern TUSCANY. Since the recapture of NIKOPOL on the Dnieper River by the Red Army, Italian manganese will play a more important role in GERMANY's steel industry. SAN STEFANO itself is the most likely place for loading ore from the GROSSETO mines, while that from the PISA-LUCCA area will probably be loaded at LEGHORN. A parallel for this is found in DALMATIA, where supply vessels frequently carry bauxite on their return journey.

On the East Italian coast traffic to ANCONA and SAN BENEDETTO continues, probably on the usual small scale. Lack of air photo cover precludes any estimate of intake.

In DALMATIA there has been no further activity in the Northern islands. The interest has rather shifted to central DALMATIA, where concentrations of landing craft in SPLIT area suggest that operations are brewing. The obvious objective is VIS, the last remaining Partisan-held island in that area, and a constant threat to the enemy's vital

..... L of C.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

L of C. Such an operation, in view of the long stretch of open water to be covered, and the distance from the mainland, would be rather more ambitious than anything the Germans have yet undertaken in this part of the world.

Supply traffic up and down the coast continues normally. There has been no further attempt to sail large MVs South of ZARA since the disastrous expeditions early this month when 3 MVs were destroyed. So a growing strain is being thrown upon the enemy's limited fleet of ASVs and motor coasters. Allied Naval and Air forces continue to add to this strain by attacking such vessels whenever the opportunity presents itself.

(b) RAILWAYS

Since 17 February there has been very little interference with the North and Central Italian railway traffic. The East coast line has been open since 6 February. The main FLORENCE-ROME line was blocked for two days South of ORTE, but the subsidiary ORTE-ROME lines remained open. On the West coast line the bridge at CECINA remains blocked and considerable damage was caused at PIOMBINO on 15 February where the traffic to ROME was probably held up for two days. On 22 February POLIGNO Marshalling Yards and the bridge at MONTALTO di CASTRO are believed to have been blocked.

From air reconnaisance it is apparent that considerable traffic has been reaching ROME, and other sources report that on 9 February 12 trains and on 12 February 20 trains reached the capital from FLORENCE and PISA. On 16 February however, a successful attack was made on ROME marshalling yards and two trains are reported to have been destroyed. Trains have also been observed South of ROME in both the ANZIO and CASSINO areas, evidencing the continuance of the enemy policy of pushing his railheads as far forward as possible. While this rail traffic is not great a few trains slipped through provide a great saving in MT column space and fuel and the enemy is known to be short of both these items

3. BALKANS

GREECE

The negotiations between EDES and ELAS appear to have reached a deadlock after the third meeting between the representatives. Agreement has been reached on all the major issues except the formation of a common Andarte Army and the person of its commander. Col ZERVAS fears the complete subjugation of his force by the numerically superior ELAS formations unless the commander of the proposed joint Army is friendly disposed towards him

ALBANIA

During mid-February Partisans destroyed a small road bridge at PALASSA S.E. of VALONA. This action was swiftly followed by a German drive against the Partisan 5 Bde in the ERATAJ area and against the Partisan 6 Bde in the PERMET (M.61) LUKHERIES Mts. Details are lacking.

.....JUGOSLAVIA....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

JUGOSLAVIA

SLOVENIA AND CROATIA

Partisan forces are reported to have crossed the river ISONZO between CORIZIA and TOLMINO and to be fighting near the last war battlefield at CAPORETTO.

The German garrisons are still encircled in NOVO MESTO and KOCEVJE and are suffering heavy casualties in their attempts to break out. Between these two towns attacks were made on enemy columns and 16 lorries were destroyed and 73 Germans killed. An armoured train which attempted to interfere from LJUBLJANA was forced to retire after the Partisans had removed some 100 metres of line.

Fierce fighting is reported to be taking place between KOPRIVNIC and LUDBREG on the Hungarian frontier. A German drive is taking place in the FRUSKAGORA Hts in the SREM. Many Partisans successes are reported in this area including 9 trains wrecked on the BEIGRADE-VINKOVCI railway and attacks on the German strongpoints at NJEMCI and MOROVIC. In the latter town 43 Germans were killed and a large amount of stores captured. In the KNIN sector 3 small German garrisons were overwhelmed, about 300 Germans being killed and a further 260 wounded; attacks on enemy columns in this area resulted in the destruction of 14 German trucks 2 tanks and 4 guns. Fighting continues against other German columns.

OTOCAC is again in Partisan hands. This town on the SENJ-GOSPI road was recently captured by elements of 392 German Croat Div. BOS GRAHOVO has changed hands twice during the week and is now held by the Partisans.

DALMATIA

The enemy hold KARLOBAG, SVETI JARAJ, SENJ and CRIKVENICA on the coastal strip and the Partisans are in control at SELCE, NOVI VINODOL, ZUTA LOKVA and KRIVI PUT. There are no enemy on the islands of DUGI and IZ and reports state that the Partisans hold RAB, PAG and the smaller islands of this group only.

BOSNIA

Further Partisan successes are reported in the TUZLA area where the Partisans have captured GRACANICA and KARANOVAC, where they destroyed the railway bridge, and then advanced down the DOBOJ TUZLA railway destroying the track enroute. The report adds that all industrial plants at TUZLA and ZENICA are out of action and the coal mines at LUKAVAK and VARES are no longer working. Fighting has taken place between TRAVNIK and DONJI VAKUF where about 50 Germans were killed and near BUGOJNO where a German column of 100 vehicles and 10 tanks broke through from TRAVNIK. Another strong German column from BIHAC had entered RIPAC on the 16 February. To the South the Partisans have captured ROGATICA about 40 miles East of SARAJEVO, and were last

....reported.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

reported to be attacking towards SARAJEVO.

SERBIA

The large scale BULGARIAN offensive in the PUSTA river area has proved a fiasco in as much as after burning three Partisan villages the BULGAR forces gave themselves over to herding up the livestock which they drove off. It is reported that the BULGAR rank and file have no wish to fight the Partisans and will fight the Chetniks in occupied MACEDONIA only. An action took place near BRODAREVO to the North of BIJELO POLJE where 40 enemy were killed and a train was wrecked near KUMANOVA on the main, BELGRADE - SOLONIKA line.

ORDER OF BATTLE

The German HQ for GREECE is reported to have moved from SALONIKA to ATHENS leaving a Div HQ only in the former town; presumably this report means Army Group "E" under GAF Gen LOEHR but confirmation is lacking. Another report affirms that the air and military HQs in BELGRADE have moved to PETROVGRAD about 40 miles to the North. Elements of 1 Mtn Div have been identified in the BIHAC area, this may indicate that 1 Mtn Div is moving North. 373 German Croat is confirmed at BOS NOVI.

Elements of 100 Jaeger Div have been identified in the recent operations in the SHUSHICE valley, an area previously thought to come under 104 Jaeger Div.

92 P.G. Regt (mot) has been identified by its rising sun and palm tree emblem in North Dalmatia while the skull and crossbones emblem has been noted near BENKOVAC. 264 Inf Div is confirmed in the KNIN OBNIS sector.

A BULGARIAN Bn is stated to be in BANJA LUKA; if this is true it means a change in the Bulgarian policy as up till now they have not sent any formations outside the country except to occupied SERBIA and MACEDONIA. In connection with this report it is reported from a source 'reliability unknown' that all Bulgarian formations in SERBIA and MACEDONIA have recently been allocated a number of German officers and N.C.Os.

-o-o-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

Ten divisions are now represented opposite our ANZIO bridgehead, and in the last week a most determined effort has been made to eliminate it. This main offensive by 14 Army began on the morning of 16 February with four divisions attacking down the CISTANO - ANZIO road on a front of about five miles. From West to East the units taking part were 65 Div between the 85 and 86 Eastings, 3 P.C. Div with 29 G.R. 309 P.G.R. and 1027 G.R. under command down the main road, 715 Div between the 87 and 89 Eastings and 114 Jaeger Div between the 89 and 92 Eastings. 114 and 715 Divs were rather mixed up in the first attack and the other boundaries are also not entirely clear; 1028 G.R. seems to have been in 114 Div's sector and some elements of 4 Para Div were assisting 65 Div. In general, however, 4 Para and H.G. Divs on the Western and Eastern flanks respectively made only holding attacks. Fighting was very fierce and was assisted by the utmost efforts of the German Air Force. By 18 February the enemy had pressed down this narrow front as far as the 285 Northing and was attacking the "fly-over" bridge at F.862287 but his losses had been very severe. On 19 February the enemy attempted to carry out the second part of his original plan which was to put through two fresh divisions, 26 Pz and 29 P.G. but the breakthrough which would have enabled their mobile divisions to exploit had not been made. Their attack was firmly held and the enemy were forced to give ground. At the same time he tried to widen his salient on the Eastern side by bringing 715 Div round to attack down the railway bed and the POSSO DELLA FICOCCIA towards PADIGLIONE (R. 920287). This attack was originally planned for the night of the 18th but the assembly was broken up by our artillery and when it was attempted at first light next morning it met with an Allied attack in force up the road in the opposite direction which took many prisoners. By this time the enemy was in considerable disorder and his forces seriously weakened, as is shown by the fact that on 19 February elements of 147, 741, 721 and 725 Regts were all identified between the 90 and 91 Eastings.

By 20 February the enemy's attacks had ceased and the main.

.....offensive.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

offensive at the bridgehead can be said to have failed. It won ground but has cost him wholly disproportionate casualties. But we cannot expect that he will permanently go over to the defensive for too much depends on the issue. It has already been made a matter of prestige; the defeat of the first Allied landing attempt in 1944 would be a good augury for a year which is bound to see others. From a purely military point of view at ANZIO we are certainly containing ten German divisions with a force about half their number and unless the bridgehead is eliminated we shall continue to contain them for any weakening would at once revive the threat to the rear of 10 Army. We must expect the enemy to resume the offensive again when he has rested and replenished his formations. An indication of his probable intentions is given by the identification of elements of Hermann Goering divisions in the area F.9831 and of 362 Division on the Eastern flank; probably the former will be the spearhead of the new attacks.

There have been one or two new identifications; from the point of view of German manpower 1028 G.R. is an interesting phenomenon. Prisoners state that it is formed of two training bns which were apparently intended for 15 P.G. Div but were sent into action after a very short period of training as an independent formation; they expressed great indignation at being put straight into the line as they had been given to understand that their training had only begun. 1027 G.R. (reinforced) is a more obscure unit and nothing is known yet of its exact composition or nature. 309 P.G.R., I and III bns of which have been identified, is the renamed Infantry Lehr Regt. This is an independent regt normally stationed at the Infantry School at DOEBERITZ where it demonstates tactics and experiments with new weapons. It was hastily removed from DOEBERITZ on 7 February, rushed down to the bridgehead and put straight into action under command of 3 P.G. Div. The regt is said to have 24 Assault Guns attached. The arrival of this formation shows clearly the complete lack of a proper strategic reserve in GERMANY itself. Prisoners from 36 SS P.G.R. made a strange impression; they were all youths of about 17½ years old, of poor physique, low mentality and deficient training. They had not volunteered for the SS (one had violently protested against his enrolment) but had been drafted straight in; they say that the entire class of 1926 from rural districts had suffered the same fate which will certainly account for the phenomenal recent expension of the SS. Quality, however, seems to have suffered.

On the GUSTAV line CASSINO has still been the main centre of interest and the Germans continue to put up a most bitter and violent resistance in which battalions of 1 Para Div have played a leading part. Further South 29 P.G. Div, which is now identified opposite the bridgehead, has been relieved by the elements of 71 Div which came from there (194 G.R. and the div tps). On 19 February the enemy made a full scale attack to recapture Monte CROCE, whose importance was referred to last week, employing I and II/194, II and III/129, I/104 and I/115 G.R. The attack was a costly failure and 112 PWs were taken, including three Coy Commanders. It appeared from prisoners taken there that 115 G.R. has returned finally from H.G. Div to its parent formation, 15 P.G. Div, which it has not been with since SICILY and is to be amalgamated with 129 G.R.; the new regt will take the number 115 as being associated with the memories of 15 Pz Div in AFRICA.

.... On Eighth Army....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On Eighth Army front at the beginning of the week there were in line the first and second bns of both 3 and 4 Para Regts and it appears that these too may be leaving. Between 18 and 20 February II/3 Para was making rather leisurely arrangements to withdraw from the line. On night 20/21 February, according to a PW from II/146 (formerly III/146), his bn was moved up from the ARIELLI area to near TOLLO where it allegedly relieved a unit of 4 Para Regt. It is reasonable to assume that these remaining elements of 1 Para Div will join the rest of the division in the CASSINO area where it will be again concentrated after a month of separation. It is not yet clear what is going to replace them though there are slight indications of the presence of elements of 90 P.G. Div on 8 Army front. In that case the relief might take the form of a direct change-over; 90 P.G. has had a very hard time at CASSINO and its casualties are known to be high, particularly in 200 G.R.

2. ENEMY SUPPLIES AND COMMUNICATIONS

(a) SHIPPING

On the Italian West coast, SAN STEFANO continues to be the principal port of intake. Photo recce of CIVITAVECCHIA has revealed no sign of activity. There has been insufficient photo cover this week to enable an estimate of intake to be given, but on 20 February there were 4 F-Boats, 4 barges and 2 coasters present at SAN STEFANO; on 19 February PIOMBINO (a staging point on the voyage to SAN STEFANO) had 12 F-boats and 4 barges, and the turnover of F-boats and barges at SPEZIA has been fairly heavy. All this suggests a slight increase in daily intake, which for some weeks has apparently been in the neighbourhood of 900 tons. At the same time, the air attacks carried out against SAN STEFANO by day on 16 February and during night 16/17 February, must have served as a warning to the enemy of what will happen if he continues to put all his eggs in one basket. So it is probable that some attempt will be made to reduce the concentration of shipping in SAN STEFANO by providing an alternative port.

In connection with this coastal traffic, it is interesting to note that ITALY's manganese production, which amounted immediately before the war to 60,000 tons per annum, is mainly concentrated in Southern TUSCANY. Since the recapture of NIKOPOL on the Dnieper River by the Red Army, Italian manganese will play a more important role in GERMANY's steel industry. SAN STEFANO itself is the most likely place for loading ore from the GROSSETO mines, while that from the PISA-LUCCA area will probably be loaded at LEGHORN. A parallel for this is found in DALMATIA, where supply vessels frequently carry bauxite on their return journey.

On the East Italian coast traffic to ANCONA and SAN BENEDETTO continues, probably on the usual small scale. Lack of air photo cover precludes any estimate of intake.

In DALMATIA there has been no further activity in the Northern islands. The interest has rather shifted to central DALMATIA, where concentrations of landing craft in SPLIT area suggest that operations are brewing. The obvious objective is VIS, the last remaining Partisan-held island in that area, and a constant threat to the enemy's vital

..... L of C.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

L of C. Such an operation, in view of the long stretch of open water to be covered, and the distance from the mainland, would be rather more ambitious than anything the Germans have yet undertaken in this part of the world.

Supply traffic up and down the coast continues normally. There has been no further attempt to sail large MVs South of ZARA since the disastrous expeditions early this month when 3 MVs were destroyed. So a growing strain is being thrown upon the enemy's limited fleet of ASVs and motor coasters. Allied Naval and Air forces continue to add to this strain by attacking such vessels whenever the opportunity presents itself.

(b) RAILWAYS

Since 17 February there has been very little interference with the North and Central Italian railway traffic. The East coast line has been open since 6 February. The main FLORENCE-ROME line was blocked for two days South of ORTE, but the subsidiary ORTE-ROME lines remained open. On the West coast line the bridge at CECIN. remains blocked and considerable damage was caused at PIOMBINO on 15 February where the traffic to ROME was probably held up for two days. On 22 February FOLIGNO Marshalling Yards and the bridge at MONTALTO di CASTRO are believed to have been blocked.

From air reconnaisance it is apparent that considerable traffic has been reaching ROME, and other sources report that on 9 February 12 trains and on 12 February 20 trains reached the capital from FLORENCE and PISA. On 16 February however, a successful attack was made on ROME marshalling yards and two trains are reported to have been destroyed. Trains have also been observed South of ROME in both the ANZIO and CASSINO areas, evidencing the continuance of the enemy policy of pushing his railheads as far forward as possible. While this rail traffic is not great a few trains slipped through provide a great saving in MT column space and fuel and the enemy is known to be short of both these items

3. BALKANS

GREECE

The negotiations between EDES and ELAS appear to have reached a deadlock after the third meeting between the representatives. Agreement has been reached on all the major issues except the formation of a common Andarte Army and the person of its commander. Col ZERVAS fears the complete subjugation of his force by the numerically superior ELAS formations unless the commander of the proposed joint Army is friendly disposed towards him

ALBANIA

During mid-February Partisans destroyed a small road bridge at PALASSA S.E. of VALONA. This action was swiftly followed by a German drive against the Partisan 5 Bde in the ERATAJ area and against the Partisan 6 Bde in the PERMET (M.61) LUNGHERIES Mts. Details are lacking.

.....JUGOSLAVIA....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

JUGOSLAVIA

SLOVENIA AND CROATIA

Partisan forces are reported to have crossed the river ISONZO between GORIZIA and TOLMINO and to be fighting near the last war battlefield at CAPORETTO.

The German garrisons are still encircled in NOVO MESTO and KOCEVJE and are suffering heavy casualties in their attempts to break out. Between these two towns attacks were made on enemy columns and 16 lorries were destroyed and 73 Germans killed. An armoured train which attempted to interfere from LJUBLJANA was forced to retire after the Partisans had removed some 100 metres of line.

Fierce fighting is reported to be taking place between KOPRIVNICA and LUDBREG on the Hungarian frontier. A German drive is taking place in the FRUSKAGORA Mts in the SRM. Many Partisans successes are reported in this area including 9 trains wrecked on the BEIGRADE-VINKOVCI railway and attacks on the German strongpoints at NEMCI and MOROVIC. In the latter town 43 Germans were killed and a large amount of stores captured. In the KNIN sector 3 small German garrisons were overwhelmed, about 300 Germans being killed and a further 260 wounded; attacks on enemy columns in this area resulted in the destruction of 14 German trucks 2 tanks and 4 guns. Fighting continues against other German columns.

OTOCAC is again in Partisan hands. This town on the SENJ-GOSPIC road was recently captured by elements of 392 German Croat Div. BOS GRAHOVO has changed hands twice during the week and is now held by the Partisans.

DALMATIA

The enemy hold KARLOBAG, SVETI JURAJ, SENJ and CRIKVENICA on the coastal strip and the Partisans are in control at SEICE, NOVI VINODOL, ZUTA LOKVA and KRIVI PUT. There are no enemy on the islands of DUGI and IZ and reports state that the Partisans hold RAB, PAG and the smaller islands of this group only.

BOSNIA

Further Partisan successes are reported in the TUZLA area where the Partisans have captured GRACANICA and KARANOVAC, where they destroyed the railway bridge, and then advanced down the DOBOJ TUZLA railway destroying the track enroute. The report adds that all industrial plants at TUZLA and ZENICA are out of action and the coal mines at LUKAVAK and VARES are no longer working. Fighting has taken place between TRAVNIK and DONJI VAKUF where about 50 Germans were killed and near BUGOJNO where a German column of 100 vehicles and 10 tanks broke through from TRAVNIK. Another strong German column from BIHAC had entered RIPAC on the 16 February. To the South the Partisans have captured ROGATICA about 40 miles East of SARAJEVO, and were last

....reported.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

reported to be attacking towards SARAJEVO.

SERBIA

The large scale BULGARIAN offensive in the PUSTA river area has proved a fiasco in as much as after burning three Partisan villages the BULGAR forces gave themselves over to herding up the livestock which they drove off. It is reported that the BULGAR rank and file have no wish to fight the Partisans and will fight the Chetniks in occupied MACEDONIA only. An action took place near PRODANOVO to the North of BIJELO POLJE where 40 enemy were killed and a train was wrecked near KURSUMOVA on the main BELGRADE - SOLONIKA line.

ORDER OF BATTLE

The German HQ for GREECE is reported to have moved from SALONIKA to ATHENS leaving a Div HQ only in the former town; presumably this report means Army Group "E" under GAF Gen LOEHR but confirmation is lacking. Another report affirms that the air and military HQs in BELGRADE have moved to PETROVGRAD about 40 miles to the North. Elements of 1 Mtn Div have been identified in the BIHAC area, this may indicate that 1 Mtn Div is moving North. 373 German Croat is confirmed at BOS NOVI.

Elements of 100 Jaeger Div have been identified in the recent operations in the SHUSHICA valley, an area previously thought to come under 104 Jaeger Div.

92 P.G. Regt (mot) has been identified by its rising sun and palm tree emblem in North Dalmatia while the skull and crossbones emblem has been noted near BENKOVAC. 264 Inf Div is confirmed in the KNIN ORNIS sector.

A BULGARIAN Bn is stated to be in BANJA LUKA; if this is true it means a change in the Bulgarian policy as up till now they have not sent any formations outside the country except to occupied SERBIA and MACEDONIA. In connection with this report it is reported from a source 'reliability unknown' that all Bulgarian formations in SERBIA and MACEDONIA have recently been allocated a number of German officers and N.C.Os.

-O-O-O-O-O-O-O-O-O-

1. ENEMY SITUATION

The past week has seen a lull in the beachhead which lasted from the failure of the four day German offensive of 16-19 February until the morning of 29 February when another large-scale attack appears to have begun. It seems that the main enemy schwerpunkt has been shifted East, and the first report of the new offensive speaks of attacks in the area between the 94 and 01 Eastings. This had been suspected from the displacement of enemy artillery towards the East which had been noticed during the week. It is certain that other regrouping has been going on but the evidence is far from complete. 362 Inf Div has been identified between the 94 and 99 Eastings and in the former area of Hermann Goering division, covering CISTERNA, and this makes it probable that the latter (now known as a Parachute Panzer Division) will take part in the new attack. 362 Div itself may also be involved this time, having been inactive during the last attack. What other force will be involved is difficult to say; on grounds of the heavy casualties they suffered in the first attack we can probably rule out 715 and 65 Inf and 3 P.G. Divs while 4 Para is still over in the West. This leaves 114 Jaeger, 29 P.G. and 26 Panzer which may be employed: the first indeed has also suffered very heavy losses and may be restricted to a holding role, but 29 and 26 Pz, which were apparently the two divisions intended as the second wave last time, will probably be well to the fore again. They are, perhaps, the best divisions of which von MACKENSEN disposes, after Hermann Goering div. The attack will probably therefore be made by two infantry and two armoured divisions. The latter are already conspicuous; 90 tanks have been observed on 29 February moving from CISTERNA Southwards towards FEMINA MORTA and it seems as though the offensive this time is beginning with an armoured rather than an infantry attack.

.....The enemy.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The enemy intention is probably to drive a wedge into the Eastern part of the bridgehead and thereby cut off our troops holding the line of the MUSSOLINI canal. This does not, on the face of it, look like an all-out attempt to eliminate the bridgehead in one blow but rather the tactics would be to reduce gradually its size, causing us at each stage a serious attrition of force, until it became too small for safety. It seems probable that this new attack is under command of 76 Panzer Corps which appears to be operating under 14 Army; at least it seems clear that this Corps H.Q. is in the bridgehead area. This gives 14 Army two Corps H.Q. which is reasonable in view of its considerable strength in divisions and 1 Para Corps is apparently still commanding the Eastern flank.

Interrogation of prisoners has given interesting information on the 16 February offensive. It is clear that when the attack was launched morale was particularly high; troops had been given a special order from HITLER in which he made it clear that this "abscess" must be eliminated and, even more important for morale, they had been told that they would get massive air support from the Luftwaffe combined with numbers of heavy tanks. Finally at least two regts were told that 14 Army were to have the privilege of operating, for the first time of any German troops, with the "secret weapon". This long-awaited marvel was actually demonstrated to 309 P.G.R. according to one prisoner; the demonstration was a failure and the secret weapon turned out to be the radio-controlled explosive tank which has in fact already been used on the Russian front. None of them was reported in action by our troops but a prisoner reports that 14 of them were exploded prematurely by our artillery. With all this encouragement it is clear that the Germans fought with exceptional fierceness. 735 G.R. of 715 Div was, according to one P.W. reduced by the end of the attack to two assault groups with a total strength of 150 men; this would represent about 95% casualties against establishment strength. The division has apparently, as a result, been withdrawn to a quieter sector of the front or to rest and has not been identified since 20 February. It is clear from PW statements that figures for killed were high and particular damage was done by our artillery fire. 114 Jaeger Div suffered especially from this, for which its previous experience against Partisans in YUGOSLAVIA had not prepared it.

On the main front there has been little change or activity. It is now clear that 1 Para Div has taken over the CASSINO sector from 90 P.G. Div and its H.Q. is at the former's old site near RECCASECCA. Otherwise dispositions are unchanged. A prisoner from 115 Tank Bn who had been posted to 115 G.R. stated that the Bn had handed over its tanks to H.G. Div and the men had been drafted as infantry. On 8 Army front there is also no activity to report; apparently parts of 90 P.G., including elements of 190 Arty Regt and 361 G.R. are somewhere on that front though they have not yet been identified from prisoners. It looks as though a straight change-over with 1 Para Div was intended but final dispositions are not yet clear.

.....An Anti.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

An Anti-Nazi who travelled all the way from RUSSIA to desert to us in ITALY stated that while in BOLOGNA he met soldiers from the 278 Inf Div which was forming there. As he enquired about it with particular care in order to forge papers representing himself as a member of the division, and since he seems otherwise reliable, this identification should probably be accepted for the hitherto unidentified division known to be forming in the BOLOGNA area.

2. ENEMY SUPPLIES AND COMMUNICATIONS

(a) SHIPPING

This has been a very poor week for air photography in ITALY, so little can be added to last week's information. No sign of activity has been seen at CIVITAVECCHIA, where port facilities are now known to be almost completely destroyed. Nevertheless, increased activity in F-boats and barges at SPEZIA suggests that seaborne maintenance traffic is being stepped up in Western ITALY. SAN STEFANO continues as the main port of intake on the West coast, but it is not unlikely that arrangements have been made for unloading this increased traffic at other small harbours.

There has been no photography of the Eastern coast of ITALY, but the usual traffic of ASVs is assumed to be reaching ANCONA and SAN BENEDETTO.

In DALMATIA, concentrations of landing craft were observed in KORCULA Channel on 25 and 26 February, and the port of KORCULA showed abnormal activity. Two destroyers were sighted near TROGIR on 26 February. There is little doubt that these activities are in preparation for an attack on VIS, which, so long as it remains in Partisan hands, must endanger the vital seaborne supply line upon which the maintenance of the enemy's coastal garrisons depends.

Normal small craft traffic continues up and down the Dalmatian coast. The only large vessel seen, a medium MV at ZATON (near SIBENIK), was attacked by Allied aircraft and received a direct hit. The ports of POLA, FIUME, ZARA and SIBENIK were also attacked.

(b) RAILWAYS

Air attack on 22 February resulted in the cutting of the line near MONTALTO di CASTRO bridge and it is reported that the line is still out. Since this there have been no attacks on the railways in ITALY, and the bridge at CECINA and junction at VITERBO are the only other points where the railway system is now thought to be interrupted.

Owing to the destruction of CECINA bridge on 24 December no through traffic has been possible on the West coast line for over two months. Presumbly the line has been used for nothing more than the small amount of traffic required to move supplies brought in by sea to the small port of SAN STEFANO, and with the line out near MONTALTO di CASTRO through traffic from SAN STEFANO South to the ROME area is no longer possible. Reports

....continue to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

continue to indicate that the Germans are removing tracks and electric generators from this line for use elsewhere.

The FLORENCE-ORTE-ROME line and the PERUGIA-TERNI-ORTE by-pass still form the main supply channel from the North to the enemy forces on the ANZIO and CASSINO fronts. Since the beginning of February access to ROME by these routes has been possible except on 5, 6 and 7 February when there was a block at TERNI, and on 8 February when ORTE was blocked. It is also believed that traffic was held up at BUCINE viaduct between AREZZO and FLORENCE on 13 February, but this requires confirmation. It is interesting to note that the through lines at VITERBO junction have now been blocked since January and that no repairs seem to have been attempted. The VITERBO-ROME lines (there are two, one electric and the other steam) form a useful loop around ORTE junction on the main FLORENCE-ROME line, but with VITERBO junction blocked no through traffic to ROME is possible over this loop. However, some local traffic from VITERBO to ROME is reported moving over the electric line; there are indications that the steam line has been mined.

The East coast railway line has been open since 3 February.

3. BALKANS

GREECE

The negotiations between the rival Greek parties have continued in a friendlier atmosphere. Eight meetings have taken place between the representatives of ELAS, EDES and EKKA, the latter having proved an effective cushion between the more fiery and involved ELAS and EDES parties. The release of Greek PWs and hostages taken by all parties during the recent struggle has been agreed to.

In the Mt. OLYMPUS area a German troop train was blown upand almost completely destroyed. In the ensuing confusion the Andartes caused great slaughter with hand grenades and LMG fire.

A Bulgarian force which surrounded a Greek band to the South of XANTHE on the river NESTOS suffered heavily in the ensuing action. 200 dead and wounded Bulgars were counted for the loss of 40 Andartes.

ALBANIA

SKENDER MUCO the BALL KOMBETAR chief of the VALONA area and said to be the representative of the Ball Kombetar Committee has stated that this party is willing to serve under orders from CAIRO, but he wished first to have a guarantee of Albanian independence from the Allies and secondly to suppress the Partisan Communistic bands. LIBOHOVE, midway between VALONA and JANINA was captured by the Partisans who took 50 Ball Kombetar PWs.

JUGOSLAVIA

SLOVENIA and CROATIA-SLAVONIA

The mercury mines at IDRIA situated between GORIZIA and

...LJUBLJANA....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

LJUBLJANA have been attacked for the second time by Partisan specialists and are now claimed to be out of action for the duration of the war. Fierce fighting continues in the KOPRIVNICA area where the enemy is striving to open his communications from HUNGARY to ZAGREB and the S.W. A combined force of Germans, Ustashi and Chetniks was repulsed at PETRINJA and an USTASHI force which attempted to interfere from the direction of KARLOVAC was forced to retire. In these operations lasting two days the enemy lost 84 killed, 92 wounded and 10 PWs.

The Partisans claim to have entered but not captured KOCEVJE and have twice destroyed the garrison in VELIKE LASCE to the South of LJUBLJANA. Partisan activity South of FIUME and in the entire area recently taken over by 392 Germano-Croat Div has increased. ZLOBIN was captured on 22 February and the Partisans were then advancing on KRALJEVICA. It appears that Ustashi troops are in possession of OTOCAC, last reported to be held by the Partisans. A report states that a column of 800 Ustashi made a sortie from this town but was forced back after losing 82 killed and wounded.

The recent withdrawal of German Divs from the N.W. has been used by the Partisans to tighten their hold and they claim to be in control of the area exclusive ZAGREB-SISAK-KOSTANJICA-BOS NOVI-BIHAC-KARLOVAC. Lack of heavy weapons and in particular of AT guns has so far prevented them from capturing the towns. CAZIN, 10 miles North of BIHAC, was captured by the Partisans on 21 February. On 15 February a troop train was mined at PERKOVCI on main BELGRADE-ZAGREB line. The engine and 16 trucks were destroyed, 45 Germans were killed and 29 taken prisoner. Some days later a section of the BANJA LUKA-PRIJEDOR line was destroyed and two bridges blown; a train was also derailed at BOS NOVI. On 22 February two trains were derailed on the LJUBLJANA-LITIJA line by Partisan specialists who also damaged the lead mines in the latter town and put out of action the coal mines at RAHJENBERG.

DALMATIA

The Partisans appreciated that the attack on VIS would take place on or about 25 February and claim that the enemy postponed his attempt when the element of surprise was lost. There has been considerable activity on German held KORCULA and the PELJESAC peninsula. An estimate of 3,000 enemy on KORCULA and increased shipping activity in nearby waters points to the conclusion that the attack is imminent. Elsewhere in the Northern islands the enemy have slackened their grip but as yet no partisan gains are reported.

BOSNIA

There has been fighting on a reduced scale near BOS GRAHOVO probably intended as a flank protection for Northbound German convoys on the KNIN-BIHAC road. Fighting at ROGATICA to the East of SARAJEVO continues, but details are lacking. The Partisan forces which invested and captured KALINOVIK are reported to be hard pressed and suffering from lack of ammunition and may eventually have to cede the town to the enemy. Another train has been derailed on the MOSTAR KONJIC line and some 50 Germans killed.

SERBIA

Partisan strength is reported to be increasing but no

....great activity....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

great activity appears to have taken place. An attack by the Partisans on PRIJEPOLJE is announced but no details are given.

ORDER OF BATTLE

162 Inf Div is reported to be in the UDINE GORIZIA area and to have commitments on the Istrian peninsula; it is unlikely that this formation still has duties to perform in the LJUBLJANA-NOVO MESTO area.

SS Mtn Div Prinz Eugen was confirmed in the MOSTAR-NEVESINJE GACKO area but was later rumoured to be moving North.

A delayed report states that LA Police Regt left OGULIN for RUSSIA at the same time as the SS Divs Nordland and Nederland.

It is reported that a regt bearing the number 8 was concerned with operations near KOZANI between BITOLJ and LARISSA. This probably refers to 8 SS Police Regt of the newly formed SS Police Gren Div with H.Q. at LARISSA. SS Police Gren Div has the SS Police regts 5, 7 and 8.

THIS PAGE IS DECLASSIFIED IAW EO 13526

If so he has finished off the destruction which our bombs had almost completed. Consequently with only the ports of PIOMBINO and SAN STEFANO on the West, ANCONA and the little fishing harbours down the coast to PESCHETTO on the East, it is estimated that, in the event of a major rail breakdown in Central ITALY, road transport and the limited coastal shipping could barely cope with the daily army supply and maintenance requirements.

The movement of supplies is not the only form of transport affected. Rail interruptions have imposed considerable delays on the movement of troops. The normal German infantry division is still horse-drawn and is normally moved by rail when making such journeys as from North to South ITALY; indeed it is the German practice (again probably largely due to MT tyre and fuel restrictions) for even the non-tracked elements of armoured and motorised divisions to make such journeys by rail. It is known however that the moves of most of the divisions which have come South in the last few months have been either delayed or the formations forced to detrain as a result of rail interruptions.

Although the rail network in Central ITALY is not extensive, it is too much to hope that even sustained attacks will in fact cause a complete breakdown; nevertheless the mounting chaos and confusion caused by sustained attacks could bring about an intolerable situation for the enemy and one which he could not endure indefinitely. Furthermore, the increased use of MT for the movement of supplies (and consequent increase of fuel consumption) which our recent attacks must be imposing on the enemy, together with the general large scale troop movements necessitated in reaction to our landing, may have far reaching repercussions. Should a serious fuel shortage develop in Central ITALY the enemy's freedom of tactical manoeuvre might well be affected.

Just as important to the enemy as MT and fuel at this time are horses and fodder. It is estimated that the number of horses now being used by 10 Army may well be as high as 35,000, and that these will require at least 400 tons of fodder daily. From what is known of the supply situation in German occupied ITALY there is reason to believe that the enemy may have considerable difficulty in getting the necessary fodder locally as would be his wont. Failing this, supplies would have to come from North ITALY or the Reich imposing yet a further strain on his L of C.

DALMATIA AND CROATIA.

The situation in DALMATIA has also, at least temporarily, deteriorated. In an area where the enemy relies almost entirely on his road and sea communications both have been under constant attack. Nowhere in the area between KARLOVAC-BIHAC-SPLIT and the coast can the enemy be said to be in full control of the main roads, while coastal shipping and ports have been severely handled by the air force. The Germans are still having to fight to keep the main inland roads, SINJ-LIVNO-DONJI and OGROZAC-KNIN-GRACAC. 114 Jäger Div has been fighting its way Northward along the road GOSPIC - OTOCAC - SINJ while 392 Croat Div is apparently fighting its way South down the road from

.....KARLOVAC to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

KARLOVAC to meet it. Yet another German column is reported to be fighting its way along the SISAK-SENJ road. The Partisans are strongly attacking all troop movements along these roads and there has been fighting on a considerable scale. At the same time German coastal and island shipping has been heavily attacked where the Germans and Partisans continue to perform a kind of "Cox and Box" act on some of the more important of the Dalmatian islands. This state of affairs is only a part of the ceaseless and never wholly successful German struggle for the effective control of communications in YUGOSLAVIA.

RAILWAYS

ITALY

Prior to the ANZIO landings a large scale and co-ordinated air attack was launched against the enemy's rail L of C and is continuing. Helped by good weather the attack proved extremely successful and by the eve of the landings all the main routes of Central ITALY had been cut, while traffic on the subsidiary lines was at best on a very restricted scale. The situation was, in fact, more satisfactory than at any time since the invasion of ITALY. Blocks were caused at all the major rail junctions and in addition successful attacks on the CECINA and MONTALTO di CASTRO bridges had closed the West coast line for an indefinite period.

Thus at the critical period when it was essential for him to have his communications working freely, the enemy was faced with a large scale breakdown of the railways. The seriousness with which he viewed this situation is shown by the rapidity of the repairs effected. 48 hours were normally sufficient to have a junction open again, although the bridges offered a tougher problem, and even now the CECINA and MONTALTO bridges are still closed to traffic. The strain imposed on his repair facilities by the widespread nature of the attacks was of course cumulative, and if it had been possible to maintain them without respite, a very critical situation might have arisen.

Owing to weather conditions, however, attacks were on a reduced scale for a few days after the landing and a degree of recovery was achieved. By 28 Jan the Central route from FLORENCE to ROME was probably open although working on a restricted scale. The West coast line was still shut, and the East coast line probably cut at RIMINI. Attacks were however renewed on 28 and 29 Jan and although full PR is not yet available it seems likely that the Central line is again closed at ORTE and at the North ORVIETO bridge while there is at best only restricted working on the EMPOLI-CHIUSI and the TERNI by-pass routes.

It is as yet impossible to draw any definite conclusions as to the effect this will have on the German supply system. Recent PR and visual reconnaissance of the ROME Marshalling Yard show a considerable amount of rolling stock present suggesting that a degree of congestion has been achieved in this area. At the same time the Marshalling Yard at FLORENCE is only very lightly loaded implying that little traffic is proceeding South down the Central line. Apart from this, little evidence is available but it is certain that the moves of any possible

.....reinforcements from.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

reinforcements from the North to the new battle area will have to be carried out at least partially by road at the present time.

In the North, all available information shows that the BRENNER and TARVIS routes are still the main supply arteries for ITALY, though even these are only working on a restricted scale. On the TARVIS route the average daily number of incoming trains in the period 25 Nov - 19 Dec was only 13, and on the BRENNER it was very little more. It is evident that the daily number of trains coming in on any given day rarely exceeds 20 on each of the above routes. This of course is ample for the maintenance of all the German forces in ITALY even if only half of them are carrying supplies.

On the Franco-Italian routes traffic is on a very reduced scale. The coast line is cut at the ROCCO Viaduct near GENOA and may still be interrupted at TAGGIA, while on the MONT CENIS route traffic is only working sporadically. It is clear that apart from troop movements these lines carry little traffic of importance.

YUGOSLAVIA

There is very little fresh to report in the railway situation in the Balkans. Partisan activity continues in the general areas which were outlined in Summary No.29. On the FIUME-OGULIN-KNIN-ZADAR line at least one railway bridge has been destroyed and the track is reported cut at several points.

On the main ZAGREB-BELGRADE railway, interruptions have been on a smaller scale of late except in the BROD area where the track has been cut in at least five places during the past week. Apart from this, the line seems to be working fairly normally. In addition the important narrow gauge line from BROD to DUBROVNIK is now thought to be in use. It seems likely that supplies are being carried down this to DUBROVNIK for shipment to points along the coast.

SHIPPING

ITALY

Up until 22 Jan when we landed on the ANZIO area 10 Army supplies continued to be brought South to CIVITAVECCHIA and ANZIO in the usual P-lighters and supply barges. The only change between the date of our last Summary (7 Jan) and 22 Jan was an increase in lighter traffic to ANZIO. This increase, however, is not thought to indicate an overall stepping up of seaborne tonnage to 10 Army but simply that ANZIO was receiving a considerable portion of the supplies formerly unloaded at CIVITAVECCHIA. As already indicated in our last Summary, this splitting of seaborne supplies to 10 Army between CIVITAVECCHIA and ANZIO was undoubtedly forced upon the enemy as a result of continued air attacks on CIVITAVECCHIA.

With the exception of 1 munitions carrier, supply shipping South of PIOMBINO appears to have been restricted exclusively to small craft, i.e. barges, P-lighters and an occasional ASV.

.....Since ANZIO.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Since ANZIO is lost and demolitions have probably been executed at CIVITAVECCHIA, it is thought that SAN STEFANO is likely to become the main port for US Army supplies, probably supplemented at least for the time being, by the continued use of CIVITAVECCHIA on a small scale.

On the Italian East coast we have been successful in sinking a number of ASV's by air and surface attacks and several ports were bombed and bombarded. Otherwise shipping continues to ANCONA and SAN BENEDETTO on the usual small scale.

It is interesting to note that the enemy continues to commission new supply shipping. Photo reconnaissance of the shipyard at SESTRI PONENTE (near GENOA) discloses that between 7 Jan and 27 Jan 1 munitions carrier and 2 F-lighters were launched, while on 27 Jan a 480-foot cargo liner, 3 - 45- foot tankers, a munitions carrier, 5 F-lighters and 2 - 120 to 150 foot vessels were observed to be under construction.

From GENOA Westward along the Southern coast of FRANCE the usual supply traffic is evident and the enemy continues his policy, begun with our initial landings in ITALY, of removing ships from Italian waters to French ports. In this area it is interesting to note that it has been reported that crews are being sent by rail from French ports to GENOA to sail ships to French ports. On the arrival of a ship at these ports, the crew is entrained for GENOA again for the same purpose. The Germans have ample shipping at their disposal in the Western Mediterranean Basin, but there is a shortage of crews. The use of crews in this manner would appear to be the most economical way of handling their limited manpower, as the time factor at the moment is not particularly pressing.

DALMATIAN COAST

The islands continue to be the focus of interest along the Dalmatian coast. Since 7 Jan the enemy has captured the islands of SOLTA, BRAC and HVAR with little or no Partisan resistance. LISSOSA has been evacuated by the Partisans and all the other islands between SPLIT and DUBROVNIK are in enemy hands with the exception of VIS. A through coastal route is now open from TRIESTE to the ADRIATIC, though no shipping appears to have moved any further South than KOTOR BAY in Southern YUGOSLAVIA. However, the Partisans have recently countered with attacks on, and at least partial occupation of, the islands of ULJAN and PASMAN between ZARA and SIBENIK. Since Partisan occupation of these two islands would be a serious threat to his vital Dalmatian shipping the enemy reacted quickly and began reoccupation of ULJAN on 31 Jan.

Considerable shipping activity continues from TRIESTE as far South as DUBROVNIK. SPLIT appears to be assuming increased importance though the increase in shipping here may at least in part be attributable to the enemy island operations in that area.

FIUME, POLA, ZARA and MAKOVIC were each subjected to a rather heavy and successful bombing raid. Our air effort against shipping, however, has been notable for the success of our fighters and fighter-bombers, particularly in the area SPLIT-DUBROVNIK. It is estimated that at least 2 fairly large M/V's, a small tanker, an E-boat and some 20 to 25 assorted ASV's schooners and siebel

.....ferries have been.....

THIS PAGE IS UNCLASSIFIED

0384

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ferries have been sunk or damaged.

Our naval units have also been successful in sinking a small tanker and a number of small craft. Several of the ports, including ROVIGNO between POLA and TRIESTE, have been bombarded.

3. BALKANS

ALBANIA

Fighting in the SHUSHNICA Valley has died down but clashes have taken place further to the West around TEPELENE where some 40 Germans were killed. During mid-January the Germans organised mopping up operations in the HERSNIK area (West of KORCA), a number of villages were burnt out and by 20 Jan it was announced that Partisan opposition had been broken and the whole of the area brought under German control.

JUGOSLAVIA

The recent Bosnian offensive appears to have come to an end with the reported arrival on the coast of 1 Mtn Div and the SS Mtn Div Prinz Eugen... Again the enemy failed to encircle the Partisan forces or to bring them to battle and after capturing JAJCE, DUGAJNO, GORNJI VAKUF and most of the towns in this area pushed on to GLAMOC but Partisan activity cropped up in their wake and it is now claimed that most of the towns have been recaptured by TITO's forces. Serious casualties were inflicted on the enemy during these operations but it is to be feared that the Partisans lost much valuable material which had been dumped in this area.

As the centre of gravity of the German operations moved to the West the Partisans in E. BOSNIA again went over to the offensive in the area DONJ, TUZLA and ZVORNIK. Fierce street fighting was reported in TUZLA but the Partisans were forced to withdraw in the face of heavy armoured columns of reinforcements; however a great amount of war material and ammunition is claimed to have been captured by the Partisans who inflicted heavy losses on the mixed German Ustaschi garrison. Further to the South in the FOCA area the Partisans claim to have killed 900 Germans in the recent fighting and the towns of KALINOVIK, FOCA and RUDO were stated to be in Partisan hands. The capture of these towns would seriously impede German communications in the upper DRINA Valley and counter measures will probably be taken by the enemy.

In CROATIA the efforts of the 114 Jaeger Div to reach the area recently vacated by 71 Inf Div have been strenuously opposed by the Partisans but in spite of continuous attacks the German columns reached SENJ on 24 Jan and soon after were reported in NOVI some 10 miles to the North. The rear of the German columns was vigorously attacked on the OTOCAC-GRACAC road and many casualties inflicted on the enemy.

Widespread fighting has taken place to the North between LJUBLJANA and NOVO MESTO, the Partisans claim to have cleared the South bank of the river KRKA between the latter town and KOSTANJEVICA and to have successfully attacked German forces near VELIKA LASCE to the South of LJUBLJANA.

...The German Great.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

The German Croat 392 Div which is reported to be moving South in two columns from ZAGREB via KARLOVAC-SLUNJ and KARLOVAC-JOSIPDOL was attacked by the Partisans who claim to have slowed its progress and to have inflicted heavy casualties. The Partisans have captured the villages of GABRIN and POTEC in the PAPUK area killing 352 enemy mostly USTASCHI including the formation C.O. and captured amongst other material 2 x 75mm guns, 30,000 rounds S.A.A., 12 M.Gs and a lorry.

A list of the islands on the E Adriatic coast showing whether held by Partisans or enemy forces is given below. It is emphasised that these islands are usually held by nothing more than look-out posts and with the possible exception of KRK and the larger Dalmatian islands all the islands in enemy hands are garrisoned by less than 200 men each.

BULGARIA.

A law was passed through the SOBRANJE on 26 Jan creating a new state gendarmerie on the lines of the German SS. Its purpose is to forestall or destroy any mass movements, to prevent

....the formation....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the formation of subversive groups and to destroy any existing ones. Although the Government is still feeling its way carefully it would seem that it is going to attempt to maintain its alliance with GERMANY by concentrating about itself the reactionary forces in the country.

ORDER OF BATTLE

Main HQ 2 Panzer Army is now reported to be at VRNJACKA BANJA in SERBIA between KRUSEVAC and KRALJEVO. The HQ was in BANJALUKA on 1 Jan.

15 Mtn Corps is reliably reported to be in BANJA LUKA and not as previously stated at BIHAC.

The Partisans claim that the enemy formation surrounded in NOVO MESTO is the 162 TURCOMAN Div; it may well be that elements of this div are in the area but the report should be treated with reserve.

392 Germano-Croat Div is moving down from ZAGREB to the GOSPIC area and may perhaps take up the area recently vacated by 114 Jaeger Div.

1 Mtn Div is reported in the area KNIN and the SS Mtn Div Prinz Eugen at ARZANO South of LIVNO.

The long awaited 13 SS Div BOSNIA-HERCEGOVINA has arrived in OSIJEK and is reported to be destined for the coast; it would thus appear that the Northward trend of the coastal Divs was a temporary measure to cover the move of 114 Jaeger Div and no major move has taken place in the area of 264 Inf and 118 Jaeger Divs.

-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The second main enemy attack which began at 0800 hrs. on 29 February had already failed by the afternoon of 1 March. The enemy had not succeeded in gaining any ground at all and the casualties, especially among the inexperienced troops of 362 Div, were heavy. Prisoners amounted to slightly over 500. As stated last week the divisions involved were 362 (all three regts of which have now been identified), 114 Jaeger, Hermann Goering and 26 Panzer on the main front while 715 Div attempted a diversion on our right flank and 4 Para Div on our left. The failure of the offensive was followed by a period of relative calm but strong local attacks, up to battalion strength, covered the enemy's disengagement and fighting patrols have been active to cover what is probably a regrouping. The only evidence so far is reports of heavy MT movement between CORI and CISTERNA both ways on the afternoon of 6 March and morning of 7 March which might indicate the withdrawal of a formation from the line - Herman Goering Div from the locations. 29 PG Div has not been identified in the line since 1 March and may well be in reserve.

There have been several interesting and novel identifications. The most important is 508 Heavy Tank Bn which is stated by a captured diary to be equipped with Tigers and to have arrived from MAILLY LE CAMP in FRANCE on 16 February. 813 Eng Bn, according to a prisoner, operates the remote-controlled explosive tanks referred to last week which are now known to be called GOLIATH. According to the prisoner there is an 811 Eng Coy similarly equipped on the CASSINO front. A prisoner from I Bn 129 was captured at F 9730, having been transferred there from the area of S. ALPOLLINARE on the GARIGLIANO. It is not known whether the rest of this regiment has also transferred; III Bn was still

....in the area.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in the area on 3 March but II Bn has not been identified for some time. 146 G.R. has rejoined its parent div, 65 Inf, from 8 Army front. 76 Panzer Corps has been definitely identified from a captured order dated 7 February as cooperating with 1 Para Corps under 14 Army; at that date the inter-Corps boundary ran through TORRE DI PADIGLIONE (F 9229) with 1 Para Corps West and 76 Corps East; the boundary is probably about the same at present.

Enemy losses in the beachhead fighting have necessitated many replacements. We have only a very partial knowledge of these but a few instances will show their scale. On 22 February 3 P.G. received a draft of 600 men from March Bn 317 and on 27 February an unspecified March Bn arrived with replacements specially for 29 G.R. 29 PG Div received an unknown number of replacements, probably a March Bn, on 18 February at VELLETRI. 65 Div received 450 replacements on 15 February from March Bn 984 and 26 Pz Div had 1,000 replacements on 24 February divided between its two Grenadier regiments alone. The above figures give us a replacement rate of about 3-5,000 men between 18th and 24th February and it seems that a rate of 5,000 a week for 14 Army alone is not improbable. We have however, possibly over-calculated the enemy's strength in one respect; further examination of the evidence from identifications of 16 SS Div seem to show that only two inf bns can be identified with certainty in the bridgehead area, namely II/35 and II/36; we have besides, from documents, evidence of the presence of IV Bty 16 SS Arty Regt and 16 SS Recce Unit though perhaps only sub-units of these are present. It is, of course, difficult to prove a negative but prisoners' statements make it clear that I and III Bns 36 G.R. remained in LJUBLJANA and we have not firmly identified I and III/35 PGR. Certainly if there had been as many as four infantry bns, as was previously assumed, we might have expected them to take a more active part by now.

There is no important change on the main Fifth Army positions. The enemy continues to develop the switch-line from PIEDIMONTE through AQUINO and PONTECORVO to S. OLIVA. On Eighth Army front the enemy reorganisation has become clearer. 305 Div apparently extends as far as the coast where a PW from I Bn 578 has been captured; apparently this regiment leap-frogged round 577. The boundary with 334 Div appears to run roughly through CRECCHIO and the latter div extends as far as the MAIELLA. 146 G.R. has left this front altogether and gone to the bridgehead. The ALFEDENA-PESCOCOSTANZA sector is still defended by 576 G.R. with at least part of the Div Reconnaissance and Engineer bns under command and possibly 280 March Bn, if it still exists as a separate unit: the whole is known as Battle Group BOIE after the Commander of 576 G.R. The front, therefore, between ALFEDENA and the sea is held by two divisions only, 334 and 305. 90 Lt is apparently not in the line; 361 Regt appears to be in the PESCARA area where it is probably resting after its heavy fighting at CASSINO and watching the coast. We know the enemy is worried about the possibility of landings on the East coast; he has actually erected notices in PESCARA warning troops to have their arms with them at all times in view of the

....imminent danger...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

imminent danger of landings. The rest of 90 Div has not been located but is probably also resting in some central position.

There is nothing of interest to report from North ITALY, but in FRANCE we have reliable reports of a move South of 9 SS P.C. Division ("HOHENSTAUFEN") from the AMIENS area to South FRANCE. This Division may be intended as a mobile reserve for the French Southern coast but it may also be staging there on its way to ITALY. It seems reasonable to assume that since the enemy has twice failed to demolish our bridgehead with the forces at his disposition at present, and since he must at all costs demolish it or risk his whole defence scheme in ITALY, he is likely to try to bring down some fresh forces. And if possible they should be of better quality than 715 or 362 Divisions.

2. ENEMY SUPPLIES AND COMMUNICATIONS

(a) RAILWAYS

During the past week weather has again restricted operations against railways. However, successful attacks were made on ROME marshalling yards which the enemy is probably using as railheads. At least one ammunition train is believed to have been hit. It is reported that many trucks in the yards have been destroyed and extensive damage done to the tracks, and that the enemy has been forced to switch much of his rail activity in this area to the LITTORIO marshalling yard on the outskirts of ROME and to SETTE BAGNI about 5 miles further North. The marshalling yards at ORBETELLO, which serve the ports of SAN STEFANO and PORTO ERCOLE, were successfully attacked on night 2/3 March. On 7 March raids were made on the PRATO, PONTASIEVE, CERTALDO and POGGIBONSI yards, but results are not yet definitely known.

Railways in Central ITALY are still blocked at CECINA bridge on the West coast line 20 miles South of LEGHORN and at VITERBO, a junction of several secondary lines some 30 miles North of ROME. However, repairs are going forward on CECINA bridge and according to P.R. on 7 March, 2½ of the total of 3 spans have been repaired.

Considerable coal shipments are apparently still coming into ITALY from GERMANY via SWITZERLAND. It is reported that during December 1943, 184,000 tons of coal were brought in over this route by rail. While this is an appreciable falling off from the figure of 255,500 tons for November, figures for the period 1/20 January are something over 170,000 tons, indicating that January performance will probably have attained the November level.

(b) SHIPPING

During the past week there has been little change in the shipping situation.

On the Italian West coast the usual activity in F-boats and barges continues. SAN STEFANO, the enemy's most Southerly

....port on this.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

port on this coast, has again been attacked and appreciable damage achieved. Appreciable activity nevertheless continues at this port, where five F-boats were observed on 2 March and 4 F-boats and one barge on 6 March. On the East coast, where there appears to be some increase in shipping between ANCONA and SAN BENEDETTO, small ships have been successfully attacked at ANCONA, CIVITANOVA and SAN BENEDETTO.

Shipping in the Eastern Adriatic from TRIESTE and FIUME continues active to as far South as DUBROVNIK. These waters remain dangerous for the enemy and ships cannot safely venture South in the face of our continued successful air and surface attacks. On night 29 February our Naval units intercepted a convoy between POLA and ZARA and in the resulting action two enemy merchant vessels were believed to have been sunk. Allied air forces have sunk or damaged a number of small craft, set an M/V afire at SIBENIK, and sunk another M/V at SPLIT.

In order no doubt to replace his losses in small craft, the enemy is building F-boats at Adriatic shipyards. Within the past few days photo reconnaissance discloses that 12 such craft are under construction at MONFALCONE. While these craft are being extensively used on the Italian West coast, they have not heretofore been observed in the Adriatic; with a cargo capacity of about 80 tons, they should form a most useful supplement to the Dalmatian coast small-ship tonnage at present undoubtedly much strained in view of continuous losses.

3. BALKANS

GREECE

More details have arrived about the troop train wreck in the Mt Olympus area. The train was carrying about 1,500 Germans of which, one report states, 900 have been killed or injured. Three coaches with officer dead are still under the waters of the river PINIOS. The Gestapo have sealed off the scene of the wreck but it is known that high ranking German officers have made an inspection of the wreckage. Some idea of the magnitude of the disaster is gleaned by the fact that 350 troops have been working for four days to clear the wreckage.

In the PELOPONNESE the Germans have burned a number of villages South of PATRAS and shot many hostages as a reprisal for the death of two German officers.

To the North, in the JANINA area four German trucks were captured in an ambush on the KALIBAKI GRAVENA road. 8 Germans were killed and 3 Italians made prisoners. The stores, including petrol and tyres were carried off by the Partisans and the trucks burnt.

JUGOSLAVIA

CROATIA AND SLOVENIA

A report from SLOVENIA states that the enemy forces

..... in this area.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in this area are purely defensive. The railways MARIBOR-ZIDANI MOST-LJUBLJANA-TRIESTE and VILLACH-KLAGENFURT-DRVOGRAD are strongly garrisoned by Wacht bns and SS Police.

The ZAGREB-VARAZDIN line is not working with consequent congestion on the roads. Partisans are harrying Germans convoys and a number of minor successes are reported.

An armd train was derailed at BOROVNICA on the TRIESTE-LJUBLJANA railway. The engine and six trucks were destroyed and German casualties are believed to be high. A German column was attacked near NOVO MESTO and 176 of the enemy were killed.

392 Germano-Croat is receiving its Balkan baptism on the Croatian coastal strip. Clashes are reported at BRINJE where 25 enemy were killed and at PERUSIC. Repeated attempts by the enemy to break out of OTOCAC in thedirection of PERUSIC were frustrated and the Partisans claim to have killed 60, mostly Ustashi. Perhaps the heaviest fighting has taken place in the area of KOCEVJE. Many enemy sorties were repulsed and heavy losses inflicted on them.

Clashes have taken place in the area GLINA, PETRINJA, KOSTAJNICA between the Partisans and elements of 1 Mtn Div. The enemy used tanks and aircraft in an attempt to enter GLINA but was repulsed by the Partisans.

BOSNIA

KALINOVIK to the South of SARAJEVO is still in Partisan hands in spite of repeated enemy attempts to enter it. It would appear, however, that the enemy have completely surrounded the town, thus preventing the arrival of much needed supplies to the Partisan defenders. A German column was surrounded to the NE of TUZLA and is suffering losses in its attempts to break out. A relief column from CELIC, to the NE, was forced to withdraw after a sharp engagement. Some fighting has taken place near PRIJEDOR and SANSKI MOST; 25 Germans were killed and about 20 wounded. Still another train has been derailed on the SARAJEVO-MOSTAR line and some 100 Germans were killed. Much war material fell into Partisan hands.

DALMATIA

Activity on a reduced scale is reported in the Southern island group. A small scale raid was made on German held HVAR during which six Germans were killed and two wounded. The Northern coastal strip has been the scene of much fighting. JABLANAC and STARIGRAD are now reported to be in German hands thus ensuring their hold of all port facilities along the coast. RAB and PAG are again believed to be held by the enemy.

In Northern waters the Partisans captured two small M/Vs taking a total of 92 PWs. A petrol boat was also captured with a further 8 PWs, and a cargo of 170 tons of flour.

The Partisans carried out an attack on SINJ airfield on the mainland. Buildings were burnt and the landing ground ploughed and mined. 21 Donobran troops were captured and a number killed. An unconfirmed report states that the

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Germans have demolished and mined harbour installations at SPLIT and KASTEL.

SERBIA

A troop train was blown up near BILJACA, 30 miles to the NE of SKOPLJE and about 20 Germans killed. In the same area a Bulgarian Paymaster, together with his funds fell into Partisan hands. In HERCEGOVINA fierce fighting is taking place between Partisan Odreds and elements of the SS Prinz Eugen Mtn Div and the 118 Jaeger Div. The Partisans claim the capture of VILUSE, VELIMLJE and LASTVA, all in the vicinity of NIKSIC and to control the roads GACKO-BILECA and NEVESINJE-STOLAC-LJUBINJE. Fighting continues near BILECA and PLANA some miles to the North. In these engagements 200 Germans were killed and 400 wounded. Some war material, including 9 MGs, was captured by the Partisans.

ORDER OF BATTLE

An unconfirmed report states that 15 Mtn Corps has moved from BANJA LUKA to ZAGREB.

1 Mtn Div is reported in the SISAK area, elements having taken part in the attacks on GLINA and PETRINJA. Some 3,000 troops of the SS Kroatien Div are reported to have reached BANJA LUKA at the end of February. An officer deserter states that the Div will shortly move into the SISAK area.

2 Partisan Corps operating in HERCEGOVINA now has 4 Divs and a coastal unit under command, an addition of 1 Div and the coastal unit.

ENEMY METHODS

Battle Group formed around elements of Regt BRANDENBURG
28 Nov 43/5 Jan 44

This Battle Group consisted of elements of the Regt BRANDENBURG, 3 Coy 114 Eng Bn and one Tp of Arty from 114 Lt Div. The Battle Group also had with it two 2 cm Vierlinge and six lt tanks (exact calibre unknown).

12 Km from BOSNISCH GRAHOVO, on the way to LIVNO, the Battle Group encountered a superior force of Partisans, who however, had no heavy weapons. Heavy arty fire and the VIERLINGE were directed against them and the Partisans, who could not return the fire, were forced to withdraw. The Battle Group then moved on to LIVNO and took the town without much difficulty. Two days later the 6th and 8th Brigades of Partisans (about 1,000 men) attacked the town and in spite of superior forces and weapons on the part of the Battle Group took possession of it. They were ejected the following day. The Partisans had heavy casualties, but the German losses were slight.

Another task of the Battle Group was to encircle and annihilate the Partisans in the LIVNO area in conjunction with the Prinz Eugen Div, which was to attack them from another direction and chase them into the arms of the Battle Group. An encirclement was completed with the Prinz Eugen Div, but no Partisans were found within the circle.

....EFFORTS TO APPEASE PARTISANS.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

EFFORTS TO APPEASE PARTISANS

(a) Treatment of Partisan PWs

Normally the Germans either shoot the Partisan PWs or send them to working PW camps. However, they have frequently issued ultimata to the Partisans to lay down their arms and during the period of these ultimata the treatment of PW is exceptionally good. They are given clothes, food and money and then sent home. They are urged to communicate with their friends and tell them of the good treatment received and suggest that they also lay down their arms.

(b) Use of Leaflets

At various times, leaflets have been dropped by the Germans, one side of the leaflet being a 10 dollar bill, the other side promising safe conduct for the holder and an offer of good treatment. These leaflets are honoured by the Germans but in fact are very rarely used.

(c) Prize on TITO's Head

Notices all over CROATIA offer a prize of 100,000 Marks in gold for anyone who gives information resulting in the capture or death of TITO, with no questions asked.

EXCHANGE OF PRISONERS BETWEEN GERMANS AND PARTISANS

There have been several cases of exchange of PWs. In one instance a Partisan was captured who had come to BOSNISCH GRADISKA disguised as a woman. He was caught, put in jail and accused of being a Partisan leader.

The CO of 114 Engr Bn, who was town major, received a letter within the day from the Partisans, offering to exchange a 2/Lt for the captive who was held "in such and such a house in such and such a room". The Bn CO replied to the writer suggesting that he come to him to negotiate. The reply was that it was just as far from the writer to the major as vice versa.

-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The enemy has remained strictly on the defensive on all fronts. On the beachhead front the decision had already been taken by 4 March on which date an instruction was issued by 14 Army (reproduced in Appendix 'A') that the line reached should be organised for defence and offensive operations restricted to gaining ground in front of the main defence line to give depth and a better field of fire. The experiences of 16 to 19 February and 29 February to 1 March had shown that the beachhead was firmly established and special orders from HITLER demanding its elimination in three days have had to yield to facts. As part of the change of policy it is now confirmed from prisoners and from a reliable source in ROME that Hermann Goering Div has been withdrawn from the line and despatched elsewhere; prisoners stated it was being sent to FRANCE (its intended destination in January) and whether this is true or not it appears to have moved North from the bridgehead.

An Italian bn of San Marco Marines has been identified in the line from prisoners taken at G 0317. It is called BARBARIGO, presumably after the submarine commanded by EZIO GROSSI, the MUNCHAUSEN of the Italian fleet. This is the first all-Italian unit we have met and according to the prisoners the Germans treat them with some diffidence, putting German troops into their positions at night.

On the Southern front the main change is that 71 Div has apparently sorted itself out and regrouped as a division for the first time since it arrived in ITALY. It appears to have taken over the sector from Monte FAITO to the AUSENTE with 191 G.R. North, 194 G.R. probably still in the CASTELFORTE area and 211 G.R. somewhere between the two. It is not clear what the position is North of 71 Div's sector; we have had no identification of 276 G.R. for a long time and it may also have rejoined its division West of the

.....AUSENTE.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

AUSENTE. The dispositions of 15 P.G. div are also obscure; prisoners from 115 Recce Unit say they were relieved by I Bn 104 G.R. on the North bank of the LIRI at G.8615. A detachment of 33 Arty Regt has been reconnoitring positions in the CASSINO area, presumably in support of 1 Para Div which is very short of artillery.

The position in ITALY cannot be regarded as satisfactory for the enemy. He hoped in February to win a resounding victory at ANZIO which would give an immense boost to German morale and depress correspondingly Allied morale at the opening of the year of invasion. The net result of his efforts has been that he finds himself holding no longer a line along the shortest distance between two points across the Italian peninsula but two fronts with a total extent half as long again. The effect of his losses and the needs of the Western front have obliged him to give up his attempts to eliminate the beachhead and go over to the defensive. And however much he may organise the defences round the beachhead it remains a most serious threat to his whole conduct of operations on the GUSTAV line.

2. ENEMY SUPPLIES AND COMMUNICATIONS

SHIPPING

The enemy shipping situation on the Italian and Dalmatian coasts remains generally unchanged.

On the Italian West coast PR has disclosed the presence of a few F-boats at TALAMONE, a small port just North of SAN STEFANO. Presumably TALAMONE is being used to supplement the supply intake at SAN STEFANO, which continues to receive the attention of our aircraft, having been raided on night 7/8 and on 8, 9 and 13 March. TALAMONE was attacked on the 13th and PIOMBINO the following day. Further demolitions have been observed at CIVITAVECCHIA and it may now be written off as an active port; no supply shipping has been observed there for at least a month.

On the East coast of ITALY shipping is active at ANCONA, though as usual, on a small scale. Craft are largely confined to ASVs, but an occasional MV is also observed. Apparently there is still some shipping proceeding South of ANCONA, presumably to SAN BENEDETTO, a small coaster having been sunk by our destroyer patrol South of ANCONA on night 11/12 March.

Dalmatian coast shipping continues to suffer losses from both air and surface attacks. Losses included a medium M/V near DUBROVNIK hit twice and probably sunk, a Siebel Ferry sunk at OMIS (about 10 miles S.E. of SPLIT), both by air attack, and two small coasters sunk by light naval forces, one in the NERETVA Channel, the other off MURTER Island.

RAILWAYS

In the past week a considerable number of successful attacks have been made on the central Italian railway system. On the West coast line, just as repairs on the bridge at CECINA were nearing completion after eleven weeks, the bridge at MONTALTO di CASTRO was completely destroyed on 9 March, and

....four days.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

four days later two bridges near SARZANA, S.E. of GENOA were blocked and the line was cut at VIAREGGIO.

On 11 March FLORENCE was bombed for the first time and a block was caused in the N.W. marshalling yard which probably lasted two days. A small bridge just South of ORVIETO station on the FLORENCE-ROME line was destroyed the same day and the line blocked at PONTASSIEVE. A block is believed to have been caused on 13 March at SPOLETO between TERNI and FOLIGNO and on the following day the remaining three lines out of TERNI are also believed to have been cut.

The East coast line has been free of interruption except for a successful attack on a bridge near PESARO, South of SAN BENEDETTO on 11 March.

On the Westerly of the two lines from VITERBO to ROME, the tracks were cut at CAPRANICA junction on 11 March and were not repaired by 13 March. Attacks with apparently good results have also been made on PRATO, POGGIBONSI, FABRIANO, GENOA and PERUGIA, whilst in the North of ITALY, PADUA was bombed, direct hits being scored on a bridge and explosions caused in the marshalling yards.

The dislocation caused by these attacks will definitely have hampered the enemy's rail traffic to ROME, most of which travels on the FLORENCE-ORTE network, and it is possible that on 11 and 13 March traffic was held up altogether.

3. BALKANS

ALBANIA

The Germans have evacuated the civil population from the coastal district between DURAZZO, KAVAJE and SHIJAK. That this part of the coast is causing uneasiness to the enemy is apparent. The civil population of VALONA was sent inland some six weeks ago.

A German column was attacked by L.N.C. near KOLISPOL (opposite CORFU) and suffered a number of casualties. The Partisans destroyed three German trucks before they were forced to withdraw.

GREECE

The 4,700 tons steamship LUXEMBURG suffered serious damage by sabotage whilst undergoing repairs in the dry dock of PIRAEUS. The crankshaft, furnaces and other vital engine parts were wrecked.

A report which throws some light on German manpower difficulties says the Germans have promised that Greek labourers who are willing to go to GERMANY to work will be rewarded by a grant of land and a wife. The report does not state the quality of either.

Some activity has taken place in the North of the PELOPONNESE. Andarte bands are stated to have fallen back

....on KALAVRYTA....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

on KLAVKATA in the face of German columns coming from the direction of PATRAS. No details are available but it is thought to be one of the periodical German drives to clear up the country. Further to the East ELAS claims to have ambushed German troops near KALSANI and to have killed 100 and taken two prisoners of war.

JUGOSLAVIA.

DALMATIA.

It is now confirmed that the enemy hold PAG. The Partisans offered no resistance but faded away to regroup elsewhere. German troop concentrations on KORCULA were successfully shelled by Allied destroyers during the night 9/10 March. A report states that the enemy is destroying installations and mining defiles on the roads MUC, KNIN and MUC DRNIS.

SLOVENIA and CROATIA

Violent fighting is reported in the area of NOVI, SENJ, BRINJE and KRIVIPUT. Details are lacking.

A large German MT column supported by tanks left ZAGREB and is reported to have reached PTUJ (45 miles to the North) without incident. The reason for this move is not apparent unless an offensive is planned against the Partisans in the VARAZDIN KRIZEVCI area.

Two trains have been derailed on the SUSAK SISAK line. In one wreck the Germans lost 80 killed and many wounded, besides a large amount of war material. The power station at VELIKA LASCE about 10 miles South of LJUBLJANA is now known to have been completely destroyed by the Partisans on 24 February. It is not known if this has affected rail traffic between LJUBLJANA and FIUME.

BOSNIA

Units of 373 Germano-Croat Div are pressing on PRIJEDOR 30 miles NW of BANJA LUKA. During the last week the Partisans claim to have inflicted 500 casualties on the enemy. Later reports show that the fighting tends to spread Southwards, clashes having taken place near LJUBIJA and SANSKI MOST. A German attack on the Partisans near LIVNO was repulsed; fighting on a small scale continues. A German sortie from SARAJEVO to reinforce the besiegers of KALINOVIK was forced to retire after losing 40 killed.

SERBIA

Last week fighting took place between Partisans and Bulgarian occupation troops near SKOPLJE. After five days of hard fighting during which the Bulgars are reported to have suffered heavy casualties, the engagement was broken off.

HERCEGOVINA

A mixed German Chetnik column, reported to have been 4,000 strong, which left METKOVIC in an attempt to open up

.....communications.....

THIS PAGE IS UNCLASSIFIED

0398

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

communications between GRAHOVO-NIKSIC and TREBINJE was attacked on 4 and 5 March and dispersed by the Partisans. Partisan claims put the enemy casualties at 90 killed, 100 wounded and more than 50 P.Ws. The remainder of the column made off in the direction of NIKSIC. Some days later a mixed USTASHI DOMOBRAN formation was attacked near TREBINJE; 35 were killed and 89 prisoners captured.

ORDER OF BATTLE

Units of the SS Croatia Div are reported to have taken part in the fighting near PRIJEDOR and BOSANSKA GRADISKA. Various reports have been received that 92 Mot Regt has left SPLIT and moved to BIHAC, while there is an unconfirmed report that 1 Mtn Div is moving from the SISAK area to ZAGREB and the North.

4. APPENDICES

At Appendix 'A' is a translation of a captured instruction for the development of defences around the ANZIO bridgehead.

At Appendix 'B' is a paper on the German Military Supply in ITALY.

INTELLIGENCE SUMMARY NO.36.
OF 15 MARCH 44

Army Headquarters,
4 March 1944.

Headquarters 14th Army
Headquarters Army Engineers
S-3 Section (Ia)

No.740/44 Confidential

Subject: Construction of Positions

1. The line which has now been reached must be developed defensively forthwith as speedily as possible as the Main Line of Resistance (HKL).

Sufficient depth to form a Main Sector of Resistance (HKF) will be gained by the employment of fighting patrols and general improvement of the line.

Command posts of all kinds (e.g. Bn, Regt, etc.) must be organised for all round defence. The same applies to any positions of troops, machineguns, infantry guns, anti-tank weapons, etc.

Beyond that all bivouac areas of reserve units must be developed into strong points (all round defence).

All these strong points must be arranged according to a uniform plan which should be established by the commander of the sector in question. They should be mutually supporting so that any enemy attack, even a full-scale offensive, will be held up in a mesh of strongpoints.

2. Laying of Mines

In terrain suitable for tanks mine laying should be carried out in conjunction with anti-tank weapons and tank destroyer squads.

In terrain which is not suitable for tanks S-Mines will be laid. It should be noted that numerous marked passages should be left open for fighting patrols or the development of future attacks.

In the matter of laying scattered mines Army Headquarters will decide each case on its merits.

When ground is won forward, any minefields which remain in the rear must be marked according to instructions. Marking posts or the surrounding wire must be placed at least 50 metres (165 feet) from the outer edge of the minefield.

3. Flamethrowers

Flamethrowers for defence (in groups of three) must be arranged in such a manner that they cannot be destroyed by the first few artillery shells falling upon them. (Instructions will be issued).

..... 4. Obstacles.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

4. Obstacles

Lay only trip wire at first. Economise in your use of wire. Wire fences in rear areas should be torn down and used.

5. Construction of Dugouts

a A limited number of wooden frames are being manufactured. These frames must be used primarily for the construction of dugouts which have to be sited in the direct vicinity of a firing position.

b "Heinrichbogen" (Special type arch), which may have been issued to troops will not be used in the front line.

c Dugouts for more than six men each are prohibited.

6. Trenches should be narrow enough to provide sufficient protection against tanks, and should not be longer than 5 metres (approx 16 ft).

7. Obstacles in rear areas must be examined from time to time. Previously issued orders for the excavation of charge holes will not be carried out for the moment (see Headquarters 14th Army, Headquarters Army Engineers, 537/44 Confidential, 15 Feb 44, to 1st Prcht Corps only).

THIS PAGE IS DECLASSIFIED IAW EO 13526

APPENDIX 'B' TO H.Q., A.A.I.
INTELLIGENCE SUMMARY NO. 36.
OF 16 MARCH 44

ENEMY MILITARY SUPPLY IN ITALY

I GENERAL

The enemy is estimated to have in Italy about 25 divisions or their equivalent, plus Corps and Army troops, GAF and Navy units. It is not thought that he maintains large reserve stocks in Italy. In fact his total supplies on hand in Italy probably are equivalent to only about 1 month's requirements. This is not to be taken as reflecting any shortage but rather a predetermined policy. Total supply requirements probably amount to some 6,000 to 7,000 tons daily. Since this is a relatively small percentage in German's overall supply needs and since the great majority, if not all, of these supplies must be brought in from sources outside Italy and must then be distributed to consuming units, the enemy supply situation in Italy revolves chiefly around the problem of transportation.

II TRANSPORTATION

a To Italy from Outside sources

It is believed the supplies are moved into Italy almost exclusively by rail. With the exception of oil products brought in from eastern Europe through Ljubljana, the rail arteries for military supplies are the Brenner and Tarvisio lines from Germany*. In as much as 6,000 to 7,000 supply-tons a day represents not more than 20 trains for the entire Italian theatre, the enemy is presented with no real difficulty in moving the necessary tonnage into Italy. There remains, however, the much more complex problem of getting the supplies to the consuming units, i.e. for the most part to points south of Rome.

b Central Italy

South of a general line Pisa-Rimini it is estimated that total daily supply requirements amount to about 4,500 tons. Supplies brought into this area are moved chiefly by rail. Probably about 10% are transported by sea and the amount by long-haul MT is undoubtedly negligible.

It is estimated that the enemy brings in about 500 tons a day by sea, with intake on the west coast at least twice as great as that on the east coast. He might be able to step this performance up to 1,000 tons a day, but this would very likely

.....entail serious losses.....

* Coal, not here included as part of military supply, is brought into Italy from Germany via Switzerland. Coal shipments for November are reported to have been 255,500 tons, falling off to 184,000 tons in December. Figure of 170,000 tons for period 1/20 January indicates January performance will probably have attained the December level.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

entail serious losses from air attack. While a considerable number of ports on both coasts are active the chief ports of intake are San Stefano on the west coast, Ancona and San Benedetto on the east coast, with Genoa, Spezia and Venice as ports of origin. No supply shipping is now apparently moving south of San Stefano or San Benedetto. On the west coast vessels consist chiefly of F-boats (cargo capacity 80 tons) and barges (cargo capacity 100-125 tons) and on the east coast ASVs (cargo capacity 50-150 tons). A few KT ships (cargo capacity 400 tons) and small M/Vs are used, but the latter do not proceed south of Piombino on the west coast and Ancona on the east coast.

As indicated above the railroads handle some 90% of the supplies to Central Italy or about 4,000 tons a day; denied their use it is most doubtful whether the enemy could maintain his forces for any appreciable period of time. However, to move 4,000 tons a day requires only about 12 or 13 trains, which at most represent about 10% of normal rail capacity. It is thus very difficult to affect decisively the enemys supply position by attacks on railways unless all lines are fully blocked and kept blocked for at least 2 weeks. Despite considerable Allied air effort against railways this degree of blockage has so far not been achieved. The most important rail route is the main Florence-Rome line. The east coast line is also considerably active, while the west coast line is at present largely used for moving seaborne supplies from port to southern railheads. Secondary lines are also of importance as they provide alternative routes when points on the main lines are blocked.

It is known that the enemy is short on MT and that he is using a considerable amount of Italian military and civilian vehicles, and probably some of French manufacture. As already stated MT is a negligible factor as far as long supply hauls are concerned. To save on MT the enemy pushes his railheads well forward. The Anzio bridgehead is at least partially supplied from railheads South of Rome and trains are not infrequently reported in the Frosinone, Arce, Sulmona and Pescara areas. The average haul made by Army supply MT to dumps in the battle area probably does not exceed 50 miles.

III DUMPS

In as much as the enemy is not thought to maintain large supply reserves in Italy, it is unlikely that he has many supply dumps in Northern Italy. Such stocks as exist in Northern Italy are probably to be found at or near important rail centres such as Verona, Mantua and Bologna, and at the ports of Genoa, Spezia and Venice. Most of the main rear area dumps (i.e. C in C SW dumps) are believed to be located between Florence and Rome and it is logical to assume that they are largely disposed along the main Florence-Rome railway. The more forward dumps (i.e. Army dumps) are spotted in the general area Rome-Frosinone-Sulmona-Aquila. It is presumed that in general most supplies are consigned from Germany direct to armies, and that only the necessary strategic reserves are maintained in C in C SW dumps. From time to time armies in order to meet temporary shortages of particular items, undoubtedly draw on C in C SW, who in due course replenishes his dumps to cover what he has issued to armies, thereby maintaining a more or less constant strategic reserve level.

-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

There has been nothing new to report from the beachhead front this week. The enemy continues to carry out minor regroupings, in one of which 29 G.R. has just relieved elements of 114 Division; the latter has been in the line for some time suffering heavy losses, and deserters have stated that it was due to go back for a rest. 29 P.G. Div appears to be still out of the line and 26 Pz Div has also not been recently identified, so that when the intended regrouping is complete there may be three divisions in 14 Army reserve. Hermann Goering division is almost certainly not to be counted among them; a reliable report states that it has moved to LEGHORN. It is not clear whether the report intends LEGHORN as its final destination - prisoners have said it was again bound for FRANCE, as in January - but possibly it may pause there to rest and refit before proceeding so that during that very necessary period it may be available in an emergency to guard a part of the West coast.

On the main Fifth Army front 1 Parachute division is putting up a most stubborn defence of CASSINO. As far as can be seen at present 3 Para Regt is responsible for the defence of the town and the Monastery hill with the Para M.G. Bn, Para A/Tk Bn, I Bn 1 Para Regt and II Bn 115 G.R. under command. (The last named is the former II Bn 129 G.R. and was brought up from South of the LIRI.) I and II Bns of 1 Para Regt and I and II Bns of 4 Para Regt have also been drawn into the fighting in the town and on the slopes to the West; III Bn 4 Para is said to be on Monastery hill but III Bn 1 was last reported at Div H.Q. ROCCASECCA. The fighting has been extremely fierce and bitter and the enemy has had very heavy casualties and an honourable mention in the German

.....communiqué.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

communiqué. So far, apart from II Bn 115, there has been no indication of the arrival of any reinforcements; MT movement during the first two days of the attack probably indicated the arrival of a formation from the area of the beachhead in the PONTECORVO area but nothing of it has appeared forward. It looks as if the enemy's intention was to secure the Adolf Hitler Line and to fight a stubborn delaying action in CASSINO before withdrawing to it. It is possible that the measure of success which has so far attended his defence in CASSINO may encourage him to change this plan in favour of a counter-attack to regain the lost ground.

On the rest of the front there is little activity to report. In the extreme North 188 Div is reported to have moved Eastwards from BELLUNO to ISTRIA and SLOVENIA, with its HQ at MARIBOR; at the same time elements of 162 Div are reported to have moved from ISTRIA to the VERONA-PADUA area. With the cutting of the LWOW-ODESSA railway and the Russian advance across the DNIESTER, communications to the Southern part of the Eastern front must again run through HUNGARY and RUMANIA, and the defence of SLOVENIA and its rail communications becomes even more important.

2. ENEMY SUPPLIES AND COMMUNICATIONS

SHIPPING

It is evident that the enemy is attempting to increase his seaborne supplies to the Armies in the South. On the Italian West coast there has been an increase in activity of F-boats and supply barges, especially at GENOA and SAN STEFANO, whilst two ammunition carriers have left GENOA for the South during the last week, one of which is known to have reached PORTO FERRAIO which is a staging point for SAN STEFANO. One armed coaster was sunk in GENOA harbour during the week; SAN STEFANO was attacked from the air on 19 March and PIOMBINO on 18 March.

Nine supply barges, similar to those used on the West coast, appeared in VENICE last week; this is the first time craft of this type have been seen in any number in the ADRIATIC, and they probably indicate an attempt to step-up supplies to ANCONA. The latter port remains the chief port of intake for the Southern West coast traffic, and the usual turnover of ASVs with an occasional MV was noted during the week.

In the Eastern ADRIATIC shipping has also been on a larger scale this week. Several MVs have been plying between TRIESTE and other Northern ports, whilst there has been an increase in small shipping to the Dalmatian Islands, ASVs, launches and Siebel ferries being the type of craft used. A floating crane had arrived at TIVAT on 18 March. Two Siebel ferries were attacked and set on fire by fighter bombers at HVAR and MARINA on 15 March.

The enemy continues to build small transport craft as fast as he can. 21 F-boats are now under construction at MONFALCONE, and three Siebel ferries at VOLTRI.

.....RAILWAYS.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

RAILWAYS

The successful bombing of railway targets which commenced on 11 March has been kept up during the last week, and the enemy must have experienced very great difficulty in getting supplies South between 11 and 18 March.

On the West coast the double bridge at SARZANA, on the main line South of SPEZIA, was hit in two places on 13 March and 95 yards have collapsed. CECINA bridge which was finally repaired on 16 March was blocked again on the 18th. The bridge at MONTALTO DI CASTRO is still completely destroyed.

On the central line FLORENCE M/Y which was bombed on 11 March was still blocked on 16 March, and ORVIETO M/Y was blocked from 11/15 March; whilst there were temporary interruptions at ORTE on 16 March and ORVIETO North bridge on the 18th. This line is now believed to be open again.

Fighter bombers have had good results on the lines converging on TERNI in the last few days. All have been cut at one or more places and bridges have been destroyed on the lines to SPOLETO, PERUGIA and AQUILA.

The East coast line has remained open as far as PESARO North of SAN BENEDETTO.

3. BALKANS

ALBANIA

A large force of Ball Kombetar with some German support attacked a Partisan odred at KLIVIC (10 miles N.N.W. KORCA). In the battle which followed, 65 Ball Kombetar were killed and 400 were captured. The German increment is reported to have left the field early without casualties. KONISPOL opposite CORFU is again in German hands. The Partisans stormed and captured this town on 14 March but were forced out after three days by superior German forces.

Martial Law has been proclaimed in VALONA. It is thought that this will not alter conditions in the area, which for a long time has been under a "state of emergency".

GREECE

The peace between the rival Greek parties has shown good results in an increase of activity against the enemy. German propaganda has been busy in the PINDUS area with some results. A statement, coming from German sources, that the Allies and GERMANY will join forces against RUSSIA has been circulated. To lend colour to the statement, leaflets have been dropped asking the local inhabitants to treat kindly any Allied parachutists who may land, adding that they should be handed over to the German authorities at once.

Fighting has been reported in the KARDISTA area. A force of 250 Germans with mortars and arty support were forced to retire after a battle lasting fifteen hours. Casualties appear to have been light on both sides. A mixed German-Albanian band estimated at about 300 clashed with Partisans at VELIOVISTA

.....(about 20 miles...)....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(about 20 miles S.W. of JANJA.). The enemy withdrew after fighting had lasted some twelve hours leaving fifteen dead and wounded behind.

A German post and MT column was attacked on 8 March at FOURAS (25 miles S.S.W. of KARDISTA). Three P.Ws were captured together with much valuable equipment.

JUGOSLAVIA

DALMATIA

The main news items concern our own naval and air force activities. A Siebel ferry was attacked by Kittyhawks off OMIS. Six hits were scored and the ferry was blown up. A schooner of 150 tons was sunk off MURTER Island. There were no survivors. Coastal forces sank a small schooner in the mouth of the NERETVA river. This craft was carrying 50 leave personnel of which 24 Germans and three Italians were captured. BRNA on KORCULA was shelled by our naval forces on night 11/12 March. Minor clashes have taken place along the coastal strip at SENJ, NOVI and KRIVI PUT. The Partisans are reported to be in possession of OTOCAC and to control the roads for a distance of 5 miles from the town.

CROATIA AND SLOVENIA

A strong enemy force moved from OSIJEK to VIROVITICA and then turned South. Partisans sallied out of their stronghold on the PAPUK tableland and engaged the enemy South of VIROVITICA. This report, together with the report of enemy troop movements from ZAGREB to the North would point to enemy intentions to clear up the area South of the river DRAVA between VARAZDIN, KOPRIVNICA and VIROVITICA. On the other hand these troop concentrations are admirably placed for eventual use in HUNGARY.

A second enemy offensive is taking place from VUKOVAR (on the river DANUBE South of OSIJEK) in the direction of the BOSUT Woods. Here the Partisans have been forced back to the river SAVA. Fierce fighting is taking place on the North bank of the river. The Partisans have recently been building up considerable forces in this area from where they have frequently raided the BELGRADE-ZAGREB communications.

The encircled enemy garrisons in NOVO MESTO and KOCEVJE have again suffered losses in their attempt to break out. Partisan sources now state that these garrisons belong to the SS Div Reichsfuhrer SS. It will be remembered that the same source claimed that elements of 162 (Turkoman) Div formed the garrisons. The Partisans fought a successful action at LOGATEC (10 miles S.W. of LJUBLJANA.) in which they captured large quantities of equipment and weapons. HORVATI on the ZAGREB-KARLOVAC railway fell to Partisan assault detachments who killed 20 and wounded 40 Germans in the action.

BOSNIA

Fighting in the PRIJEDOR area seems to have abated. A column of enemy reinforcements was forced to retire after losing 80 killed. In the JAJCE area the Partisans fought a twelve

.....hour battle.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

hour battle with elements of the SS Prinz Eugen Mtn Div and claim to have killed 120. A military train was wrecked on the JAJCE-DONJI VAKUF line and 80 Germans were killed. This is the first indication that this line is in operation again. It was presumed to have been wrecked by the Partisans before they evacuated the area during the last Bosnian offensive.

HERCEGOVINA

The railway NIKSIC-BILECA has been completely destroyed and this area is now reported to be in Partisan hands. The line BILECA-TREBINJE has been frequently cut in the past and is believed to be out of action. The coastal railway from DUBROVNIK to KOTOR is said to be working but the Partisans are threatening to cut it in a number of places.

ORDER OF BATTLE

162 Turkoman Div has been identified in the VERONA-PADUA area. 188 Res Mtn Div has moved in and was last reported to be in the vicinity of MARIBOR near the Hungarian frontier. 13 SS Mtn Div BOSNIA is reported to be taking part in the BOSUT Woods operation and also in the fighting near PRIJEDOR. It may well be that two battle groups have been formed after the manner of the SS Prinz Eugen Mtn Div. This latter formation is known to have one group in HERCEGOVINA and a second in the JAJCE area.

69 Res Corps is reported to have left VUKOVAR for ZAGREB. Confirmation is being sought as there would appear to be no reason for such a move.

Brigadier,
B.G.S.(I).

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

An enemy column of some 500 Germans and 100 Chetniks was attacked at BOLJANICI near PLEVLJE and casualties inflicted; fighting, in which elements of the Italian Garibaldi Div are taking part alongside the Partisans, continues.

In a recent large scale raid in the HERVENTA area near PROD, the Partisans captured 350 P/s and much war material.

SERBIA

Fighting is general throughout SE SERBIA and it would appear that the Partisan strength has of late increased. Reports continue to arrive about the defection of Bulgarian troops to Partisan bands and though this is probably true in some instances it must not be regarded as general. In the PLEV MARINA district near the Greek frontier a mixed German Chetnik formation was attacked. Twenty Germans and eighty-four Chetniks were killed and sixty-two Chetniks captured, the remainder took to the mountains to effect an escape. Partisan sources estimate that in SERBIA there are 20,000 Ustashi, 110,000 Domobrans and 40,000 Chetniks.

From MONTENEGRO comes a report of a successful ambush by the Partisans on a German column North of DANILOVGRAD. Forty Germans are claimed to have been killed and damage inflicted on M.T.

DALMATIA

DUGI has been very much in the news. Conflicting reports have stated that it was held by a large garrison and then that it was evacuated. It is now believed that the Germans may have finally evacuated the island. ULJAN and PASMAN remain in German hands while LAGOSTA is unoccupied.

ORDER OF BATTLE

392 Germano-Croat Div would appear to be taking over the coastal area South of FIUME and probably as far South as GOSPIC. I Mtn Div has elements in OMROVAC and 92 Mot Regt is in the TROGIR-ROGOZNICA area.

Reports that 13 SS Div BOSNIA-HERCEGOVINA is moving to the coastal area lack confirmation but there is a strong probability that this will be its eventual destination.

4. APPENDICES

At Appendix 'A' is a translation of an "Operation Order for the Advance of the HERGER Battle Group (114 Jaeger Div) into the FIUME area".

At Appendix 'B' is "effect on enemy operations at ANZIO of Allied Air attacks on his L. of C."

Appendix 'A' to H.Q. A.C.M.F.
Intelligence Summary No. 32
dated 16 February 44.

JAEGER MARCH COLUMN

OPERATION ORDER FOR THE ADVANCE INTO
THE FIUME AREA.

1) The enemy is holding the area N of GOSPIC along the route to FIUME with strong forces. Est strength: about 10,000 men.

The area N of the road GRACAC-GOSPIC-KARLOBAG to KORENICA-OTOCAC-SENJ has not been, during the communist rebellion, cleared up by German troops. Guerrilleros are rife. Fertile territory, numerous supply dumps, hospitals, airfields and training establishments are at their disposal. By forced recruiting the Partisan movement constantly receives reinforcements.

Strong attacks by enemy aircraft give reason to believe that the enemy is endeavouring to hinder our advance. Therefore we must reckon with air attacks on troops on the march and in bivouacs.

Those units, which have not received it, may examine the summary of information about the enemy at the office of the regt adjt. Those units, which have received this summary, will impart the information to the coy commanders.

2) TASK

JAEGER March column, consisting of:

H.Q. 721 Jaeger Regt
16 Coy " "
H.Q.Coy " "
Lt Mtn Jaeger column, 721 Jaeger Regt
II Bn " "
III Bn " "
II Bty, 661 Arty Regt
III Bty, " "
114 Recce Bn
114 A/Tk Bn
3 Coy, 114 Eng Bn
661 Fd Replacement Bn

together with Eng Transport echelons has the task:

a) On X day to leave its assembling area and occupy GOSPIC and clear the road GOSPIC-PERUCIC-OTOCAC-SENJ-NOVI-FIUME for the move of the division into the FIUME area.

b) to destroy the guerrillero bands on both sides of the road

c) to keep open this route for the supply traffic of the div by the construction of strong points, not under coy strength.

d) to occupy the Northern Dalmatian ports until relieved by other forces

The following specialist troops will be under command: Survey detachment GOSPIC, one pl 114 Bakery Coy, one pl 114 Mtn Med Coy, one pl 114 MT Coy, one Vet Sec from 2 Coy/114, one Vet Sec from 3 Coy/114, 2 Tp, Transport half squadron, 3 Tp, 114 Mtn Transport coln.

....3).....

THIS PAGE IS DECLASSIFIED IAW EO 13526

March sub-coln comdrs will arrange independently the order of march of their sub-coln.

March sub-coln III must vary its distance from March sub-coln IV in such a manner that the wagons keep up a good pace.

March sub-coln III will therefore share in the MT and tractors. March discipline must be of a high standard. At halts, keep well into the right. Keep proper distances. Overtaking must be possible even on the move. It must always be possible for motorised units to move to the head of the column.

March sub-coln comdrs are responsible for this. They will also arrange an active air protection and are responsible for a constant air attack preparedness.

5) MOVEMENT

The advance Guard will on X day at Y hours leave the area SIROKA KULA-CUKOVAC-LICKI OSIK and reach, as the first day's objective, the area OTOCAC. There they will pass the night. Any enemy is to be driven off by quick and energetic action.

March sub-coln I will leave the area LICKI OSIK (8 Kms NE of GOSPIC on X Day at Y hours + 30 mins and will reach, as first day's objective, the area of OTOCAC. There they will pass the night.

March sub-group II will leave on X day at Y hours the area GOSPIC and will reach, as first day's objective, the area DOLNI PROZOR. They will pass the night there.

March sub-group III will leave the area of MEDAK on X day at Y hours and will reach, as first day's objective, COVICI. There they will pass the night.

March sub-coln IV will leave the area of RENIK on X day at Y hours and will reach, as first day's objective, the area of LESCE. There they will pass the night.

6) THE CROAT USTACHI BN will form strong-points with one coy, at DUDAK Bridge, another at LICKI OSIK and two others at PERUCIC. The Ustachi Bn will remain to guard the route in the places named.

7) ARTILLERY The arty will support the MERGED March coln's advance. O.C. II Bty, 661 Arty Regt will be with the H.Q. Staff.

8) INTER-COMMUNICATION

The regtl signal troop, with the elements of the div sigs bn under command, will establish and maintain from the H.Q. Staff:

a) Wireless comn to the adv guard and to march sub-colns I, II, II and IV.

b) Telephonic comn

It is intended to utilise the permanent telephonic lines existing on the route (only slightly destroyed). Each march sub-coln is to link up through the permanent line at once on halting and on arrival at the day's objective, using its own sig sec for this purpose, and will remain in comn until marching off.

Comn within the march sub-coln is to be arranged by march sub-coln comdrs by wireless or D.R. Projected wireless comns are to be submitted at once to H.Q. Staff. Morning and evening reports to be sent in by march sub-coln comdrs to H.Q. staff at 0500 hrs and 1730 hrs respectively. Interim reports every two hours. Sitreps to be

.....sent in.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

sent in in accordance with message regulations. Ammunition reports to be in accordance with Div orders.

Recognition Signals

WHITE: We are here
GREEN: Lay down arty fire
RED : (to be fired in the appropriate direction) ENEMY!

Aircraft recognition signals are to be taken.

9) PRISONERS

Prisoners and deserters are to be taken along with the troops and are to be turned over to Sonderführer HORWIT (H.Q. Staff) when opportunity offers.

Deserters are to be well treated. Remember the order about the granting of special leave for the discovery of important enemy papers and captured dumps. The civil population is to be interrogated.

10) SUPPLY

In accordance with Div instructions. Those units u/c for this march, which do not possess their own supply elements, will be attached for rations and supplies to a supply unit of this March sub-coln, under arrangements to be made by the March sub-coln comdr. Supply arrangements for the motorised H.Q. Staff to be the responsibility of III Bn, 721 Jaeger Regt.

11) I shall be with the motorised H.Q. Staff between the advance guard and the main body.

Signed: BERGER
Col and March Coln Comdr

George
Capt and Acting Adjt.,

THIS PAGE IS DECLASSIFIED IAW EO 13526

Appendix 'B' to H.Q., A.C.M.F.
Intelligence Summary No. 32
dated 16 February 44.

EFFECT ON ENEMY OPERATIONS AT ANZIO OF ALLIED AIR ATTACKS ON HIS L. OF C.

It is considered that our air attacks against the enemy's railways have played a vital part in supporting the ANZIO landing. Beginning 20 Jan it is estimated that all railway lines were cut along a general line PISA - FLORENCE - RIMINI and that this condition was substantially maintained until about 28 Jan. Since that date weather and other commitments have prevented us from maintaining this condition and with the possible exception of 2 or 3 days the enemy has had at least one line open to the ROME area.

Since the air plan was designed to prevent the enemy from bringing reinforcements from the North, those troops moved to the ANZIO area from 10 and 8 Army fronts are not here considered; exclusive of these, elements of 5 divisions plus 1 independent reinforced regiment were identified on the ANZIO front by 12 Feb. Allowing for elements of these 5 divisions which are known to have been South of ROME prior to ANZIO and for those elements which had probably not yet arrived, it is estimated that by the second week in February the enemy had brought South about 27 reinforced battalions, or the equivalent of 3 three-regiment divisions. It is believed that owing to railway dislocations most of the movement involved in bringing these forces South was by road. Had it been possible to move them by rail it is estimated that they could have been in the line by 29 Jan; while this estimate is believed to be logistically correct, in actuality it tends to be academic in view of the many variables involved. However, with reference to the movement of 65 Div (less one reinforced regiment) from the GENOA area and 715 Div (a two-regiment division) from the MARSEILLES area, the effect of the enemy's inabilty to move them by rail can be assessed with reasonable accuracy. It is almost certain that both 65 and 715 Divs moved by road. Elements of 65 Div were first identified in the line on 27 Jan, of 715 on 30 Jan, and it is likely that these troops were committed just as soon after their arrival as possible. It is believed that 65 Div did not close South of ROME prior to 28 Jan and 715 Div not prior to 1Feb. Had it been possible to move these troops by rail it is estimated that 65 Div could have closed South of ROME by 25 Jan and 715 Div by 26 Jan. Just how much this delay affected operations is difficult to say, but it is believed to be most considerable, and had we not achieved as great a degree of surprise as we did it is not unfair to say it might well have been vital.

Aside from movements of troops there is the question of supply. Since the ANZIO landings enemy strength South of ROME has increased almost one third and supply requirements have increased proportionately. Except for the relatively short lift from railhead to the battle area the enemy moves his supplies almost exclusively by rail. As a result of the blockage of railway lines he is thought to have been forced to draw on reserve supplies which he already had on hand in Central ITALY. This put him in a position where, even after he had managed to get his railways functioning again, he was forced to delay operations until such time as he was able to replenish his reserves and in addition bring in sufficient supplies to support a sustained attack in the ANZIO area. Had he been permitted full use of the railways it is estimated that this could have been accomplished by 1 Feb.

In conclusion it should be noted that in a situation where every consideration dictated that he should launch a strong attack against the ANZIO bridgehead without delay, the enemy did not initiate a serious attempt to eliminate the bridgehead until 16 Feb, 26 days from the day we landed. It is felt that this delay has been in large part the result of our air effort against railways. If we are able to restore this effort to its initial level, it is not unlikely that the enemy would have grave difficulties in maintaining the large number of troops which he now has South of ROME and his freedom of manoeuvre would be very seriously limited.

-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

Operations during the past week have again been dominated by the struggle for CASSINO. Bitter fighting has continued in the town itself and for the heights to the North and West, without however any decisive change in the ground situation, and the position appears to be for the moment stabilised with the enemy still in possession of Monastery Hill and strongpoints in the Western portion of the town. Apart from assistance provided locally by two infantry bns and elements of the artillery of 15 P.G. Div, the defence has devolved entirely upon 1 Parachute Div and has been conducted with all the dourness and tenacity we expected from the troops who held us up at ORTONA in December. Identifications during counter-attacks on the 22nd of a Div H.Q. Coy, Regimental Eng Pls and even a GAF Telephone Coy showed clearly that General HEIDRICH was not prepared to yield an inch so long as he could scrape together some force capable of counter-attacking.

Though however the enemy has been able to seal off our penetration without employing his reserves, the losses inflicted on 1 Para Div have been extremely severe and some effort will undoubtedly be made to relieve it now that the battle has died down. Already on the 25th, there was evidence that contact had been made between elements of 104 P.G.R. and the parachutists which may have been the preliminary to handing over. The evidence is still inconclusive and elements of the parachutist div are still in the line, but it would not be unreasonable for 15 P.G. Div, which already had two bns in the parachutists' area to complete its side-step and take over the sector to as far North as CASTELLONE where III Bn 115 P.G.R. has been identified. In this case 90 P.G. Div, hitherto in 10 Army reserve, might be expected to move into the plain North of the LIRI. So far however, though some of 90's

.....guns have....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

guns have been identified in action, none of its infantry appears to have moved forward of FROSINONE.

Further evidence of moves on the Southern front is provided by stories from two recent deserters, one from 44 Div, the other from 94 Div. If the former is to be believed the whole of 131 Inf Regt moved South from BELMONTE on the night 19/20 March and took up positions in the FAITO area three days later. 134 Inf Regt was supposed to have come down at the same time. The deserter from 267 Inf Regt of 94 Div claims to have seen 276 Inf Regt some time about the 20th at rest in the FORMIA area. From these two statements it would appear that 94 Div has at last got back its third regiment and is now assembled complete again in the coastal sector, while 276's positions South of the LIRI may have been taken over by part at least of 44 Div.

Elsewhere on the main front there has been little change to note. In the ADRIATIC sector an appearance of livelier movement behind the enemy's lines by day on the 24th is more likely attributable to an improvement in the weather, which is permitting freer movement off the roads, than to any offensive preparations. It is difficult to see where the enemy could find troops for anything more than very local attacks from the two divisions with which he is at present holding from the coast to the MAIELLA.

In the bridgehead the enemy's preoccupation continues to be the development of his offensive positions, and his offensive activity has not gone beyond patrols and small probing attacks in platoon strength. No changes have occurred in his general lay-out and his intentions appear to be to continue to hold the perimeter with his infantry and parachutist troops and to give his mobile divisions the maximum time for resting and refitting. Rumours prevalent among PsW that 4 Para Div is to be withdrawn to complete its training remain unsubstantiated; there is no sign of any fresh formation arriving to take its place and KESSELRING can hardly afford either to thin out 14 Army front any further or to weaken his counter-attack force by committing 26 Pz or 29 P.G. Div to a holding role.

In Northern ITALY there are indications that 162 Div, whose move from ISTRIA was traced in last week's Summary to the area PADUA-VERONA, may now have some elements as far West as the TUSCAN coast. The Germans are spread thinly on the ground along the West coast, and if the Hermann Goering Div now resting and coast-watching in the LEGHORN area is destined eventually for FRANCE, 162 may well be required to fill the gap.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

During the past week dislocation of the Central Italian railway system has been very nearly complete. On the West coast lines the bridges at SARZANA, CECINA and MONTALTO DI CASTRO remain impassable. There was a block at MONTE PESCALI from 20-24 March and GROSSETTO bridge was blocked on 27 March. On the Central line FLORENCE was impassable for three days, the viaduct NW of AREZZO was damged beyond use on 22 March and the bridge NW of ORVIETO on 24 March. On the by-passes POGGIBONSI and CETRALDO bridges were put out of action on 28 March, while

.....the lines.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the lines running out of TERNI in all directions have been kept almost continually cut by fighter bombers. On the East coast line the bridge at PESARO is still useless and the line is believed to have been blocked North of ANCONA for at least two days.

While direct traffic to ROME is now certainly impossible, it is still possible for the enemy to move supplies South largely by rail by ferrying round the breaks with MT and there are indications that he is doing so. He is also apparently using small ships to ferry round the breaks on the East coast, unloading on beaches and carrying the cargoes to the nearest railway by MT. All this, however, can only be done at the cost of considerable time and labour and by further straining his already overworked MT.

SHIPPING

There is very little to report on the Mediterranean. Coastal traffic in F-boats and barges continues at the same rate though at least two MT ships are now in use. SAN STEFANO continues as the main port of intake in the South. The docks at LEGHORN were bombed twice during the past week with good results.

The Italian East coast traffic seems to have increased slightly. Several large coasters have put into ANCONA and at least four tank lighters reached this port during the week. ANCONA remains the chief port of intake on this coast and very little traffic seems to reach SAN BENEDETTO. Three sailing vessels were sunk and quays damaged in an air attack on SENEGALLIA on 24 March.

In the Northern ADRIATIC, TRIESTE is becoming more active, a tanker, two M/Vs and one coaster totalling 15,000 tons having left between 22 and 26 March, and one cargo liner, an M/V and a passenger packet totalling 8,000 tons having arrived in the same period. Also an 11,000 ton tanker, previously laid up, has been moved to an active berth. It is now known that in the night bombing attacks on MONFALCONE on 19/20 March much damage was done to workshops, shipping and shipyard installations including a 480 ft M/V badly damaged and a direct hit on the largest floating dock.

Traffic along the Yugoslav coast has been normal except that eleven assault craft were noted in various ports and ten with an escort vessel off BAKAR inlet on 27 March. 13 vessels, including one siebel ferry and four invasion barges are known to have been sunk in the Eastern ADRIATIC during the past week.

-o-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The most interesting news of the week is of the move of 114 Jaeger Division, last identified opposite the bridgehead, to the Central sector of 10th Army's front. None of its units has yet appeared in the line but there is sufficient evidence from independent sources to leave no doubt about its presence. Troops wearing the oak-leaf insignia have been seen debussing in the SULMONA area for the past ten days and escaped British P.Ws report that a Div H.Q. has recently arrived and established itself at INTRODACQUA, G 9278. Finally, to clinch the matter, we have two deserters from 576 Inf Regt who claim that advance parties of 114 Div have begun to relieve 576 in the area of ALFEDENA and that 576 is expecting to move shortly to the Adriatic coast. All this fits together to form a clear and reasonable picture. 114 Div will presumably take over the whole of the Central sector from the left boundary of 5 Mtn Div up to PENNAPIEDIMONTE where the responsibilities of 334 Div begin. The resulting increase in strength of four bns is hardly excessive in view of daily improving weather which will soon make roads and tracks through the mountains passable again. On the Adriatic flank the return of 576 Inf Regt and the divisional Recce and Eng Bns to 305 Div may be followed by some readjustment of the boundary between 305 and 334 Divs which will allow each to withdraw at least one battalion into reserve.

Elsewhere on the Southern front the past week has brought few fresh developments. 1 Para Div has not yet been pulled out at CASSINO and whatever rest its troops have been granted has been purely local and cannot have allowed them to do more than to get the dust of CASSINO out of their mouths and absorb rear details before returning to the line. In fact all the reliefs which were undoubtedly in progress a week ago appear now to have been suspended. 90 P.G. Div is certainly not going to be employed on 10th Army front at the moment and elements of

.....the division.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the division have been reported North of ROME, possibly assisting 103 Recce Unit in rounding up guerillas. Nor is it certain that the whole of 276 Regt has rejoined 94 Division in the FORMIA area. From entries in a diary found on a corpse North of the LIRI it appears that an advance party of the Regiment was sent to the coast on the 20th March but that the move of the remainder of the Regt was overtaken by events at CASSINO. The enemy's order of battle between Monte CAIRO and FAITO therefore still remains a very confused affair, offering few clues apart from showing that no fresh formation is at present being brought in to patch up the GUSTAV Line.

The stubbornness and resiliency of the parachutists have solved KESSELRING's problems temporarily but his reluctance to reinforce from reserves even at the most anxious moments of the CASSINO battle suggests that he is not prepared to stake everything on his present positions. He would no doubt welcome the end of a situation in which he is forced to face us on two fronts, involving as it does the most expensive deployment of his resources and the impossibility of securing adequately his flanks North of ROME. On the other hand it is no less clear that he has been ordered to hold us as far South of ROME as possible and it is unlikely that he will withdraw 10th Army to link up with 14th Army except under the compulsion of such pressure as might threaten the destruction of a great part of his forces.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

During the past week the complete Central Italian railway system has been continually blocked on a general line CECINA-RIMINI, the main blocks being the bridges at CECINA on the West coast, POGGIBONSI, CAMALDO, PONTICINO and INCISA in VALDARNO on the Central network, and FALCONARA on the East coast.

South of this belt the bridges at GROSSETO and MONTALTO di CASTRO on the West coast have not yet been repaired, whilst the PERUGIA viaduct was cut on 28 March and a bridge South of SPOLETO on 2 April, effectively blocking the PERUGIA-TERNI by-pass. On the East coast PESCARA bridge is still down and the bridge at ROSETA DEGLI ABRUZZI has been cut. There is also a bridge blocked at SEGNI on the PISA-FLORENCE line and one TERNI-AQUILA line. There are at present 15 railway bridges completely or partially demobilised between FLORENCE and the Armies in the South.

Whilst the enemy can still run trains between the breaks and ferry freight round by road from one side to the other, this can only be accomplished at the cost of time in loading and unloading, and of further straining his already dangerously stretched MT position.

SHIPPING

In view of the heavy dislocation of the Central Italian railway system, the enemy is likely to attempt to

.....stop-up the....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

step-up the movement of supplies by sea. There is, however, as yet no indication of any definite increase in shipping activity which continues normal.

On the Italian coasts, LEGHORN, PIOMBINO, SAN STEFANO, ANCONA and SAN BENEDETTO have all been attacked during the past week, and our aircraft have continued their successes against ships along the Dalmatian coast.

3. BALKANS

GREECE

The sequel to the recent train wreck in the Mt OLYMPUS area has taken the form of vicious reprisals against the local inhabitants by the Germans. Many arrests have been made and 100 persons, mostly young men, have been shot. These repressive measures have had little or no effect on Andarte activities elsewhere in GREECE. A number of incidents are reported which, though minor in themselves, are taking a steady toll of the enemy and increasing his already considerable difficulties.

In what are best described as pick and shovel raids, the villagers in the TRIPOLIS area have systematically destroyed roads so urgently needed by the enemy. Trenches two metres wide and six metres long have been cut into the road surface every two or three kilometres between TRIPOLIS and VITINA.

The railway bridge at ANIRISTA on the TRIPOLIS-ARGOS line has been blown up by ELAS forces. Traffic was for a time stopped completely. Later reports state that the enemy is now manhandling goods from one side of the gap to the other, a process which must still impose considerable delay.

ELAS troops ambushed twelve German lorries at MONODHENDRI near SPARTI. Seventeen Germans were killed and wounded. This attack is probably the reason for the recent severe reprisals and the curfew imposed in Southern PELOPONNESE. Forty women and one hundred men are being held as hostages in TRIPOLIS prison.

A German force estimated at 300 attacked ELAS at MESSINA, 25 miles South of KASTORIA, but were driven off with casualties. A similar force which attempted to enter the village of MESSENIKOLAS 12 miles South of TRIKKALA was even less successful and seventy killed and wounded are reported to have been left behind by the enemy. Two German posts West of LAMIA were successfully raided by Andarte formations.

JUGOSLAVIA

DALMATIA

On 19 March special service troops carried out a highly successful raid on SOLTA in which the entire enemy garrison of 150 was accounted for. One officer and 97 O.Rs were taken prisoner, all of 2 Coy 892 I.R. Our forces re-embarked with slight casualties. The island is now believed to be again in German hands.

...HVAR was raided....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

HVAR was raided by a mixed Allied and Partisan force on 22 March. 120 Germans and 20 Italians were captured and 30 Germans killed. Fighting is still going on. Fighting is also taking place on KORCULA, LAGOSTA and BRAC in which Allied commandos are taking part. VIS island is reported to be in Partisan hands.

From BRAC comes a report that eighty civilians have been shot by the Germans as a reprisal for the recent Allied raid on the island in which the islanders gave help to the invading forces.

SLOVENIA-CROATIA

Strong elements of 392 Germano-Croat Div thrusting from UGOLIN to KORNICA, PLASKI and SLUNJ were attacked by Partisans and forced back. In the heavy fighting the enemy suffered 250 casualties including a Lieut.Colonel killed, and lost much equipment including several heavy mortars.

German troops moving Northwards have suffered heavy losses in a number of widespread attacks. On 13 March a train carrying German troops and material from BRCKO to PLETERNICA was destroyed at SAPCA. In the engagement which followed 150 Germans, stated to belong to 92 Mot Regt, were killed and much war material fell into Partisan hands. As a reprisal the enemy is reported to have burned the village of SAPCA. Twenty-seven of the inhabitants were hanged and the remainder sent to concentration camps.

An enemy column, stated to consist of 200 troop-carrying lorries and 50 AFVs, was attacked by Partisans near DULAVEK 12 miles South of VIROVITICA. After a furious engagement the Partisans claim to have killed 100 Germans, destroyed 15 vehicles and damaged two tanks. This column is believed by Partisan sources to have been going to HUNGARY.

Another Northbound enemy column was successfully attacked during the night 20/21 March near DAZINOVAC on the branch road leading from BANOVA JARUGA to VIROVITICA. A third column was attacked near DARUVAR. 106 Germans were killed, 50 PWs were taken and five lorries and 28 carts of supplies destroyed.

Railway sabotage has again added to the enemy difficulties. In the PAPUK area a railway bridge was destroyed near IVANICGRAD and two goods trains blown up on the same line. Trains were destroyed at VRBAS, North of NOVI SAD, and S. MITROVICA. The line BANOVA JARUGA - LIPIK has been cut in several places.

BOSNIA

The enemy have made determined attacks against the Partisans in the SREM with the object of keeping communications open with the North. Two enemy columns from BRCKA and SREM RACA converged on KORAJ which they captured only to be thrown out later with heavy casualties. BIJELJINA was recaptured by the enemy on 17 March, since when the fighting in this area appears to have abated. Since 14 March the Partisans claim to have killed 1,200 Germans and 1,000 enemy wounded are known to be in the hospital at BRCKA.

.....Heavy snowfalls.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Heavy snowfalls have restricted movement in Eastern BOSNIA. In a clash with NEDIC troops at PRIBOJ the Partisans succeeded in entering the town but were later forced out by German reinforcements. The Partisans also claim to have destroyed an armoured train on the PRIJEDOR-BANJA LUKA line. Two other armoured trains which attempted a rescue were immobilised by cutting the rails at both the front and rear, and were then attacked by the Partisans who inflicted serious casualties on the crews.

ORDER OF BATTLE

The German occupation of HUNGARY has had repercussions on the Balkan Order of Battle. A number of important moves have taken place in the last week and rumour has been rife. 92 Mot Regt was identified by its sign as far North as VIROVITICA and is stated to be on its way to HUNGARY. 1 Mtn Div was also reported to be moving North through VIROVITICA. Partisan sources claim that it is ear-marked for the Eastern front. Elements of 100 Jaeger Div, last identified in the ELBASAN area, have taken part in the fighting in the SKEM. Reports also connect this division with heavy troop movements from BROD to RUMA and thence over the DANUBE to PETROVARADIN. Among the unconfirmed but probable movements is that of 11 GAF Div. This formation, last reported in the ATHENS area is stated to have arrived in CROATIA on its way North. The SS Mtn Div Prinz Eugen is also numbered among rumoured candidates for the Russian front but confirmation is entirely lacking. SS Regts Nordland and Westland have twice been reported in the GORIZIA sector but it is felt that these reports must be treated with reserve until further evidence is forthcoming.

187 Res Div has been upgraded and renamed 42 Jaeger Div and 367 Inf Div is now known as 330 Mtn Div.

-0-0-0-0-0-0-0-0-0-0-

1. ENEMY SITUATION

There has been less change than was expected on the CASSINO front. 1 Para Div is still holding the town but some elements of 15 P.G. Div are now to its North as well as South; 115 Recce Unit has been identified in the MASS. ALBANETA area and III Bn 115 P.G.R. is in the COLLE SAN ANGELO area. The location of II Bn, which assisted in the defence of CASSINO, is not known. In ROM's old area we have confirmation of the arrival of 114 Jaeger Div, reported last week; prisoners have been taken from I Bn 721 in the area NW of ATINETA and from III Bn of the same regiment NE of PALENA. This rather looks as though 721 Regt is taking over the SULMONA axis and we may find 741 Regt in the ALEDELENA axis.

In the area East of ROME 90 P.G. Div is still in reserve but appears to be more concentrated. At least a bn of 361 G.R. has returned from PESCARA to the ORVINIO area (G 1292) while 200 G.R. appears to be still round ANAGNI (G 3149). There is considerable activity going on in the central sector in rear of the present line and foreign troops have been reputed digging near AVEZZANO. These are probably from the Slovak Technical Brigade which, according to a prisoner, consists of 101 and 102 Regiments, each of three bns; it was previously employed on digging a line near S. OLIVA (G 6912), part of the Adolf Hitler switch position. This new employment may be in connection with the construction of a line to which the enemy could withdraw if his Southern line were breached which would allow the junction of 10 and 14 Armies while still defending South of ROME.

In North ITALY, KESSELRING has apparently lost the bulk of 16 S.S. P.G. Div to HUNGARY and 278 Div has extended its defensive commitments from the RIMINI area into ISTRIA. It is not clear if the whole division has moved but it does at least mean that the East coast is very lightly held. The enemy has never left this stretch of coast so weakly defended before and it would probably be wise to expect some further readjustment of his dispositions possibly, in spite of the difficulties of the situation both in the West and East, the arrival of another low-category division.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

During the past week our air effort against the central Italian railways has continued successfully. However, the enemy has succeeded in effecting a number of repairs. The bridges at MONTALTO

....di CASTRO.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

di CASTRO and GROSSETTO have been repaired and the West Coast line is now open South of CECINA, where the bridge is still out. The PISA - FLORENCE line is still cut at SIGNA bridge, and PRATO marshalling yard was temporarily blocked on 7 Apr. On the EMPOLI - SIENA line CERTALDO bridge was definitely repaired by 7 Apr and probably earlier and both the bridges at POGGIBONSI were shown to be open by PR on 10 Apr. The tracks, however, were still cut in three places. On the main line South from FLORENCE, the bridge 4 miles West of AREZZO and at INCISA in VAL D'ARNO have both been repaired, and it is probable that the PONTICINO bridge is also passable. The approaches to PONTASSIEVE bridge were cut, however, on 7 Apr, and South of CHIUSI the canal bridge SW of FICULLE has been destroyed and the line blocked at ORVIETO marshalling yard and 4 miles NW of ORTE. The PERUGIA - TERNI by-pass is still blocked at PERUGIA and BASTIA, but the bridge South of SPOLETO has been repaired. On the East coast the bridges at FANO and FALCONARA were repaired by 8 Apr, but the former is believed to have been hit again on the 10th. PESARO bridge is probably open again, while the bridges at CUPRA MARITTIMA and ROSETO DEGLI ABRUZZI are still blocked.

Whilst the situation, from the enemy's point of view has deteriorated on the line South of CHIUSI, it has definitely improved elsewhere, and it is evident from train movements observed that the enemy is using the lines in such a way as to reduce ferrying round breaks by MT to a minimum. There is still, however, at least one break to be negotiated on every line, and the continual fighter-bomber attacks on the lines further South must add considerably to his difficulties.

In the North, TREVISO, FERRARA and MESTRE marshalling yards were all bombed on 6 Apr, heavy damage being caused to tracks, rolling stock and installations, and all traffic being stopped. It has also been reported that an ammunition train was destroyed at MILAN on 28 Mar.

SHIPPING

There is no appreciable change in the enemy supply-shipping situation. SAN STEFANO on the Italian West Coast and ANCONA and RIMINI on the East Coast continue as ports of intake. There is some evidence that the enemy is using small craft to circumvent the breaks in the West Coast railway, notably at CECINA, where the railway bridge is cut.

Air attacks against ports and shipping on the Italian coasts have been light. SAN STEFANO was attacked on the night of 5/6 and 7/8 Apr and a small ship was left sinking South of ANCONA after an attack on 6 Apr.

On the Dalmatian coast, however, the enemy continues to suffer heavy shipping losses. In the past week about 15 vessels are claimed as either sunk or damaged. Traffic along this coast continues to consist of small craft having as far South as DUBROVNIK, with M/V traffic consistently remaining North of ZARA. E-Boats are again apparently operating from KOTOR, three having been observed there on 6 April.

DUMPS

The following were bombed during the past week with generally good results: Stores depot at BUSSI (G 8792); MT depot at G 006553; Supply dumps and MT parks at G 6230 and F 2929; Supply dumps at E 9793; Ammunition dumps at GALLICANO and F 9796; Fuel dumps at G 067303, G 097361 and G 100383.

..... BALKANS.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. BALKANS

GREECE

11 G.F Division which had been reported on the move North towards HUNGARY, has now been definitely identified in ATTICA, its old location, on 30 Mar.

ALBANIA

There has been no sign, as yet, that another formation will move into ALBANIA to take over the ELBASAN area left vacant by the move of 100 Jaeger Div, North towards HUNGARY indeed it is unlikely that the enemy will be able to spare another division, in view of his commitments outside the Balkans. The enemy's intentions for filling the gap left by 100 Jaeger Div seem to be indicated by reports that "Ost" troops have moved in to garrison KORITSA, and by reports that elements of 104 Light division have moved North from JANNINA. 297 Division will presumably detach forces South towards ELBASAN to join up with what troops 104 Light Division can send North, in order to close the gap left by 100 Jaeger's departure.

DALMATIA

By mid March 369 Germano-Croat Division had moved forward towards the coast and set up its HQ in MOSTAR, whilst on 9 Mar, 370 Grenadier Regt of 369 Div was leaving ROGATICA for MOSTAR, and troops of the DEVILS Division were reported, later in the month, in DUBROVNIK. Reports that 7 S.S. Prinz Eugen Division, whose 14 S.S. Regt had garrisoned the TREBINJE area since mid February, was on the move to the North, coincided with the forward movement of 369 Div, which had apparently sent troops forward to DUBROVNIK presumably to relieve 14 S.S. Regt in order to allow it to rejoin 13 S.S. Regt in the TRAVNIK/SARAJEVO area.

The enemy appears to have committed himself to holding on to the SPLIT/DUBROVNIK group of islands, as HVAR was once again in enemy hands by 31 Mar, and on 1 Apr enemy troops had landed on SOLTA.

CROATIA

On 28 Mar RAB was re-occupied by the enemy who landed 700 troops and withdrew leaving 200 behind to garrison the island.

BOSNIA

The Partisan counter-offensive in the SARAJEVO area is going well and the recent arrival of supplies have helped to turn the tide. ZAGONI (X 22) and CELIC (X 29) have been retaken and the Partisans continue to push on.

HUNGARY

1 Mountain Div and 92 Mot Regt have been confirmed in HUNGARY, whilst Partisan sources report that there are approximately three German divisions in the country. Now that the Russian thrust to the North of CERNAUTI has virtually cut the German armies in two, HUNGARY seems cast to play the part of the ISTRIA of the Eastern Front and will presumably serve as an area of strategic reserve for enemy forces opposing the Russian advance.

-o-o-o-o-o-o-o-

1. ENEMY SITUATION

There has been very little activity to report this week on any of the fronts. The beachhead has provided one bright exception in the well executed raid on CERRETO ALTO (G 0415) which brought in 61 prisoners from 735 Gren Regt and the Italian BARBARIGO Bn; the latter were apparently dispersed among the former in small packets to give them some battle experience. The Eastern flank of the beachhead has indeed been the most active of late with a fairly steady trickle of prisoners and deserters coming in from 735 G.R. and 7 G.A.F. Bn, the deserters largely from the latter penal unit though 735 has also provided some. The other main feature of the week has been that enemy armour has been making itself rather more obvious; small groups of tanks and SP guns have been firing into our forward positions, particularly on the Western flank though two tanks were also seen on the East. They were quickly taken under fire by our artillery and it is possible that these rather ineffective demonstrations were intended to deceive us into thinking that the enemy still has armour well forward.

On the GUSTAV line we have a little more information on the dispositions of the Southern group of 15 P.G. It appears likely that II Bn 104 G.R. holds the front from Highway 6 to exclusive SAN ANGELO with III Bn on its South and possibly I Bn 276 South of that, on the North bank of the LIRI. In the coastal sector we have, according to a deserter, both I and II Bns 194 G.R. in the CASTELFORTE area with 211 G.R. on their right.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

The last week has seen a race between the German repair gangs and the Allied Air Force which the Allies have managed to win, all through lines South of FLORENCE being still blocked at one or more places.

.....On the West.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On the West coast CECINA bridge is still unserviceable and the tracks to the South at Q 184165 were cut on 14 April. MONTALTO DI CASTRO bridge which was repaired on 7 April was destroyed again on the 11th. The bridge at P 748103 on the main line one mile West of SARZANA was open to traffic by 10 April, the bridge 3½ miles N.W. of SARZANA at P 726136 remains cut. Through traffic was stopped and much damage caused at LEGHORN MY on night 14/15 April.

SIGNA bridge on the EMPOLI-FLORENCE line remains cut.

On the EMPOLI-SIENA line the tracks were cut South and 3½ miles North of CERALDO on 15 April but are now probably open again. At POGGIBONSI the bridge at Q 684359 had been repaired by 10 April but the tracks were cut in three places N.W. of the bridge; these, however, were repaired by 14 April. The line to COLLE in VAL D'ELSA remains blocked. The approaches to the bridge South of POGGIBONSI were blocked on 12 April but have now probably been repaired. SIENA MY was blocked on 11 April.

On the main FLORENCE-ROME line the bridge West of PONTASSIEVE was serviceable by 14 April, probably earlier, and the bridge at Q 946566 was open on 14 April. At BUCINE the two central spans of the viaduct at R 076353 were destroyed on 12 April and the track cut North of a tunnel at R 065360 at the same time, whilst on 14 April the line was cut S.W. of the viaduct at R 076353, and N.W. of the viaduct at R 059375. The bridge at PONTICINO is now considered to be open, and the viaduct 7½ miles West of AREZZO at R 168350 was known to be open on 13 April.

Further South on the FLORENCE-ROME line the canal bridge near FICULLE (A 389757) was under repair on 10 April and is now probably serviceable again. ORVIETO station was blocked and the bridge at A 464585 badly damaged on 10 April but both were passable on 13 April. The junction North of ATTIGLIANO (A 586389) was blocked from 12-16 April and the mouth of a small tunnel at A 585407 which was blocked at the same time has not yet been cleared. A bridge at A 618334 4 miles N.W. of ORTE was unserviceable from 10 to 14 April owing to hits on both approaches.

On the PERUGIA-TERNI by-pass, the bridge West of PERUGIA at W 736905 is still unserviceable, but the RASTIA bridge was repaired by 14 April. At MARSCIANO the Northern approach to the bridge at 655800 has been cut in four places since 12 April and the approaches to TODI bridge (685715) were cut on 17 April. Repairs were completed at SPOLETO bridge by 14 April but 100 feet of tracks and embankment were destroyed and the bridge rendered unserviceable again on the 15th. The approaches to a bridge at S 119189, near FABRIANO, were cut on 16 April and have not yet been repaired.

On the East coast line the bridges at FANO, FALCONARA, CUPRA MARITTIMA and ROSETO DEGLI ABRUZZI remain blocked; the bridge at PORTO S. ELPIDIO was blocked on 15 April and tracks cut at PORTO D'ASCOLI and MONTE SILVANO on 16 April.

Fighter bombers have kept up the general dislocation of lines South of ORTE and VITERBO, and on 16 April the MANZIANA viaduct F 460925 was destroyed. The bridge at A 956374 on the TERNI-AQUILA line remains unserviceable.

..... SHIPPING .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

SHIPPING

This week has been marked by the stepping up of Allied air attacks against enemy ports. On the Italian West coast LEGHORN, PIOMBINO and SAN STEFANO were raided on the night of 14/15 April. On the East coast SAN BENEDETTO was raided on the 15th, ANCONA and CIVITANOVA on the night 11/12 and again on the 16th and a direct hit was scored on a 250 foot vessel at ANCONA on the 12th. Along the Dalmatian coast our aircraft continue their successes and some 15 vessels are claimed as either sunk or damaged during the past week. Our naval forces in this area have also had a good week. On night 11/12 April, six small craft were captured and on night 14/15 a tug, a small tanker and a lighter were taken.

There is little change in the overall shipping picture, though there is some indication of increased activity on both Italian coasts. This increase is presumably the result of the present dislocation of the railways.

The building of small craft in the Eastern Adriatic, where the enemy's losses are heavy, continues. On 16 April five Siebel ferries, recently completed at TRIESTE, were observed at FIUME. Also at FIUME on the 16th two additional Siebels were seen in the process of being assembled; this is the first time such activity has been observed at FIUME proper, though engineer landing craft have recently been under construction at KRALJEVICA some 15 miles S.E. of FIUME.

3. BALKANS

GREECE

German troop movements from GREECE to the North have been considerably hampered by railway sabotage. During early April, ELAS detachments blew up two trains between LITOHORON and LEPTOKARIA and another near MESCHAKI. This latter is claimed to have been totally wrecked. A successful train wreck was engineered by another ELAS detachment South of LARISSA. The whole train consisting of 12 coaches, each stated to contain 80 German troops, left the line. 60 Political hostages were shot in LARISSA jail the following day as a reprisal. A troop train of 18 coaches was derailed near VERIA whilst on route for SALONIKA. Casualties reported to date number 100 but it is believed that the total will be much higher.

Andartes ambushed two German lorries near KLISOURA to the South of FLORINA. Some 24 hours later an enemy column of 27 vehicles entered the village and put to death between 400 and 500 inhabitants. The village was completely destroyed by fire.

In the Mt PAJKO area on 7 April ELAS Andartes repulsed a mixed German and Italian force with great success. The enemy force, estimated at about 200 strong, lost 26 killed. Mines were laid on the road FUSTANI, 0.29, NOTIA, 0.39 and destroyed one truckload of troops and damaged two other trucks which were bringing up reinforcements.

In an action between ELAS and RALLIS troops at MARKOPOULON, E.53 on 20 March, 52 RALLIS (Quisling) troops were killed and 42 wounded.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ALBANIA

Minor clashes have taken place between Partisans and mixed German-Armenian troops near KORCE and between LNC and Germans at DELVINE and KONISPOL. A number of reports state that Bulgarian troops are moving West into the KORCE area to take over garrison duties.

JUGOSLAVIA

Islands

The recent occupation of RAB by the enemy was carried out by a special force made up of elements of 824 I.R., 13 SS Mtn Regt and led by officers of 371 Inf Div. It appears that elements of 371 Inf Div which left CROATIA for RUSSIA in Jan 44 have been left behind. A possible explanation would be that the division, known to have 3 Inf Regts when in CROATIA, was reorganised on a 2 Inf Regt basis prior to its departure for the East. This would be in accordance with the enemy's latest trend of cutting down the infantry component in his new divisions. The enemy has reinforced his garrison on MLJET. There are now about 300 Germans on the island. ULJAN is held by a mixed force of 200 Ustashi and Germans and PASMAN by a slightly smaller force. The strength of these garrisons, together with news of defence works on the PELJESAC peninsula point to the enemy's intention to retain his grip on the islands.

CROATIA AND SLOVENIA

The total railway actions carried out by the Partisans in CROATIA for the period Nov 43 - Mar 44 is as follows:

31	trains derailed
32	locomotives destroyed or damaged
247	railway trucks wrecked
10	bridges destroyed or seriously damaged
2	stations put out of action and a number damaged

392 Legion Div is attempting to clear the KNIN-BIHAC road as a preamble, it is thought, to operations in Central BOSNIA. Fighting, in which 1 Cossack Div is reported to have taken part, has taken place to the South of ZAGREB and in the KOSTAJNICA-PETRINJA area.

PODRAVSKA SLATINA to the South of VIROVITICA is again in enemy hands. The Partisans were forced to withdraw in the face of heavy counter-attacks supported by tanks and aircraft.

BOSNIA

The lull in the enemy offensive from BRCKO, CELIC and BIJELJINA to the S.W. was broken on 12 April. Partisans claim that they are opposed by the entire 13 SS Bosnian Div and that artillery shelling is the heaviest they have yet encountered. By 13 April Tito's forces were forced back into the MAJEVICA highlands from where they are fighting a fierce disengaging action. The Partisans fear an enemy thrust in their rear from the direction of TUZLA, which, if it materialises, would place them in a critical position.

.....Fierce fighting...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Fierce fighting continues in the FOCA-KALINOVIC sector in which Italian troops of the GARIBALDI division are taking part. An extension of this fighting is reported from GORAZDE in the DRINA valley. It would appear that with the better weather the enemy intends to clear these Partisan strongpoints astride his communications.

Elements of the 7 SS Prinz Eugen Mtn Div suffered a defeat at the hands of the Partisans at MRKONJICGRAD during 7-8 April. Leaving their armour and vehicles in MRKONJICGRAD enemy infantry attempted to reach MLINSTA, L.32, but were cut off and forced to withdraw to JAJCE. In the meantime the Partisans entered MRKONJICGRAD which they still hold in spite of desperate counter-attacks. Casualties in men and vehicles were suffered by the enemy.

In NW BOSNIA the Partisans have captured CAZIN (North of BIHAC) with the exception of a few strongpoints which are still holding out. Further South in the same sector GOLUBIC was captured but lost again to a German counter-attack.

SERBIA

Heavy fighting continues in the USCE-RASKA sector and in the valleys of the IBAR and STUDENICA. The Ivanica district has been the scene of fierce fighting between Bulgarian troops and Partisans, both sides it is stated, are fighting with fanatical courage.

The lead mines at DOBRNVO and KRATOVO were destroyed by the Partisans in an attack during which 60 Germans were killed and 150 Bulgars taken prisoner.

Railway sabotage has shown an increase, a total of five trains having been derailed mostly on the BITOLJ-SKOPLJE line. A total of three locomotives and 104 trucks are claimed to have been destroyed or damaged.

HUNGARY

German troop movements into HUNGARY have met with repeated Partisan attacks in the Jugoslav-Hungarian border districts. A great deal of war material was captured by Partisans in one attack near VIROVITICA, 25 Germans were killed.

A Partisan report states that the Germans are withdrawing from the BACKA leaving the administration in Hungarian hands. A state of intense uneasiness prevails but as yet there have been no incidents between the Hungarians and Germans. It is now confirmed that five Hungarian Divisions are in the LWOW-STAWISLAWOW sector.

ORDER OF BATTLE

Positions in HERCEGOVINA formerly held by the SS Prinz Eugen Division have been taken over by elements of 369 Legion Division and 118 Jaeger Division.

100 Jaeger Division, last reported in the SREM, is now reported to have crossed into HUNGARY.

-o-o-o-o-o-o-

1. ENEMY SITUATION

There has apparently been a slight change of enemy dispositions on the beachhead front. Prisoners from both 8 and 29 PGR have been captured West of CARANO in the area FC030 - 9231 so it is clear that 3 PG Div's boundary has moved East; at the same time we have prisoners from I and II Bns 1028 GR which are believed to be operating under command of 362 Div further East than before between the 03 and 05 Eastings. It is suggested that 362 Div now covers the sector from opposite CISTERNA to about the 96 Easting where we have had a prisoner from 362 Fusilier Bn. 3 PG Div sector extends Westward from there to at least the 89 Easting where we have a corpse identifying II Bn of the Infantry Lehr Regt which is known to be under command. There is one disturbing element in the many identifications from the beachhead which is provided by a prisoner from 1 Coy 9 PGR captured in the area SW of CISTERNA; this is the first identification from 26 Pz Division since early March and it has been assumed to be in reserve though in fairly close support of the beachhead. However this is only one prisoner and it is unlikely that any important elements of the Division have been committed in the line. Possibly our recent aggressiveness up the CISTERNA road caused the enemy to stiffen the front here with a small detachment from the reserve pending the strengthening of this sector by the reorganisation of boundaries already described.

Enemy defences in the beachhead area are beginning to take shape. So far photographic evidence has shown few important defences in the actual line of circumvallation but some minor works are now becoming visible South West of the COLLI LAZIALI on a line F7536 - 7836 - 8238 and South West of VALMONTONE between 8044 - 0650. These are probably intended to be eventually joined up, via the Eastern end of the COLLI LAZIALI, into a line which will cover ROME while allowing 10 and 14 Armies to join force. According to a recent prisoner from 65 Div a switch line("Auffen stellung") is being built behind the Western flank of this assumed line which runs from the area of ARANO to PALOMBARA (FC052); if this were extended to meet the TIBER it would provide a shorter and more easily defensible line.

.....On the main front.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On the main front interest centres on 15 PG Div. There is some evidence that the Regimental group of 115 PzR which has been operating to the North of the sector of 1 Para Div and whose HQ was believed to be at VILLA SANTA LUCIA (G 8023) may have been withdrawing from the line on 24 April. On the same day another group in the ITRI area was also on the move and III Bn 104 PzR, the regiment which was operating between Highway 6 and the LIRI, ordered the issue of rations to two of its companies for two days. 115 Tank Bn also seem to be involved: a civilian who reached our lines on 24 April said the tanks which were in S. AMBROGIO (G 8909) had left and the troops stated they were going to the beachhead and on night 21/22 April the tanks in CASSINO were being relieved by assault guns. 115 Recce Unit may also be going to move from its position NW of CASSINO; according to a deserter the O.C. of 2 Sqn, which is on M.SS. ARMIENTA, told the troops they were to be relieved by Alpine troops on 20 April. 1 Sqn, incidentally, is still on the Adriatic coast North of PESCARA. Div HQ, however, apparently remained at S. OLIVA (G 6913) at least up to 24 April. Prima facie the evidence seems to point to the division being removed from the line. If it were, all the mobile divisions in Army Group C would be in reserve, though 15 PG might be used to release one for other duties. If it is withdrawn the LIRI valley will be only weakly held but there is one possible source of relief: the HOHE group has not turned up on the front yet after its relief by 114 Jaeger Div and there is some indication that it has not returned to its division, 305, in the fact that the latter has been reduced to employing unreliable Russians in the front line. This regimental group is, then, possibly to be added to the strength of 14 Corps.

As already stated we have received 17 deserters from a Russian OST battalion, 412, in the ARIENZI area. Having created a good impression by volunteering for patrols, which also had the object of discovering the gaps in the German minefields, two sections of these impressed ex-prisoners waited till their German NCO was asleep and walked across. This is the first time the Germans have put such troops in the line and the experience can scarcely have been encouraging. According to the prisoners there is still 577 OST Bn in the PESCARA area but 555, 556 and 612 Bns which were there have been transferred to the West coast. This may be a suitable opportunity to mention that we have identified a new Italian unit, the 1st Italian SS Bn, in the area SW of CISTERNA.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

This week the weight of our air effort has again been directed against the Central Italian railways, though on several days weather has prevented full-scale operations. At no time during the week has through traffic from the North to a line ROME-PESCARA been possible. However there was one day, and possibly two, when trains may have been able to move from the FLORENCE area as far South as CHIUSI over the main FLORENCE-ROME line or by way of the EMPOLI-SIENA-CHIUSI by-pass line.

As of 25 April the West coast line remained blocked at CECINA and MONTALTO DI CASTRO bridges which have now been out for at least two months.

The line EMPOLI-SIENA was cut at six points, including three

....bridges....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

bridges. This line may have been open on the 20th and possibly on the 19th.

Traffic from FLORENCE South over the Main line was not possible beyond INCISA in VALDARNO (about 25 miles South of FLORENCE) near which two bridges were believed cut on the 24th. This stretch of line was open on 23 April, at which time, however, BUCINE viaduct, a short distance to the South, may have been cut, having been attacked with reportedly good results on the 22nd.

The MIRUGLIA-TERNI and FABRIANO-FOLIGNO-TERNI lines are believed to have remained cut near MACERATA and SPOLETO throughout the week.

On the East coast blocks exist at FALCONARA and at several points South of ANCONA. At FANO bridge a single track appeared to be open on 23 April, but on the night 23/24 April direct hits were scored on the tracks to the N.W.

Despite the severe disruption of the railways activity continues on many of the lines. A number of trains have been observed in motion between breaks and many stationary trucks, in some instances apparently caught between breaks, have also been reported. At least one ammunition train was caught in this way and blown up. The enemy is evidently making every effort to use the railways as much as possible in order to cut down on his MT hauls.

SHIPPING

There is no appreciable change in the shipping picture this week, though there are indications of increased activity along the Italian West coast as would be expected in view of the state of the railways. The usual ports continue active and on the West coast there is evidence of shipping being unloaded at beaches. On 22 April seven barges were seen at the beach near CECINA and six F-boats at the beach near FOLLONICA, a short distance South of PIOMBINO. Slightly further South a considerable number of barges were observed off the mouth of the BRUNA river and a number a short distance up the river. Similar activity has been reported on several occasions and while definite conclusions cannot be drawn, it does suggest the transfer of seaborne supplies from ships to rail or MT.

On the Italian West coast air attacks have been made on GENOA, VIAREGGIO, LEGHORN, PIOMBINO and SAN STEFANO and sweeps against shipping along the coast. These attacks have not been heavy and enemy losses have probably not been great. Attacks have also been made on ANCONA, CIVITANOVA and SAN BENEDETTO on the East coast.

On the Dalmatian coast most of the shipping activity was confined to the usual small craft, while larger ships are active from POLA North. In the SPLIT-KOTOR area the enemy continues to lose shipping, though this week his losses have been smaller than heretofore. A raid on MONFALCONE shipyards on 20 April resulted in the sinking of at least two ships though no damage was done to the yard where 24 F-lighters are being built.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. BALKANS

GREECE

Civil war has again broken out between ELAS and EDES after a period of uneasy peace. On 14 April an ELAS force of about 1,000 attacked a numerically inferior EDES force of KARPENISI X27. Details are lacking but it is known that on 18 April fighting was still going on. Fighting between ELAS and German forces, the latter supported by some RALLIS troops, has taken place at STRAT. X21. In the same area ELAS engineers derailed a train carrying petrol and military equipment.

It is now claimed that more than 900 Germans lost their lives in the train wreck which took place near LARISSA on 1 April. Another train has been derailed on the line LITOCHORON-LEPTOKARIA where the railway hugs the coast at the foot of Mt. OLYMPUS. The Andartes took up position about 100 yards from the railway at the point selected. When the explosion took place the train was derailed and immediately attacked. The Germans opened fire with Lt and Heavy MGs, mortars and automatics from the train and a general engagement was soon in progress along the line. German guard detachments were attacked at PLATANI, LITOCHORO, ZILIANA, SKALASOTIKA and the PLATOMON tunnel. As a result of these engagements the German detachments were prevented from joining in the main battle. Some minor clashes have taken place in the VERIA area. At PALAITSIA 032, 27 Germans and 11 collaborationists were killed.

The enemy are making determined efforts to smash Partisan resistance in the PELOPONNESE. A three pronged drive from the North converged on KALAVRYTA and from there pushed South in the direction of TRIPOLIS. Other drives are reported from the CORINTH and TRIPOLIS areas. Apart from minor clashes of a delaying nature, the Partisans are offering little resistance. They are, it is stated, dispersing to the mountains to avert casualties.

ALBANIA AND SOUTHERN SERBIA

Some 4,000 mixed German and Albanian troops took part in mopping up operations in the KUC area early this month. It would appear that this drive is not going too well for the enemy as the Partisans are reported to have captured BONGI and CERAVO immediately to the South. Heavy troop movements have been reported on the KORITSA-FLORINA road. 25 German tanks and 100 MT carrying troops are stated to have passed along this road to the West during the night 11/12 April. These forces may well be moving to the SKOPLJE, VELES, BITOLJ area to take over from the Bulgarians. A later report states that Bulgarian units including Arty were moving West along the KUMANOVO-KYUSTENDIL road. The head of this column reached the latter town on 15 April. Bulgarian troop movements are also reported on the SALONIKA-STIP-GOSTIVAR-DEBAR road heading for SOFIA.

JUGOSLAVIA

Islands

MLJET was attacked in considerable strength by the Partisans on the night 20/21 April. By dawn 21 April they had secured a foothold and are reported to have later captured BABINO POLJE and ZARKEZJE. Fighting is still believed to be going on.

.....KORCULA was.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

KORČULA was attacked by a similar force the following night and latest reports state that BLATO is in Partisan hands.

Enemy preoccupations and fear of Allied landings is illustrated by a report that they are constructing coastal defence works on the Western coast of RAB Island.

CROATIA AND SLOVENIA

Railway sabotage forms the most important news items. 800 metres of line were wrecked near BENKOVAC on the ZAGREB-SISAK railway on 12 April. The ZAGREB-KARLOVAC line was damaged in two places, the most important being near KRALJEVCI where 1,000 metres are stated to have been destroyed.

A supply train was derailed near MITROVICA on 7 April and a section of the VINKOVCI-BROD line destroyed. Although details of the above operations are lacking it is known that the Partisans usually carry away sections of the rail so that the work of repair is held up by lack of essential parts.

BOSNIA

The Partisans mounted a large scale attack on PRIJEDOR on April 20/21. KOZARAC and OMARSKA were captured by the Partisans on 20 April thus freeing the way from the East to PRIJEDOR. Two German attempts to get reinforcements to the beleaguered town failed. Most of the railway line PRIJEDOR-BANJA LUKA is stated to be in Partisan hands.

A German force estimated at 1,000 with eight tanks moved out of KOTOR L56 in a Westerly direction but was forced to withdraw by the Partisans. A second column on the BANJA LUKA - SIPSKO road was likewise repulsed and suffered casualties. Three supply trains have been blown up on the DOBOJ-PRIJEDOR line.

Fighting in the KOZARA has abated somewhat. An unconfirmed report states that the enemy have withdrawn to the North leaving a garrison at BROD.

Fierce fighting is reported from the SARAJEVO-FOCA, KALINOVIK area. This latter town was taken by the enemy on 14 April.

The Partisans have destroyed a dam near JAJCE thus depriving that town of its power supply.

SERVIA AND MACEDONIA

An attack by the enemy was launched against the Partisan held territory between PODGORICA and BIJELO POLJE on 15 April. Enemy columns from both these towns pushed into the liberated country and met with some initial success. The thrust from BIJELO POLJE was held at MOJKOVAC but the Partisans were forced out of ŠAVNIK. The Southern column was checked some 10 miles North of PODGORICA. Heavy enemy concentrations were reported in SAVNIK, PODGORICA and BIJELO POLJE.

In Eastern SERVIA the Partisans attacked and captured KNIAZ MILAN. The entire Bulgarian garrison of 300 men surrendered with their arms and equipment.

.....ORDER OF BATTLE.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ORDER OF BATTLE

A report from Partisan HQ states that the main body of the SS Mtn Div Prinz Eugen is moving to TRAWNIK. A battle group is still fighting in the BOSANSKO area. 350 Mtn Div ex 367 Inf Div is reported to have left the Balkans for RUSSIA. 901 P.G.R. for so long unlocated has turned up in HUNGARY together with one of the Brandenburg Regts. Movements North from the Albanian border may have concerned 297 Inf Div which has been reported in the ZAGREB area. It would appear to be unlikely that the enemy has withdrawn a second division from ALBANIA (100 Jaeger having left the SALONIKA area for RUSSIA) without making some replacement. The rumour that a Brandenburg Div has taken over in the SALONIKA area may mean that 2 Brandenburg Regt has moved South from Central SERBIA to fill this gap. With 1 Brandenburg Regt still in the SIBENIK area it seems probable that the Brandenburg Regt reported in HUNGARY is the 4th. Two new identifications have been made in GREECE. 41 Fortress Div has been identified in the PELOPONESE with H.Q. thought to be at TRIPOLIS. 133 Fortress Div is stated to be in CRETE. Neither identification constitutes an increase in enemy strength as the former has merely taken over the static duties of 117 Jaeger Div and controls 965 Fort Inf Regt while the latter is thought to be the new designation of Fortress Div "Crete".

Brigadier,
D.M.I. (1).

-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The regrouping in the beachhead area appears to have been completed, as far as the front-line units are concerned, and identifications have confirmed the dispositions outlined last week. The single prisoner from 26 Pz Div has not been followed by any more; it seems likely from what he said, which was not much, that only one Bn of this division was in the line. This is confirmed by another prisoner from Hermann Goering division who had been attached to I Bn 9 PGR for punishment; according to him the Bn had been in position near CISTERNA since the end of March. In both these reports there is no question of anything more than I Bn and it may be that with the recent re-shuffling of sectors this is no longer required in the line. It is all the more likely for 26 Pz Div to concentrate its forces in that the other reserve division which was nearest the beachhead, 90 PG Div, appears to have moved down towards the coast. On 27 April Div H.Q. appears to have moved to the area SW of ROME, South of the TIBER, where it will presumably be responsible for the defence of the coast between the beachhead and the TIBER. The detailed dispositions of its subordinate units are not known though 190 Arty Regt and 190 A.Tk Bn were making a fairly lengthy move on the night 25/26 April; on the other hand 200 PGR was still at PIGLIO on 2 May.

On the Southern front there is some further confirmation of the withdrawal of 15 P.G. Div from the line. Div H.Q. appears to be unchanged at S. OLIVA but 115 PGR appears to be in the ARCE area, 104 PGR just North of ITRI and 115 Recce Unit somewhere North of PICO though it still had an element in the CASSINO area on 25th. We also have a report from a reliable Italian source that an unspecified division is being withdrawn from the CASSINO area to CECCANO, G 4530, for a rest. This is slightly farther West than we have actually located any elements of the division, but the discrepancy is not serious and the report will serve as confirmation. A further confirmation is provided by ground and air reports indicating a relief in the sector between Highway 6 and the LIRI river. In view of the statement last week that the BODE Group might be made available for 14 Corps, it is interesting that a prisoner from 577 GR taken on 2 May said that the 576 GR had not rejoined its division but had been sent "to the CASSINO front".

.....If we take it.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

If we take it that the withdrawal of 15 PG is confirmed, as seems highly probable on the above evidence, it is all the more strange that there have been definite indications this week that 1 Para Div has also been withdrawn or is in the process of withdrawing. The evidence is not very strong but there was certainly a relief going on in 4 Para Regt on the night 30 April/1 May and the incoming unit was almost certainly not from 1 Para Div; there are some slight indications, which should not be pressed, that Div H.Q. have moved back to the ARPINO area (G 6738) and a prisoner from 85 Mtn Regt said he had heard that 1 Para Div was being relieved in CASSINO.

If these two good divisions are withdrawing from the line it will leave the defences in the area from Monte CASTELLONE to the LIRI very thinly held. There are two Regts available to fill the gap, BODE Group consisting of 576 GR, with possibly 305 Ersatz Bn and elements of the divisional engineer and Recce Bns, and 134 GR of 44 Div which has been in reserve for some time. If we put BODE in South of Highway 6 we have still to find replacements for three bns of parachutists and three bns from 15 P.G. Div; it can be done at a pinch by using the three bns of 134 GR plus 3 independent Mtn Bn (and 5 Mtn Bn if it exists); 4 Bn is believed to be already there. This will just take the place of the front line Bns but leave no immediate reserves in rear. It may be relevant that the O.C. 115 Recce Unit told his men that they were going to be relieved by Mtn troops; on the other hand a recent long-range deserter from AUSTRIA claims to have seen 10 Coy 100 Mtn Regt near PIEDIMONTE. If this is reliable possibly the enemy might bring 100 Mtn Regt down to the CASSINO area, adding perhaps 95 Recce Unit, and put 134 GR in its place though this would complicate the chain of command. All this is conjecture but it does seem that the results of the various moves going on is to leave the GUSTAV line held by a rather thin screen of not the best troops while a strong counter attack force is left behind - but not far behind - to be thrown in to seal off any penetration. From the location of 104 PGR near ITRI it rather looks as if 15 PG Div has at least one eye on the coast; 1 Para Div is more likely to have both eyes on the GUSTAV line and to be used, very much as the CORVIN group of Hermann Goering Div was used during the withdrawal to the GUSTAV line, as a mobile body of first class troops to be thrown in at dangerous points and withdrawn again for employment elsewhere when the danger has been parried. It is to be considered, however, whether the Germans will use these reserves to restore the situation on the GUSTAV line. If too determined a stand is made forward 10 Army may be too weakened to defend effectively the ADOLF HITLER line, the loss of which would be much more serious. It is significant that during the attack on CASSINO in March no reserves were committed and 1 Para Div was left to fight it out alone; in view of the fact that he must expect our next attack to be in greater strength it seems reasonable that he should again pursue the same policy.

On the Adriatic coast Russian deserters have continued to flow in. Documents they brought with them show that they are now called 3 Bn 578 GR, which does not explain why they were placed in 334 Div's sector between the two Bns of 755 GR when their own regiment is on the coast. There have been various reports that divisions in FRANCE have also had OST Bns incorporated to form third Bns for their infantry regts and we may find other cases on the Italian front as well.

..... 2. ENEMY SUPPLIES AND COMMUNICATIONS...

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

Again this week no through rail traffic has been possible over the Central Italian railway system. Our air effort continues to be directed mainly against bridges though FLORENCE marshalling yards have been attacked and also a number of important rail centres in Northern ITALY. While rail activity has been observed in Central ITALY only two or three appreciable stretches of line have been open and there is evidence to indicate that the enemy is continuing to use these open stretches to distribute supplies to various railheads from which MT can make the necessary haul further Southwards. In view of the state of the railways it must be considered that the majority of supplies are being moved South from a general line PISA-RIMINI by MT. Most of this MT movement is carried out at night.

As of 3 May the state of the railways was as follows. The West coast line was cut at three points between LEGHORN and ROME including CECINA and MONTALTO di CASTRO bridges. The main FLORENCE-ROME line as far South as ORTE was blocked at at least nine points and the line running down from EMPOLI through SIENA to join the FLORENCE-ROME line at CHIUSI was interrupted at six points. The loop lines running from PERUGIA down to TERNI were both cut at two or more places. However, the East coast line was open down as far as CIVITANOVA South of ANCONA and traffic is thus possible over the East coast line and then by way of the FALCONARA-FABRIANO-FOLIGNO line to as far South as SPOLETO where a bridge is down. Between a line CIVITAVECCHIA ORTE and ROME the railways are all out at at least two points.

SHIPPING

Shipping on the Italian West coast continues active though no MT ships, which are the largest supply ships the enemy brings as far South as SAN STEFANO, have been observed at either PIOMBINO or SAN STEFANO since 25 April. The usual barges, small coasters and F-boats are active. At SAN STEFANO, the enemy's most active unloading port for army supplies, 1 MT ship and 8 F-boats were present on 25 April, 4 F-boats and 2 supply barges on the 28th, and 5 F-boats and 1 small coaster on the 29th.

Heavy air attacks on SAN STEFANO and PIOMBINO were made this week, and a number of night raids, with considerable damage resulting to harbour installations and approaches. Harassing attacks have also been made on LEGHORN, SPEZIA and GENOA.

Activity on the East coast continues on a small scale, chiefly at ANCONA. The enemy's most Southerly port on this coast still appears to be SAN BENEDETTO.

3. BALKANS

GREECE

Small scale actions have taken place between ELAS and EDES forces in the ARAKTHOS River area and along the coastal strip to the South of PARGA, R61. The immediate cause of the present deadlock is the disputed sovereignty of the villages KOUKOULI, LOUTSA and TSOUKNIDA, all in square R70. This area, at present held by ELAS

....units, lies....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

units, lies astride the EDES line of supplies from ARTA to the North. EL.S has repeatedly refused permission to allow food and stores to pass from ARTA through this territory to ZERV.S. A preliminary meeting has taken place between the leaders of the two bands but EL.S shows no sign of willingness to compromise.

The enemy have launched attacks on EL.S in the Mt VERMION area. Thrusts from nine directions converged on the EL.S positions and after two days fighting, the Andarte opposition collapsed through lack of ammunition. Many Andartes abandoned their arms and fled. It is reported that the Germans have burnt many villages.

Another enemy drive in the FILLATES area near the Southern Albanian border has met with an equal success. EL.S troops are offering little resistance. The Greek population is being slaughtered and the villages of PERIS.S, POLUK and TSUK.NDS have been destroyed. The recent German offensive in the PELOPONNESE has been more thorough than any before. The enemy used mountain paths and picketed heights where Andartes were expected with the result that few escaped the net. The EAM organisation has almost ceased to function in the N.W. and EL.S, its military counterpart, will need at least three weeks before it again constitutes a fighting force.

As a reprisal for the recent train wreck near ST.M. 120 members of EAM have been shot.

ALBANIA

The L.N.C. are stated to be in control of almost the whole of Southern ALBANIA. Some two months ago the Partisan position was described as precarious in the centre and South thus proving the resilience of the Partisan movement.

POGR.DEC near KORCE was captured by the Partisans on 16 April in a well planned attack. Diversionary attacks were made and forces posted to intercept enemy reinforcements before the assault was put in. 40 Germans were killed, 220 Kosovars and 20 Albanian gendarmes were captured together with large stores of food, clothing and arms. POGR.DEC is on the KORCE-ELB.S.N-DURAZZO road, the only East-West route of any importance in the country. Enemy reaction was expected and on 26 April the Germans mounted a heavy counter attack and succeeded in driving the Partisans out of the town.

A German column was attacked on the PODGORIC.-SCUTARI road. The Partisans claim to have destroyed 20 lorries and inflicted some casualties. Spitfires strafed a column of 150 MT moving West from EL.S.N, 17 vehicles were destroyed and a further 24 damaged.

JUGOSLAVIA

DALMATIA

The results of the raids on ORCULA and MLJET throws light on the scale of the recent fighting. 393 enemy were killed and 505 PW, including 11 officers and 70 NCOs were taken.

.....Booty included....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Booty included 4 x 7.5 cm Inf Guns, 4 AT Guns, 10 Hy MGs, 26 LMGs, 10 Mortars and 50 tons of ammunition. A number of vehicles including two buses were destroyed before the Partisans re-embarked for their base. On 21 April a small party of Partisans and Allied troops ambushed two German lorries full of troops on BRAC. Both vehicles were destroyed and 30 Germans were killed. Since 19 March when SOLTA was attacked the enemy have lost more than 1,200 troops and much equipment in Island operations thus showing the importance of VIS as a base. The possibility of an enemy attack on this Allied base can not therefore be entirely ruled out, but it is felt that with his commitments elsewhere and his acute shortage of shipping he will be unable to assault and subsequently garrison the Island.

On the mainland the enemy has met difficulties on his lines of communications. On 24 April a column of 1,000 Germans and 1,500 Cetniks was attacked on the KNIN-GOLUBIC-STRMICA road and forced to withdraw. STRMICA was later captured by the Partisans. Further South 3 columns were attacked. 1,500 Germans and some Ustashi from SINJ to HRVACE, 4,000 Germans from SINJ to LIVNO and a similar force at VRLIKA all met fierce resistance and are reported to have returned to their starting points. Although it is felt that these figures are perhaps exaggerated the actions show that even in comparatively well garrisoned areas the enemy can only move his forces with extreme difficulty.

CROATIA AND SLOVENIA

The recent lull in operations has been used by the Partisans to increase their sabotage of the railway system. The ZAGREB-BELGRADE line was attacked between BROD and NOVSKA and the track torn up in no fewer than 70 places. South of SISAK the line was destroyed and a locomotive and seven waggons wrecked. The line near GLINA was breached and a locomotive and 21 waggons destroyed at POPOVAC F27. The enemy has flooded the BOSUT Woods thus immobilising strong Partisan forces in the area. Simultaneously the enemy launched attacks on the Partisan strongholds in the FRUSKAGORA Mtns with the object of safeguarding the ZAGREB-BELGRADE communications. Enemy reaction may be expected further to the West to protect this increasingly important East-West railway.

It is reported that the enemy garrison in NOVO MESTO is still virtually encircled and suffering losses in its attempts to break the Partisan ring. IVANEC B64, SV IVAN ZELINA and DRAZEVAC to the North of ZAGREB are reported to be in Partisan hands.

BOSNIA

MRKONJICGRAD was recaptured on 23 April by an enemy column operating from JAJCE. Fighting is taking place in the TESLIC M06 and KOTOR VAROS L66 areas and successful enemy attacks are reported in the LIVNO sector. These reports make it clear that the Germans are continuing their policy of harassing attacks, they have failed several times to clean up this area with much stronger forces so can hardly hope for a decisive success now.

The enemy have succeeded in bringing up reinforcements to PRIJEDOR and the Partisans have withdrawn to the outskirts. A later report states that all communications around the town are in Partisan hands and the enemy wounded are being evacuated by air.

....The B.N.J. LUKA.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The BANJ. LUKA - PRIJEDOR - BOS NOVI railway is almost completely destroyed, whole sections having been carried off by the Partisans. In a recent action near BIHAC the Partisans killed 26 Germans including a General and 2 officers. No clue to the General's identity has been given.

SERBIA AND HERCEGOVINA

The German offensive in HERCEGOVINA has petered out and the Partisans have gone over to the offensive. In the Eastern sector the Partisans had pushed the enemy back to the road PLEVLJA-SAHOVICI and on 27 April were reported to be fighting in the town of BIJELO POLJE. To the West the Partisans have captured VILUSI and SPUZ and claim to hold all communications between the towns. It is believed that very few German troops have taken part in this venture, the main body of enemy having been made up of Cetniks and Moslem mercenaries.

In Eastern SERBIA the Partisan movement continues to gather strength, 3,000 recruits are stated to have enrolled in the VRANJE area recently. Two trains have been blown up in the last week on the VRANJE-KUMANOVO stretch of the BELGRADE-SALONIKA railway. As the Partisan strength increases, the morale of the Bulgarian occupation troops deteriorates. KRATOVA was attacked by Partisans and after 15 minutes fighting, 172 Bulgarian troops surrendered. An arms magazine fell into Partisan hands. Fighting has taken place near CRNA TRAVA P58 in which the Partisans claim to have routed some 1,000 Bulgarians.

BULGARIA

Partisan activity is growing in BULGARIA. It is stated that 60 Odreds exist, the strongest being in the PLOVDIV area.

The SOFIA-BURGAS express has been attacked and the SOFIA-VARNA express wrecked. Some damage has been done to the SOFIA-PLOVDIV line. There appears to be some uneasiness in both civil and military circles but there is as yet no sign of open revolt. Troop movements are reported in the North towards the DOBRUJA.

HUNGARY

Gen Ferenz SZOMBATHELY, C. of S. of the Hungarian Army has been dismissed and his post filled by Gen WOEHSH, Commander of the 2nd Army Corps.

ORDER OF BATTLE

15 Mtn Corps is now reported to be in KNIN and the HQ of 264 Inf Div has moved from DRNIS to SIBENIK. The Bulgarian column reported moving West along the KUMANOVO-KYUSTENDIL road last week is now known to have gone to THRACE. The Germans are stated to be requisitioning houses in the SKOPLJE area thus giving colour to the reports of the imminent arrival of German forces.

The identification of elements of 297 Division in action in TEPELENA, Southern ALBANIA, in mid-April, seems to disprove previous reports that the formation had left the country It appears rather to have extended its area Southwards, thereby taking part in the regrouping to cover the former area of 100 Jaeger Division.

THIS PAGE IS DECLASSIFIED IAW EO 13526

APPENDIX "A" TO
A.A.I. INTELLIGENCE SUMMARY
NO 43 DATED 4 MAY 44.

THE ADOLF HITLER LINE

During recent weeks the ADOLF HITLER line has shown further developments, and it is now possible to give a fuller picture of the enemy defences in this area.

(a) The "camouflaged structures", which have already been discussed in previous appreciations, clearly form the enemy's main defence. Their number has increased to nearly two hundred. A wide arc of thirty-five structures runs roughly East to West from G 802227 to 773227, covering the approaches to PIEDIMONTE S. GERMANO and apparently intended to prevent any outflanking movement from the LIRI valley up the wide re-entrant commanded by PIEDIMONTE, which is situated on a prominent spur. Eleven structures are staggered in depth behind the forward edge of the line North of Route 6. Between Route 6 and the point where the line crosses the river LIRI South of PONTECORVO, a distance of about 9000 yards (5 miles) there are altogether 114 structures. Finally, West of the LIRI to a point just beyond S. OLIVA there are thirty structures, most of which are in the rolling country Northeast of S. OLIVA and only a few Southwest of Point 101 (702140).

According to the most recent information available no "camouflaged structures" are sited in front of the almost continuous line of wire except for the thirty-five forming the arc South of PIEDIMONTE in which area no wire has so far been detected. The average depth of the line in which these structures occur is about 600 yards, and only five have so far been detected at any appreciable distance West of the lateral road AQUINO - PONTECORVO - S. OLIVA, which runs roughly parallel to the front line of wire.

(b) Of the more minor defences, such as machine-gun positions and anti-tank gun positions as opposed to the "camouflaged structures", approximately seventy have already been discovered. The majority of these are also sited behind the line of wire, except in the PIEDIMONTE area as already noted, but a certain number have been found in front of the wire particularly in the triangle enclosed by the road PONTECORVO - S. OLIVA, the river LIRI, and the RIO FORMA QUESA, and in the neighbourhood of the AQUINO airfield.

The presence of emplacements for anti-tank guns and machine-guns forward of the wire in the triangle mentioned above, together with suspected constructional activity reported in this area, may indicate that the eventual defensive line will incorporate into it this stretch of the LIRI, which is an anti-tank obstacle, from 722154 to its junction with the RIO FORMA QUESA at 726141. If the enemy extended his line South through M.SAN MARIA (7213), M.CAIVO (7212) and M. d'ORO (7310) to ESPERIA he would be able to use his supply route PICO - S. OLIVA more freely and hidden from observation. The track from G 655170 (a point on the road PICO - PONTECORVO) to S. OLIVA has been greatly improved by the enemy and heavy vehicles were reported to be using it on 25 April. Air photos have so far not borne out this suggestion, although military activity has been detected in the area of M. d'ORO. From the topographical point of view, however, such a line has definite advantages, incorporating a line of steep-sided mountains overlooking the LIRI valley.

(c) The wiring, which, with the exception already noted in the

.....PIEDIMONTE area...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

PIEDIMONTE area, forms the front edge of the ADOLF HITLER position, runs in an almost unbroken line from the mountain slopes on the North side of the LIRI valley at 774226 to S. OLIVA on the South side. There is the LIRI valley at 774226 to S. OLIVA on the South side. There is possibly a gap of about 1000 yards from 751199 to 742197, where the enemy's defensive layout crosses LE FORME DI AQUINO, a watercourse with steep banks in this area. This watercourse, which is an anti-tank obstacle or possible obstacle requiring ground reconnaissance, swings Southeast in square 7420, and has not been incorporated into the enemy's defensive layout since the alignment of its course is not suitable for that purpose. The exact position of the wiring is in doubt in one small area Northeast of S. OLIVA. Small gaps for the use of vehicles etc. exist at several points. The type of wiring is uncertain but thought to be "double apron".

(d) The anti-tank ditch system on the ADOLF HITLER line, though showing signs of development, is by no means continuous. In the PIEDIMONTE area a ditch, thought to be still under construction, has been detected between 774224 and 771225. At 774224 this ditch is joined to a watercourse, which is a natural anti-tank obstacle. A Westward arc of anti-tank ditches run from 771225 to 756216 with gaps at route 6 (761223) and at the railway (777224). South of AQUINO an anti-tank ditch crosses LE FORME DI AQUINO between 749199 and 744197, and is still apparently under construction for a considerable part of its length. In the area Southeast of PONTECORVO there is a ditch from 736165 to 733166, where there is a gap of 180 yards, followed by a long stretch of ditch as far as 729158. Three other small trenches exist: 738172 to 738173, 737175 to 737176, and 737178 to 737179.

Possible tank obstacles in the form of drainage ditches are specially noted as follows: on the Eastern perimeter of the AQUINO airfield from 770213 to 772206, with three small gaps in use by vehicles; and in the open country South of the airfield from 769203 to 766196, three gaps also being noted in this obstacle.

(e) Forward and South of the line in the area Southeast of PONTECORVO, particularly in map squares 7215, 7315 and 7316, a considerable number of demolished buildings have been seen. It is believed that these may be used in a defensive role though clearing to make fields of fire may account for demolition in certain instances. This feature, added to the fact that many of the "camouflaged structures" are sited in and/or constructed from demolished buildings, shows clearly to what extent the enemy is improvising his defences from the numerous farmsteads to be found in the LIRI valley.

(f) There is yet no clear indication of the gun lines for the ADOLF HITLER position though several unoccupied sites are known North of Route 6 between the road and CASTROCIELO (7425) in map square 7324, while there are further unoccupied positions near the intersection 7323 and at 702213. Positions under construction are noted at 682212.

(g) The chief outstanding problem of the ADOLF HITLER line is the exact nature and probable armament of the "camouflaged structures".

From information obtained from air photographs and other reliable sources a more exact assessment of the situation may now however be attempted. While air photographs do not show whether these structures should be classified as concrete pillboxes or casemates, it is considered that, despite the considerable variation

.....in size....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in size of the structures, the majority appear to be large enough to preclude any theory that they may conceal the small mobile pillboxes designed to house two men only, though these mobile pillboxes may be in use at some points.

One characteristic feature which air photos seem to reveal is the very small elevation above ground level of all the suspected structures. It is thought, therefore, that the structures could be classified under one or more of the following headings, as set forth in the margin of the current defence overprints:

(i) Emplacements constructed below ground level, shored with timber (?) and covered with rubble, with embrasures at, or just above, ground level.

(ii) Converted cellars below demolished buildings.

(iii) Shallow emplacements with light camouflage roofing.

(iv) Camouflage-covered concrete pillboxes.

Another notable feature is the absence of communication trenches between the various structures. So far only one stretch of communication trench has been found, namely in the area North of Route 6 in map square 7622 and this links machine-gun and anti-tank gun positions only. There is no direct communication between these forward positions and the "camouflaged structures" sited 600 to 1200 yards in their rear.

This lack of communication trenches and the size and known siting of the structures would seem to indicate that mutually supporting heavy infantry and/or anti-tank weapons will be found to constitute the structures' armament. It will be realised, however, that the exact nature of such armaments cannot be determined from air photographs.

(h) The ADOLF HITLER position across the LIRI valley is as far as can be gauged from air photos a formidable defensive line. Its alignment is well defined and clear-cut. The continuation of the line North and South of the valley, which the enemy must defend in order to avoid any outflanking movements through the mountains, is less obvious.

Presumably the enemy will incorporate M.CAIRO and TERELLE into his defensive layout, and for this there is some evidence from air photos. These show what is suspected to be a line of machine-guns along the Southern spurs of M.CAIRO in the area Northwest of VILLA S. LUCIA (8123), and minor defences continue Northwards forward of PIZZO CORNO (8024), another spur of M.CAIRO. Behind PIZZO CORNO there is an important track junction, where a track linking TERELLE to PIEDIMONTE is joined by another from the rear running along the Southern slopes of M. CAIRO.

Early ground reports of a line Northwards through BELMONTE to ATINA are not borne out by air photos, and such a line would be very unsuitable from the topographical point of view since deprived of the use of the road ATINA-BELMONTE, the enemy would have a long mountain sector to defend without a motorable road leading up to it from the rear.

It is much more likely that the enemy will attempt to continue to hold his present naturally strong positions North of S.ELIA even

....after being driven...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

after being driven out of his GUSTAV line which runs from CASSINO Southwards along the RAPIDO. The ADOLF HITLER position in the LIRI valley would then become a switch line pivoting on M. CAIRO.

The present defensive layout Northeast of M.CAIRO is as follows:

TERELLE itself is covered by minor defences including a minefield astride the serpentine road up to TERELLE at 832273. The line continues Northeast from here through Cle ARATE (8328) to the valley in which BELMONTE CASTELLO is situated; the minor defences of this stretch have been interpreted from air photos to consist of weapon pits. On the enemy side of Cle ARATE is an important lateral track from TERELLE to CAPO di CHIL. (8332). The approaches to BELMONTE are covered by minefields astride the road and valley, and by fairly well developed minor defences consisting of anti-tank guns and machine-guns connected by a system of trenches. The line then pivots on M.CASTELLO which drops steeply South and West. Another minefield is laid across the South-North valley in squares 8829 and 8929. From here a line of machine guns and infantry section positions runs Northeast through Cle S.MARTINO (9031), MONTE CANTALA (9232), and MONTE S. CROCE (9433) to the road COLLI (H 0832) - ATINA, where suspected machine-guns, sited astride the road at the pass over the watershed (9434), cover the approach to S. BIAGIO. Further machine-guns have recently appeared on the slopes to the North of the watershed likewise covering the pass.

The Southern extension of the ADOLF HITLER line is far less well defined, and evidence from air photos does not provide any solution. A prisoner captured recently states that defences of a provisional nature were being constructed on the line MONTE FAMERA (7506) - SPICNO (7501) - M.CIVITA (7400) - the massif of SAN ANGELO (6900) - Pte PLANCETA (M 6697) - MONTE MOL. (6696) - the FORMIA area. If ESPERIA (7509), with a good supply road up to it from S. OLIVA, be included as an important pivot of the line, this suggestion is plausible from a topographical point of view, since the line of mountains noted above consist of very steep ranges facing East and South. The possibilities of a defensive line along the LIRI South of PONTECORVO through M. d'ORO to ESPERIA have already been noted above.

1. ENEMY SITUATION

Enemy dispositions are still apparently far from fixed and there is evidence of still more movement and reshuffling of units. The changes are, however, not so drastic as was suggested last week. It is clear that the movement in 1 Para Div sector implied a local relief only and not that of the division; 4 Para Regt still has two bns forward and Div HQ was reported by a German agent to be at CASTROCIELO (G 737255) on 3 May. The deserter's story of troops of 100 Mtn Regt at PIEDIMONTE is explained by the presence of a mule transport coy of the Regt in that area, apparently under command of the Regimental band-master. 15 PG Div behaved rather strangely as 115 PGR, after having moved back to West of ARCE, moved forward again some time about 4/5 May; there is some evidence that this was due to sudden apprehension of an Allied attack but this seems to have died down again later since Div HQ was moving on the evening of the 8th. All this time two Bns of 104 PGR and possibly a bn of 115 PGR with some of 33 Arty Regt remained in the ITRI area and it is clear that 15 PG Div is directing at least half its attention to the West coast. When we know where Div HQ has moved to we may be able to say whether its whole attention is directed there. In the old sector between route 6 and the LIRI another regiment has turned up which appears to be the long-lost 576 GR. Its HQ was at G 825145 on 5 May and it was under command 15 PG Div. The situation in the LIRI valley is clearly still susceptible of change and we may expect further developments before the Germans are finally satisfied with their dispositions. They are certainly thickening up their artillery; III Bn 190 Arty Regt and a troop of 764 Med Bty have been identified in the general area of CASSINO and CB sources report a thickening up of Medium Artillery in that area with a falling off in the ATINA area.

On the Beachhead conditions have been generally quiet. Two prisoners captured in the area F 8929 identified 508 Heavy Tank Bn which they said was in leaguer at F 8834. This is the first we have heard of this GHQ Mk VI Bn since it was identified by a diary in early March; it is useful as showing that it is still here though its tanks have not been in action for a long time. The prisoner gives its strength as 64 Tigers which is probably a little high. We have further confirmation of the presence of 90 PG in the North West flank

....of the....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

of the beachhead from a reliable report of a complete Panzer division in the OSTIA area (a natural enough mistake for a Panzer Grenadier division though 190 Pz Bn is in fact equipped with assault guns) and we have some evidence that 200 PGR was co-operating with 4 Para Div on 5 May; the whole regiment, however, was still in the PIGLIO area on 1 May and it still seems to have some elements there. Consistent recent reports of the move of SS troops in MT north from ROME combined with a lack of identifications of SS troops in the beachhead suggest that the small detachment from 16 SS Div has rejoined its division. There has been a fair number of deserters coming in from 14 Army; besides the perennial source of 7 GAF Bn there have been representatives of almost all divisions in the Army in the last week, particularly from 65, 715 and 3 PG Divs though 4 Para Div has also provided two.

In the Central part of the front the enemy has withdrawn from the PALENA area. It is not thought that too much emphasis should be laid on this as this was scarcely vital ground to the enemy, and prisoners had already reported that some such withdrawal was likely when the weather improved. It is interesting to note that 114 Recce Unit never went to the Central sector but apparently went straight from the Beachhead to the Lower GARIGLIANO.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

Throughout the last week once again the enemy has not been able to keep a single through line open South of the PISA-RIMINI area.

On the West coast the bridges at CECINA and MONTALTO DI CASTRO remain out, and a further bridge was down according to PR on the 7 May.

On the Central network all breaks on the FLORENCE-AREZZO line had been repaired by 6 May, but results of attacks against three bridges on this stretch on 9 May appeared good and there are still four bridges down between CHIUSI and ROME on the main line. Both the EMPOLI-SIENA and PERUGIA-TERNI by-passes are effectively blocked by a series of broken bridges.

On the East coast the main line is open to S.BENEDETTO but there are two bridges down between this town and PESCARA.

The network of lines leading into ROME from the VITERBO, ORTE, CIVITAVECCHIA area has been kept continuously cut.

Although it is difficult to obtain any definite evidence it does seem likely that this constant interdiction of his main arteries of communication has had a hampering effect on the enemy's potential freedom of operations. It is thought that he has not been able to build up extensive dumps and that he has, during the last week, only been able to maintain his day to day needs on his present very moderate scale of expenditure. The pinch will come when large scale operations oblige a drastic increase in consumption.

SHIPPING

There were no new developments of importance this week. On the West coast MT ships are again coming into SAN STEFANO, one having been observed there on 5 May along with two supply

....barges and seven...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

barges and seven F-boats. It is interesting to note that PORTO FERRAIO, the most important port of the Island of ELBA, has of late become increasingly active. On 7 May two escort vessels, one KT ship and seventeen F-boats were observed there and occasionally a small steamship is picked up at this port. It is probable that PORTO FERRAIO, along with PIOMBINO, is being used as a transhipment and staging point for supplies being moved to SAN STEFANO. On the East coast supply traffic appears to have picked up slightly but it is still relatively light being chiefly confined to small coasters. As usual most of the shipping continues to move between VENICE and ANCONA.

While there appears to have been some increase in shipping over the past month it has not been as pronounced as would be expected in view of the continued interruption of the Central Italian rail system. This may possibly be explained by the fact that ports are continually exposed to air attack and while our attacks have not sunk a large number of ships clearance of debris in harbour areas must present difficulties, and if a considerably increased number of ships were used losses might well be heavy. In addition the enemy is reluctant to move shipping to ports well to the South and consequently even after arrival at final port of destination supplies must still be moved a considerable distance before reaching units in the line. Supplies coming in by sea probably do not exceed 15 to 20 per cent of overall requirements. However, while the amount of shipping is not great, it undoubtedly contributes materially to a supply system now denied effective use of the Central Italian railways and perforce largely dependent on MT for the movement of supplies.

3. BALKANS

GREECE

There has been little activity apart from minor clashes and some sabotage of communications. A railway bridge near LAMIA was blown causing the derailment of a train. The locomotive and six coaches were destroyed. Another blown bridge near VILIVINA (NE PELOPONNESE) caused two trains to be derailed but few details have been given. An independent Macedonian Bde controlled by TITO is operating in Lake OCHRID area. On 4 May this brigade attacked the German garrison at PISODHERION M47 thereby provoking the wrath of the local ELAS units who claim to have been negotiating with the garrison to desert with arms and equipment. They further state that the Brigade has no right to operate in GREECE without first seeking permission. A number of ELAS troops are going over to the independent brigade.

Allied special service troops brought off a spectacular coup on the night 26/27 April. Maj-Gen KREIBE, G.O.C. 22 Div CRETE was captured as he was travelling by car on the island.

ALBANIA

There has been heavy troop and MT traffic from SCUTARI

....to PODGORICA...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

to PODGORICA and CETINJE. 150 trucks passed along this road on 1 May and a further 240 trucks proceeded North during the night 3/4 May. It is believed that the Germans will use these troops to clean up the area PODGORICA-NIKSIC and the roads leading to DUBROVNIK.

JUGOSLAVIA

DALMATIA

It appears that only the Eastern end of KORCULA is garrisoned by the enemy. Reports state that they have withdrawn their garrison from VELA LUKA, BLATO and SMOKVICA. BRAC, on the other hand, has been reinforced by a further 400 troops who are reported to have landed at SUMARTIN on the night 29/30 April. Nine enemy schooners landed troops on VRGADA island and later searched KORNAT. The partisans made a surprise raid on TROGIR and claim to have killed 40 Germans. Elements of 264 Inf Div took part in a drive from BENKOVAC to the N and NE. They met stiff partisan resistance and on 27 April were forced back. Some casualties were inflicted but it is apparent that this drive was of a local nature.

CROATIA AND SLOVENIA

A German offensive is developing in the CORSKI KOTAR. Enemy columns are reported to be moving from OGULIN to DREZNICA, East from SENJ and North from BRINJE. Elements of 392 German-Croat Div and one other Div are said to be involved. A similar operation was undertaken by the enemy between KARLOVAC and LJUBLJANA. Columns of about 3,000 troops pushed from LJUBLJANA to RIBNICA and from KARLOVAC towards METLIKA. A similar force crossed the SAVA at BOSTANJ and moved in the direction of ZUZEMBERK. The partisans claim to have held these enemy columns and to have inflicted heavy casualties. In spite of these preoccupations the Partisans continue to sabotage rail movements. A train was wrecked on the ZIDANI MOST-CELJE line and the line damaged between GORIZIA and PODERDO and TRIESTE-POSTUMIA. Several locos and waggons were destroyed near DRAVOGRAD. To the East a successful wreck was engineered near BATAJNICA Y12, where the death roll is believed to be high.

BOSNIA

Sporadic fighting has taken place on the BIHAC-KNIN road and between CAJCE and JERKOVIGRAD. This latter town now held by some 1,200 enemy troops, has changed hands no fewer than 37 times since the German invasion.

On 26 April a three-pronged drive was made by the enemy on VLASENICA. The Germans are making every effort to clear the Partisans from this area so vital to their supply system. The Southern column estimated at about 2,000 troops was held by the partisans on 30 April while another column from TUZLA was attacked and split up between VLASENICA and KOMMOA B97.

.....The enemy columns...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The enemy columns, stated to be elements of the SS Prinz Eugen and SS BOSNIA divisions were supported by Stukas and Henschels. The partisans claim to have killed 500 Germans in the North of this sector alone while elsewhere heavy casualties are claimed to have been inflicted. KLADANJ was recaptured by the Partisans during the night 3/4 May and an unconfirmed report states that OLOVO and VARES are again in Partisan hands.

SERBIA AND MONTENEGRO

Fighting in the BIJELO POLJE - PLJEVLJA area continues unabated. On 1 May the partisans captured ANDRIJEVICA and two days later entered BIJELO POLJE. Fierce fighting took place for PLJEVLJA and BRODAREVO and on 7 May the Partisans captured the latter town after inflicting some 400 casualties on the enemy. To the South BERANE was recaptured by Tito's forces. A train wreck causing heavy casualties took place at RISTOVAC near VRANJE.

ORDER OF BATTLE

A new formation, the Albanian SS SKANDERBEG Div is reported to be in the TETOVO-PRIZREN area. The division, said to number about 7,000 men is being formed on the lines of the SS BOSNIA Div with Albanian troops and German officers. It takes its name from SKANDERBEG, a National hero of the 15th century, who fought against the Turks.

The 13 Bulgarian Inf Regt of 7 Inf Div has left the STRUMA-AXIOS area for BOSILGRAD in BULGARIA. A report of another Bulgar Div in the VRANJE-KUMANOVO district is thought to represent regrouping and not a new arrival.

NAVAL

Following details of an enemy patrol vessel captured off OLIB have been received. The vessel is stated to be of 150 tons displacement and to be armed with:

1 Vierling MG 20mm
1 MG 20mm
1 semi-automatic 37mm A.A. gun
4 A.A. "throwers"
1 light mortar
1 heavy mortar
2 automatic rifles

Crew of 22, all Germans, of whom 4 killed and 15 wounded.

From log book captured it appears that this was the vessel responsible for shooting down the Allied fighter over Petreani at the end of April. The aircraft subsequently crashed on Ugljan island.

1. ENEMY SITUATION

Enemy reaction to the Allied offensive on the night of 11 May was slow at first, showed increasing signs of anxiety up to about 14 May and is now more controlled though no less harassed. 5 Army's silent attack definitely appears to have scored a considerable degree of tactical surprise, and on 8 Army front, although the initial very heavy counter battery preparations sacrificed immediate surprise, it appears that a relief was being carried out in the CASSINO sector which indicates that no particular anxiety had been felt. The subsequent conduct of the battle has provided no surprises for us: the enemy eventually brought up 90 PG Division, his first reserve for this front, but he has been unable to use it in a divisional counter attack to restore the situation but has had to commit its units piecemeal as they arrived. So far no reinforcements from further afield have been expected. The Germans first announced our offensive as "a holding and diversionary attack" and as late as May 15 they still allowed both the German and Italian wireless to hint that an Allied landing was probable; we know they had disposed their forces up the West coast to guard against such a contingency and if their propaganda staffs are properly in the picture they may still be clinging to their original ideas. It was a characteristic of German Intelligence in AFRICA, as noted by their more acute Italian colleagues, to cling obstinately to preconceived theories and so far at least none of the coastal divisions has been moved with the exception of 90 PG which was holding, with only part of its strength, the least important sector between the bridgehead and the Tiber.

1 Parachute Division has withstood our attack best so far. When it began, I and II/3 Para Regt were NW of Monastery Hill with II/100 Mtn Regt and 4 Alpine Bn adjoining to the North, probably under command, I and II/4 Para Regt and probably I/1 Para Regt were in CASSINO and on Abbey Hill. The Northern assault towards Monte San ANGELO was eventually repulsed after an initial success and the

...division has been.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

division has been able to devote its attention to its right flank where Eighth Army's advance in the LIRI valley threatens to cut its life line along route 6. A first attempt to avoid this danger by withdrawing the Parachute MG Bn from opposite the station and putting it down into the valley as a flank guard resulted in a disaster, and the battalion had two Coys wiped out by tanks but a later attempt to organise the defence of the Northern sector of the valley has been more successful. Lt. Col SCHULZ, Commander of 1 Para Regiment, with III Bn of his Regiment, has taken over command North of the wadi PIOPETTA. His group includes I Bn 115 PGR plus two companies of III Bn, two Coys of II/721 Jaeger Regt and one Coy of II/741 Jaeger Regt (the rest of these bns are probably on the way), the remains of the Para MG Bn, some of the Para Eng Bn, 95 Recce Bn, a troop of 242 Assault gun battery and about a troop of tanks. With this motley force he has been able to hold route 6 open and interpose a steady delaying action to our advance to the Adolf Hitler line.

In the Southern sector of the LIRI valley, South of the PIOPETTA ravine, our attack hit the BODE group as was expected and threw it into considerable confusion. Several companies were overrun and more were sacrificed in the defence of S. ANGELO and PIGNATARO. As with the SCHULZ group reinforcements have been rushed in and the group at present consists of the remains of I and II/576, three Coys of III/115 PGR and some miscellaneous A.Tk and Engineer units from 5 Mtn, 44 Inf and 15 PG Divs.

As has been seen at the moment of attack there was nothing in the LIRI valley sector but the five battalions which had been there all along. When this relatively feeble garrison was hit by two divisions, supported by 700 guns, desperate measures had to be resorted to. A reserve bn of parachutists (III/1) was sent down, the reserve bns of 114 Jg Div (II/721 and II/741) were picked up from the central mountains and hurried down a company at a time, all the reserve units of 5 Mtn Div (the Recce Unit, a Coy of the A.Tk Bn, an Assault Coy and an unspecified Alpine Coy) and any spare units which happened to be in the area were hastily welded into a fighting team which has indeed offered a most stubborn resistance. But it could scarcely be expected that this would be more than a temporary measure and already by the night 12/13th 200 PGR had begun moving forward from PIGLIO. The rest of 90 PG division began to follow on the night of 13 May but by that time a modification had become necessary in what must have been the original plan for 200 PGR had to be put in South of the LIRI to rally the routed remnants of 71 Division and block the approaches to ESPERIA and SANTA OLIVA. The rest of the division came forward at its best pace and by the morning of 15 May 361 PGR was coming into action in the PIGNATARO area. The Tank Bn (SP guns) and the Recce Unit are also in action, the latter presumably providing the armoured cars which have been seen in the LIRI valley. It had been anticipated, on the basis of the enemy's behaviour during the last attack on CASSINO, that any reserves which were brought forward would be employed to man the Adolf Hitler line; the fact that 90 PG has had to be committed forward of that line is a sign not of strength but of weakness and shows that the enemy considered the forces involved in the LIRI valley urgently needed help to avoid being overrun before they could extricate themselves.

South of the LIRI 71 Div, with 131 G.R. and II/115 PGR

.....under command,.....

-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The beginning of the week saw the right flank of 10 Army, seriously disorganised, being driven rapidly back across the AURUNCI mountains. In the LIRI valley he was withdrawing gradually to the HITLER line, and the first reserves to arrive had already been put in, of necessity South of the LIRI. During the last seven days this tendency has continued; the front has gone back slowly and stubbornly to the HITLER line while South of the LIRI, from PONTECORVO to TERRACINA, his line has been stretched and weakened and has had to be reinforced by three fresh divisions. Even these have had to be put in piecemeal and with the break out from the bridgehead on 23 May a new and even more dangerous situation for the enemy has arisen.

On 8 Army front the Parachutists withdrew from CASSINO on night 17/18. They had left it almost to the last minute and we managed to get about 120 PWs from them, including the O.C. II Bn 4 Para Regt. On the 18th the enemy resistance forward of the HITLER line lessened and on that evening elements of our armour nearly carried some of the strongpoints by a sudden coup in the AQUINO area. Later however resistance stiffened and the enemy settled down to hold the line with great stubborness from PIEDIMONTE to PONTECORVO. 90 P.G., with 361 G.R. and the divisional units, was holding the Southern end of the sector having taken under command various remnants of the miscellaneous units which had been rushed down to the LIRI valley when our attacks started, as well as the remnants of 576 G.R., but having lost 200 P.G.R. which went to restore the situation South of the LIRI. They have also under command 115 Tk Bn which went into action with 26 Mk IVs. In the Northern end of the sector is 1 Para Div also with some miscellaneous (and occasionally unreliable) units under command and its sector stretches as far as the peak of M. CAIRO on whose Southern slopes II/100 Mtn Regt and 4 Alpine division are operating. At the moment of writing it appears that the HITLER line has been breached in the area of PONTECORVO and to North of it and that an enemy withdrawal is taking place there.

.....On 5 Army front.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

TH

On 5 Army front the enemy line has been swinging Westwards like a rather rickety door on an unstable hinge in the PICO-PONTECORVO area. 71 Div has been entirely destroyed as a fighting formation and none even of its units has been identified, though Colonel NAGEL, O.C. 131 G.R. which was under command, got a mention in the German Communiqué for 21 May. Not only so but 200 P.G.R., which became 71's residuary legatee and took on the defence of the ESPERIA - SANTA OLIVA axis, seems also to have disappeared and it has not joined its division North of the LIRI or at least not in the front line. In their place have come 26 Pz and 305 divisions. The former was put in between the West bank of the LIRI and PICO and the latter, or at least 577 G.R. and II/578, have been counter-attacking West of the PICO - SAN GIOVANNI road where they succeeded on 23 May in recapturing MONTE PALINFERNO but lost the C.O. of II/578 G.R. 305 Division came from the Adriatic flank where it was relieved on night 18/19 May by the first element of 278 Div, hastily summoned from the TRIESTE area. It appears to have 1027 G.R., from the beachhead, under command though prisoners from this have been taken as far West as LENOLA. Some of 334 Div is also probably to join it; we have identified 334 Recce Unit in the PICO area, prisoners taken on the East coast say that 6 Coy 754 at least left for the Southern front on 18 May and at 0130 hours on 23 May a sudden order arrived, according to two prisoners, for the whole division to move South at 0330. Whether it did move is not known since the two informants promptly seized the opportunity to desert. 26 Pz Div, according to an intelligent prisoner, went into action with three squadrons each of 12 Mk IVs and two squadrons each of 12 Panthers; Panthers were reported in the attack against MONTE LEUCIO on 21 May. 9 P.G.R. has been very roughly handled and XIV Corps claim virtually to have destroyed it. Maj RAFFE, the C.O. of II/578 said 26 Pz Div had been ordered to hold "at all costs" in the PICO area to cover the HITLER line positions across the LIRI.

The PICO hinge has held, though with difficulty, but to the West the enemy has been falling back rapidly. A retreat at such a speed, so closely pursued across such trackless country must have caused a considerable degree of disorganisation and we can probably take it that 94 Div, whose losses have been mounting this week, has ceased to exist as an effective formation. 15 P.G. Div was in reserve when the operations started, with only the 104 Regimental group under command; II and III Bns of 104 were put in around FORMIA and I Bn got put in North around S. OLIVA and came later under command of 26 Pz Div. What the division has under command now, or whether it has a sector at all, is obscure but various stray units have turned up from other parts of the front such as 3 Alpine Bn covering VALLECORSA and I/134 in front of PALENA and it may command some of them together with remnants of 94 Div. Its HQ appears to be somewhere back in the FROSINONE area.

It was clear, however, that forces so weakened and disorganised could not hold a line which had lengthened alarmingly and a fresh formation has had to be brought in to prevent our turning the corner at TERRACINA and taking 715 Div in the rear. For this purpose Kesselring has put in his last remaining reserve in South ITALY, 29 P.G. Div from the CIVITAVECCHIA - Lake BRACCIANO area. From a captured order it appears that it was originally intended that this division should have the task not only of holding the advance from the South but also of guarding against a break out from the beachhead, but the rapid advance of II Corps through the mountains and the disintegration of the German forces opposing it

....forced the division....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

forced the division to concentrate all its force on the former task. All the Bns of the division but one have been identified between North of TERRACINA and AMASENO and the bulge driven into their centre by the advance to SONNINO and ROCCASECCA DE' VOLSCI means it has already had to stretch its front to a dangerous degree.

On the morning of 23 May VI Corps began an attack to break out of the bridgehead on both sides of CISTERNA in the sector of 362 and 715 divisions. Both German divisions suffered heavily and on the first day, over 600 prisoners were taken. The critical moment of the battle had arrived. 14 Army had already been most dangerously stripped. 26 Pz Div, its immediate reserve, had left a week before, taking with it two squadrons of Panthers from the independent Panther Bn and, if reports are true, some Tigers as well, presumably from 508 Bn. 1027 G.R., from 3 P.G. sector had also been sent to the South. 29 P.G. Div had gone to TERRACINA and had taken with it I/735. The whole of the German army is therefore stretched to the limit and there is only one mobile formation left in ITALY to come to the rescue, the Hermann Goering division in the PISA area. Faced with the destruction of his forces South of ROME it must be assumed that Kesselring, for all his reluctance and in spite of the fact that the division is clearly intended for FRANCE, must employ it to save what he can from the wreck. The decision may well have been taken by the afternoon of 23 May when the full extent of the crisis became obvious and by 0600 hours the advanced elements of the Recce Unit had reached VITERBO. The battle is no longer for ROME or for any ground or position in ITALY but to save the German Armies from destruction.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

During the past week a considerable amount of stationary rolling stock has been observed in the PISTOIA-PRATO-FLORENCE area and along the BOLOGNA-PISTOIA line; it is probable that supplies are unloaded in this area for onward transport by MT. For some time, however, the enemy's main repair activity has been concentrated on the main FLORENCE-ROME line, and with the assistance of the weather, he had by 23 May cleared this line as far South as ATTIGLIANO (just North of ORTE) except for the destroyed bridge NW of ORVIETO. If this state of affairs can be maintained then the pressure on his road transport will be considerably relieved.

The importance attached to the main BOLOGNA-FLORENCE-ROME line is indicated not only by enemy repair activity. Northwest of FLORENCE, at the important junction of PRATO, it is reported that a loop line 3 kilometres long and well camouflaged, has been constructed to provide a by-pass around PRATO connecting the BOLOGNA-PRATO stretch with the PRATO-FLORENCE stretch. South of FLORENCE it is possible that a hitherto unused narrow-gauge line, branching from the main line at the tunnel North of the bridge at G 946566, running along the West bank of the river, through INCISA village and rejoining the main line at INCISA station (Q 945547) has now been brought into use.

Of particular interest this week has been the cutting of railways along a general East-West line SPEZIA-RIMINI. Cuts are thought to have been obtained on all lines connecting the PO valley

....with Central ITALY....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

with Central ITALY, namely, GENOA, SPEZIA, PARMA-SPEZIA, BOLOGNA-PISTOIA, BOLOGNA-PRATO, BOLOGNA-RIMINI and FAENZA-BORGO SAN LORENZO (BORGO SAN LORENZO is about 10 miles NNE of FLORENCE). While breaks on all these lines have not existed simultaneously for a protracted period, they are potentially of great value since they directly supplement and appreciably deepen the intensive zone of rail interdiction in Central ITALY and force the enemy to use MT through an area where good roads are relatively few and the going is difficult. It is roughly estimated that the enemy would have to increase his MT performance by about one third, very possibly more, if rail lines through this zone were kept blocked. That the attacks so far have begun to be effective is indicated by reports of heavy MT movement both ways and the existence of dumping areas between FLORENCE and BOLOGNA.

In North ITALY the AVISIO viaduct South of BOLZANO on the BRENNER line has been repaired, but the bridge over the TAGLIAMENTO between UDINE and TREVISO on the main line from AUSTRIA has been successfully attacked and three spans have collapsed. At FIDENZA M/Y which was attacked on 13 May, all through tracks were still cut on the 17th and PARMA and PIACENZA M/Ys which were attacked at the same time were still completely blocked on the 18th. TREVISO M/Y, attacked on 14 May was still blocked on the 18th and all through tracks were cut at FAENZA on 19 May.

SHIPPING

This week has been marked by heavy attacks on ports, particularly PIOMBINO and SAN STEFANO on the Italian West coast and PORTO FERRAIO on ELBA. While in relation to the air effort involved only a small number of ships are thought to have been sunk, heavy damage has been done to harbour installations and approach routes. This damage is believed to have achieved the desired result of appreciably cutting down the turn-over of cargoes. In addition, supplies, which the enemy can now ill afford to lose, have been destroyed in harbour areas. What appear to be considerable amounts of fuel have been burnt out at SPEZIA, ANCONA and PORTO MARGHERA (near VENICE).

THE GERMAN LORRY POSITION

The report at Appendix 'A' appeared in a recent Ministry of Economic Warfare Intelligence paper. It is of particular interest at this time in view of the fact that the enemy is now heavily dependent on motor transport for movement of both troops and supplies in Central ITALY. It will be noted that the report makes no mention of the Italian contribution to German MT requirements, and while it undoubtedly has not been great from an overall point of view, it is known that the Germans in ITALY are using a very appreciable amount of captured Italian MT. It has also been reported that MT plants at TURIN are active and trains have been observed carrying MT Southwards from the TURIN area.

3. BALKANS

GREECE

The main items of news during the last week all come from the ATHENS area. ELAS forces attacked a mixed German and Rallis formation at MARCOPOULON, SE of ATHENS and claim to have inflicted 100 casualties on the enemy. A number of sabotage incidents have been reported, the most successful being the destruction of an ammunition train at LEVADHIA D69 and the unconfirmed destruction of

....a petrol train....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

a petrol train. Delayed action charges had been placed in a number of trains at THEBES and further wrecks may be expected. A delayed report from the Mt HELICON area gives details of a clash between a mixed German-Italian-Rallis force and ELAS which took place between 7-11 May. The enemy attacked ELAS who, in a counter-attack inflicted some 250 casualties on the enemy before the engagement was broken off. Activity is again reported from the DRAMA-KAVALLA area. Fighting between ELAS and Bulgarian troops has taken place at PALAEO KAVALLA L37, PANGAEON D86 and SIDEROKASTRON K20. No details have been given but it is thought that these have been patrol clashes only.

ALBANIA

Encouraging reports on the Partisan forces in Southern ALBANIA have been sent by British L.Os. The Partisans are stated to control nearly the whole of the Southern territory and are able to undertake coordinated offensive action against enemy communications. The state of training is uneven but 1, 4 and 5 Bdes have reached a high standard. TEPELENE and PERMET are stated to be in Partisan hands. The capture of the former town situated on the VALONA-JANINA road is a serious threat to German communications and the enemy is expected to react strongly.

A force of 800 Germans and BALLI KOMBETAR launched an attack on the Partisans in the hills between VALONA and BERAT. The Partisans, making excellent use of the terrain, counter-attacked and took 180 PWs. Units of 4 Partisan Bde ambushed a small German convoy at GRABOVICE near PODGRADEC and claim to have inflicted some 25 casualties in killed and wounded on the enemy. There have been some troop movements from JUGOSLAVIA to the KORCE area. No identifications have been made but it is confirmed that at least 100 lorries carrying troops have arrived. A report that the Armenian troops in the KORCE area have been disarmed by the Germans because of mass desertions may mean that the newcomers are meant to garrison this sector. The only troops available from JUGOSLAVIA would appear to be police units but this is as yet unconfirmed.

JUGOSLAVIA

DALMATIA

The enemy has continued with the work of fortifying RAB. It is known that cement and other building materials had reached the island but no details of the constructions have been received. About 300 enemy troops landed at ZDRELAC on PASMAN and proceeded to make a search of the island. This is thought to be one of the periodical clean-ups and has no particular significance. The final figure for the recent Partisan raid on SOLTA shows that 264 Inf Div has again suffered a heavy blow. 200 killed and 50 PWs, all from 892 I.R. go to swell the casualty list of the "Gch' für Heim" Div. There are indications that 369 Germano-Croat Div is relieving 118 Jg of some of its island commitments. The latter formation would appear to need some rest after the recent rough handling it received on KORCULA and MLJET.

CROATIA AND SLOVENIA

The short advance made by the enemy last week when they captured KORENICA seems to have been made with considerable speed. It is feared that with the fall of the town a number of Partisan wounded and some war material fell into enemy hands. The enemy now

...control the roads. ..

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

controls the roads KORENICA P 37 - UDBINA P 43, LOVINAC P 33 and KORENICA-BUNIC P 26 -PISAC P 35. Fighting is in progress along the roads GRACAC P 42 DRUVNO P 53 - LAPAC P 35 and DRUVNO-UDBINA. The KRBAVSKO POLJE area (NW of UDBINA), where there is a landing ground, is now entirely in enemy hands. The German drive in the PAPUK area has come to an end. The enemy's claim to have liquidated Partisan resistance was disproved when the latter captured ORLJAVAC F 75. Communications have again been the targets for Partisan specialist units. In three attacks in the RUMA area, one bridge and 150 m of railway track were destroyed and 250 telegraph poles were felled.

BOSNIA

Enemy drives of varying strengths but of purely local importance have taken place in Central and N.W. BOSNIA.

An attack, stated to be in some strength, from PALJEDOR down the railway was held at JANSKI MOST and a complimentary drive from DRVAR to the North was repulsed at SITNICA. Other thrusts by the enemy from BIHAC to the South and D. VAKUF to the S.W. were repulsed after fierce fighting.

SERBIA AND HERCEGOVINA

The German troop concentration in the PODGORICA area is stated to have reached a total of 10,000 troops. A minor offensive has been launched by the enemy with the object of clearing the Partisans from essential communications. Columns from CACKO, NEVESINJE, BILECA and STOLAC are driving to the coast in an effort to pin the Partisans down with their backs to the sea and thus destroy them. No details of this fighting are to hand but the Partisans in HERCEGOVINA have eluded much more powerful drives in the past and have no particular reason to fear the outcome of the present operations.

Two German columns were attacked on the road SJENICA-PRIJEPOLJE and casualties inflicted on the enemy. Partisan HQ appreciates that these columns were opening the road for still larger troop movements which may confirm a report that Cetnik forces intended to move from RASKA and PRIBOJ to SJENICA and PRIJEPOLJE respectively.

No further increase in the number of enemy troops in the LESKOVAC area has been reported and it seems certain that the whole of 1 Mtn Div has arrived. Reports all stress the fact that German-Bulgarian relations are very strained and tend to deteriorate. A Bulgarian drive in the JASTREBAC Mtns (West of NIS) has proved even less successful than preceding drives. The Partisans are now stated to be in control of the area bounded by the rivers MORAVA, RASINA and TOPLICA. Two complete companies of Bulgarians, consisting of 225 troops and nine officers deserted with arms and equipment to the Partisans at LESANE P 09, an example which was followed by 70 Cetniks with two officers.

Among a number of sabotage incidents the outstanding is the derailment of a train at KORLAN K 06 on the NIS-KRUSEVAC line. More than 100 German troops lost their lives in this operation.

HUNGARY

Considerable military traffic has been reported moving North from NOVI SAD to SUBOTICA and HUNGARY. The enemy is improving the railway between these two towns and one report states that a further

..... track is being laid.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

track is being laid. An unconfirmed report states that SERBIA will be taken over by mixed German-Hungarian forces and the Bulgarian troops withdrawn. It is apparent that the German High Command can no longer entirely trust their Bulgarian allies and some other solution for the occupation of SERBIA may have to be sought.

ORDER OF BATTLE

With the arrival of 42 Jaeger Div in the ZAGREB area with H.Q. at SAMOBOR, it appears that 1 Cossack Div has moved East. Reports place it at BROD and POZEGA, the former being the most likely. The role of this division, that of guarding the East-West communications, appears to be the same except that its responsibilities have moved East.

Nothing new has been reported about the Albanian SS Div SKANDERBEG except that the Albanian response to the German request for volunteers has been almost negative.

4. APPENDIX

At Appendix "A" is a report of the German Army position.

APPENDIX "A" to .Q. A.A.I.
INTELLIGENCE SUMMARY NO 45
DATED 24 MAY 1944.

THE GERMAN LORRY POSITION

When the Second Front opens, one of the first acts of the German authorities in Western Europe will be to requisition large numbers of civilian vehicles, at present used for meeting essential civilian needs in FRANCE, HOLLAND and BELGIUM, and to use them to bring divisional MT up to paper strength. This is an indication of the difficult position in which the Germans find themselves as a result of nearly three years of attrition on the Eastern Front. Today it is estimated that she can muster only 440,000 lorries to meet the requirements of the Armed Forces on all fronts.

At the outbreak of war, Germany had 400,000 lorries in civilian use and approximately 200,000 operating with the Army. Losses, however, were insignificant in the first two years of war, and the occupation of Western Europe brought a pool of approximately 750,000 lorries under German control. Of these, 500,000 vehicles were of a type and age that made them useful to the Wehrmacht.

The invasion of Russia brought a sharp change in the situation. Wastage was high, particularly during winter campaigns, and the Germans found that they were unable to make good the losses by new manufacture and at the same time maintain their production of higher priority armaments. They therefore made frequent calls upon the reserve in the occupied countries, with the result that by mid-1943 this pool was almost exhausted.

They were, therefore, compelled last year to give higher priority to the manufacture of lorries and to carry out drastic reorganisation of the industry. It was reported that Opel of Russelsheim was ordered to revert to lorry production and the total manufacturing facilities of German Europe were organised to concentrate upon the production of a few standardised types.

Up to the present, production in Germany has suffered little direct damage from air attack, but administrative and transport difficulties have had their effect on output. Production in FRANCE and BELGIUM, however, has been seriously hampered by air attack.

All current production is devoted to meeting the needs of the Armed Forces and the civilian position in Germany has deteriorated steadily as a result of its semi-starvation. It is estimated that, in March 1944, there were only 310,000 civilian lorries operating in the whole of Germany.

Three important factors have aggravated the position. The first is the greatly increased demand for road transport as a result of the dispersal of factories and for maintaining communications or clearing away debris after air attacks. The second is that the change-over to substitute fuels, quite apart from causing a loss of efficiency, has created a large demand for vehicles for the collection of these fuels. The third is that most of the civilian vehicles are now of a considerable age and are frequently in need of repair. The demand of the Army for spare parts to build up adequate reserves in the West has, however, caused an acute shortage in Germany itself, and it is by no means uncommon for lorries to be off the road for long periods.

.....The net result.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The net result of these shortages is that both the German Army and the civilian administration are unable to muster sufficient vehicles to meet all their requirements, and a high rate of loss in battle, plus added strains on the home front, will cause a sharp deterioration in the enemy's MT position.

-o-o-o-o-o-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The main centre of interest this week has lain in the former Beachhead. The break out was very successful and carried us up within range of route 6 at VALMONTONE. Our pressure then shifted to a Northwesterly direction; we have forced the enemy back along the whole former left flank of the beachhead to the prepared line in rear which was intended to be the Western end of a line across ITALY covering ROME and finally, on the night 30/31 May, we have broken through this line between VELLETRI and VALMONTONE and gained positions on the heights of the COLLI LAZIALI. In the LIRI and SACCO valleys the enemy, having been driven off the Adolf Hitler line simultaneously with the break out from the bridgehead, is now conducting a stubbornly contested withdrawal which is taking more and more of a Northerly trend. There is evidence of the arrival of further reinforcements from North ITALY and from even further afield.

The break out from the bridgehead met 362 and 715 divisions and inflicted very heavy losses on them. Local surprise was clearly gained and most of the prisoners were taken when the front line positions were overrun. The remnants of 715 Division, after suffering very heavy casualties, seem to have been driven East into the mountains leaving behind so much of its equipment that the division can hardly exist any longer as a fighting formation. 362 Division put up a stiffer fight, 956 Regt offering very stubborn resistance in CISTERNA which ended with the surrender of the Regimental Commander and his Staff and 600 survivors of the regiment. The Regimental Commander of 954 G.R. had also already been captured with his Staff. By the 27th May we had pushed an armoured force up to ARTENA which appears to have got in among some of the enemy's rear elements, for 80 M.T. were shot up by our tanks along the road. This thrust drove a new wedge between 10 and 14 Armies and in order to stop it at all costs Kesselring was obliged to commit the Hermann Goering division which was mentioned last week as being on the way from the North. Once more the enemy have been impelled by the rapid development of events to commit a reserve division piecemeal. We have now had prisoners

..... from the .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

from the Recce Unit, Engineer Bn and both PGRs and the Tank Regt also appears to be in the area. It was also necessary to bring over other reinforcements from 4 Parachute Div and 65 Div, and even from 92 Div from North of ROME, to help plug the gap, but at the time of writing it appears that these have been insufficient and a definite breach has been made in the enemy's defensive line North of VELLETRI extending almost as far as Lake NEMI.

Further East 29 P.G. Division and the remains of 94 Inf Div have been driven gradually North through the trackless LEPINI mountains which have now been almost entirely cleared. On 8 Army's front not much contact has been made with 15 PG or 305 divisions or with the elements of 334 division withdrawn from the Adriatic front and the task of rearguard has been left to 90 PG, 26 Pz and 1 Para Div. The last named put up a particularly strong defence in the ARCE area, with some vicious counter-attacks which slowed up our advance on this important point. A captured map of probably recent date shows the boundary between 90 PG and 26 Pz Divs as from RIPI to TORRICE and between 26 Pz and 305 Div as from POFI to ARNARA which shows the general line up of divisions in this area. 4 Para Regt on 31 May was in the area between Monte S. GIOVANNI (G 5937) and BOVILLE (G 5637) and the rest of the division apparently further back so that it appears that it is intended to withdraw up the ALATRI-SUBLACO road, leaving the SORA-AVEZZANO road to 44 and 5 Mtn divisions. 90 PG, 26 Pz, 305 and 29 PG divisions will presumably withdraw by routes further West and endeavour to come in on the left of Hermann Goering division to form a continuous line from sea to sea. We may expect, however, that some of the troops from this area may be moved more hurriedly past VALMONTONE to reinforce the defence of the COLLI LAZIALI.

Since the Allied attack began on 11 May all the divisions which were then in South ITALY, including the two on the Adriatic coast, have been drawn into the battle South of ROME and West of the Appennines. Of these divisions at least three, 71, 94 and 715, can be said to have ceased to exist as effective formations and the remainder have all been heavily mauled, in particular 15 PG, 90 PG, 1 Para and 362 Divs. As a result the enemy has been obliged to bring down reinforcements from the North: 278 Div from ISTRIA, Hermann Goering Div from the LEGHORN area and a regimental group of 92 Division from the area North of CIVITAVECCHIA. The latter suffered heavy losses from air attacks on its way down and even heavier when it was thrown into the line. Even these reinforcements however, appear to have been insufficient and there is evidence that more troops are being sent from further afield. Three independent reports between 17 and 23 May state that 9 Pz division, which has been in the MONTPELLIER area of South FRANCE, was moving to ITALY. Another report states that 20 GAF division from DENMARK was moving between 24 and 27 May with destination ITALY. Finally there have been reports that 16 SS PG division is moving back from the Balkans to ITALY and its HQ has been several times reported at GORIZIA. This may be connected with another report of troop-train movements from TARVIS and POSTUMIA to BOLOGNA and PARMA. It certainly seems strange that at such a time the enemy should be prepared to denude his garrisons in the West and it is an indication of the seriousness of the enemy situation in ITALY. It is possible that

....not all.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

not all these reinforcements will be employed in Southern ITALY; if they relieved formations in North ITALY for service in the South they could still be within reach of the Western front if an emergency required their return. There is really, however, only one reasonable formation in the North which they could relieve, 356 Inf Div in the GENOA area. (We have actually had a paybook captured in PALENA from 356 Ersatz Bn but this may not prove anything.) At least it is clear that the enemy still considers that great efforts are necessary to prevent a catastrophe in ITALY.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

From 19 to 25 May the enemy managed, with the assistance of the weather, to keep the main FLORENCE-ROME line as far South as ORTE and the PERUGIA-SPOLETO by-pass tolerably clear, and it is certain that he made full use of this respite to relieve the pressure on his road transport. On 25 May, however, the line was blocked in five places between PONTASSIEVE and AREZZO, and in addition at CORTONA, FICULLE, ORVIETO and at three places between TERONTOLA and PERUGIA. Since this date dislocation has progressed steadily, and whilst the enemy is still making use of every stretch of line he can, the majority of his supplies are once again being carried by MT South of the PISA-RIMINI line. On 31 May all through lines were heavily interdicted and there were no less than 35 cuts on the main BOLOGNA-FLORENCE-ROME line. The only appreciable stretch of line open in Central ITALY runs from a point just West of FALCONARA down through FOLIGNO almost as far as TERNI.

Traffic over the BRENNER, which has returned to normal after the repair of the AVISIO viaduct, had decreased somewhat on 27 May, whilst the gap in the bridge over the TAGLIAMENTO river at CASARSA is still dislocating traffic from the N.E.

SHIPPING

This week our air effort against harbours has been relatively light with only two raids made on Italian West coast ports, namely GENOA and SAN STEFANO. Nevertheless shipping activity on the West coast, at least during the first part of the week, appears to have fallen off somewhat as compared to two weeks ago. PR has been somewhat restricted but presumably the extensive attacks of last week are still being felt. Turnover at GENOA has been low and PORTO FERRAIO appears to have been relatively inactive. At SAN STEFANO six F-boats were observed on the 25th and one MT ship was seen unloading on the 27th. Activity on the East coast appears to have been normal.

The attack on GENOA sank and damaged a number of ships and destroyed harbour installations. Raids on the shipyards at MONTFALCONE and the refining and fuel storage installations at PORTO MARGHERA also achieved good results. At MONTFALCONE there was heavy damage to the yards including the submarine shops, a 590-ft tanker under construction was virtually destroyed, another tanker fitting out damaged and at least four F-boats destroyed or damaged. At PORTO MARGHERA the refinery was heavily hit and several storage tanks were burnt out or otherwise damaged.

....ATTACKS ON MT AND ROADS....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ATTACKS ON MT AND ROADS

This week has seen particularly heavy air attacks against enemy MT and roads. The main routes of withdrawal now open to the enemy are the FROSINONE-SUBIACO-AVEZZANO road and the ARCE-SORA-AVEZZANO road. Highway 6 remains important but becomes increasingly less so with the development of our thrust towards VALMONTONE. These roads have all been heavily attacked and also roads North of ROME, particularly in the VITERBO area. These attacks have cratered the roads, destroyed bridges and created blocks by attacks on towns. In addition, and no less important, our claims against the enemy motor transport for the week 24/30 May total 2104 MT destroyed and 1637 damaged by air attack. This does not include MT destroyed by ground forces, whose most notable success was when tanks caught a column near ARTENA and destroyed 80 vehicles. As a result the enemy is having considerable difficulty in moving supplies and troops in the forward areas, and the strain on his MT must be very heavy, particularly in view of his dependence on MT throughout Central ITALY owing to heavy damage to the Railways. The seriousness of the situation is indicated by the fact that he has moved considerable MT during the hours of daylight in face of our overwhelming air superiority, presumably being forced to do so in order to meet urgent administrative and tactical demands.

3. BALKANS

GREECE

The PELOPONESE has been decreed a zone of operations by the German Military authorities. Civilians are allowed to circulate between 0600 and 1800 hours only, while all postal, telegraphic, road and rail communications have been reserved for purely German use. The growing tension is perhaps best illustrated by a new anti-sabotage measure. All trains will henceforth contain two trucks of Greek hostages, who, if not killed by the act of sabotage, will be held responsible for any loss of German lives.

Zervas reports a clash with German troops in the PREVEZA W 87 area. In two days fighting 24 Germans were killed and 27 wounded. 9 Germans were captured together with 67 mules loaded with ammunition and equipment. Fighting continues with the Germans slowly withdrawing to the North.

ALBANIA

In fighting near the village of KUC M21, 40 Germans were killed. Documents taken from the corpses identify 2 Coy I Bn 524 I.R. of 297 Inf Div and a new identification - 48 R.U. This latter unit left GRAZ and arrived in GREECE during early March and has presumably taken the place of 297 R.U. which was last reported to have moved North to the ZAGREB area. Partisans clashed with Ball Kombetar in the VALONA area at KRESHLAN M16 and CAJRAN M16. The Partisan main force worked to the rear of the Ball Kombetar and killed 11. 100 PWs were captured together with an arty piece, 4 MGs and many rifles.

YUGOSLAVIA

DALMATIA

Persistent reports that the enemy have evacuated HVAR would

....appear to be...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

appear to be exaggerated. What may well have taken place is a further movement East of the Westerly garrisons while a number of troops may have left for the mainland. 600 troops have been withdrawn from BRAC and here again the total evacuation would appear to be contrary to German interests in so much as the sea passage from SPLIT to PLOCA would be seriously jeopardised if Partisan forces were in possession of the islands.

Allied troops made an unopposed landing on MLJET during the night 22/23 May. Our aircraft bombed enemy positions at dawn on the 23rd and by 0900 hours the enemy had been surrounded. No casualty figures have been received but it is estimated that the German garrison was about 300 men.

The mainland has been the scene of small scale but bitter clashes. The entire enemy garrison at BRIBIRSKI MOSTINE U 4583 on the SKRADIN-BENKOVAC road was destroyed by Partisans who later annihilated a column of reinforcements which attempted a relief sortie. 350 Germans were killed in this fighting, 2 tanks and many lorries are claimed to have been destroyed. This action by Tito's forces is all the more praiseworthy as recently the enemy went to considerable trouble to clean up the area. An unconfirmed report states that SEBENIGRAD P12 and NOVI GRAD P11 are again in Partisan hands. 7 small vessels are stated to have been captured in the ports. If this report is true German reactions may be expected as a cardinal point of their strategy is the control of the coastline.

During the first two weeks of May 24 lorries were destroyed and 114 Germans killed by Partisan mines on the road TROGIR-SIBENIK. Maj-Gen LUDECKE, G.O.C. 264 Inf Div, was seriously injured by a mine on the SKRADIN-SIBENIK road.

CROATIA AND SLOVENIA

Fighting has taken place between LJUBLJANA and NOVO MESTO and the Partisans report the capture of TREBNJE, on the railway connecting these towns. The enemy has recently made strenuous efforts to repair this line, as many as 500 civilians being put to work on it.

A column consisting of 250 lorries, 42 tanks and 20 armoured cars was reported moving from BELGRADE to ZAGREB on the 23 and 24 May. No identifications have been made but it is presumed that this movement is connected with the recent arrival of 42 Jg Div in the ZAGREB area. An unconfirmed report states that this formation is destined for the Italian front.

BOSNIA

At 0430 hours 25 May, 36 JU 52s carrying paratroops estimated at about Bn strength together with a similar force of gliders borne troops attacked Tito's H.Q. at DRVAR P 93. Simultaneous drives by many columns converging on DRVAR have placed the Partisans in an extremely difficult position. Enemy forces from BIHAC, advancing through PETROVAC have linked up with the airborne troops while a second large enemy column has made fast progress from JAJCE towards RIBNIK. The road BIHAC-TRAVNIK is now controlled by the enemy. British LOs confirm that the offensive is on a large scale and appreciate that the German intention is to eliminate Partisan opposition in W. BOSNIA. Tito and most of his staff including British and American LOs are reported to be safe but the situation is still very confused. Unusual enemy activity by recce aircraft had given warning that some

.....action was being...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

action was being planned but it is feared that the airborne attack came as a complete surprise. Diversionary attacks were launched by the enemy from the BIHAC-KOSTAJNICA road to the North and NW. Five columns took part in this drive into OROMTLA. Two of these started from BIHAC and are advancing on SLUNJ K21 and TRZAC K40; another is moving from OTOKA P79 towards VRNOGRAC; a fourth from DVOR K81 towards GLINA K64 and a fifth from KOSTAJNICA K92 towards PETRINJA K75. Allied air effort over JUGOSLAVIA was directed mainly against concentrations of enemy aircraft MT and troops in the BIHAC area. Complete assessment of all claims is not yet available but it is apparent that considerable success was achieved.

At Appendix 'A' is Force 266 estimate of enemy dispositions on the Dalmatian islands.

ORDER OF BATTLE

Events in ITALY had given rise to a spate of rumour of Balkan troop movements.

German formations which took part in the occupation of HUNGARY have, owing to the lack of Hungarian resistance, been withdrawn to fill more pressing needs. An unconfirmed report states that the SS Div Reichsfuehrer has arrived in the GORIZIA area while 4 Brandenburg regiment together with 92 Mot Indept Regt are reliably stated to be in BOSNIA. 5 Russian deserters from 1 Mtn Div state that the div is going via SKOPLJE to SALONIKA. On the night 21 May a false air raid alert was sounded in LESKOVAC to cover the departure of the first two trains.

The Hungarian quota on the Russian front again shows an increase. 2, 3, 4, 16, 18, 19, 21, 24 and 25 Lt Divs, 2 Armoured Div, 201 L of C Div and 1 and 2 Mtn Bdes have all been tentatively identified in the area LWOW, STANISLAWOW, KOLOMYJA, KUTY.

A similar increase is reported in the Rumanian forces. II and IV Corps with elements of I and V Corps making a total of 12 Divs are stated to be actively engaged.

APPENDIX "A" TO H.Q. A.A.I.
INTELLIGENCE SUMMARY No 47
DATED 1 JUN 44.

ENEMY DISPOSITIONS DALMATIAN ISLANDS

KRK	-	100 Germans late May (temporary German drive on in island and tps there are at present fairly considerable).
LUSSIN	-	600 Germans and Italians.
PAG	-	600 Germans - but may now be evacuating the island.
CHERSO	-	Italian Fascist Guard and some Germans.
RAB	-	600 Germans.
VIR	-	Frequent German patrols.
ULJAN	-	250 Germans area PREKO T 9400.
ASMAN	-	300 Germans area TKON U 1482.
ARGADA	-	50 Germans area U 2075.
LURTER	-	300 Germans area BETINA, TJESNO, LURTER U 3070.
PRVIC LUKA	-	100 Germans area U 4462.
ZLARIN	-	300 Germans area U 4855.
BRAC	-	800/1000 Germans.
HVAR	-	800/1000 Germans.
KORCULA	-	1000/1300 Germans. Recently raided by partisans.
SOLTA	-	300 Germans. Recently raided by partisans.
DRVENIK	-	600
CIOVO	-	800
MLJET	-	300 Germans.

Other islands are in Partisan hands.

In the VIS area islands tps are of 118 German Div - from SOLTA Northwards of 264 Div.

Feeling of population of islands is very strongly pro-British and pro-Partisan. This applies to the whole DALMATIAN area except in following islands.

0 3532	SILBA	Many bombed out refugees from ZARA have found refuge in these areas. They are Italian in origin, untrustworthy and anti-Ally.
0 5027	PREMUDA	
0 5721	SKARDA	
	LUSSIN	Old Italian islands full of mixed Slav/Italian stock; not to be relied upon or trusted.
	CHERSO	
0 4340	ASINELLO	

Partisans are to be found in all islands whether occupied or not by Germans. Safer areas where there are larger Partisan forces and no Germans include - VIS, DUGI (HQ at ZALI, ZELN, BOSAVA T 7206, ZAGLAN T 9085), KORNAT (and naze of islands surrounding), MOLAT (North of DUGI), IZ (between ULJAN and DUGI).

-0-0-0-0-0-0-0-0-0-0-0-

1. ENEMY SITUATION

The fierce fighting in the ALBAN hills, the break through to ROME and the pursuit beyond ROME to CIVITAVECCHIA and TARQUINIA appear to have destroyed and dispersed the greater part of 14 Army. East of ROME the enemy, though also most seriously disorganised, has offered stubborn resistance in the angle between the Tiber and the ANIENE while further East the centre and left flank of 10 Army have fallen back more slowly.

No organised resistance has yet been met between the Tiber and the West coast and four divisions which were withdrawing in this area, 4 Para, 65 Inf, 3 P.G. and 362 Inf, appear to be well out of contact and are probably not in control of the situation. I Bn 11 Para Regt was encountered in the area West of CIVITA CASTELLANA, which may indicate that these better troops had been put in to endeavour to check our advance up the Tiber which is so deeply outflanking 10 Army to the East. In the meantime, however, 20 GAF Division has begun to arrive and prisoners were taken from 39 GAF Jaeger Regt on 8 June at 448917, West of Lake BRACCIANO. They said they had left DENMARK ten days ago. Their mission was supposed to be reconnoitring a line to hold but it looks as though they have got involved in the rout of 14 Army and may get drawn in piecemeal like other German reinforcements in this battle.

East of the Tiber HG Div on the West and 15 P.G. on the East have been offering stout resistance in the area between MONTE ROTONDO and North of TIVOLI but they are now withdrawing North. 1 Para Div was to the East and 90 P.G. div apparently in the ROVIANO area (G 1680). Movements at the time of writing are obscure but it appears that 26 Pz Div is to move to the area of MAGLIANO (A 7418) and take over the task of protecting the right flank of the Army. Some of its elements may be moving to positions further North passing through CALVI (A 8223). H.G. Div, which has shown considerable signs of disintegration, may possibly be intending to withdraw through ROCCA SINIBALDA (B 1028) on the RIETI axis but elements were apparently still engaged immediately East of the Tiber on 7 June. 4 Para Regt on 6 June was to move to TORRICELLA B 0707 where it was to come under command of, apparently, 90 PG Div; this may indicate that 90 PG is also moving North through RIETI to extend the flank guard on the Tiber. If this is so the enemy will have swung his right flank round to face almost due West to meet our

....advance on.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

advance on the other bank of the Tiber. - The location of the remains of 29 PG, 92, 334 and 305 Divs is still obsoure; there is some doubt as to whether they still exist as formations commanding troops and if they do they are probably not commanding their own troops.

Further East the enemy rearguard in the SUBIACO area consisted of 134 GR, 9 PGR and some Flak. The rest of 44 Div continues to withdraw North of BALSORANO, 5 Mtn Div North of PESCASSEROLI and 114 Jaegar Div up the SULMONA road. On the Adriatic flank a deserter from 992 said his battalion was withdrawing on the night of 7/8th June beyond the FORO line. We observed large fires in PESCARA Marshalling yards and heard explosions along the whole front of 278 Div on 8 June.

The twenty German divisions which have fought on the Italian front so far in this battle have now been engaged in four weeks continuous fighting in which they have suffered one defeat after another. None of them, with the unimportant exception of 278 Division, is capable of anything more than a withdrawal and the next line on which we can expect any serious resistance is the PISA-RIMINI position. If the enemy reckons on holding this he can scarcely estimate the value of 10 and 14 Armies as more than eight full strength divisions. To hold the PISA-RIMINI position it is estimated that twelve divisions would not be too many, particularly since recent operations have shown that mountain barriers are not so formidable as had been thought. Besides twelve divisions for the line itself it is calculated that Kesselring must also require further formations to protect his flanks against seaborne landings; he can scarcely reduce the garrison of ISTRIA below two divisions, the Venetian coast will require at least one division and two divisions on the Ligurian coast would probably not be excessive. He may also need two other divisions, which could be of lower category, for internal security in North ITALY. This gives us a possible total of nineteen divisions. He may have by now in North ITALY seven divisions which have not yet been engaged, at least two of which, 162 and 188 Divs, are suitable only for limited operations. We can calculate therefore the total forces at his disposal at about the equivalent of fifteen divisions and not all of these are capable of front line duty. It looks as though the enemy must either renounce the intention of holding the PISA-RIMINI line or expose himself to the danger of a disaster there unless he can provide strong reinforcements of good quality troops. Events in Western and Eastern Europe will decide.

2. ENEMY SUPPLIES AND COMMUNICATIONS

Again this week a very considerable portion of our tactical air effort has been directed against roads and motor transport. Apart from interfering with movement these attacks, coupled with the interruption of railways, have rendered the enemy supply problems extremely difficult. South from a general line SAN STEFANO (E 6330) - ORVIETO (A 4558) - TODI (A 6965) there are very few important roads which have not been either pot-holed, blocked by damage to a town or suffered the loss of one or more bridges. For the seven days 31 May/6 June air attacks are claimed to have accounted for 1884 MT destroyed and 1683 damaged. The week previous 2104 MT were destroyed, 1637 damaged, while incomplete reports for the period 12/23 May total 303 destroyed and 458 damaged. Thus between 12 May and 6 June total MT destroyed is 4090 with damage to 3979, making a daily average loss of 255 and 250 respectively. These figures do not include enemy MT losses resulting from air attacks made during hours of darkness, nor losses inflicted by ground forces. These claims perhaps appear high, but it must be remembered that large numbers of enemy MT have been constantly on the move during the past two weeks. Furthermore they

....tend to be.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

tend to be confirmed by actual ground count. For example on the road from FROSINONE (G 4638) to PIGLIO (G 2858), a stretch of about 25 miles, 175 MT were counted, and in the immediate vicinity of SUBIACO (G 2570) 102 MT were strewn along the road over a distance of only one mile.

Added to his transport difficulties the enemy's requirements in ammunition and fuel have risen very sharply since the beginning of our attack on 11 May. While ammunition requirements have probably fallen off recently, consumption of fuel (a critical item) is likely to have increased appreciably. Also, supplies, how much it is as yet impossible to estimate, have been overrun by ground troops and destroyed by air attacks. Prisoners report shortages of ammunition, fuel and even rations. Obviously local shortages of supplies are bound to occur in battle, but on the basis of many reports from various sources it is appreciated that for the past two weeks at least the enemy supply situation has been very tight and has quite probably been an important factor in tactical decisions.

This critical administrative situation could scarcely have arisen had we not begun an all-out air effort against enemy rail communications in Central ITALY at the end of March. Before our attack on 11 May this air programme did not, and could not be expected to, produce immediate decisive results against an enemy who was not being forced to fight and who did therefore not need many supplies and in turn could move such supplies as could not be transported by rail by MT, upon which no major tactical demands were being made. However, when our assault went in, on the one hand supply requirements and tactical needs for MT immediately jumped, while on the other destruction of railways had been such that we were able to devote a large proportion of our air effort to close support of ground troops and attacks on road communications without an appreciable falling off of the degree of rail interdiction.

At this time it is true that the enemy is shortening his L of C which will tend to alleviate his supply problems. However, counterbalancing this advantage are two important factors. In the immediate future we should overrun what have hitherto been the main 10 and 14 Army dumps, most of which are thought to be located South of ORVIETO (A 4558) and from which it is doubtful whether the enemy can evacuate any appreciable amount of supplies owing to shortage of transport facilities. Secondly we will now be able to concentrate greater air effort along a general line GENOA-RIMINI against rail lines crossing the Appennines. As compared to Central ITALY, roads across the Appennines are relatively few and present hard going through country in many places. MT movement tends to be difficult and vulnerable to air and Partisan attacks. In addition there are not many points suitable for transhipment from rail to MT. Thus if the rail lines are interdicted it becomes much more difficult for the enemy to substitute MT than has been the case in Central ITALY.

RAILWAYS

On 30 May a report was received that the line from FALCONARA, on the East coast, to FABRIANO had been opened and was in use; this information was confirmed by a further report on 1 June. Though fighter bomber attacks may have had the line out South of FABRIANO, it is possible that the enemy had an outlet from the East coast line as far South as SPOLETO or TERNI until 3 June, when successful air attacks resulted in at least nine and possibly sixteen cuts between FABRIANO and SPOLETO, and a further eleven East of FABRIANO.

That the enemy still attaches great importance to the main FLORENCE-ORTE line is shown by a report that, whereas on other lines repair gangs consist of Italian labourers directed by Germans, all personnel working on this line are German. Despite this fact, the whole of the Central railway network South of FLORENCE has been consistently cut throughout its length for the past week and there is ample evidence that the enemy is still transferring the bulk of his supplies to MT in the PISA, PISTOIA, PRATO, FLORENCE area. One report states that personnel returning from leave have to wait as long as seven days at FLORENCE for onward

.....transport to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

transport to the South. An ammunition train was blown up at SAN GIOVANNI IN VALDARNO, N.W. of AREZZO, on 1 June and a fuel train set on fire between LUCCA and PISTOIA on the 3rd.

There has been an increase of traffic on the BRENNER-BOLOGNA line since 1 June, and the traffic entering ITALY from the East, after a slight decrease early in the week, is now back to normal. In the N.W. however, there has been a definite decrease in traffic from MODANE through TURIN and ALESSANDRIA to the West coast. Marshalling yards at BOLOGNA, FAENZA, FORLI, CASTEL MAGGIORE, TURIN, GENOA and NOVI LIGURE were effectively bombed during the week.

SHIPPING

This week there are indications that activity on the West coast is again picking up to approach the level of some two weeks ago. On the island of ELBA, PORTO FERRAIO appears to have become less active as a transhipment port for supplies destined for SAN STEFANO, no active shipping being observed there on 31 May. ELBA is still being used, however, four E-boats being observed at PORTO LONGONE on the 31st and one E-boat in a cave across the bay from PORTO FERRAIO. Other ports on ELBA may possibly also be in use. Presumably this development is the result of heavy bombing of PORTO FERRAIO.

Air raids on ports this week have been few. LEGHORN was heavily raided on 7 June and the ports of ANCONA and SAN BENEDETTO on the East coast have also been attacked. However, air attacks against ships at sea off the West coast have been more successful than heretofore. On 2 June a number of barges were damaged and on the following day two convoys were intercepted off LEGHORN with two E-boats, three F-boats, two schooners and two barges claimed as sunk, and another E-boat as severely damaged. If these successes can be continued enemy shipping losses should soon become prohibitive.

PR revealed on 31 May the presence of three F-boats at CIVITAVECCHIA and rail movement between TARQUINIA (5 miles North of CIVITAVECCHIA) and ROME where there had been an increase in rolling stock. CIVITAVECCHIA has not been used for regular supply traffic ever since our landing at ANZIO in January and whether or not the enemy intended to use it again is now academic since the port was captured by us on 7 June. Abandonment of SAN STEFANO is expected in the immediate future, in fact it may already no longer be in use. PIOMBINO, about 50 miles North of SAN STEFANO, then becomes the enemy's most Southerly port. Another 50 miles to the North is LEGHORN, but it is questionable whether the extra handling involved in moving supplies by sea would justify the use of a port as far North as LEGHORN, though the interdiction of land communications may force him to continue to move supplies by sea. The distance from GENOA to LEGHORN is only about 100 miles.

3. BALKANS

GREECE

No large scale operations have been undertaken by the enemy and the only news of any importance concerns acts of sabotage. Two heavy lorries ran on to Andarte mines on the road ELASSON F16 KOZANI N 81 and were blown up causing some casualties among the German crews. Two railway bridges have been destroyed in the PELOPONNESE, one near ALFIOS on the PYRGOS C 52 KYPARISSA C 57 line and another on the coastal railway between KIATON D 55 and VELLO D 55. Trains were attacked at KHILIODOMION D 63, ROUTSI H 98 and MILOI D 40.

ALBANIA

The Governor of KORCA is stated to have deserted to the Partisans'

.....together with....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

together with his force of 50 Gendarmes. 250 political prisoners were liberated and joined the Partisans who now claim to hold the area around the town. The Partisans' hold on the coast between HIMARA and PIGERAS has finally caused reactions in the enemy camp. An enemy attack on the Partisan bridgehead was announced during the first days of June. Enemy columns operating from SARANDE pushed down the KALASES valley where heavy fighting is in progress. Partisan 6 Corps repulsed two enemy attacks in the SHEN VASIL R 38 area but Spitfires on patrol reported no movement in the area on 2 June. The Partisan bridgehead, cutting the SARANDE-VALONA road for some 20 miles, has caused German North-South movement to follow the roundabout route through KORCA and ELBASAN besides allowing sea communications with ITALY.

JUGOSLAVIA

DALMATIA

The Allied raid on MLJET which took place during 22-23 May has not fulfilled earlier expectations of success. The enemy garrisons retreated to very broken and difficult ground. The locating and subsequent bringing to battle of the main enemy force would have entailed a daylight evacuation of our forces on the morning of the 24th. It was therefore decided to evacuate during the night of 23/24 May. No PWs were taken and casualties are not known.

On 2 June a strong Allied force consisting of 1,000 British, 2,500 Partisans and 100 American troops landed on BRAC. Bitter fighting took place SE of NEMEZISCE and reports state that 500 Germans were surrounded near SUPETAR. The attacking force was forced to withdraw from the latter place owing to German arty fire being brought to bear from the mainland. Partisans with British support advanced from BOL on the South coast towards SUTJURTIN where they hold positions covering the road some 4 miles West of the latter. British elements unsuccessfully attacked hill 778 from MURVICA but during the night 2/3 June further Allied forces including arty were landed in this sector. Steady progress was made against a series of enemy hill top positions surrounded by double bolts of wire and mines and reinforced with concrete. At the Eastern end of the island the Partisans captured SILO Q 3116 together with 100 PW. 130 Germans were killed and much war material including three infantry guns was captured in this engagement. The British contingent started to evacuate the island on 4 June. Partisan intentions were to remain a further 30 hours to mop up and then evacuate. Casualties have been relatively heavy on both sides.

The enemy has shown considerable activity in the Northern group. 2,000 Ustashi were reported to have reinforced PAG where the enemy have installed a number of heavy AA guns. ULJAN and PASMAN were also reinforced and at 0400 hours 31 May enemy forces landed at SALI on DUGI OTOK and on KORNAT. The DUGI force, estimated at about 1,000, is converging from both ends of the island towards the centre while 900 troops are combing KORNAT. Allied aircraft report that many villages are burning on both these islands. An unconfirmed report states that the Partisans have captured ARZANO Q 44 and are advancing on SINJ.

CROATIA AND SLOVENIA

The enemy drives in the LIKA and KORDUN have slackened and can be regarded as another failure for German arms. UDBINA,

....PLITVICE and.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

PLITVICE and most of the KORDUN is again in Partisan hands but the main roads remain under enemy control. Nothing more has been heard of the Northward thrust from the BIHAC-KOSTAJNICA road and it is evident that this was a holding movement to prevent Croatian Partisans infiltrating into BOSNIA where the main German effort has been made.

The coal mine at VELENJE D 95, the source of supply to the power station which in turn supplies the CELJE zinc foundry and other important works, was captured and destroyed by specialists of 14 Partisan Div on 1 May. In the TREBNJE action, reported last week, 100 Germans were killed and many wounded. Several heavy mortars, 15 MGs, 6 Light Mine throwers, 150 rifles, 2 railcars of ammunition and 2 railcars of food fell into Partisan hands. Elements of 13 SS Div BOSNIA are guarding the line of the rivers SPRECA and BOSNA in an attempt to prevent Partisan reinforcements from reaching BOSNIA. At BUSLJA some 10 miles WNW of TUZLA a Partisan div HQ with a hospital was surrounded, but managed to break out to the SW and cross the SPRECA valley. Several PWs were gathered on the way and a herd of cattle which had been commandeered by the enemy was captured.

BOSNIA

The German attempt to capture TITO and destroy Partisan power in BOSNIA continues unabated. The initial wave of paratroops and airborne troops who landed at DVAR suffered heavy casualties and reinforcements were dropped after the town had been dive-bombed. Land forces joined up with the airborne troops but found Partisan GHQ almost deserted. POTOCI L 14 then became the scene of action when it became known that Partisan GHQ was there. Three enemy columns from PREJAKA L 02, VRBLJANI L23 and KLJUC L 25 made rapid progress on the town but a column from BOS GRAHOVO was repulsed. Fierce fighting took place in the area of RIBNIK which fell to a German column of inf and tanks which later pushed on to POTOCI. The situation in this latter area was described as serious and deteriorating fast. TITO together with the entire Allied and Soviet missions broke through the German lines at night and were reported safe in the PREODAC L 01 area. Two columns operating to the South captured the landing ground at GLAMOC. No fewer than 15 attacks from PEULJE L 0207 to TICEVO in the North were repulsed, but the village later fell to powerful columns from GLAMOC and RORE. Enemy intelligence has shown itself remarkably well informed about Partisan movements and reports state that two powerful columns are heading for PREODAC from the East. Partisan 5 Corps which in the meantime had become surrounded in the POTOCI sector managed to break out to the North, and in spite of an ambush managed to cross the PETROVAC-MRKONJICGRAD road intact. As the scene of the fighting moves to the South, Partisan activity is growing in the North. The last report to hand states that RIBNIK has been recaptured by Partisans. The general situation is still regarded as grave though no longer described as desperate. Two facts emerge from these engagements. In no case have the Germans attempted to leave the roads and the destruction of the Partisan bands seems to have taken second place to the intention of capturing TITO and disorganising Partisan GHQ.

Elsewhere in BOSNIA harassing attacks by the Partisans have taken place. Fighting is reported from the SREBANIK M 68, CELIC W 02, BIJELJINA area while further South the Germans were forced to withdraw from VLASENICA to SOKOLAC and ROGATICA. All reports from BOSNIA give high praise to the Allied Air Force who bombed and strafed enemy troop and MT concentrations throughout the area.

SERBIA AND HERCEGOVINA

In fighting which took place near TREBINJE A 56, 30 MGs and other war materials were captured by the Partisans who counted 180 German dead. To the North, further enemy concentrations are reported at RUDNO, SJENICA,

....PRIJEPOLJE and NOVA.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

PRIJEPOLJE and NOVA VAROS which may portend a resumption of activity by the enemy in this area. Sensational reports from SERBIA paint a picture of an impending Bulgarian collapse. Fighting between German and Bulgarian troops is stated to have taken place in NIS where the German forces attempted to disarm the Bulgarians. One Bulgarian Regt is reported to have moved from NIS to JEBANE to avoid a similar fate. All rail and telephonic communications have been stopped at GRDELICA on the frontier. To add further colour to these reports MOSCOW Radio broadcast a report of mutiny by Bulgarian sailors in the Black Sea port of VARNA. It is not thought that these incidents portend a general collapse in the near future, the feeling that each Bulgarian expects his neighbour to do something about the situation but will not start the ball rolling himself is perhaps a truer picture. The situation is however pregnant with possibilities.

HUNGARY

German troops on the Hungarian-Jugoslav border are again reported to have withdrawn. A report states that Hungarian troops have constructed and are manning on the banks of the DRAVA in this area three defence lines.

ORDER OF BATTLE

Two reports place elements of 13 SS Div in MOSTAR but it would appear that the main part of this formation has taken part in the recent Bosnian operations. Other forces identified in this action are a SS Para Bn from KRALJEVO, 4 Brandenburg Regt, one regt of 373 Div 92 Mot Regt, 13 SS Regt of the SS Prinz Eugen Div, 5 Corps troops and elements of 118 Jg Div. The presence of this latter formation makes it apparent that some of its former island commitments have been taken over by 369 Germano-Croat Div. 3, 5. 10 Schutz/Polizei Regts are stated to be in NIS, RASKA and BELGRADE respectively. These formations are reported to be 100% German but equipment and morale is stated to be poor.

1. ENEMY SITUATION

As our Northward thrust West of the Tiber developed the enemy reacted by hastily transferring mobile units from East of the river and withdrawing the remaining forces there to conform and by bringing down fresh formations from North ITALY. Two new divisions have now been identified in the Western sector making a total of three which have now been brought down from reserve and committed in this sector. All these divisions have been roughly handled and we have been able to advance to a line running from the sea just South of OMBRONE to North of ORVIETO.

On the West coast the first serious resistance encountered was from 162 Turcoman division, in the form, to begin with, of Cossack Cavalry and Mongol-German cyclists. Both 303 and 314 Regts have since been identified and they have been resisting with rather better spirit than might have been expected. Further inland, roughly in the SCANSANO sector, is 20 GAF division which has already suffered fairly heavy losses. On its left is 90 PG division, all elements of which seem to have been involved; this division was brought across from East of the Tiber through ORVIETO while that lateral was still open. Where the remains of 92 and 65 Divs have gone to is still obscure; some of them may be holding the gap between the left flank of 90 P.G. Div in the SELVENA area (A 0765) and the right flank of 26 Pz Div somewhere in the ACQUAPENDENTE area. Between ACQUAPENDENTE and North of ORVIETO we have 26 Pz, 4 Para and 356 divisions. 356 came down from the GENOA area and was first contacted East of Lake BOLSENA, connected with 4 Para Div which it was relieving. It appears to have been committed, like all the German reserves in this battle, in a piecemeal fashion and suffered considerable losses in a stubborn rearguard action 10 Km North of VITERBO on 10 June. 3 P.G. Division,

....which had been.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

which had been engaged in this sector, appears to have been withdrawn as its HQ on 14 June was at S. QUIRICO (W 0588). 29 P.G. Div moves are more obscure; it was last heard of connected with 26 Pz Div and probably followed it across the Tiber. It has not been identified in contact during the past week and may have moved further West and North.

East of the Tiber Hermann Goering and 15 P.G. Divisions, after offering good resistance in the more difficult country in that area, have been falling back to conform, abandoning NARNI and TERNI. They both seem to be in process of crossing to the West of the river as HQ of HG Div was in the area West of TODI and 15 P.G. Div HQ possibly near MARSCIANO, A 6480, on the night of 14 June. This represents an extensive withdrawal. Further East 44, 5 Mtn and 114 Jaeger Divisions maintain the same relative positions and have been falling back with little contact. On the Adriatic coast the bulk of 278 Division is just behind the VOLMANO with some elements forward of the river on the coast. The Division appears to have under command, or as its right neighbour, the remains of 71 Division organised into one regt numbered 211. The main problem in this sector is the location of 334 Division which was last heard of withdrawing North of RIETI; it will probably have conformed with the movement of HG and 15 P.G. Divisions in their sidestepping movement towards and across the Tiber.

As will be seen the enemy dispositions are obscure and confused, and it must be remembered that all divisions which fought South of ROME are very seriously reduced in strength. We can clear the deck to a certain extent: 94 and 715 Divisions have shown no further signs of life and will have to reform from scratch before they can take the field again. 362 Division, according to a prisoner, has gone to FLORENCE and we know that it is interesting itself in billeting problems in the SCARPERIA area, Q 8894. It may be being used as a headquarters to start allotting divisional sectors on the PISA-RIMINI line. This famous line we now know, from documents captured in Kesselring's H.Q., to be called the GOTENLINIE or Gothic Line (the Germans have shown themselves very conscious of the deeds of their barbarous forebears in ITALY; two of their defence lines in CAMPANIA bore the names of Gothic chiefs). It is to be expected however, that further reinforcements may arrive; there have been persistent reports of an SS division entering ITALY from the North East and several circumstantial reports speak of a Jaeger division, covered with the usual oak-leaves, which came from CROATIA to the ALESSANDRIA area - presumably to relieve 356 Division. The only Jaeger division in CROATIA was 42 Jaeger Division, the former 187 Reserve Division upgraded. Some of its troops were seen in the LUCCA area on 2 June so elements of it may well have come further South. The SS Div may well be our former acquaintance, 16 SS PG Div, as a prisoner from 20 G/F Div had heard that the latter was going to relieve them; it is in any case the only SS division readily available for this theatre. The fact is that Kesselring has to find replacements on the West coast for 356, Hermann Goering and 162 Divisions; his SS and his Jaegers may be considered sufficient but, if the PW's statement is well-founded, even these are being drawn on already, and with his general weakness elsewhere he may still need another division.

.....2 ENEMY SUPPLIES AND COMMUNICATIONS....

THIS PAGE IS UNCLASSIFIED

0480

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

took the brunt of 5 Army's attack. With its centre pierced and both its flanks enveloped it was driven from its positions over its entire front and hurled back to the ESPERIA defile with a loss of about two thousand prisoners and very heavy casualties in killed and wounded. At the moment the division can be said to have ceased to exist as a fighting formation for the imperious Colonel Baron von BEHR, C.O. 200 PGR, has taken over command of the remnants from Div H.Q. and is trying to weld them into a fighting front to cover ESPERIA. Some of 90 PG's artillery has also had to be brought up, reasonably enough since the majority of 71 Div's artillery was caught when the gun area on the Northern slopes of Monte MAJO was by-passed. Apparently the newly arrived artillery has been placed in the DORA line (the new name for the Adolf Hitler line, so as to save the Führer's name from the shame of its fall) and we must be approaching very close to that line since Bohr was complaining that the artillery in question was shelling its own troops. The MONTE D'ORO is probably the link between the plain and the mountain in the Adolf Hitler line.

94 Division, opposing 5 Army's left flank, had slightly better fortune in the early stages of the battle. It suffered heavy casualties from our artillery, however, and was gradually forced out of its positions covering the FORMIA-ESPERIA road in very hard and stubborn fighting. When that road was cut it had to withdraw to conform and is now apparently trying to hold a line somewhere in the FORMIA area. By the morning of 16 May I/274 GR announced it had withdrawn according to plan to the DORA line. The main loss here is of the gun area on M. SCAURI.

How long Kesselring will allow 10 Army to continue to fight without further reinforcement is a problem which must be seriously exercising him at the moment. His resources are limited and he has to husband them if he wishes to be able to hold a line South of ROME. Part of the answer will lie in how long he will still believe in the possibility of a coastal landing. If he thinks that all our resources have been committed on the main front it will be no longer necessary for him to keep a good formation like 29 PG Div on coast-watching duties North of ROME. It is unlikely that he will weaken the forces opposing the beachhead though in view of the present disparity of tank strength between the two fronts (three bns on the bridgehead to one on the LIRI) it would be natural for him to despatch an Armoured battle group of 26 Pz Div to the assistance of 10 Army. There were some indications on 16 May that such a force might be on the way but nothing definite has yet transpired to confirm this. We should see in a day or two whether his losses in front of the Hitler line have been so heavy as not to leave him sufficient to hold that line with safety.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS.

The most important result of our air attacks on the enemy's lines of communication during the last week was the destruction on 13 May of the AVISIO viaduct South of BOLZANO, effectively blocking all railway traffic over the BRENNER Pass.

Whilst all the lines South of FLORENCE have remained blocked throughout the week, attention has been paid to the large junctions further North; the Marshalling Yards at BOLZANO, MESTRE, MILAN, PARMA, PADUA, TREVISO, VICENZA, MODENA, MANTUA, FERRARA and BOLOGNA have all

...been effectively....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

been effectively attacked, and tracks, rolling stock and installations destroyed.

The enemy continues to repair railway lines as rapidly as possible, but he is fighting a losing battle and railway activity is steadily decreasing. It is evident that he is having to rely more and more on his hard pressed MT.

SHIPPING

In the Mediterranean, coastal traffic to PORTO FERRAIO and SAN STEFANO has been maintained at its normal level, but there has been a decrease in turnover at PIOMBINO, and it is evident that PORTO FERRAIO is now the more important lying-over port for the SAN STEFANO traffic.

There are now at least two small coasters plying from the Northern ports to PORTO FERRAIO and PIOMBINO where cargoes are probably transhipped to F lighters for onward passage to SAN STEFANO. PIOMBINO, PORTO FERRAIO and SAN STEFANO were bombed during the past week, and at the latter both road and rail exits from the harbour were effectively blocked by the collapse of a bridge over the railway, whilst dock installations and shipping were hit at the other two.

There is little ship building activity on the Mediterranean coast at present; good progress has been made on 3 MT ships at VOLTRI and 2 F lighters have been launched at SESTRI LEVANTE, but work has been abandoned on 6 other F lighters at the latter port and very slow progress is being made on the construction of 6 coasters at PIETRA LIGURE where there have been no launchings since 16 January.

A marked increase of shipping activity has been noted at ANCONA where a 1,000 ton MV and a 500 ton tanker had arrived on 13 May. This is the first time vessels of this size have ventured so far South for some time and it is evident that the strain on the enemy's supply system caused by the dislocation of the railways is causing him to take risks.

ANCONA was effectively bombed on 15 May and hits were claimed on the tanker; it is not yet known whether the M/V was hit as this vessel had disappeared when further reconnaissance was made.

In the Northern Adriatic there has been lively traffic in M/Vs. Eleven 102 feet supply barges are reported to be under construction at VENICE, and two F lighters are being armed there; fifteen of the F lighters under construction at MONFALCONE are also being armed with a gun position near the stern. At TRIESTE three Siebel ferries were fitting out on May 13 and the components of two more had arrived at the docks. There were also two Siebel ferries newly assembled and five fitting out at FIUME on the same date.

A number of 50/60 ft naval launches are being assembled and launched at TRIESTE and at least two of these had already left the port by 13 May, whilst there were two more in the water and five on the quayside. Five similar craft have arrived at FIUME.

.....3....BALKANS.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. BALKANS

GREECE

A report from THESSALY states that Andartes attacked a German unit while the enemy were resting and bathing. It is estimated that 250 Germans were killed. A successful ambush was carried out by Partisans on 5 May in the vicinity of KASTANERI 0 48. A column consisting of 600 troops, 40 trucks and 1 tank was attacked. The tank was damaged by an explosive charge laid in the road and 30 Germans were killed in the ensuing skirmish. Some clashes have taken place in the DRAMA area between Capitanos bands and Bulgarian troops. The Bulgars lost 10 killed and 30 PWs at BOROVO in one of these harassing attacks. More details about the recent train wreck at LAMIA are to hand. Both engines plunged over the embankment and 150 enemy lost their lives. German reactions against the local populace followed and 150 hostages were arrested of which only 18 were detained. The PELOPONESE has been comparatively quiet, the only news of any importance concerns the Security Bns. By order of the supreme command of the Security Bns and Police, 110 Greeks were shot in reprisal for the deaths of two German officers who were killed in ambush.

The independent Macedonian Bde has now left the VITSI area and is reported to have recrossed the frontier.

ALBANIA

Some minor clashes have taken place to the South of VALONA. The Partisans have recaptured BORSH M 20, and claim to hold the coast from inclusive HIMARA to exclusive PIGERAS. Persistent reports of troop movements from GREECE through VALONA, DURAZZO and SCUTARI to the North have continued to arrive. The significance of these moves is not yet clear nor have any units taking part been definitely identified. In the KORITSA area some 300 Armenian troops are reported to have surrendered to the Partisans of 4 Bde.

JUGOSLAVIA

DALMATIA

There has been some German activity in the Northern islands. On 8 May 500 German troops landed on PAG and a steady stream of reinforcements is stated to be reaching the island. This move by the enemy may portend German intentions to occupy OLIB, SILBA and PREMUDA or to clear up the coastal strip between STARI GRAD and KARLOBAG. A later report states that the enemy is building fortifications on the island. The German garrison on KORCULA is said to consist of 1,000 troops at PUPNAT with a further Bn between ZRNOVO and KORCULA town. During the night 9/10 May a Partisan force made an unopposed landing on SOLTA. No resistance was met until the strong point at GROHOTE was reached, here the enemy put up a strong defence supported by arty from CIOVO. It is thought that some 300 German reinforcements had reached GROHOTE on 9 May. The Partisans later re-embarked without having overcome the enemy garrison.

On the mainland the railway bridge between OPUZEN and METKOVIC was destroyed by Partisans. This stretch of railway, made since the outbreak of war, has been carrying 3 or 4 trains daily.

.....CROATIA AND SLOVENIA.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

CROATIA AND SLOVENIA

Heavy fighting is reported from the BOSUT forest sector in which elements of 13 SS B.H. Div, Hilfspolizei and Ustachi are taking part. Troop movements from OSIJEK and BROD to the West have taken place. It is presumed that these troops are intended for the DARUVAR area where a German offensive has been reported. Details of this operation are lacking but it is thought that 42 Jg Div is involved. Units of 392 and 393 German-Croat Divs are pushing South from VRHOVINE P 18, PLITVICE P 38 and BIHAC and are stated to have reached KORENICA on the 12th May.

BOSNIA

Confused fighting continues in the area VLASENICA-ZVORNIK. A Partisan report stated that the enemy had withdrawn from VLASENICA to ZVORNIK but a later report on 8 May states that the enemy had recaptured the town and were pushing East towards the river DRINA.

KRESEVO 25 Kms West of SARAJEVO was captured by the Partisans who inflicted heavy casualties on the enemy. 94 killed and 54 wounded, all from the 7 SS Prinz Eugen Mtn Div, are claimed by the Partisans. The SARAJEVO-MOSTAR railway was attacked and damaged in a raid which cost the enemy a further 45 killed and 6 PWs. All bridges on this line are stated to have been repaired. In Western BOSNIA the enemy has sent three columns from PRIJEDOR, BOS NOVI and BANJA to the South in an effort to clear the BOS NOVI-PRIJEDOR railway. Strenuous efforts have been made by the enemy to keep this vital line in running order and work of repairs has been carried on with some success. A train was wrecked between BOS NOVI and KOSTAJNICA. 100 enemy were killed and 150 PWs captured.

SERBIA AND MONTENEGRO

It is stated that when the Allied air forces hit troop concentrations in PODGORICA about a week ago more than 1,000 enemy troops were killed. Considerable damage to military objectives was caused and the report states that the effect on the enemy's morale was enormous. The enemy, however, has continued to reinforce this area with troops drawn from the South. It is apparent that something of greater scope than a local operation is being planned but no indication of its nature has come to light. Reports of troop concentrations in the LESKOVAC, ZITORADA, PROKUPLJE area state that German Jaeger troops with 500 MT have moved into this sector. These concentrations together with Bulgarian concentrations further to the South point to future operations against the Serbian Partisans. On the evidence available it seems that at least part of 1 Mtn div is concerned with HQ at LESKOVAC. The Partisans destroyed a bridge at SUKOVO on the NIS-SOFIA line causing a train to crash into the river. 2 locomotives and many wagons were destroyed.

HUNGARY

In addition to 2, 18 and 21 Hungarian Infantry divisions already accepted in the STANISLAWOW sector of the Russian front, four other divisions and a brigade are now believed to be in the area. These are 16, 24 and another infantry division, an Armoured division and 1 Mountain Brigade. The number of Hungarian formations actually identified on the Russian front is

...thus raised...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

thus raised to seven divisions and one brigade. It is thought, however, that the total forces involved is probably nearer the equivalent of nine divisions.

ORDER OF BATTLE

The peaceful nature of the German occupation of HUNGARY has allowed the enemy to recall some of the forces which took part. 42 Jg Div, reported last week to have taken part in fighting in SLOVENIA, is again identified in the DRAVA area. The G.O.C. of the German troop concentrations in the LESKOVAC area is stated to be Maj-Gen v. SEUTTNER who is known to command 1 Mtn Div. This together with other evidence may show that the greater part of the division is in the area.

19 Pol Regt has left the SELJE area for FRANCE, its place has been taken by elements of 25 Pol Regt.

-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The main weight of the fighting has again been located West of the Tiber. We have advanced in this area an average of rather over twenty miles on the whole front between the sea and Lake TRASIMENE, meeting with stronger resistance than of late and it seems that the enemy is about to try to hold a definite line for a rather longer stand. Yet another reinforcing division has been drawn into the fighting, once more taken from the West.

Enemy dispositions are in general unchanged. From the West coast to the SIENA road we have 162, 3 P.G., 20 GAF, 90 and 29 P.G. divisions. We took prisoners near PAGANICO, G 7784, from the Engineer Bn of 16 SS PG Div which lends some confirmation to the story of the prisoner from 20 GAF Div that they were to be relieved by some of this division. Further back, in an area vaguely described by two Polish deserters as "North of GROSSETO" is 19 GAF division, which, according to the same source, left BELGIUM on 10 June. From the SIENA road to Lake TRASIMENE are 26 Pz, which was reporting our movements in the area A 1485 on 20 June, 4 Para, 356 (which appears to have remains of the Inf Lehr Regt under command), Hermann Goering, 11 Para and 334 Divisions. It will be noticed that 90 PG and 26 Pz have both continued to edge over to their right and it seems likely that both 65 and 92 Divs have been squeezed out and withdrawn for a short rest and refit. East of Lake TRASIMENE the situation is rather more obscure: 15 P.G. is certainly immediately next to the Lake, then apparently 94 division (of which both 267 and 274 G.R. were identified South of PERUGIA on 18 June), then 44 Div which appears to have withdrawn through FOLIGNO and TREVI, then 114 Jaeger, 71 and 278 Divs as before.

Except for the divisions on the East coast all have been fairly heavily engaged this week and must have suffered still more losses; there have been several occasions when the enemy has left his withdrawal too late, as at TODI where 15 PG lost prisoners unnecessarily and had no time to carry out the prepared demolitions.

....15 PG Div was....

THIS PAGE IS UNCLASSIFIED

0486

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

15 PG Div was intended on the 14th to be withdrawn from the line, and 115 PGR was apparently to go as far back as BAGNO DI ROMAGNA, R 3673, but it was still in the line on 19 June where it lost prisoners from both regiments and there is no sign yet of its withdrawing. Hermann Goering division was also out of the line for a short time, apperently resting in the area West of PERUGIA, but on the morning of 20 June the division was said to be on the left of 356 Div.

Light is thrown on enemy intentions by a captured order from 334 Div. According to this document, dated 14 June, the division (with 1027 GR under command) was to occupy by the 17th a line from Lake TRASIMENE at W 4092 - 3692 - 3492 where it had a boundary with 1 Para Div. This position was to be held "for a longer time"; it rather looks as though there was some truth in the confidences allegedly made by one of Kesselring's senior staff officers to his Italian doctor, reported by the latter, in which he said that the Germans intended to hold a line from SARTEANO, N.E. of RADICOFANI to CASTIGLIONE on the West shore of the lake and thence from the East shore of the lake to UMBERTIDE. It is not yet clear where the line is meant to reach the West coast, presumably somewhere not far North of GROSSETO though our advance East of route 1 threatens to unhinge it there. It remains to be seen what kind of resistance the enemy will offer on this line; it must be emphasised that up to the present the enemy has been offering steady and stubborn resistance on a variety of lines and appears to have made serious efforts to hold them. It is not a case of an enemy withdrawing with his rear protected by rearguards while the bulk of the forces break contact; with the exception of certain particularly battered formations all the enemy's strength is still in the front line and is fighting hard, withdrawing when absolutely necessary the shortest possible distance. Some divisions have actually been withdrawn from the line but put in again after only one or two days. This is a strange policy for the enemy to adopt. It would be reasonable if it were desired to gain time to allow the Appennine line to be manned by a completely fresh force, which would have to amount to some half dozen divisions, but it is difficult to see where such a force is to come from in this most critical month of the war. As far as can be seen all that is gained is time, and time now at the expense of time later for the steady drain on strength must reduce the hopes of holding the Appennine line for any considerable period. It may be that Hitler still thinks the situation is like that of last Autumn (certainly the weather in the last few days has been giving a fairly good imitation and causing us some delays) and hopes to save prestige by holding us as far South as possible while the Appennine line is made impregnable. The calculation seems to be short-sighted.

General reports indicate that 42 Jaeger division has taken over the responsibilities of 356 Div in the GENOA area. 16 SS and 19 GAF are also available for coastal duties in the former areas of 162 and Hermann Goering divisions, though, as has been seen, at least elements of both of them are in danger of being drawn into the battle. It will be noticed that, in spite of all the German commentators may say, the Germans have been obliged to send into ITALY four new divisions, two from the Balkans and two from the Western front. The total of nominal divisions in ITALY is now twenty-seven but the chances of holding the Appennine line with this force have not been improved by the events of this week.

2. ENEMY SUPPLIES AND COMMUNICATIONS

.... During the past week the enemy's withdrawal has been better

....organised and.....

THIS PAGE IS UNCLASSIFIED

0487

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

organised and weather has interfered with air attacks against his L of C. With the exception of 14 June, when we claim to have destroyed 126 MT and damaged 75, enemy MT losses have recently been light as compared to the previous three weeks; claims against MT for the six days 14/19 June total 235 destroyed, 129 damaged. Despite effective interdiction of the railways it is thought that the enemy has been able to effect some improvement in his administrative position, though it is still probably not wholly satisfactory. The enemy's L of C still remains vulnerable to air attack and raids by Italian Partisans, who have been particularly active recently. His chief concern now is probably to build up sufficient supplies South of the PO to support his defence of the PISA-RIMINI line.

RAILWAYS

Throughout the past week the Central Italian Railway system has been effectively blocked North of a line from PISA on the West coast, through FLORENCE to FANO on the East coast despite bad flying weather on at least two days. On the West coast there are three bridges at present down between SPEZIA and PISA, and RECCO viaduct between SPEZIA and GENOA is probably out. Between FLORENCE and BOLOGNA one bridge just North of PISTOIA on the single track line to BOLOGNA is cut and two bridges are down and a tunnel blocked on the main BOLOGNA-PRATO line. The East coast line is blocked by two destroyed bridges between RIMINI and FANO. The only other possible route to the South, the single track line from FAENZA, has been interdicted by the destruction of two viaducts just North of BORGO SAN LORENZO. Thus the greater part of the enemy's supplies will have to be transferred to MT in the BOLOGNA area and this MT will have to negotiate the difficult mountainous country between BOLOGNA and FLORENCE. South of the PISA-FLORENCE-FANO line all railway lines are well blocked except the main East coast route, but there is no way of switching inland from the latter and it is most unlikely that it is being used South of RIMINI.

Traffic entering ITALY over the BRENNER has been normal. MESTRE has recovered from the battering it received on 10 June and activity there and at PADOVA and FERRARA indicates that this line is in use again; there has also been a fair amount of traffic coming in from the East via UDINE, VICENZA and VERONA. It has been reported that the latter line is to take precedence over the BRENNER route for supplies entering ITALY but there is as yet no indication of any change in the respective volumes of traffic. Little traffic has been reported entering ITALY from FRANCE of late and activity on the main West-East line via PIACENZA, PARMA, MODENA and BOLOGNA has been negligible.

SHIPPING

As was expected with our further advance Northward in Western ITALY and capture of the island of ELBA, the enemy is abandoning the port of PIOMBINO, where demolitions were indicated by PR on 20 June. Further steps are also being taken to block LEGHORN harbour where a new blockship arrived sometime between 15 and 20 June. However, on 20 June the Southern entrance to the port still remained open and active shipping was present. Some difficulty in obstructing the harbour may arise as a result of our air attacks on block ships at LEGHORN on the 14th. Taking no chances the enemy had also placed an additional blockship in position at SPEZIA by 20 June.

.....With the enemy.....

THIS PAGE IS UNCLASSIFIED

0488

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

With the enemy withdrawal in Eastern ITALY a programme of harbour demolitions has also been in progress on the East coast and ANCONA is now believed to be the enemy's most Southerly port. The shipping picture is otherwise normal this week, though increased activity is probable incident to evacuation of ports.

Poor weather this week has hampered our air operations. Ports on ELBA have received most of our attention. PORTO FERRAIO and PORTO LONGONE were attacked on night 16/17 June. Fighter bombers have also operated successfully against shipping in ELBA harbours and nearby waters. A small steamship was either destroyed or heavily damaged at PORTO FERRAIO and a considerable number of small boats destroyed or damaged at sea. Our surface forces have also been active, having probably destroyed a corvette between PIOMBINO and ELBA on night 17/18.

3. BALKANS

GREECE

Many rumours of impending German drives and impending clashes between the guerilla groups have been proved to be without foundation.

An enemy convoy consisting of three Merchant ships escorted by four destroyers, 4 corvettes and 2 E-boats which attempted to supply the garrison on CRETE was successfully attacked. Two of the Merchant ships were sunk at sea or in harbour, the third arrived in CANDIA in a damaged condition and later sank. This was the most formidable enemy convoy encountered in the Aegean for some time.

ALBANIA

The situation of the Partisans in Southern ALBANIA appears to be deteriorating as the German drive gains momentum. The enemy now controls the area NE of the KELCYRE M 52 PERMET M 61 road and is clearing the mountains between PERMET and ARGYROKASTRON. German drives Southwards from PERMET, NW from DRIMADES, R 79 and up the valley of the DHRENO from EPISKOP R 68 are compressing the Partisan bridgehead. Further drives are reported from VALONA to the South and from SARANDE to the North. Enemy sailing vessels have appeared off the coast near HILARE to prevent the Partisans escaping by sea. The enemy lay-out appears to be: elements of 523 Regt (297 Inf Div) to the North, elements of 724 Regt ([illegible] Div) to the South while the centre is reported to be the responsibility of 1 Mtn Div. All Ball Kombetar forces are cooperating with the enemy in these operations. The Partisan bridgehead force was recently reinforced by the newly formed 12 Bde from the HERAT area.

YUGOSLAVIA

DALMATIA

A Partisan force landed on KORCULA on 17/18 June without meeting any opposition. No reports of subsequent developments have been received. A report from Partisan HQ stated that on 15 June the garrison of SIPAN island (between MLJET and the mainland) was 500 men from 369 Germano-Croat Div. The German sweep in the Northern islands has come to an end and it appears that the enemy have withdrawn to the mainland. The following islands were raided during these operations: OLIB, SILBA, PREMUDA, SKARDA, MOLAT, DUGI and KORNAT. Saboteurs have been busy on the mainland in the PLOCA -METKOVIC area. Six trains and 2 bridges were destroyed on the railway

.....connecting these towns.....

THIS PAGE IS UNCLASSIFIED

0 4 8 3

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

connecting these towns and 400 metres of road destroyed between ZAGVOZD Q 54 and KOZICA Q 61.

CROATIA AND SLOVENIA

Desultory fighting has taken place in the area enclosed by BIHAC-KARLOVAC-FIUME. On 11 June two enemy columns, one of about 1,000 men with 25 tanks on the road HRELJIN to LOKVE and DELNICE, the other of similar strength on the SUSAK-LOKVE road were attacked by Partisans. The enemy columns converged at LOKVE on 13 June. A column of 1,200 men and 30 AFVs which attempted to strike North to BROD J 65 via DELNICE was repulsed, the other column is reported to have moved through DELNICE in the direction of KARLOVAC. Fighting in this area continues. Many attacks on railway communications between LJUBLJANA and TRIESTE have been reported and some delay has been caused to German movement on this important railway.

BOSNIA

The Partisan offensive in the MLJEVICA area (NW of TUZLA) has ended. Enemy casualties so far reported total 1,500. The Partisans claim to have captured large amounts of war material including 100 loaded pack horses on the road CELIC W 92 - LOPARE W 91. It appears that many troops of the 13 SS B.H. Div remained in TUZLA when the Div moved to the MOSTAR area and were reinforced by a regiment from POLAND. Concentrations were reported in TUZLA, BRCKO and BIJELJINA thus constituting a threat to the Partisan rear. The Partisans, fearing no doubt to be hemmed in between the SAVA and DRINA rivers, crossed the SPRECA on the morning of the 12 June and are now moving South. In Central and Western BOSNIA the Partisans have strengthened their positions by occupying POTOCI L 13, BRAVSKO L 15, RIBNIK L 24, LKJUC L 25, GLAMOC Q 29 and PROZOR Q 97. Reports do not make it clear if these towns were captured in the face of German opposition or if the enemy had previously withdrawn. German concentrations are reported in BOS PETROVAC and BIHAC to the North and LIVNO and DUVNO (TOMISLAVGRAD) in the South while elements of 7 SS Prinz Eugen Mtn Div are in the MRKONJICGRAD area.

SERBIA AND HERCEGOVINA

The Bulgarians have started large scale mopping up operations in JABLANICA P 18 area and in the RADAN mountains WJ 80. Details are lacking but two or more divisions are taking part. Fighting is reported to have taken place at [illegible] K16 (NW of NISH) and an unconfirmed report states that Partisans have entered VRNJACKA BANJA (between KRALJEVO and KRUSEVAC). This latter may well be true as it appears that HQ 2 Pz Army left VRNJACKA BANJA and is now stated to be at MLINARSKA CESTA K 5395 near ZAGREB. There has been much activity on the KRUSEVAC J 87 airfield, 200 unassembled gliders are stated to have arrived by truck on 10 June. Enemy concentrations have been reported for some time in the SJENICA - PRIJEPOLJE - PLJEVLJA area. Attempts to drive South into liberated territory have met with limited success. One column moving South from PRIJEPOLJE was broken up by a Partisan attack on 10 June and lost 100 killed, 150 wounded and much war material. A column from PLJEVLJA met with better fortune. After crossing the TARA river, it pushed on to capture ZABLJAK G 94 on 14 June. Elements of 181 Inf Div, 2 Brandenburg Regt and 5 Police Regt were identified in this operation. Fighting is general throughout this area but the enemy does not yet appear to have made his main effort.

.....ORDER OF BATTLE.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ORDER OF BATTLE

Reports of the move of 2 Pz Army, discussed under "SERBIA" have been sent by many sources and it is certain that an important H.Q. has been set up in the Z.GREB area. The location of 1 Mtn Div in its old area is confirmed. Elements were identified on 3 June in fighting near MOVRICE M 77. Div HQ is situated at KORC. Reports from Partisan sources state that most Balkan Divs are despatching small groups of about Company strength to the Italian front. This may well be true but no confirmation apart from 17 SS Cav Sqn of 8 SS Cav Div has been forthcoming. 17 SS Cav Sqn identified in the SOLNOK area on 11 June was last known to form part of 1 Cav Regt of 8 SS Cav Div in Southern HUNGARY. It is reported that the total Hungarian strength on the Russian front now amounts to 13 Divs. It appears that troops for the Russian front have been found principally from the Central Plain and from the Rumanian and Transylvanian frontiers. The Transylvanian frontier is lightly held by 17 and 26 Divs only, a state of affairs permissible in view of the fact that the Rumanians have withdrawn most of their erstwhile frontier garrisons for service on the Eastern front. The Hungarian depots near the SW frontier have so far not been pruned, owing, no doubt, to nervousness of Tito's activities.

1. ENEMY SITUATION

Assisted by unprecedented weather for an Italian June the enemy has been fighting most stubbornly to hold his present positions. Penetrations have been made but he has always endeavoured to seal them off by bringing up fresh troops. There have been many reports of new German divisions entering ITALY but there is no evidence as yet that they have received sufficient reinforcements to make the holding of the Appennine line a reasonable proposition, and the object of the delay they are seeking to impose must rather be to perfect the defences there. An appreciation of the present state of the line is attached at Appendix 'A'.

There have been some changes in enemy dispositions to meet our pressure, the two main points where this has been particularly felt being in the coastal sector and West of Lake TRASIMENO. In the former 162 Div has had to be stiffened by 361 PGR of 90 PG Div (200 PGR was still in its old sector on 27 June) and by at least two bns of the exhausted 362 Div and subsequently, on 27 June, 26 Pz Div appeared in the area with 9 PGR holding the line from MONTEMONTANO to CASTELLO which had previously been held by 361. The Division was said to be taking over a new sector in the West at noon on the 27th so that it has presumably relieved 162 Div of its command in this area. CASTELLO is its boundary with 3 P.G. Div. The situation is hardly likely to permit the withdrawal altogether of 162 Div. On the 27th, 26 Pz Div was apparently withdrawing to a line called once more, and surely ominously, the GUSTAV line which, according to a captured map, runs roughly from Q 5406 to 8915. Elements of both 19 G.F and 16 SS divisions have been identified in this area and the former appears to be holding the extreme coastal sector West of 162 Div. It is not certain how much of 16 SS is yet forward: we have identified 35 PGR, the Engineer, Recce and Assault Gun Bns but these may represent only a battle-group of the division detached from coast-watching duties to meet a sudden emergency. However as we advance North and reduce the length of coast which the enemy has to guard we may expect to find more SS men coming into the battle. Both 504 and 508 Hy Tank Bns have been identified in the coastal sector, the former reformed after SICILY, the latter clearly in need of reforming after its handling South of ROME.

West of Lake TRASIMENO our attack on 24 June hit 334 Division pretty hard. 150 prisoners were taken forward of the TRESCIA river and 50 more when

...we had established...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

we had established a bridgehead across it; they all said, moreover, that casualties from our very heavy artillery barrage had been considerable. The enemy's reactions, after withdrawing the minimum distance necessary to straighten his line, was to start bringing 15 PG Div round from the other side of the Lake and on 26 June 104 PGR was already in position West of the railway. This again shows a significant change in enemy intentions; as stated last week he had originally intended to withdraw the division right back to rest and refit. This move of 15 PG has obviously obliged 305 Div to extend its frontage and we had prisoners from I Bn 274 GR on 27 June in the area W 673968 showing that elements of 94 Div are again being brought forward in this sector to help out. Further East 44 Div is now astride the Tiber with some at least of its troops on the East bank. 114 Jaeger had losses on 26 June in the area R 7900. On the East coast the enemy is also resisting; according to a recent prisoner 278 Div has been ordered to hold a line in front of ANCONA until further notice. Apparently a most strenuous defence of the port is intended as he had heard that it was to be evacuated, when the last minute arrived, by sea.

The general picture, therefore, is unchanged from last week and the continued stubbornness of the enemy in holding an unprepared position across the widest part of the Italian peninsula throws a light on their grave doubts about the success of the defence of the Appennine line in its present condition. It may well be that the preparation of the GUSTAV, the HITLER and the CAESAR lines (the latter is the posthumously discovered name for what was called the VALMONTONE line) required too much labour for the GOTHIC line to receive its proper allotment. It is the shortest line now possible in ITALY and naturally strong, but it will still require more troops for its defence than the enemy now disposes of. Of the divisions in North ITALY at the moment 188 Reserve Mountain is probably not of much use, and in any case a division is indispensable in ISTRIA. In fact when we are in contact with the GOTHIC line the danger of a landing in ISTRIA may well cause the enemy to look for still more reinforcements for a tongue of land which so dangerously outflanks his positions both in ITALY and the Balkans. 42 Jaeger div, some elements of which have already been identified in action, but surely only a very small group, has vital duties to perform and is wholly inexperienced in anything but Partisan warfare. It is possible that the enemy can scrape up another division from somewhere; there must be some battered divisions from the Eastern front which could be sent to North ITALY to reform as so many STALINGRAD divisions did. There is also some considerable regrouping going on in JUGOSLAVIA whose intention is very obscure at the moment but which might result in a division being spared from there. But we can scarcely expect many fresh divisions when the German Army is occupied on three separate fronts.

2. ENEMY SUPPLIES AND COMMUNICATIONS

This week the enemy must be considered to have appreciably improved his administrative position. Owing to poor flying weather the BOLOGNA-PISTOIA-FLORENCE line has been open since 21 June and enemy MT losses have been small. On the basis of improved communications and a more stable front it is probable that the enemy is not suffering any decisive shortage of supply. There is, however, strong evidence that the strictest economy in fuel consumption is being enforced, particularly with respect to petrol. A captured order issued by HQ 44 Inf Div on 13 June states in part: "The fuel situation will continue to remain critical as the available fuel is required primarily for Panzer and Panzer Grenadier Divisions. ..... In place of vehicles with high petrol consumption, vehicles with economical consumption must be used..... All petrol-driven vehicles, with the exception of staff and messenger vehicles, signal vehicles, vehicles drawing heavy guns and ambulances, must be withdrawn immediately, loaded

...with stores.....

THIS PAGE IS UNCLASSIFIED

0493

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ith stores that have to be evacuated, and sent to the rear. Petrol-driven vehicles carrying ammunition, fuel and food supplies must whenever possible be replaced by diesel-driven vehicles..... Twenty percent diesel fuel must be mixed with petrol". This shortage of petrol is not thought to involve merely the Italian theatre, but to neglect the overall effect on German petrol supplies of our current [illegible] air effort against all types of enemy fuel installations, notably the attacks on PLOESTI. It has been estimated that more than sixty percent of all Axis oil production has already been rendered inactive and Germany's fuel position may be considered as approaching a crisis.

RAILWAYS

The main West coast line has been blocked between GENOA and SPEZIA since 20 June, and a series of cuts have been maintained South of SPEZIA as far as CECINA. The line joining SPEZIA to the main PIACENZA-BOLOGNA-RIMINI line at PARMA has also been cut all this week. South of BOLOGNA; the BOLOGNA-PRATO line has remained blocked but the BOLOGNA-PISTOIA line has been open since 21 June allowing movement through FLORENCE as far South as BUCINE (West of AREZZO). The PISA-FLORENCE line and the line South from EMPOLI have both been blocked throughout the past week, but the LUCCA-PISTOIA-PRATO-FLORENCE line has been open. The line South from FAENZA to BORGO SAN LORENZO and PONTASSIEVE and the line inland from RIMINI have both remained blocked, but the main East coast line was open as far as ANCONA on 26 June and possibly earlier as it was heavily loaded on 24 June.

Whilst it has been possible to move traffic South of FLORENCE it is probable that the enemy is unloading the majority of his supply trains in the LUCCA-PISTOIA-PRATO-FLORENCE area. The heavy traffic noted between ANCONA and RIMINI on 24 June probably indicates the evacuation of surplus stores from the ANCONA area and port.

There has been no change in the volume of traffic entering ITALY over the two main routes, the BRENNER in the North and from the East via UDINE, TREVISO, MESTRE and PADOVA. In the West, however, there was an increase in traffic on the TURIN, ALESSANDRIA, GENOA line during the early part of the week and a certain amount of activity was noted at SPEZIA on 21 June. The lateral line from MILAN and TURIN via PIACENZA, PARMA, BOLOGNA and FORLI to RIMINI has again been almost entirely inactive. RAVENNA on the East coast, however, has shown some activity of late. This is the only port of any size between VENICE and ANCONA and is gaining in importance as our advancing troops move nearer to the latter. A further indication of the importance which the enemy now attaches to RAVENNA is seen in the fact that a new by-pass around FERRARA is under construction from a point on the FERRARA-POGGIORUSCO ((R) F 7403) line, two thirds of a mile West of FERRARA main marshalling yards, which is probably intended to link up with the FERRARA-RAVENNA line.

SHIPPING

The only development of note this week is our capture of PIOMBINO. With the loss of this port the enemy has been forced to move his unloading activities at least as far North as LEGHORN. Although active, LEGHORN does not appear to be receiving all Southbound shipping and demobilitions were already in progress here on 21 June. Increased activity at VIAREGGIO suggests possible unloading there. Between LEGHORN and VIAREGGIO another port which might logically be used is MARINA DI PISA (at the mouth of the ARNO) to which there is a railway spur linking this port with the PISA-FLORENCE line. Owing to lack of PR, however, there is no definite information on activity at this port.

On the East coast ANCONA is still being used but we are now only about 25 miles South of the port. PORTO CORSINI, at the mouth of the canal running from the sea to RAVENNA, is evidently acquiring increased importance. On 27 June 2 F-boats, 2 supply barges and

....2 auxiliary.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2 auxiliary sailing vessels were observed in the canal. RAVENNA is well served by three single track railways running generally North, West and South, and it is logical to suppose that it will replace ANCONA as the most active port on the East coast.

3. BALKANS

GREECE

No outstanding operations have taken place during the last week but sabotage and minor clashes have shown an increase. 50 Elas Regt operating in THESSALY, fought a two-day action with a mixed Italo-German force between MELIKI O 43 and NEOKASTRON O 43. Enemy attempts to seize the high ground of VERYINA O 33 were repulsed. Heavy losses in dead and wounded were inflicted on the enemy who later withdrew.

In a clash between Elas troops and a German convoy at DESFINA Y 30 23 lorries are claimed to have been destroyed. No casualty figure was given in the report. Sabotage on the rail systems has been widespread. Two trains were blown up in the LEVADIA Y 70 area causing the destruction of both locomotives and several wagons. 60 German troops are stated to have been killed in one crash. A train carrying petrol and military stores was derailed east of LITOKHORION T 48; details are lacking.

After a period of uneasy calm fighting has again broken out between Elas and Edes. Elas 24 Regt is stated to have attacked an Edes unit near KOUKOULA R 71 on 19 June. Fighting soon became general and spread to PAPDATIS R 91 and GRAMMENO R 84. Reports state that all Elas attacks were repulsed except at GRAMMINO where ZERVAS was counter-attacking. Fighting was reported at ANORRAKHI R 80 on 23 June. This outbreak of hostilities between the two Andarte formations is all the more deplorable at this time when the Germans have to some extent drained the area of troops to take part in the Southern Albanian offensive.

ALBANIA

The German offensive in Southern ALBANIA appears to have come to an end with the dispersal of the Partisans and the clearing of the bridgehead between HIMARE and FIGERAS. The equivalent of two divs took part in these operations and though it is not known how many Partisans managed to evade the Germans it is feared that the Partisan movement in S. ALBANIA has suffered a serious reverse. 100 MT are reported to have left GJINOKASTER M 40 for JANNINA, presumably the elements of 104 Jg Div returning to their normal stations. The bridge at GLOJEK over the LUMI E TIRANES river has been blown up by Partisans. This bridge, one of the largest and most important in ALBANIA, carries all traffic between SCUTARI in the North and TIRANA and DURAZZO to the South.

JUGOSLAVIA

DALMATIA

The centre of enemy activity has shifted from ALBANIA to DALMATIA. Persistent reports of heavy troop movements from the DRNIS area to the North via KNIN and BIHAC and other columns moving from GOSPIC via OTOCAC, BRINJE to ISTRIA have continued to arrive. Similar movements have taken place from DRNIS to MOSTAR on the road BLATO Q 23 - ZAGVARJE. 264 Inf Div has been mentioned in connection with most of these moves and though regrouping of the coastal forces is undoubtedly taking place no clear picture has as yet emerged. The identification of SS Mtn troops on CIOVO island lends colour to the report that 264 Inf Div is pulling out as the island formed the Southernmost boundary of this formation. A regt of 7 SS Mtn Div Prinz Eugen is reported in the SPLIT area making a total for the area ZARA-SPLIT of the equivalent of two divisions. This is slightly in excess

...of normal.....

THIS PAGE IS UNCLASSIFIED

0495

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

of normal garrison requirements and points either to fears of an invasion or the relief of the garrison previously in this area. The Northward movement on the roads KNIN-BIHAC-GOSPIC-BRINJE may be elements of 373 and 392 Legion Divs regrouping after the recent Bosnian offensive. A report states that there is a heavy concentration of troops at SUNJA, believed to be from 373 Legion Div. SUNJA, at the railhead from BIHAC and on the main ZAGREB-BELGRADE line has been a favourite entraining station for formations leaving the Balkans. If the enemy's intention is to take another Div from the Balkans the choice appears to fall between 264 Inf and 373 Legion Divs. Either of these possibilities would give further proof, if such is necessary, of the acute man-power shortage in the German military machine. 264 Inf Div, a static formation made up of extremely young and elderly personnel, has not shown any outstanding offensive qualities in its long sojourn on the Dalmatian coast. The despatch of 373, a Croatian Legion formation, to outside the Balkan theatre would be a reversal of German policy regarding the employment of these formations.

Fighting, in which 250 Germans were killed took place in the BENKOVAC-BIOGRAD sector on 16 June. It is believed that 1 Brandenburg Regt was the formation involved.

The Partisans who landed on KORCULA on 16/17 June ambushed a party of Germans and killed 32 and wounded 10. It is presumed that the Partisan force has since left the island.

CROATIA AND SLOVENIA

Railway sabotage, mainly on the main East-West lines, has reached a new peak in the last 10 days. The railway bridge at ZALOG P 14 has been blown and the tunnel at the Northern end blocked by demolitions. The railway KRIZ K 97 - IVANICGRAD K 88 is reported to have been cut in 12 places and the CELJE-MARIBOR line to the N.W. has been successfully breached in a number of places. Partisans have seized and are destroying in detail the railway between BJELOVAR A 20 - GARESNICA P 26. Delayed reports from the East tell of terrific damage caused by Partisan saboteurs during the first quarter of June. 50 trucks of cotton were burned at BACKA PALANKA X 67, a troop train was derailed and plunged into the Danube near SREM KARLOVCI and 2 Kms of line, a locomotive and several wagons were destroyed near SREM MITROVICA X 63. Further West a troop train consisting of 12 carriages was destroyed near BANOVCI X 27 and a locomotive and 9 carriages of troops attacked near KUKUJEVCI X 46 causing many casualties.

Enemy troops, reported to be in force, were stated to be on the East bank of the Bosut river near the junction with the Sava. No further news of this concentration has been received nor have any identifications been made. 173 Res Div, last reported in this area with HQ at RUMA has not been mentioned for some considerable time and its continued presence there is queried.

BOSNIA

The German offensive in BOSNIA has proved to be another failure. The recapture by the Partisans of BOS GRAHOVO P 81 during the night 22/23 June has reduced enemy gains to a minimum and the German forces which took part have again suffered in the process of regrouping. A column of 373 Legion Div was attacked on the road from DVAR P 93 - BOS [illegible] and 16 lorries, 2 tanks, 2 guns and 90 men were destroyed or [illegible]. Troop concentrations are again reported, together with a gradual Northward movement, in the BOS [illegible]STROVAC area and are undoubtedly connected with 373 Legion Div.

Two trains were wrecked on the DOBOJ M 28 - TUZLA N 76 line. This line has recently been in use on a reduced scale and is used principally for timber haulage. RIENICA M 54 (not to be confused with RIENIK) was captured by elements of 36 Partisan Div who killed 60 German police in the process.

...To the South...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

To the South the Partisans have gained the initiative and have captured FOCA G 78, USTIKOLINA and GACNICE H 09.

SERBIA AND HERCEGOVINA.

There has been no news of the German drive from the area PLJEVLJA to clear communications to NIKSIC but a concentration of German and Chetnik troops is stated to be in the PODGORICA area. This may portend a double drive into Partisan territory from both North and South. The Bulgarian offensives in the RADAN Mountains J 86 and in the JABLANICA area P 18 have taken on a desultory character. Little headway has been made and only minor clashes reported. Fighting has taken place in the BLACE J 74 area against Bulgars. One enemy relief column was forced back but a second which included some arty succeeded in penetrating into Partisan territory. 2 Bulgarian a/c were shot down in the engagement. An ambush set by MEDIC troops and Cetniks failed at POPSICA K 35 and cost the enemy 120 killed, the greater part being MEDIC troops. Partisans entered LESKOVAC K 20 during the night 16/17 June and burnt 4 small factories, the power station, railway station and petrol stocks. Two locomotives were destroyed together with a quantity of rolling stock, principally tankers. Partisan specialists cut the railway line in 16 places between PROKUPLJE J 93 and KURSUMLIGU J 72 and destroyed two bridges in the vicinity of BRUSNICE J 83.

ORDER OF BATTLE

The manpower shortage in the enemy camp with the subsequent splitting of Divs into battle groups makes a confusing picture when looked at from the point of view of Divisions. Both the SS Mtn Divs have been functioning in two or more battle groups and are now joined by 369 Legion Div. Elements of this formation have been identified on the Dalmatian coast and near ZABLJAK G 94. 13 SS B.H. Div has groups in the TUZLA and SARAJEVO areas while 7 SS Mtn Prinz Eugen appears to be split into 3 groups having been identified in the general areas of TUZLA, MRKAVJICGRAD and SPLIT. 1 Cossack Div is now believed to have moved West into the area recently vacated by 42 JG Div, its duty appears to be the same - that of guarding the ZAGREB-BELGRADE railway at its Western end. 92 Mot Regt has left the SPLIT area and after a short halt in MOSTAR has continued South. It is now believed to be in the GRAHOVO A 95 area. 3,000 German troops are concentrated in the village of VRNJACKA BANJA J 57 which may portend a German drive in this area. No identifications have been made but it is presumed that they are Police troops from 5 Police Regt or 3 Police Volunteer Regt. 1 Jaeger Res Regt last identified fighting with 392 Legion Div is reliably reported as guarding the ZAGREB-KARLOVAC railway. A Turkoman formation has been reported in the SPLIT area.

The Rumanians have again increased their formations on the Russian front by the despatch of the Guards Inf Div and 1 Armoured Div. This brings the total of Rumanian Divs at the front to 16. A further 4 Inf Divs, 2 Cavalry Divs, one Mot div and 2 Independent Bdes remain in the country together with 6 frontier regts and the remnants of seven divs which managed to escape from the CRIMEA.

THE GOTHIC LINE

GENERAL

The "Goten" Line (the Gothic line, Goth line, or the line of the Goths) is the name given by the Germans to the line which runs from CARRARA (P 8706) on the West coast to PESARO (S. 1280) on the Adriatic, and which has hitherto been loosely referred to as the PISA-RIMINI line. This line, which the Germans must defend if they are to retain the industrial areas of LOMBARDY, was chosen as early as last Autumn as the strongest and shortest natural position in North Central ITALY. Here the Appennines swing in a North-West direction and make a formidable barrier between Northern and Central ITALY, a barrier which can be by-passed only on the East coast. The mountains fall more rapidly to the ARNO than they do to the PO valley, and the enemy has taken advantage of this, siting his defences in the valleys and gorges forward of the mountain passes in the same manner as we have previously encountered at RIVISONDOLI, CIFALCO, SUBLACO and BALSORANO.

TRACE

The direct distance between the coast at the head of Peninsula ITALY is less than 150 miles, but the Gothic line shown on a map found at KESSELRING's Headquarters at MONTE SORATTE A 7605, and as interpreted from air photos, winds across the Appennines for about 190 miles. On the West coast the line starts at MARINA DI CARRARA (P 8202) and from here to CARRARA (P 8706) the defences have been fairly well developed. It then runs across the ALPI APUANE (no definite line can be picked up on air photos) to FESCAGLIA (Q 1292), where many machine gun positions can be seen, and cuts the LUCCA-MODENA road at BORGO A. MOZZANO (Q 2293) which has been developed as a strong point. The forward Southern and South-Eastern slopes of M. BARBONA (Q 2790) have been prepared for defence and the next positions visible on air photos are South of PRUNETTA (Q 4395) - PIASTRE (Q 4695). The line continues Eastwards to astride the main road PISTOIA-BOLOGNA South of the PASSO DI PORRETTA (Q 5497) and isolated defences are visible from here across the mountains South of M. LA CROCE (Q 6097) and M. BUCCIANA (Q 6396) and then NE to the area of VERNIO (Q 7299). KESSELRING's map shows the line to run South of VERNIO, but this is not borne out by air photos.

Eastwards from here the line runs to the most strongly defended position in the mountain sector of the GOTHIC Line covering the approaches to the FUTA PASS. The defences are sited in the area of S. LUCIA (L 8101) astride the main FLORENCE-BOLOGNA road and on the minor by-pass road GAGLIANO (Q 8395)-PANNA (L 8200) - S. LUCIA. The FUTA pass itself is situated at the NE end of the MUGELLO depression, through which the river SIEVE flows, where deployment is possible and is facilitated by a network of minor approach roads. Between FLORENCE and this depression neither air photos nor ground sources, apart from some unconfirmed reports, have produced any evidence of defences and the enemy will probably only attempt a delaying action before falling back on his main line. East of the FUTA pass there is no clear indication as to how the line runs but there are a few machine gun positions South of the IL GIOGO PASS (Q 9098) on the difficult winding road from S. PIERO A SIEVE (Q 8589) to FIRENZUOLA (L 9006) and KESSELRING's map shows the line crossing the FLORENCE-FAENZA road North of the important road junction of BORGO S. LORENZO (Q 9088) approximately at CLA DI CASAGLIA (Q 9897). On the FLORENCE-FORLI road the main defences appear to be at SAMBAVELLO (R 0584) covering the tortuous ascent to the MURAGLIONE PASS (R 1285) while a strong-point has been begun at S. GODENZA (R 0884) to counter any thrust across the mountains from the STIA area (R 1570).

On the next road to the East - from BIBBIENA (R 2458) to CESENA (North-West of RIMINI) - air photos reveal much defensive activity around SERRAVALLE (R 2667) where ground sources also report machine gun positions built in mountainside caves, and on the alternative minor roads to the West. Photo cover shows no defences between SAMBAVELLO and SERRAVALLE, but the line will probably follow the M. FALTERONA ridge. The other road to CESENA

...from the SE.....

THIS PAGE IS UNCLASSIFIED

0498

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

from the SE. which joins the main BIBBIENA-CESENA road at RASNO DI ROMAGNA (R 3573) was improved on Mussolini's express orders; astride it minor defences have been built between VALSAVIGNONE (R 4062) and the mountain pass VALICO DI MONTE CORNARO (R 4168).

The S. SEPOLCRO (R 5045) - RIMINI road is defended forward of BADIA TEDALDA (R 5459) and East of this village minor defences consisting almost entirely of machine gun positions are continued in a broken and incomplete line along the hills to the North of the road to LUNANO as far as CAVALLICO (R 7163) where defences are sited to block the approaches to PENNABILLI (R 5972) from the SE. The line on KESSELRING's map swings South of these defences, which have been detected on air photos, and certainly great topographical advantage would be gained by defending these roads at DENTA SPIGNA (R 6155) and in SORBETOLO (R 7257). After LUNANO the defences, still only minor ones and with many gaps, swing NE along the North bank of the FOGLIA river through MONTECALVO (R 9070) to MONTECCHIO, where the anti-tank ditch system starts. The line continues along the URBINO PESARO road at an average distance of about 1,000 yards North of the FOGLIA to the town of PESARO itself which is defended but only by machine gun positions.

STATE OF DEVELOPMENT

The Gothic Line is still far from complete, despite the fact that work was started on it nine months ago. The Todt organisation has been responsible for the construction of the defences but other demands have been heavy, so that work has been spasmodic and slow. It is unlikely that any speed-up took place till the VALMONTONE line was suddenly cracked. The defences as they exist to date have been mostly developed on the two coastal sectors, and South of the FUTA pass on the main road from FLORENCE to BOLOGNA. Apart from the double anti-tank obstacles, one about 7 miles behind the other, on the West coast, the line as interpreted from air photos has very little depth and in that respect resembles the Adolf Hitler line in the LIRI valley. On the coastal sectors, besides the normal coast defences there is an anti-tank wall at CARRARA, reported to be of very poor quality cement, two anti-tank ditches in depth on the West coast, and a broken anti-tank ditch system East from MONTECCHIO (S 0075) to the Adriatic. The only other anti-tank ditch is in the FUTA pass defences. According to ground sources it is of concrete and 2 metres deep and 3 metres wide, and this appears to be borne out by air photos. Mines are naturally difficult to pick out in this hilly country but there is a minefield on both sides of the road forward of the FUTA pass anti-tank ditch, and another minefield extends from the town of CARRARA MARITIMA some 2,000 yards to the N.E., to the railway. On the Adriatic minefields have so far only been detected just West of MONTECCHIO (S 0075). For the rest very little wiring has as yet been detected on air photographs and the defences consist of the usual machine gun and anti-tank pillboxes including the mobile two-man steel pillboxes found at CASSINO and on the Adolf Hitler line, and open weapon pits. A few camouflaged structures of the type which were found on the Adolf Hitler line have made their appearance in the FUTA PASS, and tank turrets mounting heavy anti-tank guns, including Panther turrets, with long 75 mm fixed in a concrete emplacement, will undoubtedly have been incorporated into the defences of the coastal plains, and sited to cover the road approaches to the mountain passes. As they stand only two or three feet above ground level they are difficult to pick up on air photos.

As yet the defences of the Gothic Line have only been developed on the coastal sectors and astride the main roads through the mountains to the Plain of LOMBARDY. Much work has still to be done to complete these defences and to make them part of a continuous line, and it is presumably to gain time for feverish last minute preparations that the Tenth and Fourteenth Armies are fighting so stubbornly South of FLORENCE.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

TOP SECRET

31 May 44.

MESSAGE FROM 14 ARMY (Ops)

TO: 1. 1 Para Corps

2. 76 Armd Corps

3. For information, 371 Harko.

1. The orders of the Corps remain unchanged.

In accordance therewith 76 Armd Corps will surrender on the night of 31/5 - 1/6 at 0000 hours 29 P.G. Div inclusive of all units then under its control to 14 Armd Corps. The new dividing line between 76 Armd Corps and 14 Armd Corps will be the same as the present dividing line between the Hermann Goering Para Armd Div and 29 P.G. Div.

2. On the 1/6 the main task besides the defence of the expected strong enemy attacks with the main thrust between the Alban mountains and the coast, is to clean up at the earliest possible moment the existing breakthrough at the Corps junction between 1 Para Corps and 76 Armd Corps.

To this end I order:

(a) Independently of the Corps boundaries everything must be done by both HQs, the last man and the last available weapon must be directed to the mastery of the position here existing. In such a matter, sector boundaries have no meaning.

(b) It is the job therefore of both HQs to attack along the line of the road 75/26, 75/48 and from the Southwest and/or Northeast in order to close the break in the front and to form a front to the Southeast with a firm union and contact on both sides.

(c) The advanced enemy units in the gap presently existing between the Corps are to be blocked by alarm units etc., After the closing of the gap in the front these units are to be hemmed in and destroyed by a concentric advance.

(d) 76 Armd Corps will support its attack from 75/46 to the Southwest with tanks which will be made available, to which are to be allotted infantry in at least Coy strength. 1 Para Corps will assemble all units available for the attack, most possibly one bn of the Assault Regiment in the area 75/39 in order to thrust in the direction of 75/47. The allotment of some assault guns is to be sought. For the security of the area Northwest and West of M. ARTEMISIO, 76 Armd Corps will employ an Armd Recce Company on the road both sides of 75/22 which by constant patrolling will impede a crossing of the ARTEMISIO by further enemy units. Further a thrust forward by way of 75/22 to 75/26 by further Armd Recce troops is to be carried out in order to secure the road 75/13, 75/26. 2nd Bn 1059 Gr Regiment will be placed under command of 76 Armd Corps and will be employed for the cleaning-up of the breakthrough in 1 Para Corps.

3. A report on the measures undertaken on the basis of this order is to reach me at latest at 0700 hours on 1/6.

(sgd) von MACKENSEN

(14 Army (Ops) No. 2338/44).

TOP SECRET.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

APPENDIX 'A' TO HQ AAI INTELLIGENCE SUMMARY NO. 52 DATED 6 JULY, 1944.

MESSAGE FROM 14 ARMY (Ops)

TO: 1. 1st Para Corps
2. 76 Armd Corps
3. For information, 371 Harko +

1. It remains the task of the Army to impede the enemy breakthrough to ROME until stronger forces of the 10th Army can come up for the relieving attack. The performance of this task is of decisive importance for the whole conduct of operations. It requires the extracting of the utmost from every man and every weapon, in order that the appointed task may be achieved. I expect and know that my men as previously that have fulfilled all that was required of them, will defend themselves fighting grimly to the last.

2. It is the task of 1 Para Corps to impede an enemy breakthrough on the 3rd June. To this end the Northeastern flank of the Corps is to be drawn back on to the general line 95/33 - 95/41 - East bank 95/48 (to be decided here by the officer in charge of operations) - 75/12 - 75/11 - 36/64. Junction with 76 Armd Corps will be effected at 36/64.

The Tank Company of 29 P.G. Div is to be pulled out on the 2 June at dusk and brought over to 76 Armd Corps at ref point 36/39 where 76 Armd Corps will take over control of the Company.

The Staff of 4 Para Div with 2 bns and as many artillery troops as possible is to be withdrawn from the front line on the 2/3 June and brought up as early as possible on to the general line 36/22 - 36/39 with its centre on the Via Cassilina so that it may bring to a standstill as far as possible to the East any further advance of the enemy. Rapid frictionless performance of the movements is of decisive importance in order to gain as much ground as possible to the East.

3. It is the task of 76 Armd Corps to impede a breakthrough between the general line 36/64 (junction here with 1 Para Corps) and 67/43. Its centre will be along the Via Cassilina.

The following will be sent up to the Corps during the night of 2/3 June and placed under its command:

(a) Tank Coy, 29 P.G. Div from 1 Para Corps (see para 2)

(b) Field Replacement Bn, 29 P.G. Div from Army to ref point 36/39 then to be taken up by 76 Armd Corps.

(c) Field Replacement Bn, 362 Infantry Div from Army likewise to ref point 36/39, there to be taken up by 76 Armd Corps.

(d) Two newly formed companies of 715 Infantry Div by direct agreement with the latter.

(e) The available trucked infantry of 715 Infantry Division which likewise will be brought up to 36/39 and are there to be incorporated into the two Field Replacement Bns of 29 P.G. Div and 362 Infantry Div.

(f) All available units of 334 Infantry Div which arrive.

4. Above all, deep echeloned anti-tank strongpoints are to be formed to counter the enemy tank thrusts. The employment of all available Engineers for the rapid establishment of minefields is more important than their employment in an infantry role. Every man will defend himself where he is placed as long as he has ammunition and is capable of fighting.

(sgd) von MACKENSEN
(14 Army (Ops) No. 2380/44).

THIS PAGE IS DECLASSIFIED IAW EO 13526

SHIPPING

With our advance Northward the enemy has been forced to abandon the port of SAN STEFANO and as suggested in last week's Summary PIOMBINO is now probably his most Southerly port on the West coast. It is questionable whether PIOMBINO will remain active very much longer. On the East coast, with the withdrawal of his left flank, it is probable that the enemy will shortly abandon SAN BENEDETTO, if he has not done so already. ANCONA will then be his most Southerly East coast port.

Lately there appears to have been some increase in KT ship activity along the West coast. While not more than 6 or 7 of these ships appear active, they are fast and have a cargo capacity of about 400 tons and are therefore a very useful adjunct to the more common supply barges and F-boats which carry on an average probably not over 125 tons.

Raids this week on shipping have been light. On 8 June an E-boat was damaged North of ELSA and two hits scored on a destroyer at PORTO FERRAIO the following day. One or two barges were also damaged off the West coast. On 13 June ships at LEGHORN intended to be used to block the port were attacked with at least partial success. Fuel installations at PORTO MARGHERA and TRIESTE were successfully bombed and also drydocks and shops at POLA, where enemy submarines are apparently based.

3. BALKANS

GREECE

The enemy has begun mopping up operations in the PREVEZA-ARTA area. Clashes between German troops and ELAS have taken place at LOUROS W89 and PHILIPIAS W99, a German column at MAKRINOROS was forced back on ARTA. A German attack in the Lake INIAS vicinity was repulsed by ELAS who claim to have inflicted 69 casualties on the enemy. 400 ELAS, mostly armed and including the C.O. of ELAS 24 Regt, have deserted to EDES in the ARTA area. For some time small groups of ELAS andartes have been coming over to EDES but this is the first report of an organised mass defection.

ALBANIA

The attack on the Partisan bridgehead between HIMARE and PIGERAS has developed from both North and South. Enemy progress to date has been slow and may be regarded as a recce in force rather than an offensive. German troop concentrations are reported in the villages of KROPISHTI, MAVROVA and DRASHOVICA, all in QM04, and similar concentrations are stated to be based on DELVINE R48 and SARANDE R38 in the South. Two new L.N.C. brigades have recently been formed. The 12th is stated to be operating in the BERAT area but no location has been given for the other, the 15th.

JUGOSLAVIA

DALMATIA

The recent Allied attack on BRAC was made with the intention of drawing off German reserves which may otherwise have been diverted

2. ENEMY SUPPLIES AND COMMUNICATIONS

This week there is no indication suggesting that the enemy has been able to improve his administrative position. Rail interdiction continues effective and disruption of road communications serious. MT movement South from BOLOGNA across the Appennines now appears heavy, and while troop movements will account for some of this, at least part is probably supply traffic. As yet incomplete claims for day air attacks against enemy MT total 948 destroyed and 870 damaged for the week 7/13 June, raising the grand total since 12 May to 5038 destroyed and 4849 damaged. The highways traversed by our advancing armies are littered with burnt out vehicles, silent witnesses of the efficiency of air attacks. Apart from PW reports of MT shortage, the destruction of dumps, and the continued abandonment of supplies and equipment (including a taxi with German Army license plates), the enemy's lack of MT is indicated by two recent reports stating that all civilian MT in the provinces of LOMBARDY and PIEDMONT are being requisitioned. The enemy is also suffering losses in horse-drawn vehicles. On 9 June for example, 44 were claimed destroyed and 11 damaged. There is no definite information this week on the enemy supply position, but it undoubtedly continues very difficult. Shortage of ammunition is indicated by light enemy artillery fire. Presence of abandoned equipment may well indicate a lack of fuel and not only a shortage of MT to tow it. There are several reports that the enemy has been forced to live off the land or eat horse meat since regular rations were not available; this was due more to distributional difficulties than actual shortage.

RAILWAYS

From 7 to 10 June at least one of the lines inland from the East coast was open as far as FOLIGNO and PERUGIA with only one break between PERUGIA and TERONTOLA South of which the main Central line was open as far as ORVIETO. On 10 June, however, the main line running S.E. from BOLOGNA to the East coast was blocked at FAENZA, RIMINI and FANO and since then there have been no indications of activity over this route. On the Central system a line was open from BOLOGNA to PONTASSIEVE on 6 and 7 June since when all lines South of BOLOGNA have been closed.

In the North, heavy attacks on the marshalling yards at TRIESTE and MESTRE on 10 June have curtailed the volume of traffic entering ITALY from the East, whilst in the West, though there has been a certain increase in traffic South from TURIN, there has been no indication of any increase in the volume of traffic from FRANCE. There was a definite drop in activity on the BRENNER-BOLOGNA line early in the week, but traffic was picking up again by 12 June.

Complete photographic reconnaissance has recently been made of an important new railway by-pass on the BRENNER route which enables through traffic to and from GERMANY to avoid BOLZANO thus obviating two crossings over the river Isarco but including a new bridge over the river ESA. Work on this by-pass was first revealed by photographs in August 43. The line should shortly be ready for single track working and some stretches of the by-pass, which is about 2½ miles long, already have double tracks.

THIS PAGE IS DECLASSIFIED IAW EO 13526

to the Bosnian offensive against Tito's GHQ. The action can be considered a success in so much as 2,000 enemy troops landed at SUPETAR during the night 5/6 June. As reported in last week's Summary the Allied force began to evacuate on 4 June and the Partisans some 30 hours later. Known German casualties number 350 but it is thought that the total will be considerably higher. On the night 9/10 June a small Allied force with light guns landed on SOLTA Island. After shelling enemy positions near GROHOTE the force withdrew before first light. The principal object of the raid was to increase the enemy's state of uncertainty in the islands adjacent to VIS. No estimate could be made of enemy casualties but our own force was evacuated intact.

Heavy MT movement from SPLIT to IMOTSKI, MOSTAR and CAPLJINA is reported. Reports indicate that it may be that of 92 Mot Regt, last located in the DVAR area. The KRKA bridge, recently completely destroyed by Spitfires, is being replaced by a pontoon bridge. This bridge carries all traffic between SURADIN and SIBENIK on the main North-South road.

CROATIA AND SLOVENIA

Following Tito's appeal to Jugoslav Partisans to go over to the offensive, the Partisans in the North, already renowned for their railway sabotage, have redoubled their efforts and a veritable spate of train wrecks have been reported. During the night 3/4 June the railway line between KRIZ K 97 and IVANICGRAD was torn up in 95 places and 600 metres of track was removed from the DUGO SELO K89 VRBOVEC E80 line some days earlier. Between 26 May and 1 June 5 locomotives, 46 waggons of war material were destroyed and 150 Germans killed on the ZAGREB-BELGRADE line and extensive demolitions made on the stretch DUGO SELO-NOVSKA F34. So serious had the rail situation become that the enemy were reported to be removing sections of the railway KRIZEVCI E91 - KOPRIVNICA to repair the main East-West lines. The Partisans have captured MIRNA PEC to the NW of NOVO MESTO and in spite of fierce counter attacks have retained their hold on TREBNJE D80 thus denying the railway to the enemy.

BOSNIA

Reports from BOSNIA have shown that the situation is still confused but that the German offensive is slowly petering out. It was reported that the Partisans had recaptured most of the villages in the SRNETICA mountains but a later report states that the enemy is still in possession of RIBNIK L14, BUSIJE L23, POTOCI L03, BRAVSKA L05, and JASENOVAC L05. It appears that the main enemy force is regrouping on BOS PETROVAC leaving a number of small battle groups in the villages whose aim will be to keep the road communications clear for further action. Further to the East and SE German columns are pushing forward to GORNJI VAKUF from BUGOJNO and TRAVNIK from JAJCE and DONJI VAKUF. A column from the SS Prinz Eugen Div is stated to have arrived in TRAVNIK after escaping from a Partisan ambush. The regrouping in the BOS PETROVAC area was considerably hampered by Partisan ambushes. A Mot column was attacked between VRTOCE P76 and BOS PETROVAC on 5 June. 15 MT were burnt by the Partisans who killed some 150 enemy. Next day another column was attacked with equal success at OSTRELJ P94 and another "Prinz Eugen" column which was moving from BRAVSKA to BOS PETROVAC suffered heavy casualties. The SS Prinz Eugen Mtn Div is reported to have suffered about 30% casualties in the last month's fighting. In an effort to relieve the situation in Central and Western BOSNIA the Partisans launched a general offensive to East and NE from the high ground NE of TUZLA. Partisan brigades

...are advancing.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

are advancing to the DRINA and SAVA rivers in the face of fierce resistance. LOPARE W91 (NOT on 500,000 map) was captured by the Partisans on 8 June. 350 Germans were killed and considerable booty, said to include 50 half tracked vehicles, 8 guns and 10 ambulances, was captured. Up till 10 June enemy losses in this offensive are reported to be 650 killed and many wounded.

SERBIA

A highly successful attack was carried out by Partisans on the airfield of LESKOVAC during the night 2/3 June. 2 hangers, 4 aircraft, 20 MT, petrol and ammunition dumps were destroyed and casualties inflicted on the German garrison. This action would appear to confirm reports that the enemy garrison in LESKOVAC had been considerably reduced. The railway between KRALJEVO and KRUSEVAC was cut in two places causing considerable delay to enemy traffic.

ORDER OF BATTLE

I Mtn Div appears to be back in its old location near the Albanian-Grecian frontier. Elements are reported in SKOPLJE, BITOLJ and even in KORCA while an unconfirmed report states that the Div HQ has gone to ATHENS and will be followed by the other elements shortly. The most likely area would appear to be somewhere between KORCA and JANINA where the Div could relieve the over-extended 104 Jg Div of part of its commitments.

2 Brandenburg Regt is reported to be in the SJENICA-PLEVLJE area where a number of enemy troops are concentrated. There have been persistent reports of a new arrival in the PALANKA X57 area. A large German force, said to be about divisional strength, arrived at the beginning of June from OSIJEK and set up Hq at GAJDOBRA X58. 4,000 troops with much MT are in NOVA and BACKA PALANKA and state they had come from RUSSIA. An unconfirmed report states that this formation may be the SS Div Gross Deutschland which was last located on the Southern Russian front.

1. ENEMY SITUATION

By the end of last month it was clear that the enemy could not afford to try and hold much longer the unprepared position running East and West through Lake TRASIMENE, which a German reporter referred to as "the new line of defence across ITALY". The speed of the Allied advance along the coast North from GROSSETTO, the heavy casualties suffered West of Lake TRASIMENE and the expensive counter-attacks which the enemy has had to put in in an attempt to seal off penetrations of his positions have further whittled down the already depleted enemy forces. The few days gained by the delaying action have given badly needed time for last minute efforts to improve the defences of the Gothic Line, but it is questionable whether the cost has not been too heavy, for Kesselring is now going to find it more difficult than ever to find sufficient troops to man the line as well as the Gulfs of GENOA and VENICE. Losses have been particularly severe amongst the better divisions which have had to be constantly switched from one threatened sector to another.

On the Western coast where 19 G.A.F. and 162 Turcoman Div had been singularly unsuccessful in trying to stem our advance, 26 Pz Div had taken over from 162 Div by the 27 June and was holding a 20,000 yard front with 1027 G.R. and 314 G.R. under command. On the 29th the Div was back on the R.Cecina and covering the approaches to VOLTERRA with 1027 G.R. between M. RILALDO Q 2624 and PONTE GINORI STA Q 3521, 314 G.R. on its left to just short of SALINE STA Q 4124, 9 P.G.R. stretching from here to Pt 96 Q 4820 and 67 P.G.R. on the extreme East flank holding up to CERBAIOLA Q 5315. In addition 26 Pz was supported by some of the artillery of 162 Div and by 764 Bty, and 26 Recce was in divisional reserve with 2 Mk IVs and 2 Mk VIs under command. An indication of the heavy casualties suffered by this division is that the fighting strength (i.e. excluding all admt personnel) of the Tk Regt was less than 100 all ranks on the 29 June.

.....Despite .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Despite strong resistance Allied troops crossed the river, though on 1 June 26 Pz Div was still trying to restore the situation and regain the original line. A counter-attack made an initial advance of 1,000 yards but was driven back. On the right of 26 Pz Div, 19 G.A.F. Div is now holding a narrow sector with a regimental group of 16 SS Div composed of 35 SS P.G.R. and part of the divisional Engineer and Recce Bns on the coast itself. CECINA was occupied on the morning of 1 July but 35 SS P.G.R. reacted strongly and put in several unsuccessful counter-attacks on the town. At the time of going to press Allied forces have pushed forward some 10-12 Kms beyond the CECINA and VOLTERRA is being outflanked on the West and East. East of 26 Pz Div 3 P.G. and 20 G.A.F. Divs both now very weak, have been steadily giving ground, conforming with the withdrawal of 26 Panzer Div. Further East again to exclusive SIENA the main weight has been taken by 29 P.G. Div while at least a battle group of 90 P.G. Div has probably also been forward though there has been little contact with the Div.

West of Lake TRASIMENE, where the enemy had fought so hard to stabilise on the line South of CASTIGLIONE W 4295, there was a general withdrawal on the night 28/29 June, and next morning the village was occupied. Although prisoners were taken from 115 P.G.R. East of the lake on 2 July, most of 115 P.G.R. had moved round to the West side by the end of last month, and had taken over the responsibility for the main road North to CORTONA and AREZZO. This did not result in the relief of 1 Para Div, badly in need of a rest (III Bn 1 Para was reduced to one weak Coy 30 strong on 29 June) nor of 334 Div which has lost heavily recently (another 90 prisoners were captured on 30 June), but merely caused these divisions to side-step to the West. Consequently both have held sectors of only about 5,000 yards. Hermann Goering Div withdrawing North through SINALUNGA has also been on a comparatively narrow front. 1 Bn 4 Para Regt was involved in fairly heavy fighting on the 30 June, but that evening Hermann Goering, 1 Para and 356 Divs were all making preparations to go back to a line S.W. of CORTONA, which was to join up with the Gustav position where 4 Para Div was covering the approaches to SIENA. That the withdrawal could not have gone entirely to plan is indicated by the fact that on 1 July BRAUER (O.C. 2 Coy 4 Para Regt) was complaining of a 5 Km gap between his Coy and Hermann Goering on the right. However for the past three days the enemy has made no real attempt to stand, pulling back each night, and relying on heavy demolitions to slow up our progress. CORTONA was occupied on the 3rd but contact with 15 P.G. and 305 Inf Div was lost. By the 4th our leading troops were 5 miles S.W. of AREZZO. SIENA was cleared early on the 3rd but progress beyond the town was stiffly opposed by 4 Para Div presumably to cover the withdrawal of those divisions to the East which are moving back along the FLORENCE axis.

East of Lake TRASIMENE where our pressure has not been so strong, 305 Div assisted by a weak regimental battle group from 94 Div, and 44 Div have made a more leisurely withdrawal, only showing signs of anxiety when we captured M. ACUTO R 6210 and M. MURLO R 5708 on the 3rd. Both 2 and 3 Bns 134 Regt, now 150 and 120 strong respectively, were put in to counter attack and succeeded in retaking the summits of both hills. East of the Tiber 114 Jaeger Div has had a relatively quiet time. On the Adriatic 71 and 278 Divisions which had been holding the Chienti river to just South of MACERATA, withdrew on the night of 30 June. A captured map showed the next position - the ELFRIEDE Line - to run behind the POTENZA continuing S.W. to RAMBONA,

.....S 4409 and then....

THIS PAGE IS UNCLASSIFIED

0507

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

S 4409 and then presumably joining up with the TRASIMENE position. The enemy however made no attempt to hold the line and withdrew North of the river. Contact was made again in the area of LORETO S 6828 and OSIMO S 5833 and the enemy is apparently trying to hold here while the demolitions in ANCONA which started on the 3 July are completed. Another captured map shows a further line running S.W. from the coast at S 6543 to IESI 3937 and then to S 3036, with the divisional boundary between 278 and 71 Divs through MACERATA and CASTEBELLINO S 3034.

It is surprising that the enemy has still not yet made up his mind to go back to the Gothic position. The divisions in the line are so seriously weakened that they have barely any reserves left with which to counter attack. The elements of 19 divisions are forward, but their present fighting strength must be equivalent to less than half that number. Of the remaining 9 in ITALY, 92 may have been disbanded (certainly 1059 G.R. was used to reinforce 19 GAF and 334 Divs, and 1060 G.R. has also been split up), 362 Inf Div which had to commit two bns last week, is probably reforming, 162 Div also appears to have gone back leaving a regiment and divisional troops with 26 Pz Div, while 65 and 715 Divs have been out of the running for some time and are almost certainly being refitted. 16 SS Reichsfuehrer appears to be strung out along the coast from North of LEGHORN to the front line, looking both South and out to sea. Coastwatching in the SPEZIA area, according to a PW, is 135 Fortress Bde controlling 905, 906 and 907 Fortress Bns. Despite the identification of elements of 42 Jaeger Div, probably only getting battle experience, the division is still believed to be in the GENOA area. In view of the extremely heavy traffic reported arriving from TARVISIO and moving through MILAN to the ALESSANDRIA area during the last week of June, it can be safely assumed that another formation has arrived, probably an infantry one. Reports have mentioned that the troops have come from RUSSIA. Together with 188 Reserve Mtn Div in ISTRIA, Kesselring will then hardly have more than the equivalent of some 15 divs to man the Gothic line and to guard his two sea flanks. This allows him to dispose of very few reserves. Kesselring's only source of further reinforcements seems to be the Balkans, where a reshuffle still appears to be going on, which might result in the release of two divisions if their place can be taken by training units or tired formations undergoing a refit. Without some reinforcements he is going to be hard put to it to hold the Northern Appennines.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

On the Italian West coast the main line has remained out at three places between GENOA and SPEZIA during the past week whilst between SPEZIA and PISA the number of cuts rose from four on 28 June to seven on 2 July. West of GENOA the coastal line was also cut near IMPERIA on the 28th and N.E. and North of SAVONA, where there are important oil dumps, on the following day. The line from PARMA to SPEZIA was open on 28 June, but was blocked again on 30th, since when it has not been opened again. The PISA-LUCCA-PISTOIA and the PISA-EMPOLI-FLORENCE lines which surround the enemy's main dumping area have both been cut at several places since 27 June in the case of the former and 29 June in the latter case.

The BOLOGNA-PISTOIA line was open on 28 June, but has been blocked just North of PISTOIA ever since. The BOLOGNA-PRATO main

..line was open...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

line was open on 28 June and again on 1 July since when it has remained open. South of FLORENCE the main line has been open as far as MONTIVARCHI all week. The BOLOGNA-RIMINI line was open on 27 and 28 June but was cut SE of RIMINI on the 29th; on the next day there were four additional cuts between RIMINI and FORLI and the line is now blocked between BOLOGNA and IMOLA, FORLI and RIMINI, RIMINI and FANO and South of FANO. The line from FAENZA to FLORENCE was open from 27 to 29 June, but the branch from BORGO to PONTASSIEVE remained blocked; since 29 June traffic along this line to both PONTASSIEVE and FLORENCE has been stopped by a number of cuts in the area of BORGO S. LORENZO. The line inland from FANO via FERMIGNANO has been cut at one or more places all week.

For at least five days during the last week it will have been possible for the enemy to push trains as far South as MONTEVARCHI, whilst the BOLOGNA-ANCONA line was open for the first three days of the week, and there is no reason to believe that the enemy will not have made good use of these opportunities to follow his usual policy of moving supplies as far forward by rail as possible, even into Divisional areas. At the same time accumulation of dumps in the PISA-LUCCA-PISTOIA-EMPOLI area and the heavy concentration of flak in this area and along the two lines running South from BOLOGNA to the FLORENCE area would seem to indicate that the majority of trains arriving from the North are being unloaded between BOLOGNA and FLORENCE and along the two Central lines between FLORENCE and PISA.

Whilst traffic over the BRENNER has been normal during the past week, there has been a definite decrease in the volume of traffic entering ITALY from the East, especially over the TREVISO-MESTRE-FERRARA-BOLOGNA route. In the West, activity at ALESSANDRIA indicates that supplies are being carried to GENOA, probably for shipment Southwards. There was also a certain amount of activity on the important lateral line PIACENZA-PARMA-BOLOGNA-RIMINI during the early part of the week, and the marshalling yards at RAVENNA, which is now the chief port of intake for enemy supplies on the East coast and has important oil installations, have also been active.

As was to be expected the enemy is demolishing the railway lines as he retires. Thus all bridges have been blown on the main line South of FLORENCE between BUSINI and AREZZO and on the dead-end line running North from AREZZO to PRATOVECHIO, 25 miles due East of FLORENCE.

SHIPPING

While ports on both East and West Italian coasts are active there has been a definite decrease in the volume of shipping in the past two weeks. We are now within about 10 miles of ANCONA and LEGHORN and demolitions at both these ports have presumably been completed by the enemy.

At ANCONA no active shipping was present on 3 July but to the North a few small vessels were at RIMINI (about midway between ANCONA and PORTO CORSINI) from which a coaster departed some time between 30 June and 3 July. While some shipping may still be proceeding to East coast ports South of PORTO CORSINI, port facilities between there and ANCONA are poor and the bulk of supplies coming down the East coast are now probably unloaded in the PORTO CORSINI-RAVENNA canal. Supplies are also evidently moving up the Po river from the sea, F-boats having been observed some time ago up the canal running from the PO to FERRARA where there is a considerable concentration of dumps.

....On the West coast...

THIS PAGE IS UNCLASSIFIED

0509

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On the west coast active shipping has been picked up as far South as VIAREGGIO and it is quite probable that at least some moves on down to MARINA DI PISA at the mouth of the Arno. SPEZIA continues the most active port South of GENOA, but how much unloading is done here is problematical; in any event no large build-up of supplies in the SPEZIA area is indicated in view of the fact that it rests almost exactly on the right flank of the Gothic line.

3. BALKANS

ALBANIA

It is now apparent that the greater part of the Partisan forces in the HIMARE-PIGERAS bridgehead managed to escape encirclement during the recent German offensive. Regrouping has taken place and sporadic fighting is reported from the PERMET area. PWs from 523 Gren Regt of 297 Div were taken during the night 29/30 June in the area North of HIMARE. There are indications that elements of 1 Mtn Div are leaving ALBANIA and concentrating in the area of FLORINA.

JUGOSLAVIA

Partisan attacks on the Island of KORCULA and BRAC on 21 June added a further 250 casualties to 118 Jg Div's heavy list. 200 killed are claimed on KORCULA and 20 killed and 17 wounded on BRAC. The enemy is fortifying the coastal strip VODICE U 46 PRIMOSTEN U 54 ROGOZNICA U 53 and bringing up more heavy artillery. No definite change has taken place in the enemy order of battle and the recent heavy movements appear to have been routine reliefs of garrisons.

Fighting has taken place in the SISAK area and it appears that another enemy drive to clear the area SISAK J 33 UGULIN J 93 is under way. Further to the North, in the VIROVITICA D 95 area, Police SS troops have launched attacks against the Partisans, presumably in retaliation for the Partisan sabotage on the CELJE-MARIBOR railway. Strong columns of enemy are reported to be clearing the GROSPULJE-NOVO MESTO railway. Heavy fighting is reported from W. BOSNIA. Some 1,600 troops, including Cetniks and Germans, failed to capture BOS GRAHOVO on 25 June. A number of enemy tanks managed to enter the town but were later repulsed and driven back to the railway KNIN U 79 TISNOVIC P 71.

In MONTENEGRO fighting has centred around the towns of BERANE H 50 and BIJELO POLJE H 42. German intentions appear to be to keep open the area North and East of the line BERANE-PLJEVLJA H 26 by a series of holding attacks.

Nothing new has been received from the JASTREBAC area and this drive by the Bulgarians seems to have petered out in exactly the same way as all previous drives. BRUS J 55 was captured by Partisans on 24 June who secured large quantities of arms and material. The radio station at NIS was destroyed together with the adm store during the night 21/22 June by Partisan specialists.

ORDER OF BATTLE

Persistent reports of troop arrivals in the ZAGREB area

....have been received....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

have been received. 12,000 Mtn troops from the CRIMEA area are stated to be in SAMOBOR (15 m West of ZAGREB); other reports assess this concentration as high as two divs. Elements of 13 SS Div B.H. are stated to have moved N.E. into the SREM (between the SAVE and the DANUBE) from the MAJEVICA area and are now placed along the railway TOVARNIK-RUMA. A new command, Befehlshaber Syrmien (or SREM) has been reported with H.Q. at VUKOVAR X 19 on the DANUBE. It is stated to control 173 Res Div and 606 Sicherungs Regt.

In 18 P.G. or 18 P.G. SS div is stated to have been in the ZAGREB area but to have moved into HUNGARY during the German occupation of that country. This is probably 18 SS Div and is still believed to be in HUNGARY. 1 Brandenburg Regt has moved from SKRADIN, near SIBENIK, and is now located further North West on the coast in the BIOGRAD sector. This move, together with the reported change-over of 892 and 891 Regts of 264 probably gave rise to the recent spate of rumours of formations leaving the Dalmatian coastal strip for ITALY. NEDIC representatives are stated to have arrived in the BACKA (the country NE of BELGRADE annexed by HUNGARY in 1941) and are recruiting the local Serbians. All males between the ages of 18 and 41 are stated to be liable for service. Rumour, which is to some extent verified by the above, states that HUNGARY has returned the BACKA to SERBIA.

4. ENEMY METHODS

Reproduced at Appendix 'A' are two of the last orders issued by von Mackensen, G.O.C. 14 Army, before the fall of ROME. It is interesting that as late as 2 June the German Higher Command had no intention of giving up ROME.

BRIGADIER,

APPENDIX 'A' TO HQ AAI INTELLIGENCE SUMMARY NO. 52 DATED 6 JULY, 1944.

MESSAGE FROM 14 ARMY (Ops)

TO: 1. 1st Para Corps
2. 76 Armd Corps
3. For information, 371 Harko. +

1. It remains the task of the Army to impede the enemy breakthrough to ROME until stronger forces of the 10th Army can come up for the relieving attack. The performance of this task is of decisive importance for the whole conduct of operations. It requires the extracting of the utmost from every man and every weapon, in order that the appointed task may be achieved. I expect and know that my men as previously that have fulfilled all that was required of them, will defend themselves fighting grimly to the last.

2. It is the task of 1 Para Corps to impede an enemy breakthrough on the 3rd June. To this end the Northeastern flank of the Corps is to be drawn back on to the general line 95/33 - 95/41 - East bank 95/48 (to be decided here by the officer in charge of operations) - 75/12 - 75/11 - 36/64. Junction with 76 Armd Corps will be effected at 36/64.

The Tank Company of 29 P.G. Div is to be pulled out on the 2 June at dusk and brought over to 76 Armd Corps at ref point 36/39 where 76 Armd Corps will take over control of the Company.

The Staff of 4 Para Div with 2 bns and as many artillery troops as possible is to be withdrawn from the front line on the 2/3 June and brought up as early as possible on to the general line 36/22 - 36/39 with its centre on the Via Cassilina so that it may bring to a standstill as far as possible to the East any further advance of the enemy. Rapid frictionless performance of the movements is of decisive importance in order to gain as much ground as possible to the East.

3. It is the task of 76 Armd Corps to impede a breakthrough between the general line 36/64 (junction here with 1 Para Corps) and 67/43. Its centre will be along the Via Cassilina.

The following will be sent up to the Corps during the night of 2/3 June and placed under its command:

(a) Tank Coy, 29 P.G. Div from 1 Para Corps (see para 2)

(b) Field Replacement Bn, 29 P.G. Div from Army to ref point 36/39 then to be taken up by 76 Armd Corps.

(c) Field Replacement Bn, 362 Infantry Div from Army likewise to ref point 36/39, there to be taken up by 76 Armd Corps.

(d) Two newly formed companies of 715 Infantry Div by direct agreement with the latter.

(e) The available tracked infantry of 715 Infantry Division which likewise will be brought up to 36/39 and are there to be incorporated into the two Field Replacement Bns of 29 P.G. Div and 362 Infantry Div.

(f) All available units of 334 Infantry Div which arrive.

4. Above all, deep echeloned anti-tank strongpoints are to be formed to counter the enemy tank thrusts. The employment of all available Engineers for the rapid establishment of minefields is more important than their employment in an infantry role. Every man will defend himself where he is placed as long as he has ammunition and is capable of fighting.

(sgd) von MACKENSEN
(14 Army (Ops) No. 2380/44).

Note + 371 Harko is Cond of 14 Army Artillery.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

31 May 44. TOP SECRET

MESSAGE FROM 14 ARMY (Ops)

TO: 1. 1 Para Corps

2. 76 Armd Corps

3. For information, 371 Harko.

1. The orders of the Corps remain unchanged.

In accordance therewith 76 Armd Corps will surrender on the night of 31/5 - 1/6 at 0000 hours 29 P.G. Div inclusive of all units then under its control to 14 Armd Corps. The new dividing line between 76 Armd Corps and 14 Armd Corps will be the same as the present dividing line between the Hermann Goering Para Armd Div and 29 P.G. Div.

2. On the 1/6 the main task besides the defence of the expected strong enemy attacks with the main thrust between the Alban mountains and the coast, is to clean up at the earliest possible moment the existing breakthrough at the Corps junction between 1 Para Corps and 76 Armd Corps.

To this end I order:

(a) Independently of the Corps boundaries everything must be done by both HQs, the last man and the last available weapon must be directed to the mastery of the position here existing. In such a matter, sector boundaries have no meaning.

(b) It is the job therefore of both HQs to attack along the line of the road 75/26, 75/48 and from the Southwest and/or Northeast in order to close the break in the front and to form a front to the Southeast with a firm union and contact on both sides.

(c) The advanced enemy units in the gap presently existing between the Corps are to be blocked by alarm units etc., After the closing of the gap in the front these units are to be hemmed in and destroyed by a concentric advance.

(d) 76 Armd Corps will support its attack from 75/46 to the Southwest with tanks which will be made available, to which are to be allotted infantry in at least Coy strength. 1 Para Corps will assemble all units available for the attack, most possibly one bn of the Assault Regiment in the area 75/39 in order to thrust in the direction of 75/47. The allotment of some assault guns is to be sought. For the security of the area Northwest and West of M. ARTEMISIO, 76 Armd Corps will employ an Armd Recce Company on the road both sides of 75/22 which by constant patrolling will impede a crossing of the ARTEMISIO by further enemy units. Further a thrust forward by way of 75/22 to 75/26 by further Armd Recce troops is to be carried out in order to secure the road 75/13, 75/26. 2nd Bn 1059 Gr Regiment will be placed under command of 76 Armd Corps and will be employed for the cleaning-up of the breakthrough in 1 Para Corps.

3. A report on the measures undertaken on the basis of this order is to reach me at latest at 0700 hours on 1/6.

(sgd) von MACKENSEN

(14 Army (Ops) No. 2338/44).

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The general withdrawal which began again along the whole front at the end of last month came to a halt about 5 July. At that time enemy resistance stiffened along a general line running from the West coast about 10 Kms N of CECINA, through VOLTERRA to some 4 Kms South of POGGIBONSI, to CIVITELLA R 1528, crossing the CHIANA Valley about 6 Kms S.W. of AREZZO and swinging S.E. along the hills overlooking the valley to M. CASTIGLION MAGGIO R 3221; it then followed a less definite line through the mountains to MONTONE R 6420, GUBBIO R 8419 and reached the Adriatic sector at FILOTTRANO S 4727 and OSIMO S 5833. The enemy has shown every intention of trying to hold along this line and has counter-attacked fiercely every Allied advance. In the West ROSIGNANO Q 1430 was the scene of heavy street fighting for two days until troops of Reichsfuehrer div (16 SS) were finally ejected. VOLTERRA itself was not held, but the enemy was in strength on the commanding hills on either side, and it was only on 9 July that the town was captured. In the face of many counter-attacks by 26 Pz Div Allied forces have now penetrated 9 Kms beyond the town to the West and have reached LAIATICO Q 3537 and are 4 Kms North of CASTELLINA Q 2330. The advance in this sector represents the greatest gain of the past week. Enemy artillery and mortar fire have been heavy in support of counter-attacks, usually put in by about a company of infantry and a few tanks. The fact that hill 380 Q 5831 changed hands four times in one day gives some idea of the stiffness of the fighting, and it was here that as many as 20 tanks were launched in a counter-attack on the evening of 8 July.

Between COLLE d'ELSA Q 6730, scene of more heavy counter-attacks by the enemy, and the Tyrrhenian sea the enemy has made some readjustment of his dispositions. There has been no contact with 19 GAF Div and instead 36 SS P.G.R. and 9 PGR have been identified in the area previously held by the division. It appears therefore that 26 Pz Div has edged West and that the whole of 16 SS Reichsfuehrer is now committed in the line, with both regiments up - earlier reports that there was a third regiment in the division appear to have been correct, but recent prisoners have stated that it has been disbanded to provide reinforcements for 35 and 36 PGRs and in particular to bring the Recce Unit up to strength. The whereabouts of 19 GAF Div are unknown, but it seems very probable that a direct exchange of responsibility with 16 SS Div may have

....been effected.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

been effected, and that it is now combining coastwatching North of LEGHORN with reorganisation after its recent heavy losses. 26 Pz Div, which according to various prisoner statements received about 600 reinforcements (mostly Volksdeutsche) on 24 Jun, is still bearing the brunt of our attack, and elements of 1059 G.R. have made their appearance in its sector, while 2 Bn 1060 G.R. has been identified in 90 P.G. Div's area. (It is now not so certain that these regiments of 92 Div have been broken up as was suggested in last week's summary). East of 26 Pz Div 90 P.G. Div has been involved in the heavy fighting round VOLTERRA, with the remnants of 20 G.F Div (this division has lost heavily), supported by 362 Fusilier Bn on its left. There is no evidence of any other units of 362 Div having been brought down, and the division is still probably reforming in the rear areas. A captured map shows 29 P.G. Div with 1 and 2 Bns 71 P.G.R. in the line West of S. ANDREA Q 6729, with the third bn back covering RACCIANO Q 5934.

East of the POGGIBONSI road to AREZZO the divisions in the line remain the same, reading from West to East, 4 Para Div, said to have been reinforced by 100 Italian Parachutists, 356 Div, apparently on a fairly broad front, Hermann Goering Div, 1 Para, 334 and 15 P.G. Divs. The last four divisions have been very sensitive to any attempt to advance on our part and show no sign of giving up the dominating ground they now hold. On 5 July the parachutists were making preparations to stay for several days and on the 6th showed their intentions were quite clear by asking for more entrenching tools to be sent forward. 1 Bn 4 Para Regt put in a 2 Coy attack on pt 514 R 1125 and succeeded temporarily in retaking the height. 334 Div, which despite recent losses continues to fight well, tried unsuccessfully to recapture TUORI R 1929 on 5 July. The enemy artillery, including 17 cm and Nebelwerfer fire, benefiting from good observation, has been heavier and better coordinated on this front than for some time past. A captured Operation Order of 15 P.G. Div dated 3 July shows the boundary between this Div and 305 Inf Div to run from just West of AREZZO to M. LIGNANO R 2827. In the mountains North of Lake TRASIMENE and West of the Tiber 305 Division, supported by a regimental group of 274 Regt (reduced to two weak Coys according to PW), and 44 Div have been withdrawing without holding any position for long. Prisoners taken on 11 July on M. CIVITELLA R 4325 state that the enemy is withdrawing to route 73. East of the Tiber following the capture of UMBERTIDE we pushed on to reach MONTONE R 6421 on 7 July which was held against several counter-attacks, I Bn 741 G.R. losing the better part of one complete Company in attempts to recapture the village. The enemy reacted strongly to our swift advance to PIETRALUNGA R 7329 and 114 Jaeger Div put in several counter-attacks to retake the village.

On the Adriatic 278 Div has fought hard to retain OSIMO S 5832 and FILOTTRANO S 4727, and only gave up both towns after a bitter struggle. The enemy shows every sign of trying to deny us ANCONA as long as possible and he is still forward of his last remaining line covering the Port, which a captured map shows to run from the sea at S 6543 across to IESI 3937. 278 Div though it has lost heavily (on 5th July 350 PW were claimed and the prisoner total is now not far short of 1,000), has had various additional units under command which accounts for the stiff defence it has put up. 676 Landesschuetzen Bn and 903 Fortress Bn have both been identified by prisoners, and a captured Order shows 924 Fortress Regt to be also under command. Of 71 Div little has been seen, though 211 G.R. lost a prisoner at FILOTTRANO, where the boundary with 278 Div appears to run.

.... As long as the .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

As long as the enemy considers there is something to be gained by holding South of the Gothic Line he will continue to resist as stubbornly as he is doing at present, in unprepared positions, but on ground of his own choosing. The main factor which must tell in favour of the present policy, however costly, is that it is giving time for the Gothic Line to be developed. Air photographs do not show any very startling progress, though work is going on chiefly in the area North and North East of FLORENCE. How long it will be before the line is ready to be manned is difficult to judge: obviously the officer PW who said that the enemy must hold at all costs South of the line only till 1 July was over-optimistic as to its state of preparedness. Opinions of recent prisoners as to how long the present positions must be held have varied between a week and a fortnight - one week has already elapsed and we have made penetrations at the Western end. The enemy will clearly only go when pushed back and even then will almost certainly try to delay us again before reaching the Gothic Line, probably along the banks of the Arno West of FLORENCE and in the hills N.W. and North of AREZZO.

The other chief factor is reinforcements, for as was pointed out last week the enemy is reduced to the bare minimum. There is a possibility, as yet unconfirmed, that another division in addition to the one reported to have reached Northern ITALY at the end of June, may also be on the way. 103 Recce Unit was apparently unable to find billets just North of BOLOGNA as this area had been reserved by 10 Army for 23 Div. This is the first mention of this div, identified until recently in RUSSIA, and it is possible that there is some confusion with the other unidentified division, which appears to be concentrating just North of GENOA. Reports continue to be received of troops and equipment arriving daily via the BRENNER and TARVISIO but these are probably reinforcements to build up battered formations. Reference has been made to a formation which is being refitted in ROMAGNA, which may well be either 65 or 715 Div, both of which have now been out of the line for some time. In any case these divs as well as 92, 162 and 362 are undoubtedly preparing and reccing positions in the Gothic Line, a task which has presumably also fallen to 3 P.G. Div now that it has been withdrawn. A captured map, undated, shows a concentration area for 29 P.G. Div astride the BOLOGNA-PISTOIA road between VERGATO L 6926 and PORETTA L 5812. Whether this area still holds good remains to be seen, but presumably the enemy formations will take up position in the new line in much the same order from East to West as that in which they withdraw.

2. ENEMY SUPPLIES AND COMMUNICATIONS

In the past week the most important development has been our success in creating a very pronounced increase in the disruption of the Northern Italian railway system. Blocks have been achieved on the BRENNER route and on at least one of the three lines coming from the North East, and as of 11 July in the general area PISA-GENOA-PIACENZA-VERONA-FERRARA-RIMINI-FLORENCE-PISA there were no less than 60 rail cuts. While this degree of rail interdiction is not to be minimised, it must be remembered that with the rather dense network of lines in Northern ITALY it is extremely difficult to block all lines simultaneously, and without simultaneous and continuous blockage of all lines no immediate effect on the enemy's administrative position can be expected. Thus, while many rail blocks existed on 11 July, there still remained two routes over which the enemy could move through traffic well down towards the FLORENCE area.

.....However, what are.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

However, what are probably the most vulnerable links in this entire rail system, the Po river bridges, were attacked on 12 July. All rail bridges from PIACENZA, inclusive, East to the Adriatic, with the exception of the one near CREMONA, are thought (PR confirmation is lacking at time of writing) to have been rendered impassable. This, combined with several other cuts in the area MODENA-FIDENZA-PIACENZA-MODENA and between GENOA and SPEZIA, completely isolates, from the point of view of through rail traffic, the forces now falling back on the Gothic line. If we can destroy the CREMONA rail bridge and the road bridges across the Po (some of the road bridges which are part of or very close to the rail bridges have already been destroyed) the consequences may be far-reaching.

Our attacks against enemy fuel supplies, from major installations like PLOESTI to relatively minor dumps in ITALY, continue unabated. While the overall effect of these attacks is difficult to assess, it is apparent that in this theatre, and undoubtedly elsewhere, the immediate effect has been the institution of stringent economy measures which will play a definite part in tactical, and probably strategical, decisions. Our attacks on railway lines further aggravates this situation in compelling the use of M.T.

66 The rail bridge across the PO just South of ADRIA (G 4708) comes to a dead end, a short distance South, at ANANO (M 5397) and is therefore not here included.

RAILWAYS

The main lateral lines of the Northern rail system are the MILAN-VERONA-VENICE line running from East to West and the MILAN-BOLOGNA-RIMINI line running NW-SE. The most important North-South routes are the BRENNER line, which branches off at VERONA with lines running South to BOLOGNA and FLORENCE and Southwest via MANTUA and PARMA to join the West coast railway near SPEZIA, and the lines entering ITALY from the East via TARVISIO, PIEDICOLLE and POSTUMIA, which connect with the MILAN-VENICE lateral line and feed South via FERRARA. In the West the main port, GENOA, is connected by trunk lines with MILAN and the Swiss passes to the North and with TURIN and the Mt CENIS (or MODANE) and RIVIERA lines into FRANCE. These main lines are interconnected with a rather large number of single-track railways. The most vulnerable points in this system are, generally speaking, where they cross the frontier and the Po river.

Air attacks on this system began on 5 July when the bridge over the TAGLIAMENTO at CASARSA, on the main UDINE-TREVISO line was destroyed and the line cut at PORTOGUARO (between POSTUMIA and MESTRE), whilst the MILAN-RIMINI line was blocked S.E. of PIACENZA and at FIDENZA and FORLI; the PARMA-SPEZIA line was blocked at four points. By 10 July the MILAN-RIMINI line was cut in thirteen places, cuts being fairly evenly spaced out throughout the length of the line. The VERONA-BOLOGNA line was blocked North and South of OSTIGLIA (near the Po) and just North of BOLOGNA. The VERONA-PARMA-SPEZIA line was cut South of MANTUA and at eight places between PARMA and SPEZIA. The line connecting BOLOGNA with the N.E. was blocked North of BOLOGNA and both lines from BOLOGNA to FLORENCE via PRATO and PISTOIA were cut. In the N.E. the bridge at CASARSA probably remains cut and in the West the main coastal line is cut at thirteen places between IMPERIA and PISA. Bridges were also demolished North of FIDENZA,

....South of SUZZARA.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

South of SUZZARA, West of FERRARA and South of RAVENNA, whilst the Mt CENIS line is reported to have been destroyed by guerillas West of TURIN in the VAL DI SUSA. As indicated above the Po river bridges are now also cut.

SHIPPING

Little change is evident in either the East or the West coast shipping picture. Both LEGHORN and ANCONA have now definitely been abandoned. Ships continue to push on as far South as MARINA DI PISA on the West coast; on the East coast most of the shipping appears to be moving no further South than MARINA DI RAVENNA though an occasional move to ports further South is apparent. The West coast ports continue quite active, particularly SPEZIA. Attacks this week have included raids on SESTRI LEVANTE, SPEZIA and MARINA DI PISA on the West coast, while ports attacked on the East coast include MARINA DI RAVENNA, CATTOLICA, PESARO and SENIGALLIA.

3. BALKANS

ALBANIA

Regrouping of Partisan forces continues in the area to the South of VALONA. German troop movements show a steady trend to the North and North East with FLORINA as concentration centre. On 1 July an enemy column made an attempt to reach KORCA N 05 from BERAT M 37 but it was held at DARDHE N 04 where it has since remained. Two German columns were attacked on the TIRANA-ELBASAN-KORCA road and many vehicles were destroyed. It is of interest in connection with this move that the port installations at DURAZZO have been blown up by the Germans who for some time have been saying adieu to the local population. To the South the Germans are stated to have evacuated KONISPOL R 45, DELVINA R 48 and SARANDE R 37 and to be concentrating in DHOLIANA R 87 and DELVINAKION R 78. German troop movements are also reported from LARISSA to SALONIKA. In part these moves may be attributed to normal regrouping after the recent operations but the choice of FLORINA and SALONIKA as concentration centres points to German uneasiness over the Bulgarian situation.

JUGOSLAVIA

Fighting has continued in W. BOSNIA. BOS GRAHOVO P 91 remains firmly in Partisan hands in spite of many counter-attacks by the enemy who employed tanks, arty and mortars. DVAR P 93 has been turned into a German strong point holding some 2,000 troops. Sorties by the enemy from this town in the direction of STRMAJA L 02 were repulsed and heavy losses inflicted. Troop concentrations in the towns and villages on the route South to KNIN U 79 suggests that the enemy is about to make further efforts to re-open the KNIN-GRAHOVO-DVAR - PETROVAC P 95 road. German columns from LJUBIJA L 09 moving South on to SANSKI MOST L 17 suffered heavy casualties on 4 July and were forced to withdraw. Identifications from 373 German Croat Div were obtained in this engagement. In Northern BOSNIA the Partisans captured DERVENTA G 00 (15 Kms S of BROD) but were later forced out by superior German forces from BROD and DOBOJ M 28. The enemy suffered about 500 casualties and lost large quantities of equipment in this engagement. Many important installations were destroyed including the railway station and nine bridges. The town was later bombed by Allied formations with excellent results. In the BIJELOPOLJE H 42 area the Partisans have improved their

...positions and now.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

positions and now hold the village of OBROV on the East bank of the river LIM directly opposite BIJELO POLJE. German troop concentrations are reported in PRIJEPOLJE H 46 and GARAZDE B 90 which may portend further enemy thrusts to the South and West.

369 R.U. was in the KALINOVIC R 54 area on 5 July and was pushing East to FOCA with the task, in conjunction with elements of 24 SS Regt, to clear the road to GORAZDE.

In SERBIA a number of minor clashes have taken place. 21 Partisan Div which captured BRUS J 55 last week, has driven the enemy Westwards to a line running roughly North and South about 15 and 33 Kms West of BRUS and KURSUMLIJA J 72 respectively.

A German document giving details of a cover plan has fallen into Allied hands. Formations will be frequently moved, false unit signs and numbers will be displayed and an impression of strength created by deception. The capture of this document throws some light on the spate of confusing reports regarding troop movement which have arrived recently.

Fairly sound sources have reported the setting up of a second MOSLEM SS Div on the lines of 13 SS BH Div at RAJEVO SELO W 94 in the Eastern Sava basin. 13 SS BH Div may well be providing cadres for the formation of the new Div. A Brandenburg Regt is reported to have moved from BOSNIA to the BOS GRADISKA-OKUCANI area on the main ZAGREB-BROD railway. This almost certainly refers to 4 Brandenburg Regt which was previously reported in the vicinity of DRVAR. 55 Cossack Engineer Bn has been identified in SLAVONIA. This probably forms the engineer unit of 1 Cossack Div. It is believed that the main part of 1 Cossack Div is still in the ZAGREB-SISAK area but separate battle groups are operating to the East near OSIJEK. 19 Fort Inf Bn of the 999 series has been identified on MLJET island; two further bns of this series are known to exist. 18 Bn suffered serious casualties in the recent air raids on WIENER NEUSTADT while on route for JUGOSLAVIA while 20 Bn is said to be forming at BAUMHOLDER near FRANKFURT am/m. No further news has been received about the new arrivals in the ZAGREB area but it is evident from reports that a new division is being formed from elements of the cut up CRIMEA Divs.

Coastal Raiding Patrols.

The Coastal Raiding Patrols (Kuestenjagdkommandos) are now known to work in close connection with the enemy intelligence organisation, and in particular 214 Abwehr Tp, HQ SIBENIK, under command of Capt KONRAD. Army units in the area, in this case 264 Div, have to supply men for raiding patrols who act under the guidance and instruction of the Abwehr Sec. Training centres have been set up in each regt sector, namely ZATON for 891 Regt, SIBENIK for 892 and TROGIR for 893. Troops of 369 Div have also been trained. The armament is normal inf with, if necessary, demolition equipment.

The patrols are in the main defensive but in the event of large scale Allied landings Cetniks in Partisan uniform are intended to infiltrate into the beachhead and recce the area for sabotage parties.

-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

Three attacks on the left, centre and right of the line which the enemy has been holding so stubbornly have driven him from his delaying positions. APPEZZO was the first bulwark of the line to fall, ANCONA followed and a few hours later American troops entered LEGHORN. The movement of the German reinforcements into ITALY which has so far brought in five fresh divisions since May has been in part reversed and one division is now in process of leaving; but even this minor tribute to the success of the Russian offensive is balanced by the greatly increased arrival of drafts for Kesselring's more battered formations.

On the West coast it is now confirmed that 19 GAF division has been withdrawn and 26 Pz Div has moved West so that its sector is now immediately adjoining that of 16 SS Division. We have not had any contact, either, with 20 GAF Division and in its former sector, East of 90 PG Division, 3 P.G. Division has reappeared in the line after being out for only about a week. It is striking evidence of the fierceness of the fighting in this sector and the extent of German losses that these two divisions, among the most recent arrivals in ITALY, have had to be pulled out; it may well be asked whether the Luftwaffe still disposes of sufficient spare personnel to reform both of them. Apart from these changes the enemy dispositions on the Fifth Army front remain the same and they have been putting up a stiff fight; on the 14th July the French celebrated the fall of the Bastille by capturing the euphonious and strategically important POGGIBONSI, but they were very violently counter-attacked by 4 Para Division and also by 356 Division and the fortunes of the battle appear to have fluctuated sufficiently to cause the Germans to believe, or at least to claim, falsely, that they had recaptured the Southern part of the town. On 18 July a rapid advance was made up to the Arno at PONTEDERA which outflanked LEGHORN. Resistance remained stiff to the West of this salient but the Germans were eventually forced to surrender this vital port.

On 8 Army front enemy dispositions have remained the same with one significant change; Hermann Goering division is leaving or has been withdrawn from the line and replaced by 715 div, prisoners from which were taken on 17 July. There had been plenty of rumours of the relief of Hermann Goering div among prisoners, and MT traffic in the divisional

....rear areas.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

rear areas had been heavy but the division was still there, and apparently still fighting on 17 July. The indications are that it is being withdrawn not only from the line but from ITALY and its destination is believed to be the Eastern front. Since the early months of 1943 the Reichsmarshall's own division, then only recently formed, has been engaged in the Mediterranean theatre, in TUNISIA, SICILY and ITALY; with the Russian advance now threatening the very frontiers of the Reich the division is called to a sterner clime; it may yet have the opportunity of defending KARINHALL itself.

The attack on AREZZO on 15 July began with an assault on the two dominating features of M. CAMARCINO and M. LIGNANO; their fall, which was hotly contested, sealed the fate of the town and by the night of 15/16 July, 33 Arty Regt was already moving back up the BIBBIENA axis to the new MLR; that this runs North of the Arno may be judged from the fact that our seizure intact of the bridges at R 221374 by light forces, who overran the German demolitions squad, drew no particular reaction from the enemy. Further to the West 1 Para Div on the night of the 15th was talking of INNSBRUCK and KOHLENKLAU which are probably their names for the IRMGARD and KARIN lines which a captured map from the Goering sector shows as running along roughly the 40 and 45 Northings respectively. The withdrawal apparently came as a surprise to the parachutists at least as on the previous day they had been getting out a "patrolling programme" for the 14th to 22nd July. They have throughout the retreat shown a most aggressive spirit even though Coy strengths have fallen as low as e.g. 62 for 3 Coy 4 Para Regt on 14 July; however if the report of 1,000 parachutists in the FLORENCE area on 12 July is true they may be getting some reinforcements.

East of AREZZO 114 Jaeger Div has extended its front Westward, being relieved by 5 Mtn Div, and now probably has only one bn East of the Tiber. Further East still our attack on ANCONA begun on 17 July made good progress; over 500 prisoners were taken from all units of 278 Div including the C.O. of I Bn 993 and his Bn H.Q. ANCONA fell on 18 July.

There are no new identifications to report from further North; the German division which is said to have arrived in North ITALY still remains anonymous but there are now definite reports of the arrival of the Italian SAN MARCO division, equipped and trained in GERMANY. It is not certain whether the Italians who are reported as collaborating with the Germans in the SAVONA area belong to this division or not. On the East coast there is a report of a German division arriving at PESARO on 13 July; presumably a battered division retiring there to refit. It was reported last week that two divisions were refitting in the ROMAGNA; if one of them, as was then suggested, was 715 Div, it may now have been replaced by another division in need of refitting. A prisoner from I/1059 G.R. shows what is going on in this part of the world; he came from WILDFLECKEN in BAVARIA with a division which was being set up there as a new formation; it was originally intended for the Russian front, or so they judged from the winter equipment with which they were issued, but in the middle of June they were suddenly despatched to the RIMINI-RAVENNA area. Here one regiment was left behind and the other was split into three March Bns and at least the Bn to which he belonged moved South and combined with the remains of I/1059 to bring that unit up to full strength again. The regt which was left behind, and possibly also the other two bns, may well have been used to reinforce 715 Div; deserters from I Bn 735 say that 90% of their bn was composed of men from the WILDFLECKEN division. This supports the idea that the ROMAGNA area is used as a convalescent depot for the resuscitation of battered formations; it has the obvious advantage that divisions reforming there can also be used to protect the Eastern flank of the Gothic Line.

It cannot be long now before we make contact with the Gothic Line, though Kesselring will try to make it as long as possible and will use the line of the Arno to the full as a delaying position. The German withdrawal has been skilfully managed so as to preserve a continuous line and almost all formations are now about equally distant from the sectors they may be expected to occupy in the line. It remains to be seen whether the time gained has resulted in so great an improvement in the defences as to compensate for the losses in men and equipment incurred.

2. ENEMY SUPPLIES AND COMMUNICATIONS

RAILWAYS

This week has been notable for the destruction of the PO river bridges by our air attacks which began on 12 July. As of 18 July all of the nine rail bridges from TORREBERETTI (SW of MILAN at J 8122) to the Po delta, with the possible, but doubtful, exception of the OSTIGLIA (F 7512) bridge, were impassable. This degree of destruction built up rather rapidly from apparently only one bridge on the 12th to four on the 13th and by the 16th all but two of the nine mentioned above had been destroyed. As usual our bridge-bombing had been accurate. These bridges are very probably impossible for the enemy to repair owing to their great length of span.

South of the Po no through traffic has been possible across the Appennines throughout the week with the possible exception of one day when the BOLOGNA-PRATO line to FLORENCE may have been open. Exclusive of the destroyed Po bridges there are now, as there were last week, about 60 cuts, many being bridges, in the area FLORENCE-GENOA-PIACENZA-FERRARA-RIMINI-FLORENCE and this condition has remained substantially the same for about the past two weeks. This does not include the line FLORENCE-PISA on which the enemy has executed demolitions. Within this area only between BOLOGNA, OSTIGLIA, FERRARA and RAVENNA will the enemy have been able to use the railways to any appreciable degree and up until recently it is probably in the area encompassed by these towns that he will have had his railheads. His railheads must now be considered as being located North of the Po. However there appears to be some shuttle traffic to the South which the enemy, based on what happened in Central ITALY, is likely to make every effort to continue in order to relieve strain on his MT.

While there are only four rail blocks, all at bridges, North of the Po these have prevented through traffic from MILAN to either the BRENNER or the routes entering ITALY from the North East since 15 July.

SHIPPING

Though ANCONA and LEGHORN had been inactive for at least a week before capture, shipping on the West and East coasts, particularly the former, continues. With GENOA as their port of origin vessels are moving as far South as VIAREGGIO, where three F-boats and two barges were seen on 15 July, but no activity has been noted this week in the Arno estuary, and in view of our advance it is undoubtedly no longer in use. Outside of GENOA, SPEZIA is definitely the most active port; the two KT ships, fourteen F-boats and thirteen supply barges located there on the 17th are typical of the traffic now making use of this port. Some of the small ports between SPEZIA and GENOA are also in use. On the East coast the volume of movement appears quite small and there is essentially no change in the shipping picture here this week.

3. BALKANS

ALBANIA

Following reports of demolitions carried out by the enemy in SARANDE and DURAZZO harbours comes the report that the Southern end of the main jetty at VALONA has been blown up. It is not thought that these demolitions portend an eventual withdrawal by the enemy but may be regarded as a defence measure to prevent port installations falling into the hands of an invading force. Partisan activity has not in any way decreased since the recent German offensive in the South and clashes are reported in the DELVINE R 48 and ARGYROKASTRON M 40 areas. North Eastern ALBANIA, for long a comparatively quiet area, has been the scene of scattered

.....fighting.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

fighting. Partisan strength has greatly increased by the influx of the brigades which escaped from the South. 1 Partisan Div is stated to have crossed the river Shkumbin and is now operating together with Macedonian Partisans in the area NE of TIRANA.

JUGOSLAVIA

There has been some enemy activity in the Dalmatian islands. 200 enemy troops landed on ULJAN on 9/10 July and are believed to have searched the island for deserters; 400 mixed German and Domobran troops landed on IZ on 10/11 July. Spitfires on patrol attacked this landing and destroyed a siebel ferry and another craft. Allied commandos raided HVAR on the night 11/12 July and withdrew after successfully carrying out their tasks.

On the mainland fighting has centred round GOSPIC P 15 and the Partisan airfield at KRBAVSKO POLJE P 36. The Partisans captured PERUSIC P 16 but were forced to withdraw in the face of powerful enemy reinforcements. The enemy pressed on and later captured the airfield. To the North better success attended the Partisan efforts; DELNICE J 64 RAVNA GORA J 74 and many other villages to the East of FIUME were captured and casualties inflicted on the enemy. LJUBREG A 04 near the Hungarian frontier was entered by Partisans on 6 July but the town was later surrounded by enemy columns from KOPRIVNIKA and the Partisans suffered heavy losses before they were able to break out.

In BOSNIA the Partisans launched a surprise attack on TESLIC M 06 and routed the 6th Domobran Regt. 65 enemy were killed and 350 taken prisoner. Much booty, including two guns and 10 mortars, fell into Partisan hands. The combined German-Bulgarian offensive in the JASTREBAC Mountains appears to have petered out though powerful enemy forces are still concentrated in the area.

ORDER OF BATTLE

Various sources have reported 5 SS Mtn Corps in the OSIJEK area. No report of this HQ leaving the MOSTAR area has been received and the formation in OSIJEK may well be a new Corps HQ designed to control the newly formed Moslem Div and the forces in the SREM. 96 Jaeger Div is reported to be in the ZAGREB area under 69 Corps. It is suggested that this is a mistake for 98 Inf Div which was last identified in the CRIMEA. It is stated that troops of 369 Legion Div wear a badge consisting of three oak leaves on their left sleeves, as well as the red/white chequered Croat shield on the right. If this report is true it may indicate that this formation has been upgraded to Jaeger status. A large German H.Q. has been reported in NAGYATAD in HUNGARY; no clue to its identification has been given. There have been continued reports of troop movements through OSIJEK into HUNGARY but here again no identifications have been made.

-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The impetus of the Polish attack which outflanked ANCONA and threw 278 Division back in considerable confusion carried our Allies well beyond the ESINO river to just South of the MISA. The violence and speed of the attack took the enemy by surprise and reinforcements in the shape of a bn from the Wildflecken Div (the division which supplied a complete regiment around which was rebuilt 715 Div, were hurried in by sea to MARINA S 5149. But even clearer evidence of the enemy's nervousness about this flank was his decision to move part at least of 1 Para Division to the East coast. This division, the most trusted in ITALY, would hardly be switched across unless the enemy appreciated a very real threat in this sector. A deserter from 3 Para Regt who reached our lines on 22 July stated that 1 Para Regt had already left by then, and the regiment has certainly not been identified on its original front since that date. On the 23rd 1 Bn 4 Para Regt instructed one of its companies to send a N.C.O. as guide to the Adriatic. But the move is evidently a slow business because elements of the Regt were still in the line three days later. As yet there is no sign of the third regiment moving. Although the temporary pause in our advance on the Adriatic does not make the transfer of the parachutists a matter of such urgency as at one moment seemed necessary, the relief in the Arno valley in the face of our continuous attacks obviously requires careful tying up and cannot be executed rashly. There is nothing to show that any new troops are taking over, so presumably 334 Division must be side-stepping Westwards into the parachutists' sector as it withdraws up the valley. Though this division is considerably reduced in strength, the enemy presumably appreciates that the formidable hill mass of the PRATO MAGNO which separates 334 Div from 15 P.G. Div withdrawing up the BIBBIENA axis, constitutes a sufficiently strong natural barrier to secure the division's left flank and allow it to take over more ground to the West. Meantime the enemy will probably try to give those units of 1 Para Div which have already been pulled out a much needed rest and hold them back in the PESARO area, only sending them forward if 278 Div shows signs of disintegrating under renewed Allied attacks.

In the mountain sector troops of 5 Mtn Div have been finally driven out of GUBBIO R 8419 and after a stiff fight CITTA DI CASTELLO R 5731 was seized with heavy losses to 114 Jaeger division. From here we have been able to exploit more quickly up the Tiber which broadens out into a plain at this point and are now drawing near SAN SEPOLCRO R 5045

.....from the South.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

from the South and South West. In the hills North of AREZZO 305 Inf Div has now apparently absorbed into its regiments the oddments of 94 Div which it had under command, and prisoners say that the latter division is now reforming near RAVENNA. In the Arno valley N.W. of AREZZO the enemy has been clinging doggedly to the lines which were named on a captured map IRMGARD and KARIN. On the road to RIBBIENA 15 P.G. division still stands on the former but further West the capture of CASTIGLION R 2140 drove the right flank of the division back to KARIN. The capture of TERRANUOVA R 0543 and S. GIOVANNI R 0044 has likewise pushed 334 and 1 Para Div respectively back to a modified KARIN line, but further West the striding of M.S. MICHELE Q 8943 has punched a hole in this part of the line and the enemy is having to withdraw to the next position called LYDIA, which appears to run West from FIGLINE Q 9650. The attack on M.S. MICHELE apparently struck the divisional boundary between 715 Div and 356 Div. 715 Div which took over from Hermann Goering was thrown into some confusion. It contains only about 10% of the original division and has not made a very good impression on its reappearance.

In the last few days good progress has been made South of FLORENCE and both 356 and 4 Para Divisions have suffered fairly heavy casualties in an attempt to slow up our advance. There was sharp fighting for M. DOMINI Q 8846 and for FABERICA Q 7548, but on the 24th we made deep penetrations into the enemy's delaying positions causing both divisions to fall back during the night. On the 25th opposition was not so severe and our leading troops forced their way to within 10 miles of FLORENCE, destroying three Tiger tanks from 508 Tiger Bn. Tac R at midday saw fires and explosions in the area between FLORENCE and PISTOIA, which suggests that after the heavy fighting of the last few days the enemy may be foreseeing the necessity for a more hasty withdrawal.

On the West coast the enemy has been driven North of the Arno between the mouth of the river and S. MINIATO, Q 4659, and activity is now chiefly confined to patrolling and shelling while both sides regroup for the next stage. The enemy lay-out has altered here for 65 Division has reappeared in the line after an absence of some six weeks. In this time it has been reformed from the OST PREUSSEN Div, apparently another division like Wildflecken which was sent to ITALY late in June to make good some of Kesselring's heavy losses. It is still too early to make any just appreciation of the division's present fighting qualities, but if the recruits are of the same quality as Wildflecken the division stands a good chance of repeating its previous failures and suffering a third disastrous defeat. At the present it is in the line between 16 SS Div, still on the coast, and 26 Pz Div which has shifted East of PONTEDERA. This regrouping has resulted in 90 P.G. Div going into reserve again and it is now located near PRATO Q 6680 where it is available to come to the assistance of 4 Para and 356 Divs if they get into serious trouble.

Of the other divisions drawn out of the line 94 is said to be refitting in the RAVENNA area, and to its South another battered formation (162 and 362 would both qualify) arrived about 13 July to take over from 715 Div. Whichever of these two divisions is not on the East coast is presumably in the central part of the Gothic Line, reforming and assisting in the construction of defences. The two G/F Divs are unlocated, but one at least will be needed for coast watching North of 16 SS Division and the other may be employed in chasing Partisans in the hills behind.

The Fascist radio announced on 25 July that GRAZIANI and MUSSOLINI had recently inspected the Monte Rosa Alpine, the San Marco and the Littorio Divs in Southern GERMANY. Mussolini told the first of these that they would be the first "to see the sky and the sun of the fatherland". The San Marco Div was reported last week as having reached LIGURIA, so that the Monte Rosa Division should also have arrived. If it has been trained, as its name suggests, in mountain warfare it may well move into the Ligurian Alps or the Appennines. There is no news yet of the Littorio Div; but there have been several reports of preparations being made to pass five divisions over the BRENNER and also of Italian troops arriving in the PIACENZA area.

.....As there are.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

As there are no signs of any more German formations being sent to Kesselring's assistance all these reports may be connected with the arrival of these Italian formations which have been reformed and trained in GERMANY. To what extent they have been reequipped with modern German weapons, how good their state of training and how reliable their fighting qualities, remains to be seen.

2. ENEMY SUPPLIES AND COMMUNICATIONS

Our air attacks this week have again been directed against the PO River road and rail bridges. One development of importance is the extension of the line of rail interdiction westward to the TURIN area. The two lateral routes connecting MILAN and TURIN with Northeastern ITALY have also been cut.+ These blocks, with others South of the PO, combine to divide Northern ITALY into a number of compartments which, from the point of view of through rail traffic, are inaccessible to each other. It is evident that under these circumstances the enemy is forced to turn to M.T. for the movement of both troops and supplies. However, the PO River presents a barrier to the movement of M.T. as well as trains. All of the PO road bridges (many of which are of pontoon construction and hence easily knocked out) from PIACENZA inclusive to the PO delta are thought to be destroyed. Under these circumstances the enemy must either sail supplies up the river from the sea by boat,ø ferry across the river, repair the old bridges or build new bridges. Information on PO river-shipping is scanty and none is available on ferrying activity; it would appear that no appreciable amount of supplies are being moved by either of these means. On the other hand there has been considerable activity in connection with getting road bridges across the river. (Damage to the rail bridges is, or soon should be, such as to make it impossible to repair them for a matter of months.) Between PIACENZA and the Adriatic activity appears chiefly concentrated from VIADANA (L 2699) Eastward to FICAROLA(L 9998). This is quite logical as it is into this area that the BRENNER railway and the railway lines from the Northeast feed. It is also through this area that supplies from the many dumps in Northeast ITALY (see schematic map of enemy dumps at end of this summary) will move to reach the front. However, with the exception of the OSTIGLIA crossing (F 7411), no bridges appear to have been completed as of 25 July. The situation at OSTIGLIA bridge is rather interesting and appears to be as follows. This is a steel-truss combination road and rail bridge, 1710 feet long with seven spans of 235 feet each (These figures are typical of the main PO bridges and hence their vulnerability; spans of this length over open water require a long time to replace.) The portion of this bridge carrying the road has been destroyed, and while the portion carrying the railway may be passable all rail lines leading to the bridge and its approaches have been blocked. The enemy have therefore converted the rail bridge to a road bridge; on 23 July PR revealed that this improvised road bridge was in use by road traffic.

....The full effect.....

+ That these lateral routes are of importance to the enemy is suggested by the fact on the main MILAN-VERONA line the enemy is attempting to circumvent the broken bridge at DESENZANA (F 2858) by rebuilding a short hitherto-abandoned loop line to the South of DESENZANA.

ø The PO is navigable to 600-ton shallow-draft vessels from the delta to at least as far as its confluence with the MINCIO at F 6314.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The full effect of this disruption of his L of C is yet to be felt by the enemy. So far there has been no indication that he is running short of supplies, but if he is forced to fight all-out at the front and his dumps South of the PO are subjected to heavy attack a shortage is very likely to develop. Another, and equally important factor, is that when we drive him out of the Gothic line and he is forced to withdraw across the PO it is going to be difficult for him to evacuate any appreciable portion of his heavy materiel across the river.

RAILWAYS

During the past week the air offensive against the North Italian railway system has been successfully maintained. Of the seven bridges over the R. PO between PIACENZA (inclusive) and the ADRIATIC coast, six have been either completely destroyed or continually blocked, and the bridge at OSTIGLIA on the VERONA-BOLOGNA line, which was blocked from 21 to 23 July is now the only one open.

South of the R. PO on the main or PIACENZA-BOLOGNA-RIMINI line four bridges have been destroyed between PIACENZA and PARMA, and one South of FORLI; the line from PARMA to SPEZIA has been cut South of BORGO di TARO and a bridge destroyed at AULLA and both lines South from BOLOGNA, to PRATO and PISTOIA, have remained blocked, the former by a cut North of VADO and the latter by a destroyed viaduct at PITECCIO. A bridge has also been destroyed between CASALMAGGIORE and PARMA, and another at SABBIONETTO on the loop line from REGGIO EMILIA to MODENA, whilst the track was cut at CARPI on the MODENA-MANTOVA line. No through traffic across the Appennines has therefore been possible.

North of the PO bridges have been destroyed at DESENZANO on the main line West from VERONA, just North of MANTOVA blocking the lines to PESCHIERA and VERONA and between MANTOVA and CREMONA. Tracks have been destroyed East of MANTOVA, at ROGARA, LEGNAGO and South of MANTOVA. This damage has blocked all routes of access to the OSTIGLIA bridge and prevented any through East-West traffic.

In the NE the bridge over the R. TAGLIAMENTO at CASARSA destroyed some time ago, probably remains cut. In the North West a bridge over the PO at BOFFALORA has been destroyed blocking the main MILAN-GENOA line, and another at VALENZA on the NOVARA-ALESSANDRIA line. The lines connecting GENOA and TURIN have been blocked by the destruction or blocking of bridges at ASTI, ALBA, OVADA and South of ALESSANDRIA; and a bridge has been blocked at CHIVASSO between TURIN and MILAN. Partisans in NW ITALY have also been active of late against rail communications and have succeeded in closing the MONT CENIS pass for considerable periods.

On the Coastal route into FRANCE a bridge has been destroyed West of ARENZANO, between GENOA and SAVONA, and another at IMPERIA. Further East between GENOA and SPEZIA there were reports that the line was open about 23 July, but this is doubtful. In any event PR of the 25th showed five bridges out on this stretch.

SHIPPING

There is no change in the shipping situation this week.

INSTALLATIONS

At Appendix "A" is a map showing the general lay-out of enemy fuel and ammunition dumps.

Of the fuel dumps, two-fifths are concentrated in the area East of PIACENZA and South of the R. PO where they are dispersed along the roads and railways giving access to the Gothic Line along the general line of the

PIACENZA-BOLOGNA-RIMINI railway, and at the main ports of intake, SPEZIA on the West coast and RAVENNA on the Adriatic. There are also a certain number of fuel dumps in the vicinity of FERRARA the first junction South of the PO on the main railway line from the NE, and a couple on each of the main roads over the APPENNINES from BOLOGNA to FLORENCE and PISTOIA. Of the remaining three-fifths of the enemy's fuel dumps the majority are situated North of the PO where they are scattered along the roads entering ITALY from the North and NE and the roads giving access to the PO bridges, with a concentration at VENICE from where fuel is carried by sea to RAVENNA. In the West in addition to the dumps supplying traffic on the roads in the MILAN and TURIN area, there is a concentration in the GENOVA, AQUI, ALESSANDRIA area from which fuel is probably shipped to SPEZIA via GENOVA and SAVONA.

Of the ammunition dumps only a quarter are situated South of the PO most of which are concentrated near the railways converging on BOLOGNA, with a group at SPEZIA and one or two near PIACENZA and South of PARMA. The great majority of the ammunition dumps are situated North of the R. PO and East of a line PIACENZA-MILAN and these can be roughly divided into two main groups, one in the NE where the dumps are dispersed along the system of railway lines linking TARVISIO and PIEDICOLLE with VERONA in the centre and BOLOGNA in the South, the other in the North where the dumps are dispersed along the main BRENNER line between BOLZANO and VERONA and the lines giving access to the PO South and West of VERONA. There is also a group of ammunition dumps in the ALESSANDRIA, GENOA, SAVONA area which probably supply troops on the Riviera Coast and a number North of MILAN which probably supply forces in that area.

In conclusion it would appear that the enemy has concentrated his forward dumps to the South of the R. PO. In the case of fuel the policy seems to be to concentrate the main dumps as far forward as possible leaving North of the PO only those necessary for maintenance of L.T. movement in that area. Fuel for the forward dumps is presumably brought direct from the REICH, in bulk; in any event it is apparent that the enemy does not maintain large fuel reserves in ITALY. A large ammunition reserve has, however been built up in the North and NE. In either case the complete dislocation of the PO bridges, both road and rail, as has been achieved of late, will make it extremely difficult for the enemy to replenish his forward dumps especially if these should suffer to any large extent from air attacks, and dislocation of the railways North of the PO would further aggravate the fuel supply situation as this would necessitate the formation of new dumps and breaking of bulk much further North. It is not thought that the enemy could move enough fuel by sea to make any appreciable difference to the situation.

1. ENEMY SITUATION

There has been little change on either of our coastal flanks this week and the main centre of interest remains in the FLORENCE area. Here the enemy is resisting with great stubbornness and, no doubt appreciating that our assault across the Arno will wait until FLORENCE falls, he has strengthened his forces in this sector at the expense of his lines further West. Whether he will treat FLORENCE as an open city when driven back on to it remains to be seen, though he is apparently treating it as such now, but he is obviously determined to make us pay as heavily as possible now for an eventual unopposed entry. Behind the front there have been no changes of interest but the departure of Hermann Goering Div can scarcely be regarded as adequately compensated by the arrival of a further Italian Division and the "Government troops of the Protectorate of BOHEMIA and MORAVIA".

Along the Arno from the mouth as far as MONTELUPO, Q 6065, there has been no noteworthy activity. An interesting identification in this area was provided by prisoners from II Bn 956 G.R. at Q 466628 which apparently puts their regt under command of 26 Pz Div. It is clear that 362 is not operating as a division. Further East all interest has centred on the defence of FLORENCE. Previously this had been entrusted to 356 and 4 Para Divs but on night 26/27th 29 P.G. Div moved Eastwards to meet our attack on the city from the South West. 71 P.G.R., the regt first engaged, moved its H.Q. to Q 7363, with I Bn at Q 7261 and II Bn at Q 7560. 3 P.G. also shifted its right boundary Eastwards to about the 66 Easting but its left boundary, according to prisoners, still remains on the 47 Easting, well West of EMPOLI. 3 P.G. is therefore well stretched; if danger threatened in this area it might be necessary to re-commit 90 P.G. division whose H.Q. appears to be somewhere in the PRATO area. However, at the expense of the weakening of the front, the defence of FLORENCE has been strengthened and much weight has been taken off 4 Para Div. 12 Para Regt bore the brunt of the defence for the early part of the week but appears to have been relieved on 31 July. Some of 11 Para Regt was back in the line by 30 July and on the same day we had prisoners from 10 Para Regt at Q 782589 who said they had just come back in again. The frontage of the division remains about the same, however, at not much more than a regimental frontage. 356 Div on its left has not had so hard a time.

Further East 1 Para Div has now finally left the line. Presumably,

.....as stated by.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

as stated by prisoners, it has gone to the Adriatic coast area and there are indications that I Para Regt at least is not far in rear of the present front line there, perhaps already in the Gothic positions. General Heidrich gave a farewell party on 28 July at REGGIO which was [illegible] by Desert Air Force with results as yet unknown.

The arrival of the Italian Monterosa Alpine Division, foreshadowed by Mussolini's recent speech, has been reported from several sources this week. Like the San Marco Division referred to in I.S. No. 55 it appears to be destined for LIGURIA but further East than its sister formation. On 23 July it was reported as moving through BRONI, STRADELLA and VOGHERA (these are all stations South of the Po in the area South of PAVIA and East of ALESSANDRIA) and on 27 July Italian Alpine troops were reported as replacing German units in CARISCO (P 2839) which is just inland from CHIAVARI. The last location we had for San Marco was in the SAVONA area so it looks as though we have San Marco West of GENOA, then 42 Jaeger Div in GENOA itself, Monterosa East of GENOA and 135 Fortress Bde in between German formations in a manner reminiscent of standard German practice in AFRICA, leaving the two most important sectors, the ports of GENOA and SPEZIA, in wholly German hands.

A possibly less reliable addition to the German forces in North ITALY was reported by a recent deserter. According to him the entire Armed Forces of the Protectorate of BOHEMIA and MORAVIA, known as the REGIERUNGSTRUPPEN BOHMEN-MAEHREN, were transferred from the Protectorate during May and are now employed on L of C duties, especially the protection of railway communications. They number some 7,000 men, all Czechs by nationality and race, and are organised in twelve battalions. They wear Czech uniform, have no heavy weapons and are not motorised. For the duties for which they are intended they are probably useful and reliable enough and will release badly needed Germans; in spite of skilfully directed propaganda by perhaps the ablest of the émigré governments the Czechs during the war have in general collaborated with the Germans without giving much trouble.

2. ENEMY SUPPLIES AND COMMUNICATIONS

GENERAL

That the general dislocation of the North Italian railways and the destruction of both road and rail bridges over the Po is having a definite effect on the enemy supply situation is now evident. Despite every effort at repair, all the railway bridges over the Po except two far to the West, and all the road bridges East of PIACENZA are still impassable, and the enemy is being forced to rely on ferry boats and pont on bridges which are cut in half and hidden along the banks of the river by day. North of the Po the widespread cutting of bridges is causing increased use of MT for ferrying purposes and long detours are often necessary. In one case it has been reported that ammunition going South from MILAN had to be transferred to MT at PAVIA and make a 12½ mile detour to BRONI (K 2819) on the VOGHERA line so as to by-pass the demolished bridge North of BOTTARONE. Another report states that a party of Italian soldiers travelling South from the BRENNER detrained at PESCHIERA, crossed Lake GARDA by ship, entrained again at LONATO and proceeded via BRESCIA, BERGAMO and MILAN to CODOGNO where they detrained, crossed the Po and continued their journey by MT. PW have reported a three day rail hold-up on the BRENNER. South of the Po very little attempt is being made at repairing damaged rail communications and MT now appears to be the main means of transport.

If the present advanced state of dislocation of the railway system North of the Po can be maintained it will cause the enemy to rely more and more on MT and make him use up fuel and tyres he can ill afford to expend, whilst the continued blocking of the Po bridges will make it extremely difficult for him to replenish his forward dumps, especially if these should suffer to any extent from air attack or sabotage. Another probability is that the enemy will attempt to make much more use of the inland waterways, and small cargo carrying craft have already been seen on the river Po as far West as PIACENZA. There are several navigable rivers in North

....and NE ITALY.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

and NE ITALY, and it is possible to sail 600 ton vessels up the Po as far as PIACENZA, and up the R. Mincio to MANTUA. The R. Adige will take 300 ton vessels as far as LEGNANO.

RAILWAYS

The air offensive against the Po bridges and other North Italian railway targets has continued successfully throughout the past week. Since 26 July all the railway bridges over the Po East of, and including, the one at TORREBERRETTI (J 7720) have been continually impassable, except for the one South of MANTUA which was not out on 28 and 29 July during which period, however, the track was blocked immediately South of the bridge.

North of the R. Po the line West from VERONA is blocked by demolished bridges at PESCHIERA, MONTEBELLUNA K 6668 (between ROVATO and TREVIGLIO) and at K 5067 (West of TREVIGLIO). Bridges are also down at CREMA on the TREVIGLIO-CREMONA line and at F 2520 on the MANTUA-PIADENA line, and tracks cut North of ROVIGO, at LEGNANO, NOGARA and North of MANTUA.

South of the river the main PIACENZA-BOLOGNA-RIMINI line is blocked by demolished bridges SE of PIACENZA at K 6711, at FIDENZA, West of MODENA at L 4667 and SE of FORLI at M 4715; whilst the track is cut five miles West of PARMA and the bridge at SASSUOLO on the REGGIO EMILIA-MODENA loop-line remains impassable. The line from PARMA to SPEZIA is blocked in several places between FORNOVO and BORGO DI TARO, and the bridges at FORNOVO and AULLA are both impassable. Both lines South from BOLOGNA remain blocked, the one to PISTOIA by two demolished viaducts at PIEVECCIO and the one to PRATO by cut tracks at L 8128. There is also a bridge down at L 8050 on the BOLOGNA-VERONA line, and several blocks between PARMA and CASALMAGGIORE.

West of PIACENZA the bridge at K 5616 remains impassable, bridges are also cut at TORTONA where the line SW from PAVIA branches West for ALESSANDRIA and South for GENOA, at J 9971, on the GENOA-ALESSANDRIA main line, North of OVADA, at ASTI, ALBA and VILLA FRANCA D'ASTI (J 2819), whilst the approaches to the Po bridge at CAVASSO are cut; the track is also cut at BAFFALORE between NOVARA and MILAN and at CEVA on the line running West from SAVONA. On the main Riviera coast line there are four bridges down between GENOA and SPEZIA, one at IMPERIA and one at ONEGLIA.

Partisans too have been active again this week in many parts of North ITALY, and reports have been received of sabotage to a bridge at IVREA (J 2171) and to the SIMPLON, CORTINA-DORBIACO, UDINE-TREVISO and PADUA-VICENZA lines.

SHIPPING

Owing, probably, to the extensive dislocation of the railways, the enemy appears to be trying to step up his coastal shipping. On the West coast SPEZIA continues to be the main port of intake and there is a lively traffic in coastal craft, including KT ships, between this port and GENOA. A number of lighters and landing craft are also being sailed as far South as VIAREGGIO where they are unloaded on to the beaches.

On the East coast VENICE and PORTO MARGHERA are being served by a number of medium M/Vs which make a daily run from TRIESTE, and a 10,000 ton tanker has also recently made this trip. From VENICE and PORTO MARGHERA cargoes are sent South in landing craft and lighters to RAVENNA and CORSINI or other small ports in that area, and up the R. Po to unloading points as far West as PIACENZA.

3. FRANCE

(a) NORMANDY

The American attack launched on the 25 July with strong armoured

....support between.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

support between PERIERS and ST LO broke through the German positions, and has led to the collapse of the enemy's left flank during the past week. "Deeper penetrations" as the German communiqué puts it, have been effected throughout the week. On the West coast we have now reached the base of the CHERBOURG peninsula with the capture of AVRANCHES and are reported to have crossed the river Selune at DUCEY 6 miles to the S.E. The enemy's lack of adequate armoured forces on the Western flank to meet our attack has cost him dear. The prisoner bag since the start of the attack is now reported to be some 18,000 and mopping up still continues. Very heavy losses in equipment have also been suffered and one road South of COUTANCES is reported to be almost impassable owing to the quantities of destroyed enemy transport littering it. Four divisions - 3 Para, Pz Lehr, 353 Inf and 17 SS P.G. (GÖTZ von BERLICHINGEN) have been virtually destroyed (the latter's iron hand thereby doubtless greatly softened), while 243, 91 and 77 Inf Divs who escaped with remnants from the CHERBOURG peninsula last month, have by now shrunk still smaller. The reference in the German communiqué of 31 July to SS tank units fighting their way out from SOURDEVAL W of PERCY suggests that 2 SS Pz Div, probably the best armoured formation in this sector, has also not escaped unscathed.

While our advance down the West coast has been headlong, resistance has been stiffer further East. To the West of TESSY, 2 Panzer Div and 116 Panzer Div have been identified. The latter comes from the BEAUVAIS area North of the Seine and was identified for the first time on 30 July. Its tardy arrival at the front is hardly likely to retrieve the present situation. NE of TESSY and W of CAUMONT enemy resistance continues to be fierce and 3 Para Div in this sector has been fighting hard.

In the CAUMONT sector, the British attack was initially delayed by extensive minefields but progress has since been very rapid. We have taken Hill 303, 5 miles South of CAUMONT, thereby cutting the CAEN-AVRANCHES road and are firmly established there despite enemy counter-attacks. W of Hill 303 our armour has made considerable progress to the South and is now reported to be 9 miles South of CAUMONT. East of CAUMONT the week has been fairly quiet apart from a few local German counter attacks. 276, 277, 271 Inf Divs and 10 SS Pz Div have all been identified in the area between VILLERS BOCAGE and the river Orne. Up to 31 July there was no sign of any enemy withdrawal in this area.

In the CAEN sector bad weather following the Canadian attack of last week enabled the enemy to do some minor reshuffling and gave him an opportunity of recuperating from his losses in the recent attacks. In the past few days he has been more aggressive and has made several local counter-attacks without regaining any of the ground he has lost. On one occasion elements of both 1 SS and 9 SS Pz Divs took part in a counter-attack without gaining any ground.

Further reinforcements for the battle area may still be on the way. 363 Inf Div, recently arrived in BELGIUM from DENMARK, is now reported moving South into FRANCE, and may be destined for the front. This if it arrives will be the third contribution to the battle made by forces from 15 Army, North of the Seine, during the past fortnight, 326 Inf and 116 Pz having already arrived. It seems likely that the enemy now appreciates the danger of a further Allied landing North of the Seine to have decreased, and in any case, 15 Army is in future likely to have to bear the brunt of the demands for fresh formations for the battle area. 2 Para Div from BRITTANY is another possible arrival, and according to the German radio 5 Para Regt has already distinguished itself in battle. Northward movement from the South of FRANCE may now [illegible] Blaskowitz too has to make further contributions to meet the expenses of the 7th Army.

(b) SOUTH OF FRANCE

Reports of Northward movements from the TOULOUSE-BORDEAUX area may concern either 11 Pz or 9 Pz Divs or both. 11 Pz is reported to have received some heavy tanks and is more likely to be battleworthy than 9 Pz which may

...still be.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

still be partly occupied with the Maquis in HAUTE SAVOIE. Until further confirmation is received the Divs will still be carried at BORDEAUX and the Rhone estuary areas respectively. The enemy still has 12 Divs South of the line LYONS-BORDEAUX as follows:

Panzer	-	2	(9 Pz RHONE Estuary with possibly elts in HAUTE SAVOIE. 11 Pz East of BORDEAUX)
Infantry	-	12	(242 Inf TOULON 244 Inf MARSEILLES 338 Inf ARLES with elts possibly between LYONS and AVIGNON 198 Inf NARBONNE 716 Inf PERPIGNAN 708 Inf BORDEAUX
Training	-	4	(148 Trg NICE 157 Trg HAUTE SAVOIE 189 Trg Central PYRENEES 159 Trg S of BORDEAUX

(o) GENERAL

The nominal total for enemy divisions in FRANCE and the LOW COUNTRIES is now 65. The Russians report that elements of 19 Pz Div have been identified on the Eastern front but until this is confirmed it will still be carried in HOLLAND. The 65 Divs consist of:

12	Pz or SS Pz
1	SS P.G.
4	Para
41	Inf and GAF
7	Training
65

NOTE: NO INTELLIGENCE SUMMARY WAS ISSUED ON 9 AUGUST.

1. ENEMY SITUATION

There has been no major change in the enemy lay-out over the past two weeks and fifteen, possibly sixteen, divisions are still disposed in the line. The doubtful runner is 29 P.G. Division which as the enemy withdrew on FLORENCE was gradually squeezed into a narrower and narrower sector. With 4 Para Division sitting behind the Mugnone Canal and watching most of the Northern exits from FLORENCE as far West as the 75 Easting, and 3 P.G. Division stretching as far East as the 71 grid at least, the division's front is reduced to a few thousand yards. No prisoners have been taken from 29 P.G. Division recently, and it is quite possible that 3 P.G. Division is in fact 4 Para Div's right neighbour, and that 29 P.G. Div is resting and refitting behind in the PRATO area. To assist 3 P.G. Div hold a long front, one regiment from 362 Div - 956 G.R. - has been placed under command and it was a bn of this regiment which was driven out of EMPOLI five days ago and forced to withdraw to the North bank of the Arno leaving a few snipers and machine gun nests behind. West of here, despite heavy losses over the past two months, is still 26 Pz Div, and the policy with this division appears to have been to feed it with a constant stream of reinforcements (and it has had more than most divisions) without taking it out of the line. Recently only one of its regts has been forward - 9 P.G.R. - and evidence shows that it was being relieved on night 13/14 by 67 P.G.R. which has presumably been refitting. Under command of 26 Pz Div is the Infantry Lehr Bde or Regt, which fought at ANZIO under the name of 309 Inf Lehr Regt. 16 SS Reichsfuehrer is still on the coast.

The old city of FLORENCE is now clear of parachutists, who have withdrawn behind the Mugnone Canal. From here they make

....occasional raids.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

occasional raids supported by a couple of tanks to beat up the Partisans who control that part of FLORENCE which lies North of the old city and South of the canal. The burden of feeding the population of the city and the irritation of constant Partisan attacks were presumably the main reasons which made the enemy decide to pull back from the Northern banks of the Arno. He left behind a considerable number of snipers, mostly Fascist, to harrass our troops and to engage the Partisans in internecine strife. But despite an Allied announcement that we have only sent across the Arno sufficient troops to maintain order and supervise the distribution of food, the parachutists are apprehensive, and fire at the slightest movement in the streets approaching the canal. 356 Inf Div on their East flank (a captured map shows the inter-divisional boundary to run through FIESOLE North to FIRENZUOLA) has also withdrawn about one kilometre from the banks of the Arno to the hills beyond, where its anxiety is shown by instructions to forward units to take prisoners for identification.

On the BIBBIENA axis our capture of M. GRILLO R 2346 on 7 Aug provoked violent counter-attacks from 15 P.G. Div which was stiffened by 305 Recce Unit and I/578 G.R. It is not clear whether the appearance of these two units in 15 P.G. Div's sector was necessitated by our threat to the enemy positions, or whether in fact 305 Div was beginning to side-step Westwards. There are slender grounds for supposing the latter might be the case - 114 Recce has been identified West of its divisional sector and two bns of 104 G.R. (15 P.G. Div) were switched West late last month to assist 715 Inf Div. They have not reappeared in 15 P.G. Div's sector nor have they been identified in the PONTASSIEVE area since they were driven off pt 558 Q 8866 on 8 August. Prisoners taken on that occasion had heard the rumour that the division was transferring to the Adriatic. Rumours have often had more than a grain of truth lately (the prisoner from 1 Para Div forecasts his division's move to the Adriatic correctly), and certainly at this point the enemy must try to rest his Panzer Grenadiers and if possible to form a mobile reserve for each Army. The Tac/R report on 15 Aug of 15 M.T. including 4 towing guns, moving North along the new road from STIA R 1570 to S. SOFIA R 3286 (15 P.G. Div's axis) may be a pointer as to the enemy's intentions with regard to this experienced division.

At least one other mobile division (90 P.G.) and possibly a second (29 P.G.) are out of the line. 90 P.G. Div's activities are fogged, perhaps deliberately, by the enemy. Last heard of near PRATO at end of July, by the 27th it was reported resting West of BOLOGNA bound, so it was said, for GERMANY. A deserter from 200 G.R. said that when he left his Regt on the 3rd it was at PRATO under orders to move to REGGIO EMILIA. The following day transport bearing the div sign was reported moving West from PIACENZA towards ALESSANDRIA carrying some 1,500 troops. A further report of doubtful reliability mentions an "armoured division" in the TURIN area moving on the 4 August into FRANCE down the DURANCE Valley leading to the Rhone Valley at AVIGNON. These facts are not necessarily all related and the evidence is inconclusive: what is clear is that the division has been out of the line 3-4 weeks, during which time it must have been at least in part brought up to strength and re-equipped. The new landing in the South of FRANCE may lead the enemy to appreciate that the main schwerpunkt in the Mediterranean has been shifted to the RIVIERA from ITALY, but it is clear that 90 P.G. had not moved at least by 16 Aug.

On the Adriatic, where the enemy had withdrawn some three miles behind the Misa by the 4 August, 278 Div was again bounced back by a Polish attack on the 9th and 10th August and forced to withdraw beyond the Cesena river. In this successful opration prisoners

....were taken from...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

were taken from not bns of 278 Div, and also from 914 Assault Gun and 242 Assault Gun Bde. We are now across the river in contact across the road which runs from the coast S 3064 to MONTEPORZIO S 2356.

2. ENEMY SUPPLIES AND COMMUNICATIONS.

To date there has been no direct information covering the effect of the cutting of the Po river bridges on the enemy supply situation. It is known that at many points along the river the enemy is getting supplies across by night using ferries and pontoon bridges. He has had a rail bridge in operation just North of FERRARA for about the past week. South of the river, while a number of rail cuts exist, there is a considerable amount of open trackage and PR has shown trains to be active in this area; if the events in central ITALY are any criterion we can be certain that this area will be used by the enemy to move supplies well forward by train. No doubt the situation is causing him some anxiety and according to hearsay a German General stated that the question of supply was "serious". However, the probabilities are that current supply requirements South of the river, estimated as not in excess of 2500 tons a day, are being met. When the front becomes more active the picture is likely to be quite different and when the time comes for the enemy to withdraw across the PO he will undoubtedly find himself in an extremely difficult position.

RAILWAYS.

Owing to lack of photo cover it is not possible to give a consecutive picture of the state of the North Italian railway system during the past two weeks. At present however, it is known that all rail bridges over the R. PO East of (and including) the one at TORREBERETTI are still impassable except the one at PONTELAGOSCURO. This bridge, which was blocked on 3 Aug but open by the 8th or shortly before, is most important to the enemy as it is on the direct line from BOLOGNA to PADUA and affords an outlet to the BRENNER via VICENZA and VERONA and to the NE via TREVISO and UDINE. North of the PO the only certain interdiction at present is the destroyed bridge East of MANTUA on the MANTUA-NOGARA line.

South of the river on the PIACENZA-BOLOGNA-RIMINI line a bridge is believed to be impassable at FIDENZA and another between REGGIO EMILIA and MODENA. Tracks have been cut at FAENZA, and the bridge is down at SASSUOLO on the REGGIO EMILIA-MODENA loop-line. The PARMA-SPEZIA and PARMA-GENOA lines are still believed to be impassable. A bridge has been destroyed on the BOLOGNA-PRATO line and another on the line running NE from BOLOGNA to OSTIGLIA. The line from BOLOGNA South to PISTOIA is probably open for most of its length.

West of PIACENZA on the line to ALESSANDRIA and TURIN bridges at K 5616, TORTONA, ASTI and J 2810 are still believed to be impassable. Bridges are probably still impassable at RONCO SCRIVA between GENOA and NOVI, at OVADA NW of GENOA, at ALBA on the line running SW from ALESSANDRIA and at CEVA on the SAVONA-TURIN line. The RIVIERA line is still believed to be blocked by destroyed bridges at ALBENGA, IMPERIA and BORDIGHERA. Owing to lack of PR these blocks are of doubtful certainty.

SHIPPING.

On the West coast traffic continues rather heavy between GENOA and SPEZIA. The amount of supplies being brought South is somewhat problematical in view of a very reliable report of the evacuation of munitions from SPEZIA to GENOA. Since SPEZIA was heretofore a base

.....for naval.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

for naval operations and rests on the Western flank of the Gothic line it is quite probable that at least naval supplies have already been moved North. No information is available on what is coming South, but it is not unlikely that an appreciable percentage of cargoes is made up of fortification materials for the Gothic Line.

Along the Adriatic the PORTO CORSINI-RAVENNA canal remains the most active unloading area, though the Po river and inland canals appear to be assuming increasing importance, owing no doubt to the destruction of the Po river bridges. Ground sources report ships moving by canal from GRADO (45577) and VENICE down to CHIOGGIA from which they may continue South by sea or inland waterways. That South-moving shipping originates at VENICE is well known and it is probable that some also comes South from GRADO in view of the dumps in that area. Though PR has picked up barges on the Po as far West as PAVIA it does not appear that any appreciable number from and to the sea move any further Westward than FERRARA. In the FERRARA area PR confirms that barges move up the Po to PONTELAGOSCURO (M 1191) South down the canal to FERRARA and then along the Po di VOLANO running East and West just South of FERRARA. Recent attacks on canal locks should stop or at least restrict this canal traffic.

3. FRANCE

Allied troops began landing operations in the area East of TOULON early on 15 August.

In NORMANDY the main development during the past week has been the capture of LE MANS and the subsequent drive Northwards to ARGENTAN which threatens to encircle the German forces in the great pocket between MORTAIN and ARGENTAN. At the time of writing the gap between the Canadians advancing Southwards on FALAISE and the Americans coming Northward from ARGENTAN is reported to be about 12 miles. The enemy is fighting a fierce delaying action around ARGENTAN to cover the withdrawal of his forces along the secondary roads running through this gap.

The rapid American advance East from NANTES and ANGERS left the German left flank with virtually no troops capable of checking our advance. A hurried reshuffling on the front itself coupled with a substantial reinforcement of the German Seventh Army from other areas of FRANCE resulted. The enemy clearly decided that the NORMANDY front, facing a major and present crisis had to have priority over all other areas where Allied landings might take place in the future. Neglecting the area South of the LOIRE, now almost devoid of troops, he started to reinforce in the LE MANS sector. On the left flank, 9 Pz and 708 Inf Divisions from the South of FRANCE, and 84 Inf Division from the ATHENS area were put in between MAYENNE and LE MANS. In general enemy dispositions here are extremely confused and probably no divisional sectors, as such, exist. North of ARGENTAN we have had IW from 21 Pz, 2 SS Pz, 17 SS P.G. Pz Lehr and 3 Para Divs. Further reinforcement of the German left flank is to be expected and it is reported that 158 and 159 Res Divs (the former now upgraded to 16 Inf Div) are on the way from the Atlantic coast, while captured documents suggest that 6 Para Div may be moving Westwards into the battle. Despite all the reinforcements received, the line from MORTAIN Southeastwards still lacks any sort of cohesion however, and the enemy has been unable to do more than form local strongpoints to check our advance.

While on his left flank the enemy has been putting in divisions piecemeal in the hope of obtaining some sort of stable line, in the centre and on his right flank the situation has been more in hand and

...he has at.....

THIS PAGE IS UNCLASSIFIED

0543

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

he has at least been able to prevent any breakthrough. After the failure of the counter-attack at MORTAIN, the enemy began withdrawing under pressure from the MORTAIN-VIRE salient and resistance is reported to be decreasing rapidly E of MORTAIN as the Germans pull out. All along the line from VIRE to the sea, on the Northern side of the pocket, resistance has been fierce with the enemy only giving ground when forced. There has been considerable reinforcement of the area between VIRE and the ORNE. 331 Inf Div from the LILLE-PAS DE CALAIS area has been identified S of VIRE while 9 and 10 SS Pz Divs, 21 Pz Div and elements of 1 SS Pz Div have all shifted West from the CAEN sector. This has left the CAEN area dangerously thin in armour which in part accounts for the initial success of our drive down the CAEN-FALAISE road. A thickening up in infantry, if not in armour, has ensued however and two new infantry divisions from North of the SEINE, 85 and 89 Inf have been identified S.E. of CAEN.

In BRITTANY enemy resistance is confined almost entirely to BREST, LORIENT, ST NAZAIRE and St MALO. At BREST, elements of 2 Para, 343 Inf and 266 Inf Divs are defending the port, while elements of 265 Inf Div are reported in LORIENT and ST NAZAIRE. In ST MALO we have identified all three regiments of 319 Inf Div, the channel islanders, but the bulk of the division is believed to be marooned on the islands.

Since June 6th it is considered that nine divisions, (709 Inf, 243 Inf, 77 Inf, 91 Inf, 353 Inf, 16 GAF, 275 Inf 352 Inf and 5 Para Divs) have been destroyed, while Pz Lehr, 17 SS P.G. and 326 Inf Divs are little more than remnants. The present German forces facing us are the equivalent of approximately 23 divisions. The enemy still has fifteen divisions left North of the SEINE (the departure of 19 Pz Div from HOLLAND for RUSSIA is confirmed) and at the present rate of wastage they are likely to be called upon to make continued contributions to bolster up whatever position the Germans hope to hold in FRANCE.

In the South, our landings on 15 August found the enemy with nine divisions South of the LYONS-BORDEAUX line. 708 Inf and 9 Pz have gone to NORMANDY, and on the Atlantic coast only 159 Res Div was left coast-watching between BORDEAUX and the Spanish frontier. This formation has apparently given up the job as hopeless and is reported to be moving North leaving SW FRANCE devoid of troops. On the Mediterranean side, 11 Pz Div has also left for NORMANDY while part, if not all, of 189 Res Div has moved from the Central Pyrenees to MONTPELLIER. There have been many reports of train movement Northwards towards LYONS but it is not known to which, if any, formation they belong. From the Spanish to the Italian frontier the layout on the coast at D day was 716 Inf Div at PERPIGNAN, 198 Inf at NARBONNE (both recuperating from battles in West or East) 189 Reserve at MONTPELLIER, 338 Inf in the ARLES area, 244 Inf at MARSEILLES, 242 Inf at TOULON and 148 Reserve in the NICE area. Behind them in HAUTE SAVOIE 157 Reserve Division is engaged in the permanent task of mopping up the Partisans.

The total enemy forces in FRANCE are now estimated at 55 Divs viz

-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

Except on the Adriatic coast, where we have pushed the enemy back to the Metauro, there has been no significant change in enemy dispositions in the line. Behind the line, however, there have been considerable changes. One mobile division has been attracted towards the French frontier by the RIVIERA landings, another has been withdrawn from the line and appears to be passing through MANTUA while the arrival of at least one new German division in Northeastern ITALY has come to light.

The movements of 90 P.G. Div have become clearer this week. Its divisional sign was seen in MILAN on 19 Aug with the significant inscription LEITSTELLE BADE (= Movement Control H.Q., BADE is the Commander) and it seems likely that its movements were dictated by fear of the landing which eventually took place on 15 Aug. A faulty appreciation of 7 Army's intentions sent at least 190 Arty Regt to GENOA, where its guns were in position ready to go into action on 15th but later reports on 19 Aug of a mobile division moving Westwards from TURIN, partly in the direction of the MADDALENA pass on the French frontier, show this mistake was soon corrected. The report quoted last week that the division was bound for the DURANCE Valley may in fact have been based on good evidence though in view of the development of events it is not now likely to attempt to push so far West. There is indeed one very important task for it to do. The Northwards thrust by 7th Army has already cut off 148 Res Div from the West and threatens before long to cut off 157 Res Div in SAVOY and both these will have to form fronts to the West and fight their own way out or base themselves on ITALY. But for the moment at any rate the passes from FRANCE into ITALY are infested with Partisans and it will be vital, if these divisions are to come under Kesselring, at least for supply, to clear a safe L of C for them. If one can judge by the reports quoted above the MADDALENA pass will be one route which 90 P.G. will attempt to clear.

Another P.G. Div has also been moving this week, 3 P.G. On 21st August its Recce Unit was staging in the area of ROVERBELLA (F 4735) and it informed one of its sub-units that the Divisional "LEITSTELLE" was at CERESI (F 4719), just South of MANTUA. This mention of a Leitstelle must imply a fairly long distance move, not a mere withdrawal to refit, and there seems little doubt that the division will not remain in the MANTUA area. Confirmation of the move of the division may be derived from a report dated 19 Aug of a column of assault guns moving North from MODENA to GUASTALLA; these can scarcely belong to 90 P.G. which by this time should have been clear away to the West nor is the direction right. We know

....from 103 Recce.....

THIS PAGE IS UNCLASSIFIED

0546

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

from 103 Recce that CASTALLA was one of the bridges which the division was to use, though later on 21 Aug it seems to have dropped out, for Northbound traffic, in favour of S. BENEDETTO (F 5010) and S. NICOLO (F 5011). The two bridges for Southbound traffic were CASTIGLIA and FICAROLA L 9790. 3 P.G's place in the line has been taken, apparently, by 362 Div whose H.Q. was located in the area of Q 5377 on 20 Aug. It is indeed, the only formation available and its Commander, Gen GREINER, with his usual macabre humour, has already informed his troops that the division is now strong enough to fill a hole in the line again. 956 G.R., one of its regiments, has been in the line already, for some time, in the REPOLI area.

Two further identifications have been made in North ITALY. The division on the extreme Western sector of the Ligurian coast is now known to be 34 Infantry division, last known on the Russian front. It appears to be under command of Graziani's Italo-German Army, whose H.Q. is reported at NOVI LIGURE, O 80. The other formations in this army are presumably 42 Jg Div and the Italian S. MARCO and MONTE ROSA divisions. A reliable report, based on documentary evidence, gives the strength of the latter as 16,849 all ranks; the same document also mentions the LITTORIO and ITALIA divs as having arrived in the country but in spite of various reports they have not been positively located. The other new German division is 98 Inf Div which has been reforming after its severe losses in the CRIMEA in the ZAGREB area; reports of 27 July and subsequently state that this division moved into ITALY through VENEZIA GIULIA and its movement was followed down as far as BOLOGNA. Pending more exact location it is placed in 10 Army reserve probably with a coast-watching commitment on the Adriatic. Further North it appears possible, from several reports, that 188 Mountain div has moved back into CARINTHIA from ISTRIA; its regts are reported in the area of VOELKERMARKT and KLAGENFURT. If this is confirmed, and it seems strongly supported by several corroborating reports, we can hardly expect the Germans to leave ISTRIA ungarrisoned and must expect some other formation to take 188 Div's place.

On the Adriatic coast of 8 Army 992 G.R. of 278 Div and the attached 242 Ass Gun Bn suffered losses in the Polish attack on 19 Aug and it appears that some of 1 Para Div has had to be moved forward to support it. On 22 Aug at least part of 4 Para Regt was going into position in the front line though they had not yet been heavily engaged. The Panthers of I Bn 4 Pz Regt are also on this flank as appears from documents found in two knocked out tanks.

2. ENEMY SUPPLIES AND COMMUNICATIONS

Enemy movement across the Po river continues to be the focus of interest this week. Unfortunately, from our point of view, the situation is not satisfactory. It is true that all rail bridges, and all but one of the regular road bridges, over the Po are cut as far West as the bridges just South of PAVIA (K 1933), but we have been unable so far to prevent to any appreciable degree the movement which takes place across the river at night by temporary bridges and ferries. The strength of the Po river line of interdiction is that it presents a definite barrier to MT movements as well as rail traffic; its weakness is that the distance from the Po to the Gothic Line averages only about 75 miles and this the enemy should be able to cover without too much difficulty with available MT during the hours of darkness. (As a matter of fact trains are also in movement South of the river). Hence if the enemy is able to get MT across the river the destruction of the Po rail bridges loses much of its significance.

How many bridges and ferries are operating across the Po is difficult to assess but on the night of 21/22 August from 2100 B to 0500 B it is known that four bridges were to be open for traffic, namely at

.....S. NICOLO A PO.....

THIS PAGE IS UNCLASSIFIED

0547

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

S. NICOLO A PO (F 5011) S. BENEDETTO (F 5010), OSTIGLIA (F 7412) and PICARELLA (L 9798), and on the night of 22/23 air reconnaissance showed that the bridge at S. BENEDETTO was in use at 0300 B. It is quite evident that the bridges are being used only at night; during the day they are partially disassembled and dispersed along the river banks near the crossing site. These bridges and others along the river are located at sites where bridges already existed prior to our air attacks. PR and ground reports indicate other crossing points and also barge traffic on the Eastern reaches of the river. It is felt that the only conclusion possible is that the enemy is getting enough supplies across the river to at least meet current requirements.

RAILWAYS

There has been little change in the state of the river Po crossings since last week. East of PAVIA all railway bridges have remained blocked except for the one at PONTELAGOSCURO; PR has been conflicting about the state of this bridge and whilst it is now probably blocked, it has certainly been open to traffic for the better part of two weeks. The importance which the enemy attaches to this bridge, which carries traffic both from the BRENNER and the N.E., is shown by a concentration of 32 heavy AA guns within a radius of four miles and another 34 in the vicinity of FERRARA, the junction just South of it.

North of the Po, bridges probably remain impassable between PIADENA and MANTUA and between MANTUA and NOGARA on the secondary East-West line just North of the Po. On 22 August the tracks were cut in two places between ROVIGO and PONTELAGOSCURO and the bridge North of ADRIA on the single line running South from MESTRE remains blocked. The BRENNER line and the lines running S.W. from TARVISIO and PIEDICOLLE remain open.

South of the river the main PIACENZA - BOLOGNA - RIMINI line was open on 20 August as far as FAENZA and only two blocks have definitely been achieved since then. The PARMA-SPEZIA line is now believed to be passable and in use. The two lines running South from BOLOGNA to PISTOIA and PRATO appear open for most of their length, but whether in use or not is problematical.

In the West, the PIACENZA - VOGHERA line is still blocked. While the bridge over the Po at TORRETTETTI has been repaired the Po river bridge just South of PAVIA at BOTTARONE and approaches to the bridge immediately Southeast of ALESSANDRIA are cut forcing traffic for GENOA to move at least as far West as ASTI (J 4307) where one of the two nearby rail bridges is possibly open. The coastal routes to GENOA from FRANCE and SPEZIA remain blocked at many points and no activity has been noted except immediately West of GENOA.

Activity at marshalling yards and junctions North and South of PONTELAGOSCURO and along the PIACENZA-BOLOGNA line shows that the enemy has been making full use of the opportunities afforded him during the past week, to feed his main forward dumps which now appear to be situated in the IMOLA-FORLI and MODENA-PARMA areas.

SHIPPING

There is no substantial change in the situation. Shipping continues active between GENOA and SPEZIA and between the Northern Adriatic ports and RAVENNA.

The following information on ship-building in the Northern Adriatic is extracted from a photo reconnaissance report covering the past six months. In addition to the North Adriatic it is also known that there are active shipyards in the GENOA area.

"The period has been marked by successful bombing attacks on several shipyards, notably at MONFALCONE, where serious losses were sustained among both naval and merchant vessels. All yards are now concentrating on

....building F boats...

THIS PAGE IS UNCLASSIFIED

0548

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

building F-boats and a few coasters, barges and tugs; a handful of naval craft are being completed, but several others have been abandoned, and only small craft such as M.A.S. are still being laid down.

"Outside the yards proper many Siebel Ferries, A.L.C. and I boats (launches) have been assembled at TRIESTE, FIUME and KRALJEVICA. The speed with which these prefabricated craft are put together makes it impossible to give an accurate figure for completions; at TRIESTE alone it seems probable that at least 30 Siebel Ferries have been assembled".

3. FRANCE

In the South of FRANCE, the first week of the invasion has seen very rapid progress by our forces and the total of 17,000 prisoners to date is a measure of our success. The first assault was met by 242 Inf Div, who had elements of one regiment on the islands of LEVANT and PORT CROS, the rest of the division as expected, holding the coast to the East of TOULON. On the following day elements of 148 Res Div were identified in the area West of GRASSE and since then we have identified elements of all the divisions which were located on the French Mediterranean coast with the exception of 716 Inf Div from PERPIGNAN. The enemy has been adopting blocking tactics to oppose our advance to the East and West but has been unable to offer any effective resistance to our rapid Northward drive towards GRENOBLE where we have made contact with the Maquis in the HAUTE SAVOIE region. 148 Div has had the task of holding us to the East while to the West the enemy has been putting in his divisions in piecemeal fashion. 242 Div is North and East of TOULON with elements of 244 Inf Div in the same area. On 242 Div's left are elements of 189, 198 and 338 Inf Divs. Of this latter division there is probably only a regimental group left in the South of FRANCE, most of the division, according to prisoners, having left for Northern FRANCE before the battle started. On the other hand the bulk of 11 Pz Div, elements of which we had identified in the CHARTRES area has remained in the South of FRANCE and has been making its way laboriously from the TOULOUSE gap across the RHONE to the battle. There has so far been no contact with this division but it is now thought to be East of the RHONE, probably somewhere West of AIX en - PROVENCE.

The enemy's main concern must now be to keep the escape route of 19 Army via the Rhone Valley clear, and the advance of Allied recce elements to MONTELIMAR and VALENCE must be causing him considerable anxiety. So far we have not encountered any of 157 Res Div, located in the HAUTE SAVOIE, but it is reasonable to expect that this will have the task of keeping the way open for a general withdrawal of 19 Army which, if it is to take place at all, must take place now. The virtual abandonment by the enemy of S.W. FRANCE where TOULOUSE is now in Free French hands, and the relatively weak opposition so far encountered in the South East, suggests that the enemy is preparing to write off Southern FRANCE, and hopes to establish a single land front in FRANCE somewhere in the North. If this is so, he must start his withdrawal up the RHONE valley immediately, probably leaving behind garrisons to defend MARSEILLES, TOULON and BORDEAUX. He has already left it dangerously late and further delay may mean that 19 Army, like the 7th Army in the North, will be faced with another of the all too frequent "Kessels" in which German Armies have of late found themselves.

Meanwhile in the North events have been moving apace. Having reduced the gap between ARGENTAN and FALAISE to 12 miles, American armoured forces turned Eastwards and in a spectacular drive against light opposition have reached and crossed the Seine near MANTES and are

....outflanking PARIS.....

THIS PAGE IS UNCLASSIFIED

0549

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

outflanking PARIS to the South. At the same time the trap has closed on the ARGENTAN pocket where considerable enemy forces have been cut off and prisoners are now coming in at the rate of about 10,000 a day. Only in the area between ARGENTAN and the sea has the enemy been able to maintain any coherent front. Here he has been withdrawing, at first slowly, and n more rapidly towards the Seine.

In the chaotic state to which 7th Army has been reduced in the past week, enemy dispositions have been confused in the extreme and it is impossible to draw any clear picture. 9 Pz Div is somewhere East o ARGENTAN trying to block the American Northward drive, while a flow of divisions has been arriving piecemeal from North of the Seine to patch up t remnants of 7th Army. 6 Para Div has been identified East of ARGENTAN, while 340 Inf Div, 17 G.A.F. Div and elements of 344 Inf Div all from the area between CALAIS and DIEPPE have been arriving South of the Seine. Elements of 18 G.A.F. Div from DUNKIRK have been identified in the MANTES area and elements of 48 Inf Div from OSTEND in the area East of CHARTRES. This leaves a total of eight uncommitted divisions still North of the Seine including 49 Inf Div from the BOULOGNE sector which is reported to be moving down into the battle.

In BRITTANY, ST MALO has finally surrendered but the enemy is still holding out in BREST, ST. NAZAIRE and LORIENT.

H.Q., A.A.I. INTELLIGENCE SUMMARY NO. 59

OF 31 AUGUST, 1944

(a) This Summary will NOT be distributed below HQs of Army Corps. Sidelined information will not be reproduced in any Intelligence Summary of formations under this H.Q. except by special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The main enemy activity of the past week can be briefly summarised as regrouping of his forces forward of the Gothic Line and withdrawal by 10 Army on to the main Gothic positions, a withdrawal which has been more or less voluntary between PONTASSIEVE and URBINO, and which on the Atriatic coast had apparently been planned but not completely put into operation when we attacked on the night 25/26 August.

The regrouping has been primarily occasioned by the collapse of the German Armies in Northern and Southern FRANCE. To N. FRANCE Kesselring has had to send two P.C. divisions - 3 P.G. on 28 August had already reached BRIENCOURT between TROYES and NANCY while 15 P.G. Division was identified by prisoners S.E. of TROYES on 29 August. The retreat of the battered remnants of 19 Army up the Rhone Valley has added a further commitment to Kesselring's Army Group - the blocking of the passes on the Franco-Italian frontier between the Swiss frontier and the sea. True, Kesselring has probably gained two new divisions as the result - but he would hardly regard the acquisition of two reserve divisions, 148 and 157 (both already knocked about and under strength) as fair exchange for two of his best P.G. Divisions. Furthermore, as was pointed out last week, the only other mobile formation available to Kesselring, 90 P.G. Div, has been tied up for the past fortnight in trying to keep the passes over the Alps free of partisans so as to secure an L of C for 148 and 157 Divisions. Whether the enemy considers that 3 divisions are sufficient to hold the Franco-Italian frontier depends on his appreciation as to how serious a threat he considers the Allied Armies will develop against his right flank. At the moment Kesselring appears to be taking the narrow view that the Allied landings in S. FRANCE are principally aimed at outflanking the Gothic Line, and he is consequently taking no risks. Clearly however the employment of 90 P.G. Division in the mountains is uneconomical and the enemy would prefer to have the division in Army Group Reserve. Fear of an Allied landing in the Gulf of GENOA must keep 34 Inf and 42 Jaeger Divisions at any rate for the present in their role of coastwatching and stiffening for the two unreliable Italian divisions. Any substitute for 90 P.G. Division would therefore have to come from elsewhere: the relief by 278 Division of 5 Mtn Division North and N.W.

....of URBINO.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

of URBINO releases an eminently suitable division - and a relatively strong one - for that type of warfare. It is interesting in this connection that civilians at URBINO were full of rumours that 5 Mtn Division had "gone N.W." - it is not clear how far but it is in the right direction. The only other Mtn Division which might qualify for the task is 188 Res Mtn Division, but recent reports agree that the formation is now in the DRAVE Valley near KLAGENFURT, and that it has been reduced to the status of a draft-finding and training division. Even if 5 Mtn Division has moved to N.W. ITALY there is no evidence as yet that 90 P.G. Division has been relieved of its present commitments.

With 90 P.G. still tied up, the need for some other mobile reserve has become of paramount importance especially in view of strong Allied thrusts up the Adriatic. The three remaining P.G. Divisions- 26 Pz, 29 P.G. and 16 S.S. P.G. (latter of far inferior calibre to other two) have all been holding sectors along the ARNO under 14 Army, and the departure of 15 P.G. Div has left 10 Army with no mobile division. There have been several indications of regrouping in 14 Army. On the 15 August a unit of 12 Para Regt was asking for 1: 25,000 maps as far West as PRATO and on 28th there was a bn commander's conference in the same regt, while an officer of 3 Bn was to be put "further in the picture". All this may indicate that the division is taking over part at least of its right hand neighbour's area - 29 P.G. Division. 4 Para Div has recently been on a very narrow sector immediately North of FLORENCE, and could easily accept wider responsibilities. Further West 362 Inf Div is confirmed as having taken over 3 P.G. Division's old sector. On its right 26 Pz Division has been resting one of its regts - 9 P.G.R. - and evidence suggests that at least part of this Regt is now on the Adriatic, where a unit belonging to it stated at 0655 hours 30 August that enemy infantry and arty were quiet. It looks therefore as if 9 P.G.R. is in process of coming into the line behind the Foglia river. It may possibly be followed by the rest of the division, for 67 P.G.R. is only holding a sector of some 6,000 yards, which could be taken over by 362 Division. This would leave the enemy weaker on the Arno, but it seems very likely that he is in fact already thinning out and that the increase in alertness noted by our troops is designed to give the impression of greater strength than is actually the case. Whether the thinning out will be carried still further to include 29 P.G. Division will depend on events: 71 P.G.R. was still in its original sector on 29 August when it lost PW from II Bn at Q 7069.

Our attack across the river METAURO found 1 Para Division on the coast, having completed its relief of 278 Division which had moved into reserve preparatory to taking over from 5 Mtn Division, and 71 Inf Div further inland. When we crossed the river, the enemy had already withdrawn his main bodies, not apparently because he appreciated a major threat along the coastal plain, but in accordance with familiar tactics on the Adriatic of thinning out in face of any Allied attack. The direction of our attack by-passed most of 1 Para Division to the West, and fell on 71 Division. Air Photos had confirmed statements by a deserter from 3 Para Regt that the Regt had been busy for three weeks constructing a delaying position forward of the river FOGLIA along the ridge running from M. BUSETTO R 9968 - S. ANGELO S. 0371 - CANDELARA 1074. By the 28th we were in contact all along this line and had crossed the ARZILLA stream: FANO was entered unopposed. That night the enemy began withdrawing across the FOGLIA to the main Gothic position and we cleared him from his remaining positions on the ridge South of the river.
Meantime good progress had been made against negligible opposition through

..... the hills to .....

THIS PAGE IS UNCLASSIFIED

0552

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the hills to URBINO and from there to capture the high ground South of thr river opposite MONTECALVO R 9070. It was in the course of this advance that the first prisoners were taken from 278 Division in its new sector - 994 G.R. losing P.W. at R 9160. On night 29/30 August patrols crossed the FOGLIA and encountered very little enemy reaction. The next day MONTE CROCE R 9168 was captured from 71 Division, and two companies were established in daylight in MONTECCHIO - S 0175 (this village is included in the main defence system).

Several German prisoners have referred to the presence of an Italian division in the Gothic Line, and some of this information has been corroborated by a Partisan Major. Evidence is still conflicting, and it has yet to be established that the Italians belong to a combatant formation, and are not merely miscellaneous Italian Bns which have been assisting in the construction of the Gothic Line.

In the mountains 51 Corps has been voluntarily giving up ground South of the Gothic Line (a recent captured document shows that 76 Pz Corps has been switched to the Adriatic, while 51 Mtn Corps must therefore have moved West to take over ground more suitable to its name). The object of the withdrawal is presumably to secure firmly the positions already prepared. The withdrawal has so far taken place between URBINO and PONTASSIEVE, and prisoners from 715 Division in the SIEVE Valley stated that the Division was to be back on the Gothic Line by 1 September. Such a withdrawal would lay open 356 Division's left flank and would threaten the whole Arno position. It appears therefore that not only is the enemy trying to get Mobile Divisions into reserve but that he is also thinning out his infantry divisions, probably sending units from each back to the main Gothic positions. This may be a precautionary measure to avoid repeating the mistake made at CASSINO, where by reinforcing the Gustav Line and trying to hold it at all costs he so weakened his forces that he was jumped on the Adolf Hitler line. This thinning out will have a second advantage in that if the enemy gets into serious difficulties on the Adriatic he will have bns or even coys out of the line which he can rush across as reinforcements - a policy adopted extensively on the Gustav Line. To add colour to the possibility of a general withdrawal from the Arno a parachutist deserter from 4 Para Division - and a sergeant at that - stated on 29 August that he had deserted because a withdrawal was due to take place on the night 30 or 31st. Furthermore he said that it was announced at an officers conference of III Bn 11 Para Regt that whole front was moving back in the next few days owing to the situation outside Italy.

2. ENEMY SUPPLIES AND COMMUNICATIONS

GENERAL

PW statements indicate that ammunition stocks were low and a policy of strict economy in force early in August. With the bridge over the river Po open from 6 to 16 August, however, the situation is likely to have improved and it is estimated that there are now two to three weeks supplies of ammunition in dumps South of the river. Since the middle of August all rail bridges over the river Po East of PIACENZA have been impassable, but the enemy continues to bring supplies across at night by ferry and pontoon bridges which are drawn in to the shelter of the banks during the day. South of the Po he is pushing trains well down into the 10 Army dumping area around LODI.

Very heavy loading and activity between BRESCIA and VICENZA

THIS PAGE IS DECLASSIFIED IAW EO 13526

on the main MILAN-VERONA-UDINE line between 22 and 24 August suggests the possible departure of enemy formations, presumably 3 and 15 P.G. Divs, from ITALY. Any such operation may however, have been seriously interfered with by the blocking of the three main routes into the REICH on 26 and 27 August. The only line out of ITALY now passable is the one into JUGOSLAVIA via PIEDICOLLE.

RAILWAYS

During the past week three of the four main lines from the REICH into ITALY have been blocked. On 26 August the viaduct at VENZONE (C 3450) was destroyed, blocking the TARVISIO line, and on 27th the BRENNER route was blocked by the obstruction of the AVISIO viaduct (A 7632) and the bridge at BOROVNICA on the POSTUMIA line was rendered impassable. The only line now open is the one which crosses the Jugoslav border at PIEDICOLLE.

The main trunk line which runs across ITALY from MILAN via VERONA was open until the 28th of August, and heavy traffic was run between BRESCIA, VERONA and VICENZA between 22 and 25 August. Except for the PADUA-ROVIGO-FERRARA line all the approaches to the Po river are open, but the river itself has been impassable to rail traffic East of PIACENZA all week.

South of the Po breaks have been achieved in the PIACENZA-BOLOGNA-RIMINI line but the PARMA-SPEZIA line and the two lines South from BOLOGNA are still open. The enemy continues to push his trains as far South as the 10 Army dumping area around IMOLA and FORLI.

In the West GENOA has now been cut off from PIACENZA, MILAN and TURIN, and whilst traffic is still possible between GENOA and SAVONA, the coastal route is completely impassable between SAVONA and the French frontier and between GENOA and SPEZIA.

3. FRANCE

The tempo and scale of the enemy withdrawal from Southern FRANCE have increased during the past week. Leaving the bulk of 242 Inf Div in TOULON and elements of 244 Inf Div together with some marine troops in MARSEILLES, 19 Army has been falling back to the East and West. To the East 148 Res Division has been withdrawing under pressure to the VAR river and is presumably to take up positions guarding the frontier. Further North 157 Res Division has also been withdrawing Northeastwards from GRENOBLE, after giving us a thousand prisoners at GAP, and appears to be falling back to the Mt GENEVRE, Mt CENIS and ST BERNARD passes, thus sharing with 148 Res Division responsibility for the defence of the frontier together with such forces from ITALY as Kesselring can spare to prevent any infiltration into his domain. North of GRENOBLE there has been virtually no enemy opposition, and an Allied force, apparently consisting of three press correspondents, is reported to have reached the Swiss frontier.

Meanwhile, to the West, the enemy has been retiring up the Rhone Valley leaving rearguards consisting mainly of 110 P.G.R. of 11 Pz Div plus some infantry elements to cover the withdrawal. In the valley itself, the Allied road block North of MONTELIMAR on the East side of the Rhone has been the scene of fierce fighting. Counter-attacks by elements of 11 Pz, 189, 198 and 244 Inf Divs have been launched in this area. While the Germans have been successful in infiltrating some forces through our block, they have been unable to prevent a bottle neck developing. This has led to considerable congestion on the East side of the valley, of which the air forces have taken full advantage.

.....Allied forces.....

THIS PAGE IS UNCLASSIFIED

0554

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Allied forces from the North and South have now linked up in the MONTELIMAR region and the enemy Northward movement through MONTELIMAR has perforce ceased. The enemy forces still left South of MONTELIMAR are now isolated from the main body of the German forces. North of MONTELIMAR the enemy appears to be taking up a delaying position in the VALENCE area. On the West side of the RHONE valley, a large enemy column has been proceeding Northwards, consisting presumably of 716 Inf Div and the remnants of German military and civil occupational forces from Southwestern FRANCE. This force, which has to run the gauntlet of the Maquis forces operating from the MASSIF CENTRAL area, has suffered heavily in its withdrawal. In the Lower RHONE area, our forces are already reported across the river at AVIGNON and are advancing Southwest. Enemy resistance at TOULON and MARSEILLES has now ceased. Most of the installations at MARSEILLES are reported intact, although blockships have been sunk in the harbour.

There are now virtually no enemy forces left in S.W. FRANCE. The major garrison towns of TOULOUSE, MONTAUBAN, AGEN and CARCASSONE have been abandoned and large dumps of ammunition and POL destroyed by the retreating enemy. Rail movements from BORDEAUX towards POITIERS suggest that the final elements of the enemy forces on the Atlantic coast are departing, leaving possibly a garrison at BORDEAUX to deny us the port.

In Northern FRANCE, any hopes which Army Group 'B' may have entertained of holding the line of the river SEINE have been dispelled by the events of the past week. Northwest of PARIS American forces, having established a bridgehead over the SEINE at MANTES, turned towards the sea on the West bank of the river. The Seventh Army (which had already lost the bulk of ten divisions in the ARGENTAN pocket) was thus faced with the prospect of pulling back across the SEINE the German forces left in a rapidly shrinking quadrilateral of which the sea and the river formed two sides. Although all opposition West of the river has now ceased it is impossible as yet to estimate how far the enemy has succeeded in getting his forces across. Ferries operated day and night at as many as 40 crossing places. As at MESSINA last August, most of the personnel may have got across, but enemy losses in transport and heavy equipment must be serious. The line of the SEINE between PARIS and the sea has been finally broken by the joining up of all the separate Allied bridgeheads over the river and the subsequent capture of BEAUVAIS and GOURNAY. Meanwhile the enemy's left wing is threatened by the Allied advances beyond PARIS. At PARIS, the bridges were found intact and although enemy opposition in the city was initially strong enough to make the use of armoured units necessary the Germans have been able to offer little resistance to our rapid drive Eastwards along the North bank of the MARNE to SOISSONS and on across the AISNE to near LAON. Further to the South only moderate opposition has been encountered in the advance which has led to the capture of REIMS, CHALONS and VITRY. These thrusts threaten the Seventh Army with the now familiar prospect of being outflanked, and there seems no alternative for the enemy but to fall still further back. With our armoured forces already across the AISNE at SOISSONS, the prospects of holding a line based on the SOMME and the AISNE, or the MARNE, are becoming increasingly remote, and it looks as if he must now fall back with his left flank to the Siegfried line while his right wing withdraws as best it can towards the Belgian frontier.

There have been several interesting new identifications this week. Both 3 P.G. and 15 P.G. Divisions from ITALY have arrived in FRANCE and have been identified N.E. and S.E. of TROYES respectively. 47 Inf Division and elements of 49 Inf Division (both from the PAS de CALAIS area) have been identified N.E. of PARIS while elements of three divisions

....from the South.....

THIS PAGE IS UNCLASSIFIED

0555

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

from the South of FRANCE - 338, 189 and 244 Inf Divisions - have been identified on the American sector South of the capital. It seems likely that some of the enemy forces operating S.E. of PARIS are now under command of H.Q. 1 Army which was formerly at BORDEAUX.

The destruction of five further divisions - 84, 271, 276, 277 and 363 Inf Divs is now accepted, and they are no longer carried on the enemy order of battle in FRANCE. This brings the total of enemy divisions completely destroyed in FRANCE since June 6 to fourteen. Add to this the 31 German divisions whose destruction on the Eastern front is now accepted, and an appreciable reduction has been achieved this summer in the fighting strength of the German Army.

There are now at least six uncommitted or only recently committed divisions in North FRANCE and the Low Countries, and it is believed that further reinforcements are arriving in the West from GERMANY. The arrival in the PARIS area of a low grade formation was reported about 9 August and it is likely that further such formations are arriving. Arriving simultaneously is Field Marshal MODEL who is reported to have taken command in the West from von KLUGE, the latter's seven weeks in command of the battle having been even more disastrous than RUNDSTEDT's month. MODEL has been in command of Army Groups Centre and North Ukraine, and having succeeded in holding WARSAW in the summer, is now given the task of holding the Western Allies somewhere before the German frontier in the autumn.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-

1. ENEMY SITUATION

There are now elements of seven divisions opposing our attack on the Adriatic sector and although the Gothic Line has been breached for over twenty miles of its length the enemy is still offering stubborn resistance. On the rest of the front he is withdrawing, without offering much resistance to our pursuit, into the Gothic Line; whether he will be able to stay there or will have to continue the withdrawal to beyond the Po to prevent being outflanked from the East will depend on the progress of the next few days.

The rate of build-up on the East coast has been accelerated this week as the strength of our attack slowly dawned on the enemy's mind. By the night 28/29th August 9 P.G.R. had arrived and on 1 September we had prisoners from 67 P.G.R.; the whole of 26 Pz division is now known to have arrived. At about the same time the first elements of 98 Div were identified in the MONDAINO area and at least the infantry of this division now appears to be complete. On 4 September a small battle-group of 162 Div was identified from prisoners and part of I Bn 71 P.G.R., the first to arrive of 29 P.G. Div, was identified in an area unlocated but clearly in an active sector. Div H.Q. of 29 P.G. Div also appears to have arrived on the East coast. Finally a Bn of 5 Mtn Div, II/100 Mtn Regt, were operating on 4 September; the main body of the division is far away in Northwest ITALY, so this must be merely a unit whose relief was delayed for some reason causing it to become engaged in the fighting when the situation began to look nasty.

So far the brunt of the fighting and the heaviest casualties have fallen to the three divisions originally in line, 1 Para, 71 Inf and 278 Inf. 1 Para Regt suffered in the fighting in and S.W. of PESARO, which was captured on 2 Sep, and 4 Para Regt in the fighting for MONTECCHIO. 71 Div had fairly heavy casualties in the MONTECALVO area, where fighting was very fierce. The infantry of 26 Pz Div also had fairly heavy casualties and have not been identified since 3 September. Over 2,000 prisoners in all have been taken since 25 August. The German line now runs roughly North and South and the lay-out appears to be as follows : on the coast is 1 Para Div to as far as CORIANO with under command the battle group of 303 G.R. (162 Div) and possibly I/117 G.R., of 98 Div, from CORIANO to the river Conca possibly 26 Pz Div, unless it has pulled out, then 98 Div as far as about the 77 Northing, then 71 Div on a very narrow front Northwest of TAVOLETO and then 278 Div from about PIAN DI CASTELLO R 8375. If 26 Pz Div is in fact being pulled out, 29 P.G. Div

.....will probably go.....

THIS PAGE IS UNCLASSIFIED

0557

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

will probably go in the CORIANO sector and it may do so in any case as this is the area where our threat is greatest. It seems that part at least of 3 and 4 Para Regts are out of the line together with some of 26 Pz Div's infantry and it is suggested that they may be engaged on preparing the line of defences which is now under construction Southwest from RIMINI. These have been greatly developed since 23 August though they consist of field works only, with no concrete and no wire except in the immediate vicinity of RIMINI itself. This line represents the last ditch which the enemy must hold if he is to prevent us from breaking out into the plain beyond the Appennines.

The rumours reported last week of an Italian Mountain Division being in the line on the Eighth Army front appear to be satisfactorily accounted for by the capture of prisoners from several different bns of the Monte Rosa Alpine division who had been attached to 71 Div in order to gain experience of operations.

On the Arno the enemy began to withdraw on night 30/31 August and was closely followed up. The first bound was to a line running roughly on a level with the mouth of the SERCHIO and based in part on that river and the ROGIO canal South of LUCCA; further East he is established firmly on the line of hills North of FLORENCE including Mt MORELLO, Mt CALVANA and Mt GIOVE. The enemy may withdraw more slowly in the latter sector but on the West coast he has further to go before the Gothic Line is reached, and has apparently already started a further withdrawal. The forces here are now spread rather thin. 334 Div has moved over to relieve 29 P.G. Div and there is no reserve anywhere within reach except for the weak 20 G.A.F. Div which appears to be now coming into the line in the LUCCA area. The whole enemy position in ITALY now depends on holding the Eastern flank of the Appennines. A break through there would directly threaten the communications and essential routes of withdrawal of the forces on the rest of the front and even the threat of a break through must cause the enemy to start a withdrawal from the Gothic Line for such a movement will call for the most skilfull timing and coordination, especially as the movement must be continued across the bridgeless Po.

In Northern ITALY a captured document of the end of August shows that 75 Corps, on the Franco-Italian frontier, has under command 157 Div to the North, 5 Mtn Div in the centre and 148 Div to the South. This confirms the destination of 5 Mtn Div suggested last week but an even more interesting point is that there is no mention of 90 P.G. Div which was definitely in that area. Apart from this, however, there is no indication whatever of that division being relieved though it would be reasonable to expect Kesselring to pull it out as soon as possible for a mobile role. The only sign of change in this area is a rather vague report of the end of August that 42 Jaeger Div was moving but in what direction was not specified. In N.E. ITALY the only change indicated is that elements, probably not more than one or two bns, of 188 Mtn Div have returned from CARINTHIA into ISTRIA. The defence of this area is apparently exercising the Germans; POLA is said to be garrisoned by 6,000 troops and to have been evacuated by civilians and precautions against invasion have been taken.

2. ENEMY SUPPLIES AND COMMUNICATIONS

There is as yet no recent direct evidence that the enemy is suffering any shortage of supply. While only about one third of the enemy forces on the Gothic Line are now heavily engaged, the present battle will have increased ammunition and fuel requirements somewhat and the past week has seen a very definite intensification of our attacks against the enemy L of C. While no definite statement can be made

.....on available.....

THIS PAGE IS UNCLASSIFIED

0558

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

on available evidence, it is clear that the enemy's overall administrative position is deteriorating and may become as precarious as it was during the latter part of May and June.

At many points on the Po crossing activity continues, but the enemy's difficulties along this line of interdiction are undoubtedly increasing as a result of stepped up air attacks. All rail bridges over the Po East of PAVIA are out and supplies continue to move across the river at night by pontoon bridges and ferries. It is now definite that the enemy breaks up his pontoon bridges during the day and then reassembles them under cover of darkness. During this week night Tac/R and PR revealed two pontoon bridges across the river at points where only dispersed bridging sections had been seen during the day.

Rail communications in Northwest ITALY have been heavily disrupted. A pronounced increase in MT movement in this area attests the effectiveness of our rail interdiction here. This hits the enemy at one of his currently most vulnerable points, namely his shortage of MT and fuel. Also, and no less important, this rail interdiction, if maintained, should make the eventual withdrawal of formations from the West both slow and difficult.

Further back along his L of C the enemy is also in difficulties. All lines in the Northeast are cut at one or more points and the BRENNER has been blocked (probably continuously) for at least a week. It is quite evident therefore that if the enemy is getting enough supplies into ITALY to meet current requirements he is only doing so with difficulty, while the POSTUMIA route is blocked just North of GORIZIA.

RAILWAYS

Since 1 September all the rail communications between ITALY and the Reich have been cut at one or more points. On the BRENNER Pass the AVISIO viaduct has been impassable since 27 August and reports have been received of troop trains held up at TRENTO and material being forwarded by road from TRENTO to BRONZOLO 50 Kms further North. In the NE all the railway bridges over the R. Piave are now impassable, cutting the lines to AUSTRIA and JUGOSLAVIA, and the bridges over the R. Tagliamento at CASARSA and VENZONE on the TARVISIO line have also been demolished.

On the R.Po all railway bridges East of PAVIA have remained impassable all week. The main lateral line from MILAN to Northeast ITALY, while probably open for several days, is now blocked West of VERONA; most of the railways running South from this line to the Po remain open.

South of the river the PIACENZA-BOLOGNA and FERRARA-BOLOGNA lines are both out in one or more places, but the line from REVERE, on the South side of the Po, to BOLOGNA and those running South and SE remain passable. The PARMA-SPEZIA line is blocked.

In the Northwest dislocation of the railway system has now reached a high level with at least 20 bridges destroyed West of a line MILAN-GENOA. There is only one very round-about route open to through traffic between MILAN and TURIN, while lines leading into GENOA are all blocked, including the coastal lines running Southwest to FRANCE and Southeast to SPEZIA. The GENOA-SPEZIA line has now been cut at many points for at least a month with no attempt at repair having been made; this route apparently has been abandoned in favour of the PARMA-SPEZIA line which the enemy apparently succeeded in opening after it had been continuously cut for a considerable period. However, as indicated above the PARMA-SPEZIA line has again been blocked.

.....3. FRANCE.....

THIS PAGE IS UNCLASSIFIED

0559

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. FRANCE

On 29 August H.Q. 19 Army issued an order stressing the importance of a speedy withdrawal up the RHONE Valley in order to release 11 Pz Div for other tasks. During the past week the remnants of 19 Army have been doing their best to obey the order. Abandoning to their fate the isolated elements of 716 Inf Div left in the RHONE Valley South of MONTELIMAR, the enemy has retired rapidly Northwards through VALENCE and LYONS. The bulk of the enemy forces passed through LYONS on 1 and 2 September with 198 Inf Div and elements of 11 Pz Div forming the rearguard. They left the main road from VALENCE to LYONS cluttered with the wreckage of more than 2,000 destroyed vehicles, 198 Inf Div having suffered particularly heavy losses in material and prisoners amongst whom were the divisional commander, Maj-Gen RICHTER. LYONS is now clear of the enemy who destroyed all but two of the city's bridges. Most of 19 Army is withdrawing rapidly up the LYONS-DIJON road on which our air reconnaissance has observed considerable quantities of horse-drawn transport. Northeast of LYONS the enemy has been attempting a minor delaying action in the BOURG-en-BRESSE region. Our recce elements advancing N.W. from BOURG were counter-attacked by tanks on 4 September and civilians have reported that the enemy has as many as 30 tanks in this region, presumably belonging to 11 Pz Div. This force has, however, been by-passed by Allied troops who have entered LONS LE SAUNIER 35 miles North of BOURG and have reached the Swiss frontier West of GENEVA. Our forward elements are now advancing N.E. to PONTARLIER which is 60 miles S.W. of BELFORT. This drive has so far been meeting little opposition and threatens to beat 19 Army in the race to BELFORT, to which area, according to prisoners, the bulk of 11 Pz Div is withdrawing and where the enemy may hope to make a stand.

The enemy forces North of LYONS amount at the most to the equivalent of two infantry and one weak Panzer divisions (242 and 244 Inf Divs are now considered to have been destroyed and are no longer carried on the enemy order of battle). These represent a sadly reduced force in comparison with the Army Group with which the enemy had doubtless hoped to hold the left flank of a German line across FRANCE. Even if these forces succeed in reaching the BELFORT gap, the developments in Northern FRANCE are such that 19 Army will be fortunate if it ever links up with the rest of MODEL's Armies inside the frontiers of FRANCE.

On the Eastern flank of the Allied Seventh Army the withdrawal to the Franco-Italian frontier continues. 148 and 157 Res Divs which formerly belonged to 19 Army are now believed to be under KESSELRING's command, and enemy dispositions along the frontier are discussed under para 1.

From S.W. FRANCE the evacuation of enemy forces continues. Some 100,000 personnel including miscellaneous civilians and paramilitary groups are withdrawing along the route BOURGES - NEVERS - DIJON. They have probably left behind them a small garrison to defend BORDEAUX. From the Mediterranean coast all enemy forces have been withdrawn and our advance to NARBONNE made no contact.

In Northern FRANCE the enemy forces which had succeeded in escaping across the SEINE last week proved quite incapable of offering any effective opposition to the Allied drive Northwards. The tattered remnants of the German Armies have been withdrawing towards the frontiers of the Reich as rapidly as their inadequate transport will take them. While at a few isolated points, notably COMPIEGNE, BETHUNE and at ABBEVILLE, the enemy has put up local resistance, in the main, the state

.....of Army Group 'B'.....

THIS PAGE IS UNCLASSIFIED

0560

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

of Army Group 'B' has resembled a rout rather than a retreat. A fortnight ago an orderly withdrawal of the German right wing towards the Belgian frontier seemed a reasonable possibility. To-day the Allied forces are in HOLLAND, and Allied supply difficulties rather than any German ability to hold us must be MODEL's main hope of stemming our advance. The Seventh German Army has disintegrated and its headquarters is no longer thought to be in command of any of the enemy forces in the West. 5 Pz Army is now probably commanding on the German right flank with 1 Army on the left. The forces they command are in an extridably confused state, and it would seem that any German, wearing any kind of uniform is being pressed into their ranks. Even the Navy is not exempted and among the prisoners taken during the past week South of SOISSONS have been the bewildered members of a minesweeping flotilla. Two new formations have been identified this week. 226 Inf Division, a new arrival from GERMANY, was identified East of LE HAVRE, and 245 Inf Division formerly located in the LE HAVRE area provided some P.W. near ABBEVILLE. According to P.W. a third new division - 30 SS Inf Div - also an arrival from GERMANY, is in the DIJON area.

As he goes back the enemy is leaving behind a growing number of prisoners. 9,000 P.W. were taken in the MONS-CHARLEROI area alone. South of the SOMME considerable numbers of unsupported and disorganised infantry elements are being mopped up, while the coastal garrisons North of the SEINE are for the most part being abandoned to their own resources. East of PARIS the situation has been no better. Here 3 and 15 P.G. Divisions have arrived on a scene of rout for which even their experiences in ITALY can hardly have prepared them. They indeed represent the sole stiffening of 1 Army's ill-organised assortment of scratch units, and they have been able to do little to halt the advance which has brought us within striking distance of the borders of the Reich. The general lack of control on the part of the enemy is typified by a recent captured operation order to 3 P.G. Div to hold the MARNE line whereas the division is now back on the Belgian frontier.

The enemy's total strength in the West can now hardly amount to the equivalent of more than 20 divisions. Fresh reinforcements are probably coming up - not from the East certainly, for there there is nothing to spare - but there are reports of more low grade divisions from GERMANY being brought up, while 25 Pz Division is reported to have left DENMARK for the West. Reinforced by these the enemy may hope to make a temporary stand on the line of the MEUSE, but he is woefully short of equipment, tanks and horses, and the MEUSE can at best be only a delaying position before the Siegfried line is reached. Even the Germans are not optimistic and their assurances that Allied troops setting foot on Reich Territory will find every farmhouse and haystack burnt are reminiscent of the Churchillian mood of 1940; but this time there is no English Channel between the Germans and ourselves.

-o-o-o-o-o-o-

1. ENEMY SITUATION

A week ago the situation in the Adriatic sector was already fairly stable. By quick reinforcement however the enemy succeeded temporarily at least in stabilising the line. The front West of FLORENCE was milked of two mobile divisions (26 Pz and 29 P.G.), 98 Infantry division moved down from RAVENNA and the second half of 5 Mtn Div was turned back at FORLI while en route to join its division on the Franco-Italian frontier. At one moment it looked as if 162 Turkoman Div would be drawn in as well - a battalion battlegroup appeared in the line, suffered pretty heavy casualties and has now probably gone back to the less strenuous job of coastwatching between RIMINI and CESENATICA. It is not known to what extent this division has been brought up to strength since its first disastrous action on the Tyrrhenian coast, where it lost well over 2,000 prisoners in less than a month, but it is probably low on the priority list for reforming. It is not even certain that it will be made up with Turkomans who must be in limited supply now, and it is possible that low category Germans may be incorporated instead. In any event its most useful role at the moment is probably preparing defences S.W. of RIMINI and watching the coast, available as reserve if the situation demands.

The line to which the enemy is clinging so tenaciously runs still forward of the R. MARANO from the coast to R 8890: this is 1 Para Div's sector and is held by 3 or 4 bns, with most of 3 Para Regt apparently in reserve. Between the 90 Northing and incl CORIANO - scene of fierce fighting in the first week of September - is 29 P.G. Div with both regiments forward though each has a bn in reserve. Further South again is 26 Pz Div along the road to S. SAVINO R 8784 - still held by the enemy up to 12 Sep after heavy fighting - while 98 Div is now concentrated on its right extending as far as the R. CONCA. In 98 Div's sector, after very bitter fighting, S. CROCE was wrested from the enemy and we are now some 500 yards West of the town. South of the river is the battlegroup of 5 Mtn Div (4 bns) which has been pushed out of GEMMANO R 8680, a regimental battlegroup of 71 Div and 278 Div which has eased Northwards a bit and now has two bns in the area NW. of PIAN DI CASTELLO R 8375. In support the enemy has some 30 Panthers, the Mk IV's of 26 Pz Div and 29 P.G. Div (about 70 tanks) and two bns of assault guns. The enemy has managed to sort his forces out into divisional sectors and even though he is holding the line very tightly, each division has some units resting, available as reserve. That the enemy has not escaped lightly in the recent fighting is indicated by the figure of 3,000 P.W. taken since 26 August.

.....On the remainder.....

THIS PAGE IS UNCLASSIFIED

0562

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On the remainder of the front, except in the extreme West where he is still South of VIAREGGIO, the enemy is now back on the Gothic Line. The withdrawal was mainly carried out in easy stages, but on 11 Sep 4 Para Div was bundled back rather more hastily than it expected and the next day was involved in fierce fighting on the outposts of the Gothic Line itself. We penetrated the MLR by capturing M. CALVI, and 5 Bn 12 Para was told to hold all available inf and assault guns ready to assist the critical situation on 2 Bn's front on CALVI. 2 Bn's troubles were not caused by having its B echelon completely destroyed in a bombing attack.

20 G/F Div which had previously been coastwatching behind 16 SS Div North of VIAREGGIO has now reappeared in the line North of LUCCA between 16 SS and 65 Divs. Far more surprising has been the departure of 356 Division, according to some prisoners to the BOLOGNA area and to others to the Adriatic. This move began about 6/7 Sep and the div must by now be out of the line. There has been no question of straightforward relief by another formation, and 715 and 4 Para Divs have had to take over its sector by extending their commitments Westwards and Eastwards respectively. 715 Div has taken over BORGO S. LORENZO - FAENZA road (prisoners from 735 Regt were taken astride this route on 12 Sep) as well as its original commitment DICOMANO -FORLI. 4 Para Div is presumably on the FIORENCE - IMOLA road as well as in the FUTA Pass area. This has left the enemy dangerously thin astride these vital axes.

For the moment the Appennine position, though displaced in the Adriatic sector, is intact. This has only been achieved at the expense of seriously weakening the Western part of the Gothic Line. The withdrawing of 356 Div from the line seriously reduces the enemy's chances of holding the vital passes through the Central Appennines, especially at a time when he might reasonably expect an offensive by Fifth Army. Even allowing for the difficult country and the excellent opportunities the mountain roads offer for heavy demolitions, it is unlikely that the enemy feels so confident of his ability to hold the mountain passes that he can afford to entrust their defence to only two divisions. Unless he has gravely misappreciated Allied strength in the centre, Kesselring must be seriously worried about a pincer movement directed from the FIORENCE area and from the Adriatic against BOLOGNA. The removal of 356 Div can therefore only have two explanations - that he is so worried about his left flank that he considers another division necessary even at the expense of thinning out in the centre, or that he has decided that he must make preparations for an eventual withdrawal from the Gothic Line because he will not be able to hold it in face of renewed Allied attacks. His present dispositions suggest that he has decided he has insufficient forces to hold the line indefinitely and that heeding the warning in good time he has set the stage for the withdrawal. The withdrawal across the Po valley to the river in the face of Allied armour superiority will be a ticklish operation, as will also be the crossing of the river itself with communications and routes dislocated by bombing. The pre-requisite for such an operation is that he should thin out in the West and centre, while holding firm in the East, and that he should create as strong a reserve as possible to prepare delaying positions and assist at threatened sectors.

356 Div by itself will not be sufficient reserve. There have been several reports that the enemy is moving back material from LIGURIA while 42 Jaeger Div is reliably reported to have left the GENOA area to the Italians and gone into reserve. The activities of 90 P.G. Div, last known to be on the Franco-Italian frontier West of CUNEO, are confused. An unconfirmed report claims that elements of the division were moving East from TURIN on 7 Sep, but 200 G.R. lost P.W. at LERCHE N 36 on 12 Sep. One of these divisions and/or a battlegroup of the other, may well be on the way to the BOLOGNA area to help 356 Div. Whether the whole of 90 P.G. Div can be brought into reserve, clearly a more desirable role for a P.G. Div than

....its present....

THIS PAGE IS UNCLASSIFIED

0563

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

its present one, will probably depend on the activities of the Partisans, 148 and 157 Res Divs, both withdrawing into ITALY, have had fairly heavy casualties and are not particularly reliable divisions, while only half of 5 Mtn Div eventually reached the frontier from the Adriatic sector. The only other division that can assist 90 P.G. is 34 Div, and it may be that the enemy is planning to use these two divisions and 85 Mtn Regt to cover the withdrawal from N.W. ITALY when this is decided upon, while 148 and 157 withdrew ahead of them.

Meantime while preparations are put in hand for an eventual withdrawal and heavy equipment is probably being evacuated across the Po, there is no evidence that the enemy means to steal away yet from the Gothic Line positions. He is standing firm trying to gain time and waiting to see where the next blow will fall. When it does, he will hope to blunt it and so make his own disengagement easier.

2. ENEMY SUPPLIES AND COMMUNICATIONS

This week little change is seen in the enemy supply picture. With both 5 and 8 Armies launching simultaneous attacks enemy supply requirements will have increased but no serious deterioration in his overall administrative position is looked for until such time as we are able to achieve a more effective interdiction of movement across the Po. river. It is estimated that from PIACENZA Eastward to the sea there may be as many as 14 bridges and an equal number of ferries in operation across the Po at night. This number of crossing points should be more than adequate to meet current supply needs.

Since the BRENNER and one or more of the N.E. frontier rail routes into ITALY have been open for several days, the enemy should by now have been able to get in more than enough supplies to make up for any drop which may have occurred while these routes were blocked. Our difficulty is of course that, as in the past, we have been unable to achieve and maintain the 90 to 100 per cent rail interdiction of these routes which is required if the movement of supplies is to be decisively affected.

RAILWAYS

On the BRENNER route the enemy succeeded in repairing the LAVISIO viaduct by 9 Septembur, and heavy traffic has been reported on this line. In the N.E. all the railway bridges over the R. PIAVE are still impassable, but all cuts East of this river have now been repaired except the bridge over the river TAGLIAMENTO at CASARSA which is now believed to have been by-passed by new trackage laid across the river bed. The three frontier routes are very probably open with the possible exception of the POSTUMIA route which may still be blocked between TRIESTE and LJUBLJANA as a result of Partisan attacks. The importance attached to the TARVISIO route by the enemy is indicated by a report that they have reinforced all bridges in the TARVISIO area by building extra concrete buttresses. While, as above indicated, this route is now probably open, traffic is likely to be on a reduced scale, and at PONTEBBA, 15 miles East of TARVISIO, Partisans are reported to have destroyed the power plant, causing the enemy to revert to steam traction and reducing traffic to a third.

All the railway bridges over the R.PO East of PAVIA remain impassable, but the lines leading to the river from BRESCIA, VERONA, and PADUA and the main East-West line from MILAN to TREVISO are still open. South of the Po tracks have been cut on both lines into BOLOGNA from the North and four bridges have been destroyed on the network of lines which cover the main 10 Army dumping area between FERRARA and RIMINI. The PIACENZA-BOLOGNA-RIMINI line is cut between FIDENZA and PARMA and West of MODENA, where bridges remain impassable, but it is open elsewhere.

...Both lines...

THIS PAGE IS UNCLASSIFIED

0564

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Both lines running South from BOLOGNA are now open, but the PARMA-SPEZIA line which has been open for several weeks is reported to have been blocked by the Partisans.

In the N.W. heavy dislocation continues. All lines are cut between GENOA, TURIN and MILAN, and only MILAN now has direct rail communications with the East. Between GENOA and SAVONA the line is completely unusable and there are two bridges down between SAVONA and IMPERIA.

3. FRANCE

In Southern FRANCE, the past week has been notable for the enemy's attempt to fight a screening action along the DOUBS river to cover the withdrawal of 64 Corps through the gap between the Allied armies in Northern and Southern FRANCE. 11 Pz Div and the remnants of 198 Inf Div have formed the bulk of the screening force, later reinforced by elements of 159 Res and 16 Inf Divs, who apparently formed part of 64 Corps' retreating columns. Enemy resistance remained particularly fierce on the CHAGNONS - MONTBELIARD line until about 9 September when the decision appears to have been taken to disengage and withdraw in a Northeasterly direction towards BELFORT. This decision was almost certainly forced upon the enemy by the speed of our advance along the Swiss frontier which had brought us by that time to within 25 miles of BELFORT itself. Prisoners say that the enemy had intended to hold MONTBELIARD until at least the 15th September, and the abandonment of the DOUBS line so much earlier seems to have caused the utmost confusion amongst the ranks of 64 Corps. These have now split into small and disorganised groups struggling as best they can to find the way back to VESOUL and BELFORT.

11 Pz Div, having abandoned MONTBELIARD, has shifted Eastwards to cover the approaches to BELFORT between VESOUL and the Swiss frontier. Here, enemy opposition is toughest. Elsewhere only sporadic resistance is being met by our troops as 19 Army advances to the BELFORT Gap. Considerable rail movement has been observed from VESOUL Eastwards to BELFORT and the roads East and Northeast of DIJON are filled with troops falling back towards BELFORT as best they can. Somewhere in this area, although not yet identified in action, is 30 SS Division which is reported to be composed of Russian volunteers, one bn of whom deserted en toto to the Maquis recently. Apart from this there are only the disorganised remnants of 64 Corps to stiffen 19 Army's ranks when it finally makes its stand before the BELFORT Gap.

In Northern FRANCE the crossing of the German frontier N.E. of TRIER has been the climax of a week characterised by stubborn enemy delaying actions on the ALBERT Canal and the MEUSE La. On his right flank where 15 Army is now believed to be holding a sector, the enemy withdrew rapidly last week to the line of the ALBERT Canal, leaving to their fate the elements of 15 Divisions cut off in the MONS area. He left behind him garrisons at BOULOGNE, CALAIS and DUNKIRK (consisting of the bulk of 226, 245, 331, 346 and 711 Infantry Divisions) and a number of disorganised troops who failed either to withdraw with the bulk of the enemy forces behind the ALBERT Canal or to get within the protective shelter of the coastal fortresses. Some of these troops have succeeded in escaping across the SCHELDT estuary in rowing boats. Many of them are now in prison cages.

The defence of the ALBERT Canal itself seems to have fallen upon the infantry and parachutist elements of 15 Army reinforced by some hitherto uncommitted formations. 347 Inf Div from DEN HELDER, consisting of many foreigners with little battle experience, has been identified in this sector, as have 712 Inf Div from the ROTTERDAM area and 59 Inf Div a new arrival from GERMANY. The quality of the recently committed divisions in this area is typified by 348 Inf Div which has gone into action with old

...and makeshift....

THIS PAGE IS UNCLASSIFIED

0565

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

and makeshift equipment including machine guns taken from aircraft. Nevertheless enemy resistance has remained fierce throughout the week on the line of the canal and our bridgeheads have been the scene of sharp enemy counter-attacks. However with Allied patrols now across the Dutch frontier South of EINDHOVEN, it would appear that the ALBERT Canal line has been broken and the enemy is faced with the prospect of swinging back across HOLLAND to the SIEGFRIED Line. The bulk of the enemy's armour in this area has already been disengaged and is reported to be splitting into two main groups, one of which is moving Northwards from the LIEGE area, the other Eastwards possibly for a rapid refit in GERMANY.

The MOSELLE crossings between METZ and NANCY have been the other feature of interest during the week. The enemy has reacted sharply to the American attempts at crossing the river and elements of at least ten enemy divisions have been identified in action in the sector between the two cities. These include seven recently arrived divisions - the ubiquitous 3 and 15 P.G. Divs, 19 Inf, (an upgraded reserve div from DENMARK) and four Divisions from GERMANY - 58, 64, 553 and 559 Inf Divs. The last four are of doubtful quality indeed. 553 Inf Div for instance was hastily formed on 2 August in S.W. GERMANY from men on leave and discharged hospital cases. 559 is probably no better. Moreover the reinforcement of the METZ-NANCY sector has been achieved only at the expense of the area further North between MONTMEDY and GIVET which for a time was virtually drained of troops although resistance is now stiffening with the appearance of 3 Para and Panzer Lehr Divs in this sector. It is in this area that Allied troops have passed into LUXEMBOURG and thence across into the REICH.

Some idea of the state of enemy formations in the West as a result of the recent battles can be gleaned from a captured document of 27 August giving the strength of various formations. 276 Inf Div on that date had 93 men; 363 Infantry Div was a little better off with 150 men. Of the eight divisions whose strength was given, none had more than 1,200 men. It is estimated that on 1 September the enemy's total strength in the West including miscellaneous G.H.Q. troops and infantry replacements did not exceed a maximum of 360,000 men, together with 250 tanks which with replacements might be brought up to 600. Since September 1st, casualties have continued to be heavy and appreciable forces have been locked up in the coastal garrisons. All in all, it is doubtful whether the enemy can muster in the West the equivalent of 15 full strength divisions to man the 400 miles of the SIEGFRIED Line. He may still of course draw reinforcements from elsewhere. GERMANY, whence nine new divisions have appeared in the past three weeks, can doubtless produce some more, although the quality of those already arrived can hardly be encouraging for the enemy. If time permits, SCANDINAVIA and possibly ITALY may also help to swell the total a little. Apart from these the enemy can only draw on the Eastern front where his forces are already stretched to the limit. Moreover time is short and the Allies are in GERMANY, while North of the ALBERT Canal further Allied forces threaten the weakest section of the SIEGFRIED Line - that North of AACHEN. If reinforcements are to be found they must come quickly, for in their present weakened state, prolonged effective resistance by the enemy forces in the West is problematical.

1. ENEMY SITUATION

The past week has been an unhappy one for Kesselring's army. North of FLORENCE the Gothic Line has been breached by 5 Army who are now pushing over the watershed towards the plain. On the 8th Army front attempts to hold on two successive ridges barring our advance to the Via EMILIA have failed, and today we have reached the banks of the MARECCHIA river, which elements have crossed. Broad and carrying very little water, this river bed is not a very serious obstacle to our advance into the plain itself.

The 8th Army attack on the line the enemy had held so stubbornly from POGLIANO 9192 to CORIANO 8787, South along the ridge through S. SAVINO 8704 and across the CONCA to GEMMANO 8680, started on the night 12/13 Sep and by the following evening the central part of the ridge was in our hands. 98 Div, veteran of the CRIMEA, received the brunt of our attack and lost the better part of one regiment (289 G.R.) in S. SAVINO when our troops worked their way round from the South to cut off its line of withdrawal. Another regiment (117 G.R.) also suffered heavy losses and before long the division was reduced to a single regimental battlegroup. In the course of this fighting a recce unit of 44 Div made its appearance under 98 Div - the first example of piecemeal employment of spare units from relatively quiet sectors of the front. On the following day 114 Fusilier Bn also appeared, only to have its headquarters and C.O. promptly surrounded and put in the bag. No other elts of these divisions have so far been identified on the Adriatic.

On the 14th we launched our attack across the MARANO and by the evening had reached the outskirts of S. LORENZO 8691. This attack struck along the boundary between 29 P.G. Div and 1 Para Div. The latter was only partially engaged in the battle and its left flank did not pull back across the river until the afternoon. In our advance to RIMINI this div has been systematically by-passed to the West all the time and has constantly been forced to conform with the withdrawal of the rest of the front without influencing the battle in any way. Bitter fighting followed in the next two days for the village of S. MARTINO, to the North of S. LORENZO. Here we established a foothold in the Southern part of the village on the evening of the 14th, but a strong counter-attack the following morning by parachutists supported by Tiger tanks (the first identification of Tigers in the Adriatic battle) drove our troops back from the village.

Meantime to the S.W. we had pushed on just North of the CONCA river to capture M. COLOMBO 8382 and it was in this area that contact was made for

....the first time....

THIS PAGE IS UNCLASSIFIED

0567

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the first time with units of 356 Div. The plight of 98 Div had brought 356 Div down in a hurry from BOLOGNA to be committed to battle before it had had time to rest after the strenuous fighting on the ARNO sector. The bulk of the division took up positions along the MULAZZANO ridge but from the moment of its entry into battle it was on the wrong foot. Its case, after the heavy fighting of the last four days, is almost as serious as that of 98 and 71 Divs. Both bns of 869 Regt are now reduced to a single battlegroup and the two bns of 870 together with II Bn of 871 Regt form another group. The capture of CERASOLA 8280 early on the 18th followed shortly by that of MULAZZANO drove 356 Div back behind the main RIMINI-S. MARINO road. Meantime to the S.W. both 71 and 98 Divs had been withdrawn from the battle and their places taken by 278 Div which in the course of the fighting had gradually shifted further and further North until by the 17th it had a common boundary with 356 Div in the SERRAVALLE area 7888. Under its command is 100 Mtn Regt.

Our advance along the CERASOLA ridge and two successful crossings of the river AUSA in the general area 8090 - 8291 forced the enemy to abandon S. MARTINO on the 19th and pull back to the last remaining ridge barring our entry to the plain. Along this ridge running from the Southern outskirts of RIMINI to FORTUNATO 8394 the enemy had recently made an attempt to build a defensive position, and FORTUNATO itself had been developed as a strongpoint. A captured map shows that this line was intended to continue through M. ARBORETTA 8091 and just West of SERRAVALLE 7787 down to S. MARINO. Our capture of the ARBORETTA feature on the 19th caused the enemy to fall back to an alternative line on the CERIANO ridge some 2,000 yds behind. The weight of our attack on FORTUNATO fell on one of the regiments of 162 Div (314 Regt) which is apparently fighting under command of 29 P.G. Div. Well over 200 prisoners have been taken from this regiment already and the FORTUNATO ridge was finally cleared of the enemy on 20th. As on previous occasions 1 Para Div on the coast had to conform with the enemy withdrawal here and to fall back on the night 20/21 behind the MARECCHIA river leaving rearguards in RIMINI till the next morning.

The battle of CERIANO ridge proved an even tougher proposition than that for FORTUNATO. 20 G.A.F. Div, whose arrival had been heralded as early as the 15th when 29 Div was making contact with its recce unit in the area of S. MARINO, made its appearance in the line in the fighting for the crossings over the river AUSA and has since apparently been under command of 26 Pz Div. Further West much needed reinforcements arrived for 356 Div on the night 19/20 in the shape of a battlegroup from 90 P.G. Div. This battlegroup was largely responsible for the successful defensive fighting which denied us the road running N.E. from CERIANO village to cross roads at R 7993. 26 Pz Div's tanks were in the area of these cross roads all day on 20th holding up our advance. Heavy casualties were suffered by both sides in the fighting for the ridge and by mid-day at least one unit of 90 P.G. Div was considerably reduced in strength. Although there were still elements left on the ridge early on the 21st, by about 1000 hours most of them had withdrawn behind the river MARECCHIA.

On the FLORENCE-BOLOGNA axis bitter fighting has taken place all the week to seize the dominating heights astride route 65 and the road to FIRENZUOLA. The main weight of our attack directed up the latter road fell on 12 Para Regt. The enemy seems to have appreciated too late the strength of our attack and by that time 12 Para Regt had got into serious difficulties as a result of heavy losses, and only a very scanty reinforcement was available. Consequently, companies of the regiment were being taken from one threatened sector to another, often arriving too late to prevent the capture of an important feature. The critical day was the 17th when 3 Bn which had successfully repelled all our attacks on M. ALTUZZO 9198 was to be rushed across to assist the 1st and 2nd Bns in grave trouble at MONTICELLI 8998. 3 Bn's move, which at 1000 hours the regimental commander said was to be made at the double, was delayed by the late arrival of the Infantry Lehr Regiment which was to relieve it, and the enemy was thrown out of MONTICELLI. The Lehr Regt had previously been in the line North of

....PISTOIA and its....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

PISTOIA and its transfer Eastwards was the first in a series of moves aimed at bunching more tightly on the threatened FIRENZUOLA road. On the 18th our troops stormed and seized M. ALTUZZO and reached the watershed from where they advanced quickly to BARCO 9199 and M. LA CROCE L 9200. 12 Para Regt withdrew in disorder and at 1515 hrs said we had reached RIFREDO L 9100 and complained of lack of contact to the East with the Lehr Regt. On the 19th reinforcements arrived in the shape of 362 Recce unit, and by the next day two other regiments of 362 Div had been identified and it was clear that that div was moving in on the original left wing of 4 Para Div in the area of FIRENZUOLA. Its arrival did not, however, prevent us crossing the river SANTERNO East of the town that same day and reaching the slopes of Colle CAPRILE L 9307. The Lehr Regt seems to have crumbled away and 715 Div which has put up ineffective resistance in the mountains Northeast of BORGO S. LORENZO appears to be too weak and too thin on the ground to be able to hold unaided the mountains between the FIRENZUOLA-IMOLA road and the DICOMANO-FORLI road. On the 21st further reinforcements had arrived in the shape of two bns from 44 Div which lost prisoners East of FIRENZUOLA. The rest of the division may follow to bolster 715 Div. The time has been reached when the enemy must take a risk and the most reasonable place to do so is undoubtedly the sector between the main thrusts of 5 and 8 Army where he has probably appreciated by now that our intentions are not very serious.

362 Div's original sector North of PISTOIA has apparently been taken over by 16 SS Div although the evidence is at present scanty. This has left 42 Jg Div which relieved 20 G.A.F. Div North of LUCCA to hold the sector between the river SERCHIO and the Tyrrhenian sea.

Whatever the enemy's long term policy may be it is clear from the heavy fighting of the past week that he has had every intention of trying to hold the Appennine line. It is difficult to believe that at this stage of the war this decision could have been taken merely for reasons of prestige. In view of the critical situation on the Western front it would have been reasonable to expect that Kesselring would have been ordered to withdraw to a shorter line on the Alps and thus release some divisions for the West. Such has apparently not been the case, and he has been allowed to fight it out on the Appennines. In the course of the Adriatic battle Kesselring has committed ten divisions, and since these have failed to hold 8 Army on a narrow front suited to defence, it is difficult to see how the same force depleted in strength can now hope to stabilise in the plain between the N.E. slopes of the Appennines and the Adriatic. In addition he has now also to face the serious danger of a breakthrough by 5 Army down into the plain behind the bulk of his forces on the Adriatic. To meet this latter threat he has no reserves available unless he thins out still further on the Western part of the Gothic Line. This seems inevitable and we may find the bulk of 14 Army concentrating in the hills immediately South of BOLOGNA leaving only a thin screen to guard the roads into the mountains North of LUCCA and along the West coast.

The Allies having now forced their way past RIMINI, the enemy has little alternative but to try and make an orderly a withdrawal as possible. Although with the weakened force now left the enemy has little chance of stabilising in the plain, the country has many dykes and streams which can be used as delaying positions, and may still enable him to carry out a successful withdrawal. Should it rain the Allied chances of breaking through may be seriously hampered. The problem for Kesselring now is one of careful coordination in the movements of his Armies so that at no time does he gives us the opportunity to break through one Army and outflank the other. It is not an easy task, and its successful solution will largely depend on the whims of the weather and the Allied ability to maintain strong pressure.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLIES AND COMMUNICATIONS

There is no indication this week of any major developments in the enemy supply situation. While the BRENNER rail route has been cut again it may now again have been repaired and all the frontier routes in the N.E. are apparently open. There should therefore be little difficulty in getting sufficient supplies into ITALY. Within ITALY itself, though considerable dislocation of railways continues in the N.W., through rail traffic to the Po river crossing points from PIACENZA Eastwards appears possible over a number of routes. No rail traffic over the Po is possible, but a considerable number of pontoon road bridges and ferries continue active and rail movements in the area South of the river have been noted. Under these circumstances a decisive shortage of supplies is not to be expected.

With reference to the Po itself, the most interesting developments this week are the discovery by PR of what is very probably an under-water bridge at a point about 15 Kms East of PIACENZA, and the fact that just North West of OSTIGLIA (F 7212) what was previously thought to be a road bridge under construction is now seen to be a rail bridge.

While details of the under-water bridge are not known it is probably suitable for LT. There are also ground reports of similar bridges at three other points, and while they have not as yet been picked up by PR, their existence is not unlikely. Presumably the enemy will still count heavily on the continued existence of such bridges when the time comes to withdraw North of the river; at least to date he must consider that this ruse has been successful.

For some time PR has shown that there was a bridge under construction just Northwest of OSTIGLIA at F 735125. A PR report of 17 Sept on this bridge is as follows: "It is now seen that the bridge is intended primarily for a rail bridge though it is likely that it will also be of sufficient width to carry road traffic. Twenty-eight piers spaced at some 15/20 feet apart, have been built across the river. Narrow planking, suitable for foot traffic only, has been laid apparently at the base of the piers. No decking has yet been laid on top of the piers. Much progress has been made in preparing the track up to either end of the bridge since Sept 12, but this does not yet appear complete, though nearly so."

Otherwise the situation along the Po is relatively unchanged except that a growing number of crossing points, particularly ferries, are becoming apparent. Whether the number has in fact increased of late or whether we are simply discovering more of those that have been in operation for some time, it is difficult to say; it is probably a combination of both. In any event it seems reasonably certain that the enemy will develop a maximum number of crossing points in order to permit a wide dispersion of traffic.

RAILWAYS

On 13 Sept two bridges were demolished between TRENTO and BOLZANO on the main BRENNER line, but these may now have been repaired. By 16 Sept the VERONA-UDINE-TARVISIO line was reopened and still remains passable throughout. The importance which the enemy attaches to this route is shown by the fact that he has started building rail diversions round the bridges. It is also reported that the narrow gauge line from PIEVE DI CADORE, North of BELLUNO, to DOBBIACO is being used for military purposes. DOBBIACO is on a standard gauge line which runs Westwards to FORTEZZA on the BRENNER route and East to SPITTAL and VILLACH; thus, by using this route, it is possible to by-pass a 200 Km stretch of the main BRENNER line, and both the TARVISIO and PIEDICOLLE routes. On the MILAN-VERONA-TREVISO line a bridge was destroyed West of PESCHIERA on 17 Sept, but the three main

.....approaches to the Po....

THIS PAGE IS UNCLASSIFIED

0570

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

approaches to the Po, namely the PADUA-ROVIGO, VERONA-OSTIGLIA and BRESCIA-CASALMAGGIORE lines are all now open.

On the river Po itself all railway bridges remain impassable East of PAVIA, but the enemy continues to ferry supplies across by all means possible, and as indicated above there is a rail bridge under construction across the Po near OSTIGLIA.

South of the Po the PIACENZA-BOLOGNA-RIMINI line is now interdicted in five places, two of which are South of BOLOGNA, and the RAVENNA-RIMINI line has been abandoned, ten bridges having been blown along a 20 Km stretch on 15 Sep. Though there have, at several times during the past week, been cuts on both the OSTIGLIA-BOLOGNA and FERRARA-BOLOGNA lines, they have always been by-passable and fairly constant traffic has been reaching BOLOGNA from both North and NE, while to the South both the PISTOIA and PRATO lines remain open and there are reliable reports of trains running as far as RIOLA (L 6520), about 20 Km behind the present front line. Owing to lack of photo cover the condition of the PARMA-SPEZIA line, which was reported to have been interdicted by Partisans, is not certain, but it is now believed to be passable.

In the West dislocation continues to be at a high level. It is, however, now possible, by using very roundabout routes, to maintain traffic between TURIN and GENOA and between GENOA and MILAN without having to ferry round breaks. The GENOA-SPEZIA line remains absolutely impassable and is believed to have been abandoned, and to the SW of GENOA two bridges are still impassable between SAVONA and IMPERIA. Partisans have also been active in the West and claim to have cut communications between CUNEO and MONDOVI, FORNOVO DI TARO and FIDENZA, and NOVARA BORGO MANARO (J 6894) and MILAN, but there is, as yet no confirmation of these reports.

3. FRANCE.

The most sensational news in a week already outstanding for the breaching of the SIEGFRIED Defences South of AACHEN has come from a document captured by 7 Army. This is dated September 8 and announces that Field Marshal von RUNDSTEDT reassumed command in the West on 5 September, exactly 3 months after the first breaching of the Atlantic Wall, and 2 months after his replacement by von KLUGE. Thus the High Command in the West changes for the third time in 2 months. After the failure of von KLUGE and MODEL (both reported to be persona grata with Hitler) the enemy has had to fall back on the professional soldier of the old school so ruthlessly removed after the first month of the present battle. Whether the reappearance of RUNDSTEDT marks a general resumption of the war direction by the Army remains to be seen. It does at least suggest that some of the scales have fallen from the Fuehrer's eyes and that he seeks to regain the shattered confidence of the Army before it is too late.

Von RUNDSTEDT returned to a scene incomparably worse than that which he left in early July and his arrival was too late to stop the Allied armies breaching the West Wall as they had broken the Atlantic Wall in June. During the past week there have been important developments in all sectors. On the enemy's right, 15 Army, having abandoned the ALBERT Canal and withdrawn to the ESCAULT Canal, has been forced off this last defensive barrier before the Dutch frontier and Allied forces are now deep inside HOLLAND. The forces defending the ESCAULT Canal were for the most part of doubtful calibre and they had been weakened by the transfer of 3 Para Div to the LUXEMBOURG sector. The departure of this good fighting formation was hardly compensated for by the arrival of two new divisions from the REICH, and with the descent of Allied parachutists behind them, the defenders of the Canal wilted before the Allied frontal assault. The new arrivals were 176 Inf Div and 182 Res Div, both from GERMANY. The commander of 176 Div is now in our hands, and brought the interesting news that

..... 5 Pz Army .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

5 Pz Army is commanded by von ZANGEN, one time commander of a Corps in North ITALY. Prisoners had previously reported that the former Army Commander, SEPP von DIETRICH, had fallen victim to an Allied tank attack on 31 Aug.

On the left flank of 15 Army, in the MAASTRICHT area, resistance has been comparatively light, and MAASTRICHT was taken without great difficulty. Among the defenders of the approaches to the MAASTRICHT gap was 22 GAF Div, a revived edition of the formation believed to have been disbanded early this year, which had fought in RUSSIA and was reported to have been in Northern ITALY for a time in the autumn of 1943.

One of the three coastal garrisons under 15 Army's command, BOULOGNE, fell on 20 Sep after [redacted] fighting. DUNKIRK and CALAIS still hold out, although the defenders of the former have withdrawn to a narrower perimeter this week, while the troops in the CALAIS area have been giving themselves the doubtful pleasure of firing off large quantities of ammunition from the long range coastal guns. 6,000 PW have so far been taken at BOULOGNE. On WALCHEREN Island, there is now a considerable number of troops which, with the arrival of further escapees across the SCHELDT estuary, have been swollen to some 40,000 in number, and are effectively denying us the use of ANTWERP.

Meanwhile on 15 Army's left, it is believed that 7 Army now holds a sector from MAASTRICHT down to the THIONVILLE area. 7 Army was thought to have been relieved by 5 Pz Army after the collapse of the SEINE line, but with the disengagement of the bulk of the German armour to the North of AACHEN and the area behind the MOSELLE, it is likely that 5 Pz Army's turn has now come to lick its wounds while the battered 7 Army reappears to defend the German frontier. In this sector we are now meeting the savagest opposition since the break-out at AVRANCHES last July, but 7th Army has nonetheless been unable to prevent us achieving an important breach of the West wall. Both lines of the SIEGFRIED defences have been penetrated in the area South of AACHEN and the town is reported to be surrounded. Elements of at least five divs are reported in this area, including yet another raw arrival from GERMANY, 526 Gren Div. This formation is well up to the standard of the recent arrivals. It is about 14 days old and composed of training and replacement personnel. It is to be expected that other reinforcements of this, and possibly of better calibre will be brought up to assist 7 Army in the defence of its all-important sector. The Wehrkreise on the German border have been mobilised and 2nd grade reserve personnel (i.e. the physically unfit the untrained and the over 35's) are being brought up to reinforce the defences.

South of THIONVILLE, 1 Army has been fighting hard around the MOSELLE crossings, and the French fortress of METZ has proved a very difficult nut to crack. The infantry elements in this area have been reinforced by the Pz Lehr Division, while 21 Pz Div is reported to be refitting somewhere behind the MOSELLE and may shortly put in an appearance. 1 Army's weakest sector has been its left flank where the contact with 19 Army from the South of FRANCE, if it exists at all, must be tenuous in the extreme. The enemy has been unable to hold NANCY or EPINAL and Allied forces have thrust on to within 50 miles of STRASBOURG. 708 and 716 Inf Divs have appeared in this area but seem to have offered little effective resistance.

In the South it is believed that the remnants of 19 Army have reached the BELFORT area after their disheartened and costly withdrawal, and have probably succeeded in forming a continuous front with 1 Army on their right. On the left flank 11 Pz Div is still fighting hard

....before BELFORT.....

THIS PAGE IS UNCLASSIFIED

0572

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

before BELFORT, while the long L of C from the South of FRANCE does little to help the Allied Armies in this area. In front of 19 Army, the junction of the Allied 7th and 3rd Armies has brought about the end of all organised German resistance in the South West. 18,000 P.W. have been taken, comprising three generals, an admiral and miscellaneous naval, military and air personnel.

The scene which confronts the new C in C West is not encouraging. His casualties since D day are thought to be in the neighbourhood of 900,000 comprising 600,000 P.W. and men cut off in isolated garrisons, some 200,000 long term wounded, and 100,000 killed. With recent reinforcements he may now have at his disposal as many as 20 full strength divisions. But he has also to hold a frontier, the defence of which requires some 70 to 80 full strength divisions, and his main fortifications are already breached in one sector. Von RUNDSTEDT may well wonder if it was worth coming back.

[illegible] INTELLIGENCE SUMMARY NO. 63

[illegible] 29 SEPTEMBER, 1944

(a) This Summary will NOT be distributed below HQs of Army Corps. Obtained information will not be reproduced in any Intelligence Summary of formations under this H.Q. without special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-

1. [illegible]

The past week has shown no change in the enemy's tactics in the two areas of our attack. Both on the Adriatic coast and in the mountain sector North of FLORENCE he has continued to give ground only where hard pressed and numerous counter-attacks and strong and at times desperate resistance have further reduced the strength of some of his formations. In spite of his determined defence however he has been forced back in both sectors and on the Adriatic we now stand along the FIUMICINO RIVER, where the enemy has occupied a position which he calls "GERBER" and are attacking SAVIGNANO and the ridge to the S.W. of it, while South of BOLOGNA our advanced troops are on MONTE BIANCHI (I 0617) and we hold a line roughly from C.[illegible] (I 0117) on the PORRETTANA-BOL. road to S.[illegible] DI SAMBUCO (I 9115).

Between the Adriatic and the centre and between the centre and the West coast the enemy has thinned out to a very considerable degree to provide the necessary support for his two threatened fronts. The Adriatic sector has been reinforced by 11th Div whose place has apparently been taken by 356 Div - prisoners were taken from I Bn 870 G.R. area R 0102 on 27 Sep. The whole of 4th Div has moved across on to the PIANCASTELLI-DOZZA axis and 305 Div has moved Westwards to take on the DIOCLIZIO-BOZZI road and has at least one bn as far North as the [illegible]-DOZZA road. The gap left by these two latter divisions may have been filled by 90 Division. Both 90 and 356 Divisions have been very severely handled and their strength whittled away. If the exigencies of the moment do not permit of their being given a complete rest the mountain sector between the advances of 5 and 8 Armies, where our own pressure has never been heavy, is the most fitting place to put them.

Most of 90 P.G. Division, lately on the Franco-Italian frontier, has meanwhile been identified in the line and appears to be controlling some of 356 Divisional Artillery. This is the most formidable reinforcement that the enemy in the Adriatic has received and it has permitted him to keep some control over the pace of his withdrawal.

South of BOLOGNA 4 Para Div and the Lehr Brigade have had very heavy casualties. 12 Para Regt of the former has been reduced to a battle-group whose strength can hardly exceed one bn although the other two regts are less severely affected, while I Bn of the Brigade had about 80 men on 27 Sep and II Bn was reported by prisoners to have formed a battle-group out of 5 of its own.

.....Apart from the.....

THIS PAGE IS UNCLASSIFIED

0574

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Apart from the arrival of 44 Div the lay-out of divisions in this area remains unchanged with 305 Div covering the FOGLI road, 715 Div that to [illegible], 44 Div that to D'OLI while 362 and 4 Para Divs point road by the Edar Brigade hold the sector from the D'OLI road to westward the SO Bisting. Further to the West there has been considerable evidence of a move on the part of 65 Div. Actual destination however not yet apparent and though No 6 HQ LAG G.H. was at L 5524 on 27 Sep, rearguards of all three no to were still in the original area S.W. of PISTOIA on 27 Sep. In this sector prisoners have talked of long withdrawals by 42 and 16 SS Divs as imminent and air recce and ground patrols show that the prepared "GOTHIC LINE" positions between the 30 and 75 Bisting are no longer occupied.

It may well be therefore that here at any rate the enemy has decided that he must begin to face the situation, by extricating those troops whose present positions are not vital and who would be left in disagreeable isolation by an Allied break-through to BOLOGNA. On the East coast, despite our advance from the S.W. to within 20 kms of D'OLI, the enemy shows no signs as yet of making a hasty withdrawal, and for the past two days has bitterly contested the ground S.W. of SAVIGNANO. On several occasions in the past the enemy has delayed his withdrawal dangerously late and despite his apparent confidence it is possible that he may repeat the mistake he made at C.M.ERO where a tardy decision to withdraw cost the parachutists many unnecessary casualties.

2. [illegible] AND COMMUNICATIONS

The [illegible] railway is now known to have been open since 16 Sep and traffic on it is reported to be heavy. Work is still in progress on the by-pass round the [illegible] viaduct, which is probably the most vulnerable part of this line. The by-pass was begun in August and is now in an advanced state of construction. The enemy has also been constructing new roads in the [illegible] area to by-pass the existing roads and by-pass vulnerable points.

In the NE all the bridges over the river [illegible] are now impassable cutting all routes to [illegible] and the Austrian border, and heavy AD movement has been reported in this area. Rail traffic has been reported between DOMEGLIO and [illegible]. This line can be reached from [illegible] via the narrow gauge line from PIEVE DI CADORE to DOMEGLIO, thus by-passing both the main [illegible] and [illegible] routes. The PIEVE DI CADORE-DOMEGLIO line, which has been reported to be in use last week, has a capacity of 400 tons of freight or 4,500 men per day.

The approaches to the R. [illegible] over the [illegible]-[illegible]-[illegible]-PADUA line remain open and continual traffic over the river is reported both by ferry and pontoon bridges. Traffic appears to be especially heavy in the [illegible] and CUTIGLIANO areas. At CUTIGLIANO the new railway bridge was brought into use some time between the 22nd and 25th September, thus making direct rail traffic possible between the [illegible] and BOLOGNA. This bridge was, however, attacked and two central spans destroyed on 26 Sep.

South of the Po traffic continues all along the [illegible]-BOLOGNA-FORLI line, as far South as PARMA, and the enemy is still pushing traffic North from BOLOGNA; fifty trucks were seen at VADO on 22 Sep.

In the NW the situation has somewhat deteriorated from our point of view, and direct traffic is now possible between TURIN, MILAN and GENOA, and between GENOA and the French border; there are also reports of a new road bridge to be built at [illegible] and of repair works in progress on the PIACENZA-GENOA road.

No reports have now been received of industrial plants being dismantled at TURIN; whilst we have no confirmation of this report, it is quite possible

.....that the enemy...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

that the enemy is evacuating machinery to GERMANY, and this would appear to fit in with reports received lately of heavy rail traffic into the RUHR.

J. WESTERN FRONT

"GERMANY has lost a battle but not the war", commented Dr WAGNER of the German Press and Ministry on 25 Sep. Events in the West during the past week have shown clearly that von RUNDSTEDT and the forces under him subscribe in full to HAMLET'S sentiments. The enemy resistance has on all sectors been tenacious, and Allied progress has been slower than at any time since the break-out from AVRANCHES in July. The British corridor from EINDHOVEN to ARNHEM has been the main centre of interest. Some II SS Pz Corps has directed its activities to the elimination of the Allied airborne force West of ARNHEM, and to attacking both flanks of our salient North of EINDHOVEN. An SS battlegroup FRUNDSBERG (the title of 10 SS Pz Div) composed of elements of both 9 and 10 SS Pz Divs has caused the greatest trouble. It is has been exerting heavy pressure against our main supply axis and on 25 Sep did in fact succeed in effecting a temporary cut of the EINDHOVEN-ARNHEM road, which was cleared by a successful counter-attack later in the day. In this area elements of Hermann Goering Pz Regt (presumably from its depot at UTRECHT) and 107 Pz Bde have been identified. The latter is reported to have some 40 Panthers. On the East side of the Allied salient enemy resistance has not been so stiff and we have made good progress East of HELMOND where the German frontier has been crossed, and S.E. of EINDHOVEN where the MAAS has been reached. Two new divisions have been identified in this sector - the 3 Pz Gren, an infantry division (last located on the Eastern front in April of this year), and an upgraded Admin div from GERMANY.

Between ARNHEM and TRIER the week has been relatively quiet, and the enemy has been able to prevent any important exploitation of our penetration of the second siegfried defence line, South of ARNHEM. This sector has been reinforced by a Panzer Division, together with an infantry division newly arrived following a refit in GERMANY after its battering in the East earlier this year. In the TRIER area yet another new infantry division from GERMANY has been identified.

In the ARMY sector enemy resistance remains strong, but further South we have now reached LUNEVILLE and CHATEAU SALINS. A concentration of enemy armour in the sector North and South of LUNEVILLE is becoming apparent, and the enemy is now showing some aggressiveness here. There are at least four Pz or P.G. divs and a Pz Bde in the vicinity, and there is a considerable number of tanks in the FORET DE PARROY (East of LUNEVILLE). Some of these have been dug in owing to lack of petrol. This armour may well form part of the missing 5 Pz Army which is thought to have been refitting after its heavy losses in the August battles. Its reappearance in the line would relieve Army Gp of some of the responsibility for a very long and critical sector of the front.

From LUNEVILLE down to the Swiss frontier there has been little to report. EPINAL has been taken after heavy fighting, but elsewhere resistance has been fierce and the enemy has launched frequent counter-attacks. 11 Pz Div has been showing some aggressiveness in front of BELFORT.

With the capitulation of BREST, the destruction of three further enemy divisions is accounted. In addition 30 SS Div has finally disintegrated following the desertion of the majority of its personnel, and is not carried on the Order of Battle. The nominal total of enemy divisions in the West is now put at 57 divisions. The equivalent strength of these forces, estimated on the basis of personnel available, but ignoring the widespread shortages of equipment, is put at 27 full strength divisions. Now that 1 and 19

.... raids have....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Armies have linked up in Central FRANCE it is probable that Army Group 'G' will again resume control of 1 Army. (Both Armies were under Army Group 'G' in the pre-invasion days but on the evacuation of S.W. FRANCE 1 Army passed to Army Group 'B'.) In addition, if 5 Pz Army is now coming into the line between 1 and 19 Armies in the MONTVILLE area, it is likely that this too will come under Army Group 'G'. This leaves Army Group 'B' with 15 and 7 Armies, and there is now more evidence for supposing that 1 Para Army also holds a sector elsewhere on the German right. It is reliably reported that the Army Commander, General STUDENT, has established his H.Q. at TILBURG. There has been conflicting information regarding the identity of Army Group 'B's Commander following ROMMEL's recent injury, but it would not be surprising to find MODEL in command. Prior to RUNDSTEDT's reappearance he was thought to combine the duties of C in C West and Army Group 'B' Commander. As the Commander of two Army Groups in the East this year, and a reported personal favourite of HITLER, he seems well qualified to take over the somewhat faded glory of the departed desert fox.

Army Group B's sector probably extends from the North sea to the ARDENNES and includes what is at present the most vital part of the front, the sector from the North sea to ANTWERP. The enemy's fluxed reactions in this sector in the past week have shown clearly that he appreciates the critical nature of the battle here. Defeat here would mean at least the outflanking of the Siegfried Line, and an Allied advance Southwards through the flat country North of ANTWERP might even mean that the line of the RHINE, on which a final stand will be made, would be outflanked. On the other hand if the enemy can hold the Allies South of the Lower RHINE, he will gain time to produce new divisions, the fruits of the present total mobilisation, and possibly a new increase in his Air Force. Wishful and short term hopes they may be, but GERMANY can now only work on a short term policy. The front of the British Army Group is likely therefore to have first priority for reinforcements at this present time, and we must expect fresh divisions from the RUHR and possibly some from other sectors of the front to make an early appearance there.

H.Q., A.A.I. INTELLIGENCE SUMMARY NO 64

OF 12 OCT, 44

(a) This Summary will NOT be distributed below Hqs of Army Corps. Sidelined information will not be reproduced in any Intelligence Summary of formations under this H.Q. without special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

-0-0-0-0-0-

NOTE: No Intelligence Summary was issued on 6 October, 44.

1. ENEMY SITUATION

Whatever the enemy's intentions may have been at the critical stage of the battle in the middle of last month - and certain precautions against a possible withdrawal over the Po were undoubtedly taken - there can be little doubt that KESSELRING is now determined to hold the Appennines and fight in the RIMINI Plain as long as he can. On the 6th an order signed by HITLER that the Appennine position must be held at all costs was passed to all troops. The rumour that a withdrawal across the Po was inevitable had been going the rounds and HITLER's order will have helped to dispel this feeling of uncertainty and as a morale booster will have been welcomed by KESSELRING who appears to have been fairly confident of his ability to halt the Allied offensive. In the stubborn battle of attrition he has fought he has clearly been playing for time, hoping to wear down the attacks of 5 and 8 Armies till the weather broke and came to his assistance. In part it must be confessed that KESSELRING has succeeded in his object, for though the Gothic Line has now been shattered except at its Western extremity, where in any case our attempts have not been serious, he has been able to slow down our advance and on the Eastern coast to bring it to a halt in the Plain itself. For this he is much indebted to the weather which in the past ten days has reduced the RIMINI Plain to a morass and has greatly hampered operations in the mountains. A gambler's luck and an apparently shrewd appreciation of Allied strength and resources enabled him to hold out, albeit at cost of heavy casualties, till the weather broke and reduced the power of Allied air and armoured superiority.

Since 1 Oct progress on the Adriatic has been limited to the mountains South of SAVIGNANO where 278 Div, 114 Div and 356 Div were unable to prevent our crossing of the FIUMICINO RUBICONE. Our advance had no immediate reactions further North where 90 P.G. Div, now complete on Route 9, 26 Pz Div with elements of 20 GAF Div under command, 29 P.G. Div and 1 Para Div, in that order from South to North, retained their hold on the Western bank of the stream. By the 10th however, the right wing of 76 Corps had been swung back to a line running approximately from LONGIANO - M. FARUTO - MONTE CODRUZZO and 90 P.G. and 26 Pz Divs' positions opposite SAVIGNANO began to be threatened from the flank. Already on the 9th two bns of 90 P.G. were on the move and by the 11th our patrols were able to cross the FIUMICINO against negligible opposition and advance 2,000 yards up Route 9. There are many waterways and canals nearly all equally suitable for delaying positions and probably the enemy will choose to hinge his line near CASETTOLA N 6604 from where the line could follow either the SCOLO RIGOSA or SCOLO RICONCELLO and join up with the canal which runs along 095 Northing, where air observation has shown certain defensive preparations in progress. Alternatively he may decide to go right back to the line of the R. Savio. Meantime the enemy had taken certain precautions to meet our thrust through the mountains. Four of the best divisions in ITALY

....were sitting....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

were sitting in the plain watching our progress in the mountains and unable to prevent it. 29 P.G. Div was therefore taken out of the line, its sector being presumably taken over by 1 Para stretching Southwards and 26 Pz Div Northwards, for no new formation has arrived, and placed initially in reserve. On the night 9/10 Oct III Bn 71 G.R. was moved in transport to MONTE CODRUZZO and sent straight into the line, and since then deserters from I Bn have also reached us. On the 10th the other regt - 15 G.R. - had its H.Q. in the SAVIO Valley South of CESENA and it was clear that the whole division was being drawn in on this flank. The most likely role for 29 P.G. Div is on the right of 114 Div, still a strong division, between it and 356 Division which despite the arrival of a March Bn in Oct is still in a very poor state. 356 Div will therefore probably be pushed away to the West behind the SAVIO River.

South of BOLOGNA despite bitter resistance and continuous reinforcing the enemy has been gradually forced further and further back. Desperate attempts to regain M. BATTAGLIA M 0617 caused about 4 Oct, when the enemy was forced to switch his effort Westwards where 4 Para Div was in difficulties on Route 65. The enemy had apparently expected our main thrust to develop up the road to IMOLA and it was here that he brought in 334 Div (relieved on Route 64 by 16 SS Div) to take over part of the heavy responsibility shouldered by 44 Div. The latter at one time stretched from M. BATTAGLIA across to about the 95 Easting, but latterly it seems to have vanished from the line altogether, leaving the Eastern part of its sector to 334 Div and the Western part to 98 Div. The latter, replenished from a regt of the SILESIA Reinforcement Div, has now all regts in the line again: it has already had casualties since its return, losing 150 PW on one day.

It is on the main FLORENCE-BOLOGNA road that the enemy has had most cause to worry. Astride this road were two very battered divisions 362 Div and 4 Para Div: the latter took the brunt of our attack on the Gothic Line, and the former has been driven back through the mountains East of the road with heavy casualties. The identification of 147 G.R. (65 Div), brought in in an unsuccessful attempt to hold M. BIBELE L 9123, was the first evidence of a move across by 65 Div, though there had been indications for some time that moves were in progress in 65 Div sector North of PISTOIA. It is now known that 94 Div, which was very badly cut up in May and June and retired to N.E. ITALY to reform, has come back into the line and taken over 65 Div's sector. The latter has therefore been released for a more active role and is now astride Route 65 engaged in desperate fighting round LIVERGNANO 8729; and 4 Para Div which has suffered heavy casualties, including 1,400 prisoners alone since 10 Sep, is now reduced to a narrow sector between 65 Div and 16 SS Div. There are signs in fact that 16 SS Div is encroaching into 4 Para Div's area - 35 prisoners were taken between the 81 and 82 Eastings - and though prisoners' stories that they are about to be relieved may be no more than wishful rumours, a short rest and refit for those parachutists who have been in continuous action since ANZIO is very likely.

KESSELRING now has some twenty-eight divisions under his command, of which eighteen are committed in the front line and two (44 and 362 Divs) are in immediate reserve reforming with odd bns probably still forward or returning to the line after a short period of rest; five are in N.W. ITALY - 148 and 157 Res Mtn Divs, 34 Inf Div, 5 Mtn Div (less one regt involved in the Adriatic fighting and since identified on one day N.W. of BATTAGLIA) and an unidentified division reported North of GENOA; and in ISTRIA and N.E. ITALY are 188 Res Mtn Div, 237 Div and 71 Div which is reliably reported to have reached the UDINE area where presumably it will combine garrison duties with reorganisation in the same way as its predecessor - 94 Div. With this force - equivalent to some fifteen full strength divisions - and GRAZIANI's Republican Forces which now number some seven trained divisions, of doubtful fighting quality but useful for occupational duties, the Italian front is now by comparison more strongly held than any other German front. It is therefore surprising that KESSELRING has not been called upon to give up any divisions for the Western front, especially in as much as all the divisions which have been involved in the fighting in ITALY are trained and seasoned troops while many of the divisions recently committed in the West are composed of totally inexperienced fortress bns, GAF Signals units, Home Service battalions and new recruits from industry all hastily collected and rushed to the front line with little training and few weapons, relying mainly on desperate patriotism to see them through. How much longer Kesselring will

.....continue to be.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

continue to be so fortunate it is impossible to tell, but for the moment his aim will clearly be to keep as far South in ITALY as possible, holding whatever line he can and trying to seal off threats of a break-through by makeshift reinforcement from quiet sectors of the front. Though ITALY will continue to be a running sore for GERMANY, the High Command must appreciate that it is likewise a drain on Allied resources and probably hopes that by keeping us fully occupied in trying to force our way through to the Po, there is less danger of a landing on the Dalmatian coast behind his forces in the Balkans. The time may be very near when the Russian advance will compel the enemy to withdraw his S.E. Army from SERBIA and YUGOSLAVIA into CROATIA and ISTRIA, and he may then consider that Kesselring's task is completed. By this time fogs and bad weather will make his evacuation across the Po less precarious and, once back on the ADIGE line where work on defences is being carried on at high pressure, divisions could be spared for other theatres. So far however there is no firm evidence that the withdrawal has started and stubborn resistance will remain the order of the day.

2. ENEMY SUPPLIES AND COMMUNICATIONS

On the BRENNER railway line the AVISIO viaduct which had been impassable since 30 Sep, was working again for single line traffic by 4 Oct, and PR of the same date shows that the loop-line by-passing this viaduct, which has been under construction for some time, is now rapidly nearing completion. A ground source report of 27 Sep stated that another by-pass on the BRENNER is under construction between S. MICHELE (A. 7937) and ORA (A. 9254), and on 4 Oct PR reported work in progress on a new line running South from the ORA marshalling yards. North of BRUNZOLO the tracks were cut on 4 Oct but have now probably been repaired. PR shows only light activity at TRENTO and BOLZANO since the end of Sep, but ground sources state that movement over the BRENNER route now takes places mainly at night and it is probable that trains go straight through as far as the VERONA area.

To the NE all the railway bridges over the R. PIAVE were still impassable on the 4 Oct, thus no direct traffic has been possible from MESTRE, TREVISO or VICENZA to the CARVISIO and PIEDICOLLE passes. Turnover at CARVISIO, TREVISO and MESTRE has been very light since 26 Sep, and whilst this is, no doubt, partly due to the destruction of the Piave bridges, here again appearances may be misleading as the tendency would be to do as little marshalling as possible between PADUA and the frontier. The most natural marshalling area for railway traffic both to and from the North and NE frontiers is in the yards along the VERONA-PADUA trunk line which has been heavily loaded and very active of late.

All railway bridges over the Po East of PIACENZA remain impassable, but most of the approaches to the river both North and South are open. The most important of these is the VERONA-BOLOGNA line which, except for the bridge over the Po at OSTIGLIA, is open throughout; the PADUA-BOLOGNA line too is blocked at only one place South of the river and open North of it. Rail activity at BOLOGNA continues to be lively and 330 wagons were waiting on the main line North of the town on 1 Oct. Both ground sources and photo recce show that the PIACENZA-BOLOGNA line was active up to the end of Sep, but little activity has been noted since. Repairs are now stated to be in progress on the SPEZIA-PARMA line which for some time past has been subject to Partisan attacks.

In the N.W. on the main line from MILAN to GENOA three bridges are impassable between PAVIA and TORTONA, but traffic is possible between GENOA and MILAN via ALESSANDRIA, NOVARA and BUSTO ARSIZIO. The main line from GENOA to TURIN is passable throughout and through traffic is possible by a roundabout route between TURIN and MILAN. On the coast the line is now open from GENOA to VENTIMIGLIA. The marshalling yards at TURIN were heavily loaded on 30 Sep and 3 Oct and there has been a great deal of activity on the line between MILAN and BRESCIA; ALESSANDRIA yards have also been active.

The roads in NW ITALY have been very active in the last fortnight; ground sources reported constant traffic in the ALESSANDRIA area, on the MILAN-TURIN autostrada and between SPEZIA and PARMA during the last days of Sep, and since 1 Oct bomber pilots have twice reported rather heavy traffic moving generally N/S on roads West of the line MILAN-GENOA.

.....A report on.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

A SS order of 21 Sep stated that all fuel dumps on the Lombardy plain were to be evacuated [illegible] to the area West of VERONA. Earlier in the month it was reported that supplies were being evacuated from GENOA and that fuel from installations at MILAN, LODI, PIACENZA, REGGIO EMELIA and CASTALLA was to be moved to TRENTO area, whilst on 29 Sep the German High Command was stated to have ordered the moving of all fuel and ammunition dumps South of the Po to areas North of the river.

On 3 Oct PR reported that a dump in the MANTUA area had probably been moved and that the sites of fuel and ammunition dumps round IMOLA are now deserted. Whilst the reports from ground sources are probably exaggerated and it is not yet thought that any large scale evacuation of supplies is taking place, rail and road movement appears to indicate a general thinning out, especially in the N.W.

3. WESTERN FRONT

Although there has been no spectacular change in the front line since the last Summary, the period has not been unsatisfactory for the Allies. In the South, 19 Army has been forced to give ground every day. In the NANCY area, all enemy counter-attacks have come to nothing, while North of AACHEN and on both flanks of our salient in HOLLAND, small but useful advances have been made. In the rear of the present front line, the fortress of CALAIS has been taken, and the CAP GRIS NEZ guns have fired their last rounds on to English soil.

At the end of September, 19 Army was weakened by the transfer of 11 Pz Div from the BELFORT area to the NANCY sector where 5 Pz Army was making strenuous efforts. Even with its departure the depleted forces of 19 Army have continued to offer vigorous resistance, but have been unable to prevent the Allies from making steady gains, particularly on 19 Army's right flank where RAHERVILLERS has been taken by American forces. To the North of 19 Army in the LUNEVILLE-NANCY-METZ sector, 5 Pz Army, reinforced by 11 Pz Division and a Panzer Brigade, has been utilising its armour with vigour. It was in this sector that an armoured concentration was reported at the end of September. Since then, the enemy has employed as many as 200 tanks in action here in a series of violent counter-attacks. The object of these attacks has probably been to blunt the nose of our advance across the MOSELLE in the direction of the VOSGES. In this area it is clear that the enemy prefers to make full use of the natural advantages for defence of the terrain rather than fall back to the Siegfried Line in a sector where it suffers the double disadvantage of the kink at STRASBOURG, and of being on the RHINE itself South of KARLSRUHE. Having temporarily halted our advance in this area, it looks as if the enemy is abandoning his offensive activity and a Southward shift of his armour from the NANCY area to reinforce 19 Army's right wing is becoming apparent. Both 11 Pz and 21 Pz Divs have shifted South and it is probable that 15 P.G. Div has followed suit.

Between METZ and AACHEN the German Seventh Army's front has been quiet. There has been a considerable thinning out of enemy armour in the ARDENNES recently, leaving this the most weakly held sector of the whole front, particularly in front of LUXEMBOURG where Fortress troops are now believed to be in position on the West Wall. The well tried 2 SS Pz Div is still in the line, but four of the armoured divs formerly in this area have been withdrawn. The disappearance of these forces is reminiscent of the departure of 5 Pz Army at the beginning of last month, and like 5 Pz Army, they may reappear, after a refit, in a new sector. One at least has already made its appearance S.E. of ARNHEM.

The AACHEN area has been lively in the past week, although here too the bulk of the enemy armour has been withdrawn from the line. The only new identification since the last Summary has been in this sector - 246 Gren Division, a rehashed version of the infantry Div which was destroyed in the East in June. The enemy has been counter-attacking with vigour but with little success South of AACHEN, while North of the town our attack has encountered desperate enemy resistance from pillboxes, artillery and mortars around GELLENKIRCHEN.

The withdrawal of 9 and 116 Pz Divs and 105 Pz Brigade from the

.....AACHEN area.....

THIS PAGE IS UNCLASSIFIED

0581

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ARNHEM area suggested that the enemy was preparing a mobile force for use in another sector - probably in the British salient in HOLLAND. It was not surprising therefore to find all three formations together with 1 SS Pz Div reappearing on the East of the salient. The enemy has now the elements of five armoured divisions in this area. The new arrivals provided timely reinforcement for the weak and poor quality infantry divisions of 1 Para Army and their appearance in this sector has enabled the enemy to launch a series of vigorous, though up to now unsuccessful, counter-attacks against the right flank of the salient. These attacks have been launched from the REICHSWALD, S.E. of NIJMEGEN, and from the area N.E. of NIJMEGEN, suggesting that the enemy's intention is to eliminate our bridgehead over the WAAL. So far, however, the enemy attacks have not been in very great strength, partly because of the hammering his armour has received from our artillery and air force, partly because of his supply difficulties over the waterways. On the West of the salient, 15 Army with its forces fully committed has been fighting hard, but has been unable to prevent us advancing North and South of the WAAL, nor from progressing into HOLLAND North of the TURNHOUT-ANTWERP Canal. Some Eastward movement has been observed North of ARNHEM but this does not as yet seem to be on a scale to suggest that a major withdrawal of 15 Army is in progress. The enemy has probably over 100,000 men to the West of our salient including the large number who escaped to WALCHEREN island last month and it is to be expected that superfluous bodies are now being removed before Allied pressure compels the withdrawal of the entire 15 Army.

Although only one new division has appeared in the West during the past week, there seems no reason to believe that we have seen the end of that has been called the Götterdämmerung wave of new divisions. Despite reinforcements, the enemy's forces in the West are still inadequate to hold the present line against a large scale Allied attack. Nowhere has he anything to spare, and the reinforcement of one threatened area is only achieved at the expense of another. The arrival of further reinforcements for the West is therefore to be expected. All Goebel's words about the total mobilisation with which he has been entrusted may not be empty boasts, and we shall undoubtedly see more Grenadier divisions putting in their appearance. On the other hand the Panzer Brigade of which at least seven have been in action in the West, do not seem to have been very successful and it is doubtful whether any more will be formed. They had been formed for the most part from battered Pz Divs, and although of good fighting morale, were too small to recuperate after heavy losses. The first priority for reinforcements, particularly in infantry, must still be in HOLLAND where the enemy may yet hope to get through to MINNOVEN from the East in conjunction with 15 Army in the West. Taking only second place to this, the enemy strategy must call for the destruction of our foothold across the Siegfried Line in the AACHEN sector. Here the line has already been pierced and the threat of an Allied breakthrough must be ever present. The reappearance in that sector of some of the armour now refitting seems very probable. For the rest, the West must take its chance for reinforcements in competition with the ragging front in the East where the threat to Germany's frontiers is now developing from yet another direction.

-o-o-o-o-o-o-

1. ENEMY SITUATION

HITLER's orders are being obeyed and Army Group 'C' remains committed to a desperate defensive. This week KESSELRING has clearly recognised that the most dangerous part of his line lies astride route 65; he has thrown in there again elements of an exhausted division which was due for a rest (44 Inf), a battle group of another division whose main body is further West (94 Inf), a mobile div from the 8 Army sector (29 P.G.) and parts of another (90 P.G.) and by bringing into the line for the first time a newly-formed division previously in N.W. ITALY (232 Inf) he has enabled 94 and 16 SS Divs to extend to the East and thicken up their sectors. This has meant a certain weakening on the East coast, and ground has been abandoned there. And it has not prevented Fifth Army from advancing to within 10 miles of BOLOGNA.

On the Adriatic the enemy at the beginning of the week was defending the SCOLO RIGOSSA ditch, the position known as CHRISTA TWO, though 1 Para Div was still forward of this. On 15 Oct we crossed this obstacle astride route 9 without much opposition and by next day the enemy in the plain was definitely withdrawing to the PISCIATELLO, known as HEDWIG ONE. On 17 Oct we had obtained a small bridgehead at 634065. There is still one more delaying position laid down, HEDWIG TWO, which runs just in front of CESENA, before the river SAVIO, the enemy's main defence line on his present scheme, is reached. It seems that the enemy does not intend any serious stand on the lines forward of the SAVIO which he has laid down but rather that they are regarded as phase lines in what looks almost like a timed programme of withdrawal. A minor, controlled withdrawal on the extreme left was probably forced on him by the necessity to detach troops for the vital central sector; moreover, if the danger of a breakthrough in the centre is as great as these measures seem to indicate it will be safer for him to have his left back on the SAVIO rather than on the RUBICON.

In the mountain sector of 8 Army's front the enemy made no attempt to hold the upper SAVIO and by 14 Oct 879 GR was back behind the BORELLO. The regt does not, however, appear to have intended seriously to hold the line as we were able on 17 Oct to push patrols as far as R 5299. The fact is that 356 Div has much too long a front for its present strength; its sector extends from the 10 to the 50 Eastings and covers the whole of the great bulge running South down to the 90 Northing while a return on 17 Oct for I Bn 870 showing a fighting strength of 155 all ranks is believed to be fairly representative of other units of the division. Here again the enemy has weakened his positions and accepted the necessity of withdrawal by removing troops from the central sector: 29 P.G. Div which was to the East of 356 has moved hastily to 5 Army front and has been inadequately replaced by 993 G.R. of 278 Div.

In the centre the most important fighting has been due South of BOLOGNA, on and in the neighbourhood of route 65. At the beginning of this

.....week the main.....

THIS PAGE IS UNCLASSIFIED

0583

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

from left to right. Elements of 44 Div were being put in on 13 Oct and parts of all three regts have now been identified between the 93 and 97 Eastings. A further stiffening was seen on 14 Oct when prisoners were taken from both bns of 267 G.R. on the 901 Easting; they seem, however, to be separate from the rest of 94 Div which is still apparently between VERGATO and PORRETTA TERME. On 14 Oct also a prisoner was taken from III Bn 71 P.G.R. in the area L 869307; since then all three bns of the regt have been identified in this sector and Div H.Q. has left the 8th Army front. 15 P.G.R. appears also to be on the way though II bn was still at MONTERDALE on 17 Oct. 29 P.G. Div will probably take over the sector East of route 65. Finally on 18 Oct prisoners were taken at L 9830 from III Bn 361 of 90 P.G. Div; II Bn is also in the neighbourhood though I Bn is still back on the Adriatic and lost PW, also on 18 Oct, at M 630062. 200 G.R. also appears to be there but Div HQ was moving the same day and it is possible that more elements may yet be sent across. In the meantime 65 Div, which has had very heavy losses, has been restricted to a very narrow sector actually astride route 65. On its right 4 Para Div is also on a very narrow sector since PW have been taken from 36 SS on the 83 Easting. 16 SS Div sector appears to stretch as far as the 73 Easting, where PW have been taken from 274 G.R., and 94 Div, in turn to have a boundary with the newly arrived (and newly formed) 232 Div somewhere in the area of the 58 Easting. The result has been a pronounced thickening up in the area immediately South of BOLOGNA. In spite of this we have succeeded in advancing some two miles beyond LIVERGNATO (L 8729) which was captured on 15 Oct and in fierce fighting have inflicted very heavy casualties on the enemy.

There has been no evidence of any important change in the enemy's rear areas but the arrival in the line of 232 Inf Div, which is believed to be the division previously carried unidentified in the area North of GENOA, must imply some reshuffling in N.W. ITALY. In fact KESSELRING must realise that, especially with winter coming on, he has not much to fear from the Allied formations West of the Alps and that he can if he wishes detach forces from 75 Corps to strengthen his position on the Ligurian coast. 232 Div's replacement round GENOA will almost certainly have come from there and there have in fact been reports of movement into the area from the West. In any case if the Appennine position is pierced both 75 Corps and Graziani's Army of LIGURIA will have to carry out a fairly rapid withdrawal to the East to avoid being trapped between the advancing Allies and the Swiss frontier. There is some evidence already that the Germans are stripping the area South of the Po of everything useful which can be removed; large herds of livestock are reported going North, for instance, and it is believed that useful industrial installations are also being dismantled. In view of the probable difficulties of the food situation in the REICH this winter one of the reasons for KESSELRING's stubborn defence of the Appennines may be to enable the harvests of EMILIA and PIEDMONT to be gathered and sent back across the Alps. At any rate he is clearly taking some preparations against the time when it may no longer be possible to obey HITLER's orders.

2. ENEMY SUPPLIES AND COMMUNICATIONS

Lack of PR makes assessment of the enemy rail situation this week difficult but owing to poor weather our air effort against the enemy L of C has been curtailed and it is presumed that the railways are functioning more easily. Up until the 15th through rail traffic to VERONA was possible from most points of the compass with the exception that all rail bridges over the PIAVE remained out and, of course, most, if not all, of those over the Po. On the 15th the weather improved and we were able to block the BRENNER at a point about 20 miles North of VERONA, establish three cuts on the main VERONA-MILAN line, and knock out the bridge over the Po about half-way between PIACENZA and TURIN near TORRE BERETTI. While by this time repairs have probably reopened the BRENNER route and made through traffic possible from VERONA to MILAN, it is noteworthy that the destruction of the TORRE BERETTI bridge effected the complete isolation, for purposes of through rail traffic, of the entire area South of the Po; the only possible route open is the single track line crossing the Po about 50 kilometres East of TURIN at

.....CASALE where....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

C.BAILE where the bridge was down on 3 Oct but may have since been repaired. This complete, or near complete, blockage of all rail lines into the area South of the Po assumes increased importance in the light of the fact that PR of the 12th showed that a considerable number of the Po ferry points had been destroyed as a result of the recent rise in the river. While too much must not be read into this state of the enemy L of C in as much as despite the rise of the Po many ferries and the pontoon bridge sites were apparently not affected, it is quite possible that owing to the loss of some of the Po ferries and difficult footing at others, a temporary shortage of supplies existed South of the river early in October.

There appears to have been no unusual movement of either MT or rail traffic this week with the exception of rather heavy MT movement in the area TURIN-ALESS.-MESS.-ALESSANDRIA on 15 Oct. This MT movement has been noted before and may be nothing more than the use of MT to negotiate breaks in the railways but may indicate a reshuffle of troops.

Marshalling yards along the BRENNER have shown considerable activity and many train lengths have been seen on the through lines; piles of stores at PERI station just South of the block 20 miles North of VERONA suggests transhipment activity. The enemy continues to work on the BRENNER rail diversions and ground sources report that new dumps are being established in the BOLZANO area. Despite the blocks on the PIAVE river VERONA continues to be fed from the N.E. as well as from the BRENNER. On the basis of car loadings and rail cuts traffic from the PIAVE evidently moves to VERONA via the route TREVISO-MESTRE-PADUA-VICENZA. Owing to lack of PR activity between VERONA and the West cannot be assessed.

VERONA marshalling yards have shown considerable activity and sufficient rail lines South to the PO to meet current enemy requirements appear to be open. Notable in this connection is the OSTIGLIA-BOLOGNA line which is open throughout with the exception of the bridge over the PO at OSTIGLIA; on the 12th train lengths were seen at most stations between VERONA and OSTIGLIA and on the following day activity was evident at BOLOGNA and 8 trn in lengths were present on the line North to OSTIGLIA. Further evidence of the importance of BOLOGNA itself is indicated by PR of the 16th which showed what appeared to be an important railhead just North of BOLOGNA at L 909522. Some thinning out of administrative installations in the BOLOGNA area may, however, have occurred as a result of a heavy air attack on the area on the 12th.

Along the PO itself there are several developments of interest in addition to the washing away of ferries mentioned above. There are apparently at least two rail ferry sites on the PO, namely near PONTELAGOSCURO (M 1292) and PIACENZA. At both points tracks have been laid or the road bed prepared from the regular railway to the river edge. Whether or not the rail wagons themselves are ferried across the river is not known, though a ground source reports that such is the practice at PIACENZA. PR of 15 Oct showed that construction at the PONTELAGOSCURO site is probably complete and that the site is active is indicated by the presence of landing stages on both banks and of at least 6 wagons on rail sidings which have been laid in a wood on the North bank of the river in the immediate vicinity of the North landing stage.

Another development is the apparently increased importance of the pontoon bridge site on the PO just North of S. BENEDETTO at F 5814. On 14 Oct PR showed that there were 75 double-pontoon sections present, enough for 2 bridges, and recently the flak protection in the immediate area has increased from 20 heavy and 12 light guns to 32 and 20 respectively.

Shipping on both East and West coasts remains relatively inactive. Between 3 and 11 Oct turnover between GENOA and SPEZIA consisted of three MT ships, one landing craft, two schooners, one coaster and a small MV. Since the 11th there has been little, if any, activity at SPEZIA. West of GENOA there has been some movement at IMPERIA and SAVONA but all other ports appear inactive and according to a ground report of 12 Oct harbour installations have been demolished at SAVONA and block ships sunk. As for GENOA itself our coastal patrols which closed very near to the port on the night of 15 Oct report explosions, presumably demolitions. On the East coast some shipping still appears to be reaching RAVENNA but the turnover is not thought to be large.

.....All of the above....

THIS PAGE IS UNCLASSIFIED

0585

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

All of the above present nothing particularly out of the ordinary. Reports persist of the evacuation of industrial installations and materials from ITALY and the establishment of new military installations in the North. While preliminary steps to eventual withdrawal North of the Po are undoubtedly now in progress there is little evidence from a logistical point of view to suggest that a withdrawal is contemplated in the immediate future.

3. WESTERN FRONT

Although with the exception of the AACHEN area and the SCHELDT estuary the front has been comparatively quiet during the past week, there has been considerable activity behind the enemy lines. In the South, the reinforcement of 19 Army's right wing last week by a Southward shift of 11 Pz Div proved inadequate to effect complete stabilisation of the front. Slow though our advance in the VOSGES has been, every day has forced 19 Army to give more useful ground. Conscious of this, and of the general weakness of 19 Army, the enemy has given a little more support to his Southern flank by the transfer of a Pz Bde from the METZ sector to the Southern VOSGES. However so far this added reinforcement has failed to produce the desired effect and the slow withdrawal of 19 Army has continued.

Further North in the METZ-NANCY area the armoured concentration which had proved so troublesome in the latter half of September has now finally dispersed with the departure of 106 Pz Bde to 19 Army and of 3 P.G. Div which has been sent North to stiffen up the AACHEN sector. 17 SS P.G. Div still remains and there is a fair amount of infantry in the METZ-NANCY sector but the enemy's offensive plans seem finally to have been abandoned and the PARROY Forest which at one time held a considerable concentration of enemy armour is almost entirely in our hands.

Armour both from this sector and from the British Army Group sector has been transferred with some haste to the AACHEN area where the American attack has caused the enemy to abandon all offensive plans elsewhere in order to reinforce the newly threatened area with all the armour available. There are now four armoured divs, one P.G. Div, a Panzer Brigade, and a Heavy Tank Bn as well as considerable infantry forces at AACHEN. The town itself has been completely cut off with the link-up of Allied forces at WURSELEN three miles to the N.E. but constant enemy counter-attacks continue, and our progress is of necessity slow. The interesting thing about the German reinforcement of the AACHEN area is that it has for the most part been secured at the cost of his offensive intentions at NIJMEGEN. A fortnight ago he had five Pz divisions East of NIJMEGEN and from their dispositions it was very clear that he hoped to launch a counter-attack which would eliminate our bridgehead over the WAAL and regain him NIJMEGEN. Today there remain, it is true, elements of 9 and 10 SS Pz Divs in the area NE of NIJMEGEN, but 9 Pz, 116 Pz and 1 SS Pz Divs and 501 Heavy Tank Bn have all been shifted back to AACHEN. The counter-offensive at ARNHEM has been thrown to the winds, and the enemy's prospects of holding a firm line on the Eastern flank of the salient in face of Allied air and artillery superiority have appreciably diminished. South of NIJMEGEN the enemy has in fact had to give ground, albeit slowly and stubbornly, in the OVERLOON area, while his bridgeheads over the lower RHINE West of ARNHEM have been withdrawn.

There has been little to report on the West of the salient where activity on both sides has been confined to patrols. In the area of the SCHELDT estuary however there has been fierce fighting. 6 Para Regt and 70 Inf Div have been battling hard to keep open the causeway to ZUID BEVELAND and WALCHEREN. Control of the road and railway has passed from one side to another several times, but throughout the week we have at all times been able to keep the road under observation and small arms fire. On WALCHEREN itself flooding has made a large portion of the island uninhabitable. On the South bank of the SCHELDT estuary contact has been established between the Canadian bridgehead over the SAVOJARDS PLAAT and that over the LEOPOLD Canal.

The events of the past week have given striking illustration of the assertion made in last week's Summary that the enemy is able to reinforce one threatened area only at the expense of another. In particular his shortage of armoured reserves has become all too apparent. Twice in the past six weeks

.....the enemy has....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

the enemy has attempted to effect a concentration of armour with the object of launching counter-attacks at some crucial sector. On both occasions, at LAMEVILLE and at HILDESHEIM, he has had to abandon the attempt because his armour at the last minute was called away to meet a new threat developing elsewhere. This is a bankrupt situation which must spell disaster for him when eventually an improved supply position enables the Allies to launch the offensive on the grand scale again. In preparation for that day it is to be expected that he will try to build up an adequate armoured reserve possibly by the formation of new armoured divs, more probably by setting up and refitting existing formations. In the meantime he has a round total of about 60 divisions in the West equivalent to roughly half that number of full strength divisions. So long as the threat develops only in one sector at a time these are adequate to meet the situation. The test will come when he has to meet a crisis at several points simultaneously.

-o-o-o-o-o-

1. ENEMY SITUATION

(a) General

Since the battle for the Appennines started Kesselring has managed by a skilful policy of robbing Peter to pay Paul to avoid losing control of the situation. Whenever it looked as if he might break through as for instance on the PORTICATO ridge S.W. of RIMINI and at LIVERGNANO on Route 65, he has always been able to produce reinforcements from another part of the front just in time to seal off the break-in and bring the Allied attack to a halt. In the first place 14 Army was drawn upon to provide one division after another for the Adriatic. Then when Fifth Army attack got under way 14 Army had to thin out on the Western part of the Gothic Line to produce troops for the Centre; and latterly it has been the turn of the Adriatic front which has had to honour the loan it made in Late August and early September. The arrival of 29 P.G. Div just East of Route 65 and 90 P.G. Div North and N.E. of M. GRANDE I. 9952, has enabled the enemy temporarily at least to slow down our advance on BOLOGNA. This policy of switching divisions from one threatened sector to another is one that has been forced on Kesselring by lack of a central reserve and by the certainty that he will receive no fresh formations and probably only a proportion of the replacements he needs. It is a makeshift method which in face of heavy casualties cannot be continued indefinitely, but one which Kesselring had hoped would enable him to wear down the Allied attacks and finally halt them. It is in fact a question of physical and mental endurance. Up to about a week ago Kesselring seems to have remained quite confident that it was only a question of time before the Allies would give up the struggle which was gaining them ground but slowly and at considerable cost. Despite the ever-growing threat which had brought Fifth Army to within 10 miles of BOLOGNA, he showed no sign of anxiety about his forces on the Adriatic. Now, however, with the Allies still making progress from M. GRANDE towards Route 9, despite the arrival in that sector of 90 P.G. Division, and with his forces on the left wing of 10 Army considerably weakened, there are signs that even if he is not yet losing his nerve he is at any rate beginning to pull back voluntarily in the plain in order to straighten his line and avoid any unnecessary risk of an Allied breakthrough.

(b) Eighth Army

On the Eighth Army front by the 18th we had advanced to within 1,000 yards of CESENA on the South, and the enemy was back on Hedrig Two, the perimeter defence of the town continued N.E. along the road to CESENATICO and the line of the VESOLA del MONTALETTO ditch. South of the town however, we had already reached the banks of the SAVIO just East of BORELLO and it was apparent that the enemy had no intention of staying long on HEDVIG TWO. The parachutists were moving back on the 19th and on the same day CESENA was cleared except for a few snipers. That night a bridgehead was seized across the river in the area of Route 9. Although this bridgehead came in for heavy shelling the enemy made no concerted effort to counter-attack it, 114 Div being content to carry out several sharp raids. Meantime the enemy was carrying out a relief; the departure of 90 P.G. Div left the Emilian Highway in the care of 114 Jaeger Div, and feeling that this task should be extended to a more dependable division the enemy decided to switch 1 Para Division, by now returned, from the relatively

....quiet sector.....

THIS PAGE IS UNCLASSIFIED

0588

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

quiet sector on the road to RAVENNA to take over from 114 Div and come in on the right of 26 Pz Div. By the 23rd most of the division had taken up its new positions and 114 Div H.Q. had appeared in the area M 5432 suggesting that the two divisions had effected a direct exchange of sectors. Once this change was completed the enemy started to pull back from the SAVIO, which a captured map shows to be called FRENA, but not before we had forced another bridgehead at PIEVE SESTINA M 5911 on 26 Pz Div front. Two Panthers were knocked out and one captured intact, and the latter came in useful in beating off an armoured counter-attack on the 23rd; fighting in this area cost the enemy 150 PW, mostly from 9 P.C.R. That night the parachutists were pulling back to the next delaying position on the BEVANO river (called FRANCISKA) and events of the following day showed that 26 Pz Div, 278 Div and 356 Div had made withdrawals to conform. FRANCISKA also appears to be nothing more than a delaying position for on the 24th 26 Pz Div was preparing to move back to CUDRIA - the line of the river RONCO - and the parachutists had already sent 4 Para Regt on ahead to FORLI.

These withdrawals must cause 356 Div, holding S of FORLI, and 305 Div on its Western flank to pull back. On the boundary of these two Divs we captured GAIATA 3291 from II Bn 756 G.R. on the 20th Oct, and occupied M.GROSSO R 3495 against very bitter opposition. Enemy resistance then stiffened still further and though we have crossed the River RABBI stiff fighting has been going on for two days round M. dell MARINA R 2996. On the rest of 305 Div front and to the N.W. the enemy started pulling back on the 23rd and we made local advances through the hills. M. SPADURO M 0426 which we captured on the night 19/20 Oct (only to be driven off again the next day in a violent counter-attack by 334 Div assisted by I Bn 956 G.R.) was also found abandoned on the 23rd.

(c) Fifth Army.

In the Centre most of the fighting has been in the area of M. GRANDE L 9932 and M. CERERE M 0021 which were captured on the 20th. Only half of 90 P.G. Div had arrived when we seized these heights, and though II and III Bns 361 G.R. tried to counter-attack our positions on the 20th they were pinned down by heavy fire and suffered considerable casualties; only one weak counter-attack eventually developed. Our positions have been steadily improved in this area and despite the arrival of the remainder of the Div we are now some thousand yards beyond M. GRANDE, held MASSERETTO M 0131 and have beaten off strong counter-attacks on M. CASTELLARO L 9855. On the 24th our swift advance to VEDRIANO M 0234 surprised the enemy and put us within four miles of Route 9.

West of 90 P.G. Div the line is held by a jumble of units - the remnants of 362 Div, formed into small battlegroups and supported by the arrival in the Lohr Brigade sector of a Bn of 25 Jaeger Regt (42 Div) with odd units of 44 Div and 98 Div interspersed. 29 P.G. Div holds from exclusive Route 65 East to about the 95 grid; on the 24th a strong counter-attack by 71 G.R. on BELMONTE E 9032 temporarily regained the hill but by nightfall we were again in possession. 16 SS Div's left boundary now extends to approximately the 84 Easting, so that 4 Para and 65 Divs are reduced to a front of only some 3,000 yards between them. Both have suffered heavy casualties and the parachutists in particular have long been without a rest; the chances are that they later may have been withdrawn into reserve. Similar fortune may have come the way of 44 Div with whom there has been very little contact, and 98 Div, which has lost a further 700 prisoners since it was reformed last month, will soon be qualifying for a further refit.

On the Western part of the Gothic Line 232 Div has now settled into the sector North of PISTOIA and its arrival has allowed 94 Div to follow the normal practice in this area of gradually side-stepping Eastwards. In the fighting which led to the capture of pt 826 L 7326 prisoners were taken from 276 G.R. and the boundary of 94 Div with 16 SS Div appears to be just East of here. First impressions of the new 94 Div are that it has been reformed mainly with veterans wounded on other fronts and young recruits: their fighting morale appears to be high. 42 Jaeger Div, less the Reece Unit and one Bn both committed in the Central sector, still holds the coast and may have to extend its responsibilities to SPEZIA where, according to prisoners taken South of BOLOGNA from three different Fortress Bns, 135 Fortress Brigade was disbanded on the 17th Oct and is now being used to provide reinforcements for divisions on the main front.

... .(d) Western ITALY.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(a) Western Italy

In Western ITALY the departure of 232 Div has left the GENOA area bare of a German formation. Reports have been received however of the move of a German division Eastwards along the coast from the MARITIME Alps. The enemy has probably therefore denuded the frontier of a division, either 34 or 148 Division since 5 Mtn Div was still reported S.W. of TURIN on 19 Oct. 148 Div seems the most likely choice as a move to the GENOA area will give this division a chance to reform in a quiet area after its losses in S. FRANCE. 157 Div - North East of TURIN - has already been reformed according to a prisoner who states that on the 1st Oct it was upgraded to a Mtn Jaeger Division. Reinforcements to the extent of one Regt arrived for it from 188 Reserve Mountain Division.

2. ENEMY SUPPLIES AND COMMUNICATIONS.

(a) General

There were no developments this week to indicate any radical change in the enemy's overall administrative position. Weather has again hampered our air effort against the enemy's L of C. As a result he has managed to repair the rail bridge over the PO at CASALE about 50 miles East of TURIN. In view of the repair of this bridge and the fact that at least one of the lines over the TICINO River West of MILAN is now likely to be open, it is probable that through, if roundabout, rail traffic is now possible between MILAN, TURIN and GENOA. In NE ITALY the enemy has at long last been able to open up a line across the PIAVE River, and thus for the first time in a rather extended period the enemy may now move by rail from GERMANY through NE ITALY to the VERONA area and other points in North-Central ITALY without the necessity of having to tranship across the PIAVE. While the enemy has thus appreciably improved his rail communications in NE and NW ITALY, he must be concerned over the fact that the BRENNER railway has been blocked for most, if not all, of the past 10 days at a point about 20 miles North of VERONA. This, among other things, has resulted in the further building up of supply dumps near VERONA, an area already congested with many administrative installations and dumps. A block on the BRENNER at this time must be particularly undesirable in view of a ground report that two Italian Republican divisions were to begin moving from GERMANY to PIEDMONT by way of the BRENNER - VERONA - MILAN on 20 Oct. The accuracy of this report is as yet not known, but from PR it has become clear in the last few days that there is a large amount of rail activity between VERONA and MILAN despite several cuts in the line, and it is also evident that at least some troops are being moved through this area. However, owing to poor weather, information is as yet insufficiently complete to determine exactly how many troops are involved and in what direction they are moving. Typical of recent activity on this route was an almost continual line of trains, apparently facing West, with locomotives in steam, reported by visual recce on 24 Oct as standing on the tracks from a broken bridge over the CHIESE River at F 1960 Westward through BRESCIA to ROVATO, a distance of about 20 miles.

It was reported on 3 Oct that the enemy is using the Lake GARDA shipping to supplement the railways; ports stated to be in use are DESENZANO (F 2959), SALO (F 290745), PESCHIERA, GARDA (F 433703) and RIVA (A 5504).

Reports are still being received of the transfer of machinery and other industrial material from MILAN and TURIN to GERMANY, part of which is reported to be going via SWITZERLAND.

(b) Enemy installations - VERONA

The area VERONA-S. AMBROGGIO (F 5364) - PESCHIERA (F 4355) now contains by far the largest concentration of dumps and installations in ITALY. Confirmed installations in this area at present include 2 ammunition factories, 10 ammunition dumps, 1 fuel dump, 3 MT and spare part depots and 15 general stores dumps. A further 4 ammunition dumps, a fuel dump, an ordnance workshop and 2 general stores dumps have been reported by two or more ground sources but not yet confirmed by PR; in the case of the ordnance workshops the buildings have been confirmed and activity noted, but their exact use cannot be ascertained.

....Other reports,.....

THIS PAGE IS UNCLASSIFIED

0590

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

other reports, considered less reliable, include five ammunition and 3 fuel dumps.

Dumps vary in size from a number of stacks in an open field to large installations with 20 or more buildings or large dumping areas in which it is not possible to distinguish each separate dump. There is one such area at S.AMBROGGIO where the yards of nearly every building within ½ mile of the station contain stores of one sort or another.

This large concentration of installations can be accounted for by the fact that VERONA lies at the juncture of the BRENNER line and the main lateral line from MILAN to PADUA and also has good communications with BOLOGNA via OSTIGLIA or MANTUA and MODENA and with PIACENZA via MANTUA and CREMONA.

The very small proportion of fuel dumps would seem to indicate that fuel, owing to severe shortage, is delivered where possible direct to forward dumps, while such reserves as are maintained further back are dispersed as widely as possible.

3. WESTERN FRONT

The lull on the Western front has been broken during the past week by renewed British pressure on the West bank of the salient in HOLLAND and on the Southern bank of the SCHELDT estuary. Apart from this, now that AACHEN has fallen, the front seems to have entered a static period of which the enemy is taking advantage to give some of his divisions a badly needed refit. Down in the South the reshuffling on 19 Army's front during the past two or three weeks has if anything stiffened enemy resistance, and the stubborn withdrawal has been characterised by enemy counter-attacks and attempts at infiltration. To the North 5 Pz Army, its armour heavily drawn upon to meet the needs of the AACHEN area, has had a quiet week, and in the ARDENNES too the calm of the past month has been uninterrupted. At AACHEN, the garrison commander finally surrendered on Oct 21st after the troops under his command had given proof of their loyalty to the Fuehrer by sending (via the radio) 10,000 Marks for the Winterhilf. The enemy attitude here has been less aggressive than might have been expected in view of the concentration of armour in the area. Resistance has of course been fierce in the extreme but there has as yet been no sign of any major counter-attack developing.

North of AACHEN there has been no important change in the front line. Elements of 5 Para Div, which together with 3 and 6 Para Divs had been missing from the line, have been identified near VENLO. How much of the division is actually there is problematical. Allied pressure in this area has not been such as to warrant fresh reinforcement, especially as the enemy is probably trying to form a reserve of refitted parachute formations out of the remnants of the three parachute divisions which have escaped destruction in the West.

In the AACHEN area the general thinning out of enemy armour continues and the elements of 9 SS Pz Div which were there last week have now been withdrawn. There has been an appreciable reduction too in the artillery in the NIJMEGEN - ARNHEM sector - the number of guns having dropped in the course of a fortnight from 200 to 130. An undated captured map has given some fuller details of the line which the enemy has been constructing North of ARNHEM and which appears to be a Northwards extension of the Siegfried Line. This defensive position runs from DELFZYL to ZWOLLE thence along the IJSSEL and then down the Dutch-German frontier as far as VENLO. It appears from the map that this line is to be held by some seven divisions. Another line is reported forward of this, running from the ZUIDER ZEE South Eastwards to the RHINE West of ARNHEM.

However, despite these preparations for an eventual withdrawal from Western HOLLAND, there is no evidence yet to show that the enemy is trying to withdraw his forces from the large pocket on the West of the SCHELDT. He still has a nominal twelve divisions here estimated at some 100,000 strong and they have been offering very determined resistance to all our efforts at expanding the salient to the West. On the face of it prudence would dictate the abandonment of all HOLLAND, except for the WALCHEREN and BEVELAND fortresses, especially as the enemy has evidently abandoned all his offensive plans East of NIJMEGEN. But prudence has not always been a characteristic of the German High Command and stronger evidence will be needed before a withdrawal from HOLLAND can be described as imminent or even probable.

For the time being the enemy must be mainly concerned with building up some reserves both of infantry and of armour to bolster up his inadequate resources.

....He certainly....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

He certainly has need of them. The withdrawal of three parachute formations from the line has been referred to above. Two Panzer Divisions are also missing and presumably refitting. This leaves the enemy, according to SHAEF's calculations, with some 300,000 personnel actually in the line. Even taking into account the troops now out of the line and those tied up in the coastal fortresses, it is doubtful on this calculation whether his strength in the West exceeds an equivalent thirty divs plus about five divs in the form of Fortress Bns. Moreover casualties even in static periods are not light. Figures now available for the NANCY-VENLO sector in the period 10 Sep - 9 Oct are of particular interest in this respect. With the exception of the area immediately round AACHEN, this was the quietest sector of the front in that period, but the enemy nevertheless lost on an average a steady 1,300 PW every day. If other sectors in a quiet period lose proportionately, the resultant enemy casualties are likely to be in the neighbourhood of 4,000 a day or some two to three divisions per week. All in all the effort of building up a substantial reserve to meet the next Allied offensive is likely to be a difficult one for RUNDSTEDT, all the more so in view of the worsening situation in the East which is likely to call for many of the reinforcements intended for the Western front.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The following is a translation from the Croatian of a German document captured by the Partisans, place and date of capture unstated.

2nd Panzer Army,
Section Ia/Id No.4173 Sect. SECRET

HQ, 30th June 1944.

SUBJECT: Experience derived from recent defensive fighting in ITALY
(situation on 17th May 1944)

1. Cooperation between the different arms achieved by the enemy forces has proved to be our greatest threat, particularly with the armoured forces, where over 400 tanks have sometimes been employed.

2. The French have renounced their former methodic manner of waging war and their example has been followed by the British and the Americans. Recently our enemies, particularly with their armoured forces, have attempted to exploit immediately any local breakthroughs or wedges, and convert them into a strategic breakthrough. Following the Russian example, they now hold occupied territory with such strong forces that counter-attacks by local reserves are unable to regain lost ground. Consequently it is necessary for the counter-attack to follow immediately after the breakthrough, as any delay threatens the success of the counter-attack.

3. Cooperation between arms. If the enemy tanks fail to breakthrough, they generally withdraw about 300 metres and signal by rockets. This is the signal for the artillery to open fire.

Measures should be taken to ensure cover. Where ground offers no possibility units should be thinned out. Defensive measures against enemy tanks should be continued from defended positions.

4. Sighting points for enemy artillery. The enemy makes use of prominent ground objectives (church towers etc.) behind our lines as sighting points for his artillery. These objectives should be removed after consultation with the local authorities, and upon orders issued by the commanding officer. The local authorities should be informed beforehand in order that their objections may be taken into consideration.

5. Shrapnel fire. High casualties have been caused by low bursting shells. Niches should be built in trenches to protect personnel.

6. Panzerfaust. The range of this weapon is known to the enemy and his tanks do not approach our infantry nearer than 40-50 metres.

Attack should be made from a well masked position and not before the enemy has reached the favourable range. Attacks against enemy tanks outside this range are useless.

7. It should be borne in mind that French Moroccan troops are capable of passing anywhere where mules can pass and there is always a possibility of deep outflanking moves by them over terrain normally regarded as impassable.

8. The enemy, by making use of his amphibious vehicles, has rapidly crossed streams and water obstacles. There have been as yet unconfirmed reports of amphibious tanks. Therefore all water obstacles should be at any rate observed, if they cannot be properly occupied by troops. In this connection it is useful to mine marshes along their edges which are nearest to our positions.

9. The enemy is making ever more use of his Air Force on a scale as yet unprecedented. This is one of the general problems which we have to face.

After a successful breakthrough on the main front, the enemy takes every opportunity, by day and by night, to ensure that his fighter aircraft make it impossible for us to bring up reinforcements and supplies to our troops. Attacks

....are directed.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

are directed against individual vehicles and mainly take place against those sections of the road from which dispersal is impossible (bridges, dams, etc.).

There has been a case where 100 attacks against one important bridge have been made in less than 24 hours. These attacks are apt to cause a delay of from 2 to 3 days in the movement of reserves and regrouping. The enemy has such superiority in the air that it is difficult for our command to calculate time with any reasonable accuracy. The following counter-measures are recommended :-

a) The employment of adequate "Provost" forces by officers in charge of road traffic;

b) A definite allocation as to which roads are to be used by which type of transport.

c) Labour to be held in readiness at vital points in order that repairs may be put in hand forthwith.

d) A sufficiency of light mobile Flak Units.

e) Engagement of low flying planes by all from every possible point. (See this Army Group Order Ia/Id No. 1685/44 Secr. of 9/6/44).

(sgd). Frh. Von Varnbueler, Colonel,
for Chief of General Staff.

118th Jaeger Division, 19/7/44
Section Ia A. & W.
No. 4657/44 Secr.

SUBJECT: Experience derived from recent defensive fighting in ITALY.

NOTE FOR DIVISION: These recent experiences are particularly valuable. C.Os are responsible that all concerned are acquainted as soon as possible with such parts as refer to their particular activities.

(sgd) Goitner, Lt.Col.,
GSO (1).

AVAILABILITY OF OFFICERS IN THE GERMAN ARMY

Two documents have been received which throw considerable light on the German problem of finding suitable officers to command units and formations in the field. The first of these is in the form of notes made by Dr. FREYTAG, IIa of LXXX Corps, at a conference held in PARIS on 4 and 5 February 44 for Adjutant-Generals, which give a comprehensive picture of losses of officers and anticipated requirements.

a) Officer casualties up to 20 January 44

Killed	23,776
Wounded	67,400
Missing	16,805
(Exclusive of	5,000 officers lost at STALINGRAD)

b) Losses by ranks up to 1 January 44

	Generals	Cols	Lt-Cols	Majs	Capts	1st Lts	2nd Lts
Killed	33	104	135	576	2000	6563	17346
Wounded	39	200	201	1084	4752	15561	44326
Missing	25	76	110	257	960	2868	4194

c) Relative Losses by arm of Service

The highest losses of officers were among Panzer Grenadier units, followed by Panzer, Infantry, Engineers, Artillery, Signal and Supply troops in that order.

d) Future Requirements

18,000 were needed for new formations.

e) General Staff Officers

The 1,900 General Staff appointments were filled by 964 General Staff officers, 233 officers assigned to the General Staff, 90 former General Staff officers and 500 reserve officers.

f) Divisional Commanders

Command of a division can only be gained by front-line service. Regimental commanders not fit to command a division to be promoted only in the normal way. Command of a training division to be given only to former commanders of active divisions who have been wounded or fallen sick.

g) Regimental Commanders

Were urgently needed. 240 Regimental commanders were casualties in 1943.

h) Intelligence Officers (Ic)

Intelligence officers to be given accelerated promotion only if they have held an active command previously. The N.S.F.O. is not subordinate to the Ic.

The second document contains the conclusions of a conference for Adjutant-Generals held by the O.K.H. on 16 and 17 June 44 and forwarded by the Adjutant-General of Hirst Army to the Adjutant-Generals at Corps with the express proviso that it was not to be transmitted in writing below Corps. The following are the main points of interest:

a) Difficulties have arisen in the general personnel situation, mainly in the filling of positions of company commanders and higher ranks, especially regimental commanders.

.....b).....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

b) Young officers may not be immediately employed under trying battle conditions. They must at first be carefully directed, even if the posts of company commanders must be filled by NCOs.

A better training of young officers beyond the present standard is not possible. Quality of officers depends upon the demand. If the demand is small, a greater chance for selection exists.

c) All staffs must again be examined with a view to determining whether the Führer's order that no officer of the age group of 1914 and younger can hold staff positions has been carried out. Report to Army headquarters by 15 July 44.

d) Average age of regimental commanders at the present time is 30 years. Efforts will be made to raise the age to 32 years. Seven Lt. Colonels below 29 years of age are at present regimental commanders.

It is an imperative necessity to promote all officers suited for higher appointments so as to insure in the fifth year of the war a more normal filling of officers' appointments.

e) Graduates of colleges (Abiturienten) must be considered for officers' careers. A decree is in preparation which will exclude from admission to the universities all those graduates who failed to become officers.

f) There is an urgent need for Army commanders. The Führer has requested the names of ten generals who are fit for the command of an Army to be submitted to him. Age 45.

g) Medical officers who have not been properly employed as well as finance officers who have not yet been employed at all will be reported to Gen. Major MICHELMANN to be sent to the front.

h) Colonels who have been in charge of divisions at the battle front as acting commanders may be promoted to the rank of General within two months.

i) Employment of Staff Officers at the Front.

Troops over and over again request that older Staff Officers be offered an opportunity of commanding troops. All officers before being posted to Staff appointments should have commanded a company for 6 months at the front, before promotion to Lt. Col a battalion for 3 to 6 months and before promotion to Gen. Major a regiment, and before promotion to Gen Lt. a division.

j) No exchange between the Eastern and Western fronts will take place in the future.

k) The number of officers at present is 240,000 (1,200 general officers).

l) Particular concern is at present felt over cases of corruption on the largest scale, extending into the highest ranks. Such cases are apt to influence attitude and morale of the people and may have decisive consequences for the outcome of the war.

According to a decision of Fieldmarshal KEITEL all cases of corruption will be brought before the Central Court in BERLIN even for members of the forces in the field.

Cases of corruption should not be covered up or presented in a less damaging light. Caution when pleading for officers charged with corruption.

m) The Chief of the Army Personnel Office urgently requests that all officers down to the lowest rank become familiar with the order concerning Seydlitz.

n) Extremely strained conditions in the replacement of officers requires a constant examination of all officers, regimental, battalion and company commanders, who are qualified to be promoted to the next higher rank. They must be transferred.

.....o).....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

o) Immediate report to the Personnel Office in the event of a son of a General being killed in action.

p) NSFO (National Socialist Political Commissar)

Of 740 existing positions only 450 have been filled.

q) Youngest Officers in the Various Ranks:

H.Q., A.A.I. INTELLIGENCE SUMMARY NO. 67

OF 1 NOV, 1944

(a) This Summary will NOT be distributed below HQs of Army Corps. Sidelined information will not be reproduced in any Intelligence Summary of formations under this H.Q. without special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-

1. ENEMY SITUATION

The weather has played the principal role in operations this week and torrential rain with winds of gale force prevented any major change in the situation. The enemy in the meantime has been carrying out reliefs and readjusting his forces; he has brought over still another division from the Adriatic flank to the sector South of BOLOGNA and on his Tyrrhenian flank he has started to bring in an Italian division and a German regimental group.

On 8 Army front we have advanced to the line of the river RONCO from a point North of MELDOLA (M 4405) to as near to its lower reaches as is practicable or desirable by reason of the marshy nature of the ground. On the Northern flank we have been in contact with 721 Jg Regt across the BEVANO on route 16. 26 Recce Unit continued to patrol East of the RONCO in the area S. PIETRO IN VINCOLI, M 521253 up till 29 Oct but has now probably been pushed back across the RONCO. Astride Route 9 we seized two small bridgeheads across the river on 25 Oct, but heavy rain and a rise in the water level meant that they could not be reinforced and 278 Div, supported by Mk VI tanks, was able to eliminate them next day. Further South we were able to establish a bridgehead South of MELDOLA and are advancing Northwards. MELDOLA itself is clear and we are up to the 10 Northing as far East as the 44 Easting. Further South we have captured CAMINATE (M 4005) and are as far North on the West bank of the river RABBI.

76 Corps has been reduced as far as can be considered safe to reinforce the schwerpunkt South of BOLOGNA. In the last two weeks its best three divisions, probably the best three still remaining to the Germans in ITALY, have been removed one by one and hastily recommitted on the Central front where they have succeeded in stabilising the position; an excellent example of the advantages Kesselring derives from his good internal lines. The last to go was 1 Parachute Division which began to move off on 26 Oct. It had just completed taking over the sector astride route 9 from 114 Jg Division. The latter went to the coast where it now stretches as far South as the 27 Northing. It is not certain whether 162 Div still has a sector on its left, though it may still be at least entrusted with the coastwatching in this area. If a report is true that it has recently surrendered 1,500 German O.Rs to 114 Jg Div - and the PW who gave the information had certainly himself been transferred - its fighting value must be lower than ever and it could scarcely be expected to take a serious part in operations. On the right of 114 Jg is 26 Pz Div whose sector extends to within two miles of route 9. Astride the road is 278 Div with all three regts now up. From North of MELDOLA to CAMINATE and on the West bank of the RABBI is 356 Div which has been falling back fairly steadily under pressure throughout the week. 305 and 715 Divs adjoin to the West in the mountainous salient which still protudes to some thirteen miles South of FAENZA. It is not likely that the enemy intends to stand on his present positions indefinitely. The RONCO line has already been turned by our crossin at MELDOLA and we know he has already reconnoitred another line in rear. This appears to be in the nature of a switch line to swing back his Southern flank while still covering RAVENNA with his left; the line will presumably run along the FIUMI UNITI and then up the RONCO as far as M 4924 where it runs down a curving ditch to join the MONTONE at FORLI. The central portion of this line was called GERHILD on a captured map. There is no sign as yet that the enemy is going back to it,

...and while.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

and while the RONCO continues to present such an obstacle there is no pressing need, but preparations have already been made in the shape of destroying all the small bridges and culverts between this river and FORLI. Furthermore prisoners from 869 G.R. had heard that it was intended to withdraw behind FORLI and believed that the withdrawal had only been delayed owing to the weather.

On the Central front we have been mainly onegaged in consolidating the positions won in the area of MONTE GRANDE though we were able to improve them in the direction of MEZZANO, L 9934. 1 Para Div has now come into the line between 90 P.G. and 98 Divs, having relieved 117 G.R. of the latter which was previously isolated from the rest of the div. The current lay-out of this division is difficult to see but II Bn 1 Para Regt on night 30 Oct was attacking towards VEZZOLO, M 000334. This represents a move Westwards since 26 Oct as on that date the Bn H.Q. was in M 0535 and one of its Coys was making contact with I Bn 200 G.R. in the area M 011332. Probably 200 G.R. has moved West, giving 90 P.G. Div a more restricted sector. An element of 4 Para Regt was also in the line on 26 Oct and a Coy was in the action on 30 Oct but the Regt has not been definitely located.

On the West coast the enemy appears to be at last bringing up some Italian troops into the fighting. Deserters who arrived in our lines on 27 Oct report the presence in the area L 1507 of the whole of 2 Alpine Regt of the MONTEROSA Alpine Division. This division has been in LIGURIA for some time now, mainly in the area East of GENOA, and it is said to have suffered heavily from desertions. The deserters stated that the whole division was coming into the line and this may be confirmed by a report from another source that it was being relieved in its previous sector by the newly arrived LITTORIA Division. Prisoners were also taken from II Bn 6 San Marco Regt of the SAN MARCO Div in the area L 139055. They say their bn is attached to 2 Alpine Regt and possibly this is merely a detached bn sent down to gain battle experience. Apart from this the Germans have also been reinforced by 281 G.R. of 148 Division (previously numbered 8 Res.Gren Regt), prisoners from which were taken on 29 Oct in the area U 9496. It seems possible that when MONTEROSA Division arrives it may take over the whole coastal sector with the help of the stiffening provided by the regt of 148 Div and thus release 42 Jg Div for employment elsewhere. This sector is perhaps the least important on the front and the most mountainous, and may be regarded as appropriate for Italians, especially a Mountain Division.

In Northern ITALY it seems certain that 148 Div, as suggested last week, moved East from the French frontier to take up the previous position of 232 Div; 281 Regt at least came from the area of CAIRO, North of SAVONA. This division has now apparently been upgraded from a Reserve division and its Regts have been renumbered. Further East LITTORIA Division, which apparently entered ITALY this month together with ITALIA Division, is said to be taking over positions near GENOA from MONTEROSA Division. ITALIA has not yet been located though its arrival in ITALY is accepted. In the North East 71 Div has now apparently been joined by 44 Div. This is reported by a prisoner from the divisional Alarm Coy, captured on the Central front. He states that the division had left for the TRIESTE area and the majority had already crossed the Po when the serious situation South of BOLOGNA made reinforcements urgently necessary and the Alarm Coy, formed mainly from the three 13 Coys of the three infantry regiments, was rushed back into the line. 44 Div, though it has had fairly heavy losses, is nothing like so battered as 71 Div; possibly the enemy was anxious not to let it sink too low in strength for the sake of its reputation and to avoid creating a bad impression in AUSTRIA, the country of origin of most of the troops. Northeastern ITALY is now apparently the standard area for divisions to refit, though there have never been as many as two there at one time before. Possibly OKW may think that, when reformed, these divisions would be well placed there should it be necessary to switch them to meet an increased Russian threat to the Eastern frontiers of AUSTRIA.

2. ENEMY SUPPLIES AND COMMUNICATIONS

(a) General

Again this week the weather has seriously restricted our attacks

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

against the enemy L of C. There has been very little PR but it must be assumed that the enemy has by this time repaired a sufficient number of rail breaks to permit through rail traffic in most areas; in fact limited PR on 31 Oct showed that at three points repairs had been made. Most, if not all, of the Po rail bridges undoubtedly remain out; the only known exception is the bridge at CASALE MONFERRATO (J 5432) which has been passable for some time. North of CASALE MONFERRATO at least one, perhaps two, of the bridges over the TICINO River on the rail lines between TURIN and MILAN are probably passable. Recent PR of rail movements in this area are not available but a ground report of 25 Oct states that rail traffic to the North West from MODENA is heavy with trains moving both by day and night. The route reportedly followed is North West to PIACENZA, VOGHERA, TORTONA, then South to ARQUATA SCRIVIA (undoubtedly in order to by-pass the broken rail bridge just West of TORTONA) and then again North West to ALESSANDRIA. With, as noted above, the CASALE MONFERRATO bridge repaired, the enemy is now quite probably taking advantage of bad flying weather to evacuate as much loot as possible from areas South of the Po. The advantage in using the above rail route is of course that it avoids the necessity of having to tranship across the Po, and in fact once having got across the river, trains can now probably move all the way out of ITALY without having to tranship. Once having crossed the Po in North West ITALY these trains can leave the country either by the BRENNER or by the North East ITALY routes; but it is also quite possible, as rather persistently reported by ground sources, that they may leave ITALY by way of SWITZERLAND.

In N.E. ITALY the enemy last week finally opened up a line across the PIAVE River by repairing the bridge at NERVESA. This bridge was attacked on 30 Oct and PR of the 31st showed that it was impassable though not seriously damaged. However, one or more of the other bridges over the PIAVE may be open; but no PR being available since 20 Oct when they were seen as still down, no definite statement of their condition can be made. In any event there appears to be considerable rail activity in the N.E. At TREVISO on 31 Oct 330 units of rolling stock were seen in the marshalling yard as compared to only 80 on the 20th, and the turnover of rolling stock had been complete; at the station 70 mixed units were seen, most of which were loaded flats. This activity may well be connected with the reported, but as yet unconfirmed, move of 44 Inf Div to the TRIESTE area.

(b) Enemy Installations - PIACENZA

The area PIACENZA-CREMONA contains the largest concentration of enemy installations South of the River Po. Confirmed dumps include four fuel dumps, at least three of which are large permanent installations, a methane fuel gas plant, an ammunition filling plant and five ammunition depots, a repair shop, central spare parts depot and two general stores dumps. A further three fuel dumps, a tank depot and general stores dump have been reported by reliable sources but not yet confirmed by photo recce, whilst less reliable reports include one fuel and three ammunition dumps.

Nearly half these installations are concentrated round PIACENZA itself in an area approximately 4 kilometres square; the remainder are spread out over the area CREMONA-CORTEMAGGIORE (K 7709) - BUSSETO (K 8806). The fuel dumps tend to hug the river and at least two are believed to be supplied by river craft.

The reason for this large concentration of dumps is undoubtedly due to the position of PIACENZA in regard to the North Italian communication system, both road and rail. Standing almost in the centre of the Lombardian plain at the North West end of the Via EMILIA (highway 9) and the main trunk railway line which runs South East through PARMA, MODENA and BOLOGNA, it also has excellent road and rail communications with GENOA, TURIN, MILAN and VERONA and is thus an ideal point from which to supply the forces in LIGURIA and Southern PIEDMONT as well as those in the Western Appennines. Its location on the banks of the Po would also enable supplies ferried across the river to be carried direct to dumps by MT without the necessity of reloading on trains.

....3. WESTERN FRONT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. WESTERN FRONT

Once again the Southern half of the front has shown few major changes. The reinforcement of the German 19 Army has continued with the arrival of an Infantry division from NORWAY in the area North of BELFORT, and the Southward shift of an Infantry division from METZ to the area West of SARREBOURG. It is in this area - on 19 Army's right wing - that the enemy has had to give most ground in the past week, and he has been showing considerable concern at his apparent inability to halt our progress. With the additional reinforcements, 19 Army's resistance has been noticeably stiffer in the past few days, and such progress as we have made has been immediately challenged by enemy counter attacks.

From SARREBOURG to AACHEN the front has been very quiet with only sporadic local actions to break the lull. AACHEN itself now has its first non-Nazi Mayor for a decade. It is reported that the few civilians remaining feel considerable bitterness towards the German Army and SS Units who indulged in wide-spread looting before their departure.

On the British Army sector in HOLLAND there has been lively activity on both sides of the salient. The enemy seems at last to have decided on withdrawal from Western HOLLAND, and to facilitate the extrication of his forces has been lanching sharp counter attacks against the Eastern flank of the salient in the VENLO area. 9 Pz and 15 P.G. Divs have been the cause of the trouble. 9 Pz Div was already in the area, but 15 P.G. had been missing from 19 Army's front for nearly a fortnight. Between them the two formations succeeded initially in driving us back about three miles on an eight mile front. However, having done that, their attacks seem to have petered out and some of the lost ground has been regained. It is, of course, possible that the attacks may yet be resumed in order to draw off Allied forces from the West of the salient. 116 Pz Div is out of the line and may put in an appearance. It is more likely, however, that this formation has gone off to join the three other Panzer divs which are believed to be resting and refitting somewhere in GERMANY. If it has in fact done this, the enemy has the beginnings of a strong armoured reserve which should be of considerable value to him when large scale battles are resumed.

On the West of the salient 15 Army had been for some time showing signs of distress, but fought hard to keep open the BEVELAND isthmus. When this was lost and the enemy's hopes of reestablishing land contact with the forces in ZUID BEVELAND had failed, he seems to have realised that there was little to be gained by holding an uneconomic and potentially dangerous front. The withdrawal of the depleted and exhausted divisions of 15 Army has on the whole been orderly and it is unlikely that we shall succeed in cutting off any large number of the enemy. His withdrawal in ZUID BEVELAND has been less stubborn and the region has been cleared of the enemy in a surprisingly short space of time. Extensive minefields rather than enemy resistance have been the main worry. Some 2,500 PW have been taken on BEVELAND to date but a large number of Germans is reported to have crossed the causeway into WALCHEREN.

There remains WALCHEREN. When this half submerged island is clear of the enemy ANTWERP can be put into use by the Allies and the long enemy resistance in Southern HOLLAND will be over. The Germans may yet stand on the WAAL or the MAAS, but with ANTWERP ours they will doubtless appreciate that the Allies are now in a much stronger position to resume the offensive. In anticipation of this the enemy must find more fighting troops to hold his front, and any shortening of the line which will release even a small number of divisions for a quick rest and refit will be very acceptable. At the moment withdrawal to the ZUIDER ZEE - WAAL line (reported in Summary No 66) looks RUNDSTEDT'S best course of action.

4. EASTERN FRONT

The Red Army has continued to make good progress in NORWAY where the enemy has so far put up comparatively little opposition. NEIDEN, 17 miles West of KIRKENES, is now in the hands of the Russians who are trying to get control of VARANGER Fjord. There is as yet no indication of the line on which the Germans propose to stand. It is hardly likely that they would voluntarily give up the iron ore deposits at NARVIK, and a stand somwhere to the East of that town is to be expected.

....From the Baltic.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

From the Baltic to the Czechoslovak frontier the front has been fairly quiet in the past week. In LATVIA the Germans have spoken of Russian attacks from AUCE against the bridgehead they still hold in the Western end of LATVIA. There has been no confirmation of this from the Russians. Fighting in East PRUSSIA though sharp has been only local in character, but further South the Germans have been forced to give ground N.W. of PRIGA where the Red Army has extended its hold on the Eastern bank of the VISTULA.

In the Southern sector, the Germans have now withdrawn completely from the Transylvanian salient. Their fierce resistance at DEBRECEN a fortnight ago won for them time to extricate intact most of the 8 Army forces in the salient while after the loss of DEBRECEN the Russian drive from the South of the salient was frustrated by a counter-attack which regained for the enemy temporary possession of NYIREGYHAZA. In the Hungarian plain, however, the Russians have made considerable progress. KECSEMET, 45 miles South East of BUDAPEST has been reached, and the Russian forces hold a twenty mile stretch of the DANUBE North of BAIA, at which point they are within 160 miles of VIENNA.

In YUGOSLAVIA the Red Army now has a firm grip on the DANUBE from NOVI SAD to BELGRADE. The enemy is still falling back in this area and is reported to be constructing defences between the DANUBE at VUKOVAR and SID, thence Southwards to the junction of the SAVA and DRINA rivers. 118 Jg Div (from the Dalmatian coast) and the unreliable 13 SS Division, are reported to be preparing this defence line and they will no doubt eventually be joined by the tattered remnants of 1 Mountain, 7 SS, and 117 Jaeger Divs, now falling back from BELGRADE.

Further South, the Russian advance now directly threatens the enemy's withdrawal route via SKOPLJE - KRALJEVO - SARAJEVO. This is one of the two all-weather highways for German forces withdrawing from GREECE. In anticipation of the loss of this road, the enemy is taking steps to open up two alternative escape roads in YUGOSLAVIA. Elements of 297 Div are now clearing the subsidiary fair-weather road from NOVI PAZAR to VISEGRAD, where it joins the main KRALJEVO - SARAJEVO road. Other forces from GREECE including elements of 104 Jaeger and 21 SS Skanderbeg divisions are reported to be concentrating at PRIZREN and MITROVICA in order to keep open the approaches to the all-weather highway running parallel to the coast from PODGORICA to MOSTAR. The Partisans are challenging the enemy's hold on this road and hold TREBINJE, a key point on it.

Meanwhile in GREECE final demolitions were reported to have been carried out at SALONIKA harbour on 30 Oct and the town is now believed to be clear of the enemy. Enemy rearguards have been contacted at ARNISSA, 60 miles West of SALONIKA and 10 miles from the YUGOSLAV frontier, and it is probable that apart from isolated small bodies cut off by guerillas, the last German soldier will have left GREECE in the course of this present week.

for BRIGADIER,
B.G.S. (I).

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ENEMY DEFENCES ON THE RIVER RENO

Air photos taken on 20 and 24 October show the beginnings of minor defences along the River RENO from ARGENTA (M 2960) to CENTO (L 8574). A delaying position along the RENO in this area has some topographical advantages. First, the River RENO is a ready-made anti-tank obstacle, the difficulty of which will increase if rainy weather continues in the Appennines. Secondly, there are two large areas South of the RENO, one between ARGENTA and MOLINELLA (M 1561) and the other South of MALALBERGO (M 0472), which consist of water-meadows, ricefields and wet ground liable to become waterlogged after appreciable rain. Thirdly, by bringing his line on the impassable VALLI di COMACCHIO, which is no doubt his intention, the enemy shortens his front, the distance from CENTO to the VALLI di COMACCHIO being about 35 miles. Northeast of CENTO, however, the RENO turns Southwest, and this western end of the line is uncertain, loose and vulnerable, and can be outflanked. For any protracted stand the army would have to lengthen and continue his defences westwards, but of this there is as yet no indication, nor is there any outstanding natural feature like the RENO of which he can make use. The RENO line thus appears rather as a holding line on the enemy's Eastern flank, an intermediate position while the remainder of the forces in the Northwest are extricated.

The RENO line so far consists of minor defences only, chiefly machine-gun positions, and by no means continuous. There is no comparison with the fairly well-developed VENETIAN line. ARGENTA on Route 16 (RIMINI - RAVENNA - FERRARA) will probably be a keypoint in the defensive organisation. Northwest of the town there is an intricate system of defences under construction covering the map square M 2663 (near BOCCALEONE M 2563), with extensions to M 2764. In the area East of BOCCALEONE there are some machine-gun positions North of the RENO. Southeast of MALALBERGO there are twelve machine-gun positions in the area M 1160. MALALBERGO itself on Route 64 (BOLOGNA - FERRARA) will probably be another keypoint in the line. There are minor defences at L 9478 and L 9070. In the area of CENTO minor defences have appeared both West and East of the river. In all, these defences do not add up to much, but they are the first signs of a line as usually found. Ground sources have so far provided only very little information on this new line of defences. According to one source, whose report goes back to the summer, there are minefields along the RENO between ARGENTA and CENTO and also Southwards to LAVEZZOLO (M 3155), Southeast of ARGENTA. The same source states that the bridges along the RENO are mined and that there are anti-tank bunkers on the North bank of bridgeheads.

-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The improvement in the weather in the last few days has enabled operations to be resumed on the Adriatic sector. Developing the bridgehead established over the RONCO at MELDOLA at the end of the last month we had by the 3rd Nov reached GRISIGNANO M 4211 and had also crossed the river just South of Route 9 where we seized positions both sides of the airfield. This did not however appear to worry the enemy further to the North where he remained in possession of RONCO village, and continued to hold his positions along the West bank of the RONCO with outposts across it at BORGO SISA 4822. On the night of 7 Nov we attacked South of FORLI and by the morning had cleared all the buildings on the Northern perimeter of the airfield and were driving towards S. MARTINO in STRADA 4213 which was captured in the evening. Heavy fighting continued all day and cost 278 Div and 356 Div some 200 prisoners. Earlier evidence had indicated that the enemy did not intend to hold for long forward of FORLI - prisoners in fact stated that the withdrawal behind the MONTONE had only been postponed owing to the deterioration of the weather at the end of last month - and by night 8/9 Nov the enemy had had enough and decided to pull back to GERDA TWO, the code-name given on a captured map to the FORLI-CASTROCARO M 3510 road running just West of the R. MONTONE. By 0100 hrs 992 G.R. (278 Div) was reporting itself in its new positions and later in the morning of 9 Nov our patrols entered FORLI and to the South crossed the RABBI unopposed. North of Route 9 a deserter from 67 P.G.R. stated that on the 6th a runner arrived with orders for his unit to pack up and move off; BORGO SISA was clear by 9 Nov and it is probable that the enemy has pulled back to the RAVALDINO CANAL, which runs Northeast from FORLI to COCCIOLA M 4924. The latter village was still strongly defended today and it is likely that the new enemy delaying position will run as indicated along the R. MONTONE and the RAVALDINO CANAL and hinge at COCCIOLA on to the line he has been holding South of RAVENNA through GAMBELLARA 5128 and along the FOSSO GHIAIA.

On the Polcorps front 305 Div and the right wing of 356 Div have been driven further North. On the 6th M. CASALUDA was captured and held against repeated counter-attacks by II Bn 871 G.R. that night and the following day. Further West I Bn 576 G.R. was forced to give up DOVADOLA M 3005 on the night of 7 Nov and took up a position 1,500 yards to the North in the area of PLANDERA M 3005. The following day M. LECHIA M 2606 was captured but it was not till the morning of the 9th that M. BORA M 2906 was finally secured. In the fighting between these two hills an OST Coy of 578 G.R. suffered heavy losses and by the evening of the 8th was reduced to 13 men. On the right wing of 305 Div a slight withdrawal took place on the 7th and the enemy is now back on M. POMPEGNO M 2006.

From the Central and Western parts of the line there is little to relate. Following their unsuccessful attempt to capture VEZZOLO M 0033 on 31st Oct the parachutists have been quiet, and II Bn 1 Para Regt on 4th was withdrawn from the line to a rest area at VARIGNANO M 0138. The capture of PALAZZO L 6322 provoked severe counter-attacks by 94 Div, but all were repulsed, and similar raids in the SERCHIO Valley by Italians and Germans met with no more success. On the coastal plain we have improved our positions and

....occupied M.CAVALLO.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

occupied . CAVALLO U 9099.

There can be little doubt that the enemy is taking advantage of the present lull South of BOLOGNA and the comparative inactivity on the Western part of the line to carry out some regrouping. Both Regts of the MONTE ROSA Alpine Division have now been identified and this Italian division appears to have taken over a sector between the SERCHIO Valley and the sea, though the coastal plain itself is held by a Regt (281 G.R.) of 148 Inf Div. In addition several companies of the SAN MARCO Div have lost prisoners in the MONTE ROSA sector; these companies are presumably attached to gain battle experience since the div is still placed coastwatching West of GENOA. The Italians return to the line, despite the bouquet handed out by the German communique of 1 Nov, has hardly been a propitious one. The daily rate of desertion has been high, not surprising since most of the personnel of the division were recruited from internment camps in South GERMANY. Two independent reports of the arrival of about a Regt of Germans in the SERCHIO Valley about 4/5 Nov are therefore probably true, and it is likely that the Germans will institute a more vigorous control of the Italians and that they will have to resort to the familiar practice of sandwiching Italian units between German ones. The identity of these German arrivals is unknown. 42 Jg Division used to hold this Western sector, but since it has already been relieved of most of its commitments by 281 G.R. and MONTE ROSA it is probably required for some other task and is unlikely therefore to return. A more probable candidate is another Regt of 148 Div. This would involve a further thinning out of the Ligurian coast which would suggest that the enemy is no longer seriously worried about a possible Allied landing in the Gulf of GENOA. Northwest ITALY has until recently been liberally garrisoned, considering that the only hostile activity has been by Partisans, and the heavy casualties he has suffered on the main front make it inevitable that this luxury be cut down. A report from a ground source dated 6 Nov even suggests that 5 Mtn Div might be preparing to leave SALUZZO, the H.Q. of the Div, was said to be packed on that day with soldiers preparing to move, so it was rumoured, to the Appennine front. This is completely unconfirmed, but not by any means improbable, especially if its place were to be taken by a battle-weary division from the main front.

Meantime the two new Republican Divisions trained in GERMANY have arrived as reinforcements for GRAZIANI's Army of LIGURIA. ITALIA is still unplaced, but several reports which there is no reason to discredit, refer to the relief of MONTE ROSA by LITTORIO and on the 6th the latter's H.Q. was said to be at BONASCO K 3518 near PIACENZA, where some troops of MONTE ROSA were previously engaged on anti-Partisan hunts.

South of BOLOGNA the enemy is clearly resting some of his divisions. Parachutists of 4 Para Div have been reported back in the BOLOGNA area though this does not necessarily discount the possibility that they are still holding a narrow sector. 362 Div is probably in an even more sorry state, and its relief by a new division, rumoured amongst prisoners in the first days of November, may by now have been effected. Certainly it has produced no very recent identifications. It is difficult to see what division is available to relieve it, unless it be 42 Jg Div which has had its Recce Unit and III Bn 25 Regt committed in this sector for some time and has also handed over its commitments on the West coast. Of the other divisions South of BOLOGNA 16 SS, 65 Inf, 29 P.G., 1 Para Div, 98 Inf, 334 Inf and 715 Inf Divs have all been identified recently. 90 P.G. Div however has been particularly quiet and there has been no contact with it since parachutist prisoners said they believed that 1 Para Division had relieved it. 90 P.G. Div may therefore also be in reserve.

Whereas there is no evidence to suggest any large scale withdrawal, the enemy on the Adriatic has not shown any inclination to hold ground since he pulled back from the SAVIO River. It is quite likely therefore that 76 Corps is conducting a limited fighting withdrawal, the speed of which will depend on the weather and Allied pressure, to a shorter line joining up with the present positions South of BOLOGNA and resting its Eastern flank on the VALLI DI COMACCHIO. Such a line would enable Kesselring to economise on his divisions and draw others out to refit. If this policy of a limited withdrawal is in fact in progress, it is very probable that 76 Corps has been instructed to carry it out with the divisions at present at its disposal, exchanging a tired division with a more healthy one within the Corps if the occasion demands. This would avoid having to commit one of the divisions resting in the BOLOGNA area before it had had time to refit and give these divisions a badly needed respite for reorganisation.

....2 ENEMY SUPPLIES AND COMMUNICATIONS..

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLIES AND COMMUNICATIONS

A few days of good weather in the past week have permitted our air forces to achieve a degree of interdiction of North Italian railways heretofore unequalled. While there is no direct evidence that the enemy's supply position has been seriously affected, it seems fair to assume that at least some shortages already exist and in the event that we can continue to maintain the present degree of rail interdiction his position is likely to become precarious. Already the enemy is undoubtedly using a relatively large amount of vital fuel to get supplies past breaks in the rail sys by MT; in view of Germany's overall fuel shortage the enemy is thus hit at what from the logistical point of view is his most vulnerable point.

Since 5 Nov all rail routes leading into ITALY, with the exception of those through SWITZERLAND, have been blocked. On the BRENNER route from VERONA to a point about 15 kilometers North of TRENTO, a stretch of about 100 kilometers, the railway has been blocked at numerous points. While it is true that the cuts achieved consist mostly of craters on the open track, there are at least two points blocked which in the past the enemy has been slow to repair. Weather permitting, this may well be the beginning of a long period of 100 percent interdiction of through rail traffic on the BRENNER. Attacks have also been made on railway electric-power facilities on the BRENNER; if these attacks are carried further the enemy may be forced to substitute steam for the present electric traction along certain stretches, in which event there may well be an appreciable drop in efficiency with the consequent decrease of through train capacity. One weakness in the present interdiction of the BRENNER is the fact that all the blocks but one are South of TRENTO from which an alternative loop line branches off and runs South East to the important rail centre of CASTELFRANCO (G 3976) in North East ITALY on the through line between VICENZA and UDINE; from CASTELFRANCO there are excellent rail routes to all points of the compass. However, there are now three cuts on this alternative route including a destroyed bridge. Furthermore, and this has been another important development this week, most of the possible routes through the area between PADUA and UDINE are blocked at two or more points, including all the rail bridges over the PIAVE river. Thus enemy held territory South of a line MILAN-VERONA-VENICE is, with the exception of the Swiss routes, completely isolated for purposes of through rail traffic.

The MT lift to negotiate the BRENNER railway breaks is appreciable - about 100 kilometers as noted above. In the North East however, the problem of negotiating the breaks in the railway is not quite so satisfactory from our point of view. With a single transhipment across the PIAVE by MT supplies can be moved further by rail to PADUA and then Westwards by way of VICENZA, possibly as far as the important supply base at VERONA. Alternatively they can be carried South West to as far as the LEGNAGO (F 8927) area where the rail bridge over the ADIGE is destroyed. That the enemy is in fact moving supplies in from the North East is indicated by much rail activity at VICENZA between 4 and 6 November and a complete turnover of rolling stock here between the 6th and 8th. At PADUA there is also considerable activity, turnover of rolling stock being complete between the 4th and 7th. However, rail activity has been slight for the past several days at VERONA itself, so it may well be that the approaches to the bridge about half-way between VICENZA and VERONA, observed as cut on the 4th, have not as yet been repaired. Assuming the line is still cut between VICENZA and VERONA and since there is a bridge out on the main line running South from PADUA, supplies must be off-loaded in either the PADUA or VICENZA areas, though some may be moved directly South by through train to LEGNAGO.

.....West of VERONA.....

THIS PAGE IS UNCLASSIFIED

0606

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

West of VERONA on the line to MILAN by way of BERGAMO considerable activity continues. On 8 Nov a rail bridge West of BRESCIA near CALCINATO (F 1958) was seen to be destroyed and while no movement was then observed in this area, a concentration of about 800 wagons including 300 loaded flats, were located between BRESCIA and CALCINATO, a distance of approximately 20 kilometers. The few engines observed appeared to be facing East and, while the loads on the flats cannot be definitely identified, it may well be that a movement of troops to the East from North West ITALY is involved; the single report that 5 Mtn Div is moving might possibly be relevant. West of BRESCIA, also on 8 Nov, considerable rail activity was noted at ROVATO (K 8872) and BERGAMO.

While VERONA is isolated from the North, East and West, the line South to OSTIGLIA (F 7513) on the PO appears to be open, but this is the only line over which through rail traffic can get as far South as the PO from VERONA, all other routes being blocked at one or more points. Over the PO itself the enemy is now apparently making a determined effort to improve the rail crossings. Of particular significance is the fact that he has repaired the permanent rail bridge over the PO at CASALMAGGIORE (F 1306) which "appeared" to be passable according to PR of 8 Nov. In addition he has begun to reactivate the temporary rail bridge just West of OSTIGLIA, completed but promptly knocked out some time ago, where repairs were 50 percent complete on the 8th. Considerable activity has also been noted recently at the rail ferry just East of PONTELAGOSCURO (M 1292) where the rail wagons themselves are believed to be ferried across the river; there has been no recent information on what appears to be a similar rail ferry at PIACENZA. Other ferries and pontoon bridges over the PO of course continue active, notably near CAMATTA at F 587140 and near FICAROLO at L 983967 where recent night PR shows that pontoon bridges continue to be used. Thus, while the enemy may have been experiencing some trouble in getting across the PO around the first of the month owing to heavy rains, at this time no particular difficulty in getting supplies across the river is probable. The current weak point in the enemy's L of C is rather to be looked for in the railways further to the North.

In view of the state of the railways a step-up in shipping activity might be expected, but so far no pronounced change is evident. In the Ligurian sea traffic between GENOA and SPEZIA continues, and there has been some increase in MT ship activity, but F boat activity is very slight and barge activity appears to have stopped altogether. Traffic from GENOA Westward to SAVONA continues on a small scale, mainly F boats with an occasional coaster and schooner. Other ports appear mainly inactive.

In the Adriatic RAVENNA now appears to be inactive and the quays have been demolished. F boats were still arriving in the RAVENNA-CORSINI canal on a very small scale up to 31 Oct but the only active shipping present on 5 Nov were two F boats in the canal which had not moved since 31 Oct. Turnover at VENICE and TRIESTE has been very light for the past fortnight, though traffic in M/Vs continues between these ports and PORTO MARGHERA, just South West of VENICE. Traffic has also been noted between TRIESTE, POLA and FIUME.

Of late there has been a noticeable decrease in the number of reports of the evacuation of Italian industries to GERMANY, and the general Northward movement of administrative installations. Possibly the preliminary steps to a withdrawal North of the PO have been completed though continual rather heavy rail movement on the MILAN-VERONA line suggests that some evacuation continues. In this connection in any event it is interesting to note what appears to be a reliable ground report to the effect that as of mid-October factories at TURIN were continuing to manufacture spare parts for motor vehicles. Another very recent report states that while FIAT has a capacity of producing 1200 trucks per month it is in fact producing only 150 and that the Germans have threatened serious measures unless production be increased to 400 or 500 within the next two months. In view of the enemy's known shortage of motor transport and spare parts it is logical to suppose that he will continue their production in ITALY as long as possible. Furthermore, while it is probably true that the enemy recently stepped-up his looting of Italian industry, the evacuation of Italian industrial facilities to GERMANY has been a long-standing practice, and it is likely that at the moment the Germans are continuing to devote considerable attention to keeping essential Italian war industries as productive as possible.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. WESTERN FRONT

In the Southern sector of the front Allied pressure in the BACCARAT area during the past week has caused the enemy some concern, and a thickening up of 19 Army's forces in this area has taken place. A Panzer Brigade has been transferred Northwards from the BELFORT sector, a Volksgrenadier Division has come down from the North and there have been several local moves on 19 Army's front all tending to reinforce the Northern part of the Army front at the expense of the BELFORT area which is now relatively thinly held.

From BACCARAT to HOLLAND the past week was quiet until Nov 8 apart from sharp fighting around the small German village of SCHMIDT. A new division, 18 Volksgrenadier, has been identified South of METZ in which area on 8 Nov the lull was broken by what the enemy has described as a large scale Allied offensive between PONT A MOUSSON and CHATEAU SALINS. This attack has been launched in what was formerly the sector of 5 Pz Army, which now seems to have gone out of the line altogether. There is as yet no evidence as to how the enemy intends to employ 5 Pz Army. Such armour as the Germans still have in the line is all in the Northern half of the front and it is possible that 5 Pz Army is destined for employment further North, reinforced perhaps with some of the armour now out of the line refitting. Most of this armour however is likely to be incorporated in a new formation now setting up in WESTPHALIA, 6 Pz Army. According to a recent deserter this formation is to include 2, 10, and 12 SS Pz Divs and the Pz Lehr Division. It may be joined by 21 Pz Division which prisoners expect to be taken out for a refit in the course of the present month.

In HOLLAND there has been no resumption of the counter-attacks West of VENLO by 9 Pz and 15 P. . Divs and all the ground we lost in the previous week has been regained after stiff fighting. On the West of the salient, 15 Army, fighting a fierce rearguard action has now withdrawn to the North bank of the MAAS. Elements of 10 SS Pz Division were brought down to the HERTOGENBOSCH area from ARNHEM at the start of the week in an attempt to stem the Allied advance, and the enemy has succeeded in getting most of his forces back across the MAAS, at the same time abandoning all the islands South of the HOLLANDSCH DIEP except WALCHEREN where a small pocket still holds out on the North coast. South of the SCHELDT estuary, 64 Inf Div has ceased all resistance and its commander is in our hands.

Now that the battle for Southern HOLLAND is at an end, it appears that the enemy is engaged in a reorganisation of his chain of command in the West in time to meet the coming battles for the REICH. An accumulation of evidence suggests that a new Army Group - Army Group North - is being formed to take over 15 and 1 Para Armies and charged with the defence of HOLLAND and North West GERMANY. This will leave Army Group B, presumably renamed MITTE, free to concentrate on the RUHR front, with 7 Army and perhaps 5 and 6 Pz Armies under command, while Army Group G, which might logically be called Army Group Süd, holds the front from the VOSGES down to the Swiss frontier. It is not quite clear who will have command of the new Army Group. General BALCK, a cavalryman in the early fifties is now believed to be commanding Army Group G in succession to BLASKOWITZ. However the German radio recently referred to a conference between MODEL, BALCK and BLASKOWITZ which suggests that BLASKOWITZ still held a command of some sort. We might therefore see him take over the new Army Group in the North. RUNDSTEDT remains the supreme commander in the West.

4. EASTERN FRONT

Interest this week has centred almost entirely on the Southern sector of the front. Apart from German counter-attacks in EAST PRUSSIA which the Germans claim regained for them GOLDAP, there has been little change in the Northern and Central sectors.

In HUNGARY, the Russian armour has penetrated into the outskirts of BUDAPEST, where the offensive has come to a temporary halt due in part to bad weather. East of BUDAPEST however, Soviet forces have established a substantial bridgehead over a 35 mile stretch of the TISZA river between KISKORE and POLGAR. South of the Hungarian capital they have extended their hold on the East bank of the DANUBE North of BAJA, and the Germans say that the Russians have effected a crossing of the DANUBE at APATIN.

.....In YUGOSLAVIA.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In YUGOSLAVIA, the enemy's concern is now to gain time, firstly to prepare his defence line West of BELGRADE between the DANUBE and the DRINA, and secondly to keep open escape roads while his forces withdraw from North ALBANIA and Southern YUGOSLAVIA. West of BELGRADE 1½ SS Division is hard at work preparing defences while further East 117 Jg, 1 Mtn and elements of 110 Jg and 264 Inf Divisions are staving off the Russians whose pressure in this area has temporarily abated. Further South, the Russians have been able to capture VALJEVO thereby denying the Northward road from KRALJEVO to BROD to the Germans and forcing them to use the KRALJEVO-SARAJEVO road. Even this route stands now in grave danger for 7 SS Prinz Eugen Mtn Division has been unable to stop the Russians reaching PRIJEDLJINA from which town the Soviet artillery should be able to shell the KRALJEVO-SARAJEVO road.

Meanwhile South of KRALJEVO the weary procession of forces from GREECE and ALBANIA fights its way Northward through the difficult mountain roads of Southern YUGOSLAVIA. A thin screen of German divisions, including probably 11 C.A.C. and 22 A.G. is now protecting these routes against the pressure of combined Russo-Bulgar forces. Elements of at least three divisions (297 Infantry, 104 Jg, 41 Fortress) together with some independent Fortress units are in the area of Southern YUGOSLAVIA and Northern ALBANIA proceeding Northwards along several subsidiary routes. The most important of these appears to be that from NOVI PAZAR to VISEGRAD. The withdrawal of these forces is being constantly harassed by Partisans particularly in the PRIJEPOLJE - PRIBOJ area and around VISEGRAD where guerrillas claim to have destroyed the bridge over the DRINA river. It is not clear whether the enemy is using the all-weather highway along the coast from PODGORICA via MOSTAR - SARAJEVO for his withdrawal. This is probably the best of the roads remaining to him, but with the Partisans in possession of the coast line from SIBENIK to North of KOTOR it is likely that forces withdrawing along this road would have an even rougher passage than those now following the mountain roads inland.

Under circumstances in which the Germans may propose but the Red Army dispose, it is not as yet clear what will be the enemy's eventual intentions in South East EUROPE. The general shaping of the vast battlefield suggests that the enemy's present hope is a stand on the line BUDAPEST-DANUBE-across SLOVENIA - and along the DRINA river while three German-Croat divisions protect his right flank in the Dalmatian hinterland. Once safely behind that line Army Group F might hope to reorganise and prepare a delaying zone on the Italian model which would permit a phased withdrawal North-eastwards. The enemy's ability to hold such a line for any length of time will be largely governed by his success in stemming the Russian drive through South East EUROPE towards VIENNA.

5. STANDARD OF EQUIPMENT OF RECENTLY COMMITTED GERMAN FORMATIONS

Prisoners taken in the fighting around EINDHOVEN towards the end of last month have made illuminating statements on the equipment of some of the enemy's recently committed Panzer Brigades. Lorried infantry from one of these formations went into action with armoured TCV's and dual-purpose weapons of inferior design which had arrived less than a week before the formation moved up to the front. The armoured TCV's although brand-new from BERLIN arrived poorly fitted with axles out of alignment and necessitated the crews working in 24-hour shifts to get them ready to move. The dual-purpose DRILLING anti-aircraft guns (calibre believed 1.5 cm), in which the men had no training prior to using them operationally, had frequent stoppages involving the use of a hammer and lasting up to fifteen minutes.

Sabotage in the case of the vehicles and faulty ammunition in the case of the weapons were the causes to which prisoners ascribed these difficulties. This may in part be true, and the employment in large numbers by the Germans of foreign workers upon whom the present course of the war must be having its effect would tend to lend credence to it as an explanation. But the significant fact which emerges is that the enemy is being forced by the demands for equipment on all fronts to abandon his normal method of carrying out tests and adjustments over a period of seven weeks before AFV's, etc., are despatched for operational use. This is one more piece of evidence of the short "pipe" between German factory and fighting line, a situation which will undoubtedly be aggravated by any increase in operational activity and by the

-o-o-o-o-o-o-

1. ENEMY SITUATION

The enemy has been steadily pushed back all last week on the Adriatic, and his main line now runs along the FIUMI UNITI just South of RAVENNA, up the MONTONE to within 2,000 yards of Route 9 where it follows the COSINA Canal into the hills to the S.W., joining up with positions given on a captured map from 354178 to M. FORTINO M 3214. MODIGLIANA M 2309 was reported clear yesterday and 305 Div appears to have taken up a line running from CASTELLACCIO M 2912 to M. PRUNETTA M 2212, though rearguards are still forward and the report from civilians that M. del TESORO 1808 is clear is not yet confirmed. The enemy resisted our attack N.W. from FORLI up the corridor between the MONTONE river and the RAVALDINO Canal stubbornly in the first place, and 278 Div lost a good many prisoners, but by the 12th we had advanced to SAN THOME M 4221 and the enemy was pulling back to the MONTONE.

Our attack caught the enemy in process of carrying out a relief, the intention of which was to move 356 Div North of Route 9 into the comparatively quiet sector between 114 and 278 Divs and to replace it South of the main highway by 26 Pz Div and 20 GAF Div. It was, in fact, a direct exchange of sectors, and was clearly designed to bring the better division into the line opposite the main weight of 8 Army attack. 26 Pz Div has had a comparatively easy time recently and although it has not been possible to take it out for a rest and refit, it has absorbed a fair number of reinforcements while still in the line. The units of 20 GAF Div on the other hand are all pretty weak by now - I Bn 40 GAF Regt has only two companies - and they are still under command of 26 Pz Div. Since 20 GAF Div has not controlled its own units in battle for the past two months, it looks as if it may eventually be completely absorbed into 26 Pz Div and cease to function as a separate formation. The interchange of sectors which started on the 9th is by now finished, and 67 P.G.R. yesterday had one Bn acting as rearguard on Route 9, while 9 P.G.R. is on the division's right flank, and two days ago had its regimental H.Q. at M 3218. G.A.F. units are sandwiched in between the Panzer Grenadiers, and are normally placed in the front line while the Panzer Grenadiers are used for counter-attacking. 871 G.R., the last regiment of 356 Div to be relieved, appears to have come in either to reinforce or replace the left wing of 278 Div. The latter div has taken the brunt of our attack and has had fairly heavy casualties.

In the RAVENNA sector another relief has been carried out, 162 Div, having according to prisoners, moved out of the line and disappeared North to some unknown destination. In view of the unreliability of the Turcomen and the fact that the div recently surrendered a fair proportion of its German personnel to 114 Div as replacements, this is hardly surprising. 114 Jaeger Div now extends from the coast inland for about 20,000 - 25,000 yards.

In the Central and Western parts of the Appennine front activity continues to be limited to patrolling and a plentiful flow of desertions from the MONTE ROSA Div. Prisoners from 4 Para Div show that 12 Para Regt has returned to the line, with companies in II Bn averaging 100 men each. This Regt was the hardest hit of the three in the division and fairly substantial parachutist replacements must have arrived. (Prisoners say that 1,000 arrived last month in the BOLOGNA area). Internal reliefs have also taken place in

....65 Inf Div.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

division. There continues to be no contact with either 362 Inf or 90 P.G. Divs and both are definitely considered to be out of the line, presumably refitting in the BOLOGNA area.

So far 76 Pz Corps has conducted the battle on the Adriatic without reinforcements - in fact the departure of 162 Division represents the loss of about a regimental group - and there is no sign at the moment of any formation coming up to help. If it is the enemy's intention to try and stand on one of the river lines, either the present one of the MONTONE or else on the LAMONE, he will probably need reinforcements and in that case 362 Inf and 90 P. Divs would be available. On the other hand evidence at present suggests that the MONTONE is certainly a temporary line - it is apparently called GARHILD ONE which presupposes further delaying positions - and 356 A.A. on the 15th had already selected gun sites S.W. of BAGNA CAVALLO 3938 clearly intended for the next delaying position, apparently to be called HEIDEMARIE. It is reasonable to suppose then that the enemy is pulling back to a shorter line, and that the speed of his withdrawal will be governed as suggested last week by the weather and Allied pressure. In this case the forces at present at his disposal should be sufficient to carry out the withdrawal to a general line from M. GRANDE to VALLI di COMACCHIO, and the enemy will obviously try to avoid committing reserve formations in order to give 90 P.G. Div and 362 Div ample time to rest and refit.

Meantime reports from ground sources suggest that the transfer of part at least of 5 Mtn Div from Western ITALY to the Appennine front is in process. Alpine troops with the divisional sign on their vehicles were observed on the 7th moving East from TURIN towards ASTI, and reports of the same date that large numbers of troops were expected shortly in the PIACENZA area were s[illegible] followed up by a flash that 500 Alpine troops en route for BOLOGNA spent the night of 9/10 Nov in the public gardens of PIACENZA while at the same time large bodies of troops had reached the FIDENZA area (between PIACENZA and PARMA). The transfer of 5 Mtn Div to the main battle front though requiring further confirmation seems a reasonable step. It remains to be seen how long the move will take, for interdictions of railway lines are numerous and frequent transhipments will be necessary, and whether its place on the Franco-Italian frontier will be taken by another formation.

The arrival of the two Italian Republican divisions has been interfered with by the successful dislocation of the BRENNER line and ground sources have reported that many of the troops had to march from BOLZANO to VERONA, while PR has picked up heavy vehicle movement South from the BRENNER. By now the bulk of LITTORIO is believed to have arrived and to have taken over MONTE ROSA's old sector between GENOA and SPEZIA with commitments against Partisans S.W. of PIACENZA. The troops are said to be in good heart at being back in their own country but to have little intention of actually fighting. The ITALIA Div is now believed to be on the way South and some BERSAGLIERI troops of the division were reported across the BRENNER on the 6 Nov. Its ultimate destination is unknown but as it will almost certainly come under GRAZIANI's command it will presumably move into Western ITALY and may even relieve 5 Mtn Div.

From N.E. ITALY there is little news. 71 Inf Division has been reported in the Plain South of UDINE, in the sector originally held by 94 Div. 237 Div is still in ISTRIA and elements of 188 Res Mtn Div are reported at various places with some 4 battalions apparently guarding the TRIESTE-FIUME railway. North of UDINE in the TOLMEZZO area Cossack troops provide the garrison and are engaged with the Partisans: as many as 20,000 of these Cossacks have been reported in this area and also in the Plain itself, and it seems that they are in strength of at least a division. Conspicuous by its absence in all these reports is 44 Inf Division, and its location remains uncertain.

2. ENEMY SUPPLIES AND COMMUNICATIONS

By 12 Nov all the railway bridges over the rivers TAGLIAMENTO, PIAVE and BRENTA were impassable making three complete blocks to be negotiated over a distance of 70 miles on all lines entering ITALY from the N.E. Despite this fact however, activity at TREVISO, PADUA and VICENZA indicates that the railways in this area are still in use. Despite considerable enemy repair activity the BRENNER line remains blocked at several points and there was still no sign of rail movement between TRENTO and VERONA on 12 Nov. That the

...complete blocking..

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

complete blocking of the BRENNER railway has forced the enemy on to the roads is shown by the observation on 12 Nov of considerable MT movement in a Southerly direction North of VERONA, and near S. AMBROGGIO, whilst on night 10/11 Nov 100 lights were seen moving S.W. along the N.W. side of Lake GARDA.

With the BRENNER blocked and cuts on the line between BRESCIA and VERONA there has been complete congestion of the VERONA-BERGAMO line with rolling stock. On 8 Nov approximately 800 wagons, including 300 loaded flats, were seen on the tracks from CALCINATO to BRESCIA, by 11 Nov there was a heavy concentration of loaded flats along the whole line from VERONA to BERGAMO. It was originally thought that the loaded flats might have some connection with the reported move of 5 Mountain Division Eastward from N.W. ITALY. However, in view of the fact that PR shows that no effort was apparently being made to unload it now seems more probable that these flats and other rolling stock are carrying machinery and other loot being evacuated from Northwest ITALY. That such is the case is further indicated by ground reports this week which state (i) that 5 Mtn Division if in fact on the move, is coming Eastward from TURIN via ASTI - ALESSANDRIA - PIACENZA, and (ii) that heavy rail traffic carrying loot has been moving from TURIN and GENOA North across the PO rail bridge near CASALE MONFERRATO (J 6432). South of VERONA the direct line to BOLOGNA has been blocked South of the PO by the destruction of bridges at CAMPOSANTO and S. GIACOMO whilst two impassable bridges at MANTUA deny access to the only alternative route.

South of the river PO although the main line is cut at several places, it is possible by using the network of lines to the North of it to get from BOLOGNA to within a few miles of PIACENZA without the necessity of negotiating blocks, and activity at FIDENZA, CASTELGUELFO, PARMA and COLORNO indicates that this route is in use.

Since the destruction of the PO bridges there have been several reports from ground sources of fuel being carried across the river by pipe line. Two such pipe lines have now been confirmed by photo recce S.E. of OSTIGLIA at F 752108 and MONTELLGOSCURO (M 137920). Both these lines are served by rail spurs at either end and appear active. Ground sources report that the fuel dump at REVERE (just across the river from OSTIGLIA), which was believed to have been destroyed in July, is still operating and this appears to be correct. Photo recce on 6 Nov showed that three underground tanks are still serviceable and the fuelling point appears active.

Since the beginning of Nov there has been a slight increase in shipping activity between GENOA and SPEZIA. Photo Recce shows that 4 KT ships, at least 12 F-boats, a few barges, two or three coasters and sailing vessels are plying between these two ports. On 10 Nov ground sources reported that cargoes from GENOA to SPEZIA consist mainly of fuel, ammunition and rations for the forward troops whilst return cargoes consist of miscellaneous material including radios, sewing-machines and electric utensils looted from SPEZIA. It is thought that more tonnage is being evacuated than is coming South.

3. WESTERN FRONT

This week has seen the final clearing of the enemy positions commanding the entrance to the SCHELDT and the launching of two offensives, by 21 and 12 Army Groups. The former is against the enemy bridgehead West of the MAAS river in Eastern HOLLAND; the latter is developing as a pincer movement encircling the great fortress city of METZ from North and South. In the VOSGES we have been exploiting the salient caused by our surprise capture of BACCARAT in the direction of ST. DIE and have reached the outskirts of the latter town.

The attack in LORRAINE began on 9 Nov with two thrusts North East and South East of METZ. The former early succeeded in establishing a bridgehead over the MOSELLE at KONIGSMACHER and advanced to within two miles of the 1939 German border. Violent German counter-attacks were encountered and progress subsequently was slow but we were able to capture the important town of THIONVILLE (DIEDENHOFEN) where all resistance was reported to have ceased on 14 Nov. South East of METZ DELME fell on the first day of the offensive and

.....CHATEAU SALINS.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

CHATEAU SALINS on 10 Nov. The attack then took a more North Easterly direction, aiming at the railway from SAARBRÜCKEN to METZ and this has now been cut in three places. The important junction of BENESTROFF is closely threatened and a bridgehead has been secured over the river NIED, between there and METZ, which has been subsequently widened and extended. We now hold five of the ring of forts which have been so stoutly defended for so long and it begins to appear as though the enemy were restricting his defences in this area to the immediate vicinity of the city itself. There is no sign of any intentions to evacuate but neither is there any sign of reinforcements for this sector and it is presumed that the enemy is prepared, while resisting as long as possible, to risk losing METZ rather than weaken a more vital sector of the front to reinforce it.

In HOLLAND resistance ceased on WALCHEREN on 9 Nov, and the whole Southern bank of the MAAS and the HOLLANDSCH DIEP is now clear. On 14 Nov an offensive was started in the 21 Army Group sector in the direction of VENLO. Good progress was made on the first day and the village of MEIJEL captured; enemy opposition is reported to be moderate but the going is very bad. At latest reports our advanced troops are about five kilometers from VENLO.

On the enemy side reorganisation continues. A new division, 272 Inf Div, has been identified in the area South of TRIER. This appears to be the harbinger of a new series of low-grade infantry divisions. It is clear that the enemy, reckoning on a development and intensification of the Allied offensive, will very shortly bring up all his available reserves in a determined attempt to defeat that offensive and effect a stabilisation which will last out the winter. It is believed that four reformed Parachute divisions are by now ready for 1 Parachute Army and there are five reformed Panzer Divisions in SEPP DIETRICH's 6 Panzer Army which must be primarily intended for the DUSSELDORF-COLOGNE sector. It scarcely lies in the capabilities of these forces to mount a counter-offensive, especially in view of the enemy oil situation; it is much more likely that 6 Pz Army will be held as a mobile reserve to counter-attack Allied thrusts towards the RUHR and these counter-attacks are likely to be fierce and determined. The Parachute Divisions, which lack mobility, are likely to be sent into the line straight away and should prove a great source of strength to the defensive; it is believed that some are already in line in 1 Parachute Army's sector. The newly-arriving infantry which lacks battle experience is likely to be used for preference in quieter areas, relieving better divisions for use in more critical sectors. As always hitherto the relief of threatened portions of the front will have to be effected by accepting weakness elsewhere; it is the same flexible strategy as has been practised with such skill on the Russian front and for the same reason, lack of reserves.

4. BALKANS

The German withdrawal from MACEDONIA and ALBANIA, although harried by the Bulgars and Partisans, appears to be rapid but orderly. The fall of KUMANOVO C 95, captured by Bulgarian forces on 10 Nov, was followed by the capture of SKOPLJE, key communications centre in the VARDAR Valley. It is thought that Army Group 'E' was able to extricate the main body of its forces before the loss of SKOPLJE. 41 Fortress Div, acting as rearguard, suffered losses and its tired remnants are now screening the tail of Army Group 'E' as it withdraws North on to PRISTINA O 57. A new and perhaps more serious threat to this withdrawal, the capture by Russo-Bulgarian forces of PODUJEVA, J 60, was stemmed by elements of 104 Jg Div who are guarding the left flank between MITROVICA O 39 and PRISTINA. The main withdrawal route, MITROVICA - NOVI PAZAR - SJENICA - VISEGRAD is firmly in enemy hands though the DRIN bridge at VISEGRAD is destroyed. An alternative route, SJENICA - PRIJEPOLJE - PLJEVLJA and thence North West to GORAZDE B 90 may be attempted. To the South West the Albanian Partisans now hold ELBASAN G 52 and are fighting in the capital TIRANA. Streams of enemy traffic were reported moving West from ELBASAN to PEQIN G 21 on 12 Nov and it appears that 21 Mtn Corps is using the roads DURAZZO - ALESSIO - SCUTARI to extricate its forces from ALBANIA. PODGORICA N 06 seems to be the forming-up place for these forces and reports on 15 Nov state that heavy traffic including infantry

....and artillery....

THIS PAGE IS UNCLASSIFIED

0614

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

and artillery was moving North via DANILOV GRAD M 87. The Western route from PODGORICA, via CETINJE - KOTAR - RISAN was cleared by the enemy early this week but the Partisans claim to have recaptured CETINJE on the 14th.

Some progress, was made by the Russians against bitter opposition in the battle for BUDAPEST. The enemy has moved considerable Panzer and Infantry forces to the South and South East of the city where fierce battles are taking place. The Russians claim however to be fighting in the suburbs, with their armour making thrusts into the city proper. Gains were made throughout the week to the East of BUDAPEST where the Russians now hold MONOR H 80, TAPIOSAP H 81, KOKA H 91, JASZ-BEREWY J 11 and along the river TARNA to near KAL J 44. MEZO KOVESD J 74 was captured early in the week. The Russian claims to have forced the DANUBE at DUNAFOLDVAR N 34 and APATIN S 22 are as yet unconfirmed but almost the whole territory East of the DANUBE South of BUDAPEST has been cleared of enemy.

H.Q. Army Group 'F' is now at ZAGREB and H.Q. 2 Pz Army is stated to be at NOVA GRADISKA F 63. It appears that Army Group 'E' is responsible for the area through which runs the withdrawal route and probably Northwards as far as the SAVA and BROD. Assault Div RHODES, not heard of since it left the AEGEAN, is reported to have suffered casualties South East of BUDAPEST. 750 Jg Regt of 118 Div has been reported in the VUKOVAR area, its sister Regt 738 has probably been left behind to reinforce 369 Croatian Div in the MOSTAR sector. Other units in the VUKOVAR area are reported to include 2 Brandenburg Regt, elements of 13 SS Div and some Police and Sicherungs Bns.

H.Q., A.A.I. INTELLIGENCE SUMMARY NO. 70

OF 22 NOV 44

(a) This Summary will NOT be distributed below HQs of Army Corps. Sidelined information will not be reproduced in any Intelligence Summary of formations under this H.Q. without special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-o-

1. ENEMY SITUATION

There has been but little change in enemy forward dispositions this week and that all at the extreme Eastern end of his line. He is still determined to hold his positions in this sector until they are seriously endangered and to make us mount a large-scale offensive for each river obstacle; but he is fully prepared to withdraw at least back to a position covering BOLOGNA on the right and resting the left on the VALLI DI COMACCHIO. In the meantime there is evidence, though of uncertain value, of important moves in his rear areas.

At the beginning of the week 76 Corps was back on its MONTONE line except in the coastal sector where we have pushed forward gradually in no great strength against equally weak German outposts to the river RONCO and the FIUMI UNITI. 721 Jaeger Regt and 114 Recce Unit are holding this flank among the marshes. 992 A.R. pulled back in the area of the railway and resisted strongly and successfully our attempts to secure a bridgehead in this area on the morning of 21 Nov. 67 P.G.R., now responsible for the axis of Route 9, also defended its sector with great stubbornness and prevented any progress across the canalised river BOLZANINO. Further South, however, in the sector of 9 P.G.R. and 39 G.A.F. we were able to make better progress in an area where the enemy has not the same advantage of water obstacles, capturing CASTIGLIONE, M 3416, and the stubbornly defended Monte FORTINO, M 3214, and advancing some two kilometres further North at both points. It seems likely that in this area the enemy will next try to hold a line shown on a captured map (called GERHILD, probably a switch-line from the original GERHILD) which follows the upper reaches of the river COSINA to MONTE RICCI M 3218, and then presumably bases itself on the river MARZENO. Monte RICCI is particularly important as it affords dominating observation over the low ground below the present enemy line and over FAENZA and any further advance in this sector must make the MONTONE line, at least in the neighbourhood of route 9, untenable for the enemy.

On the whole of the rest of the front there have been only minor operations. Prisoners from 98 Division confirm that 42 Jaeger Div has relieved 362 Div and that is borne out by PW from III Bn 40 Jaeger Regt, captured at L 9632. In general in the Central part of the front most divisions have a regiment out and resting; 4 Para Div may have two of its three regts out of the line and a report from a usually reliable source states that 2,500 troops from the division are training at AVESA, F 6457, just North of VERONA. These men are presumably replacements and we know that both the Parachute divisions in ITALY have always insisted on a long and thorough period of training for their recruits even at the risk of allowing strengths of units in action to fall very low. The fact that fairly copious replacements have been made available is shown by the increased strength in which 12 Para Regt returned to the line, and we must expect 1 Para Div also to have been made up on much the same scale.

There has been considerably more daylight movement seen by the air in rear of the Eastern part of the front than has been usual for some time. Part of this may be explained by the move away of 162 Div, but not the movement reported between 18 and 22 Nov in the area BOLOGNA - MEDICINA - LUGO - FAENZA, which has been so frequent as to suggest the arrival of new troops in

....this area....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

this area. It may possibly be connected with a report from Partisan sources that new troops have arrived along the river SENIO in the area of LUGO and ALFONSINE where they are erecting defences on the river bank. These troops are reported to bear a sign which might be that of Mountain troops. There has been no further news since that reported last week of the move of 5 Mtn Div or any confirmation that such a move is taking place and it is too early to say what credence is to be given to the Partisan report. However the hypothesis that 5 Mtn Div may be coming to reinforce 76 Corps is to be borne in mind. If there is no further news of departures from N.W. ITALY there are reports of arrivals. Between 13 and 16 November troop trains were seen moving South through TURIN carrying troops of the LITTORIO Division. They were said to be bound for the CUNEO area though this information is naturally less reliable. It may be, therefore, that LITTORIO is destined for the Franco-Italian frontier, to relieve 5 Mtn Div, rather than for the GENOA area. In the meantime a report, confused and unconfirmed, from N.E. ITALY may throw some light on the move of 44 Division. It has been noteworthy that, although all other formations known to be in N.E. ITALY are frequently reported on, there has been no hint of the whereabouts of 44 Div since a prisoner on 29 Oct said it had left for TRIESTE. The latest report, the date of which is not known, does not specifically mention 44 Div but says that "a VIENNA division which fought at STALINGRAD" was moving through N.E. ITALY to AUSTRIA and HUNGARY. This description will fit 44 Div, and no other in ITALY, and it has always been considered likely that the time would come when reinforcements from ITALY would be required for the South-Eastern front. This may be the first contribution, and it is unlikely to be the last.

2. ENEMY SUPPLIES AND COMMUNICATIONS

GENERAL

The BRENNER railway was initially blocked on 5 Nov and while the degree of interdiction has varied, PR shows that the line remained out until at least the 18th. A generally similar situation has obtained on all routes leading into N.E. ITALY. While there are rail routes into ITALY through SWITZERLAND these are not believed to be used for military supplies. Thus for a period of two weeks enemy-occupied ITALY was completely isolated for purposes of getting supplies into the country by rail without trans-loading. Resupply could only be effected by a combination of railway and road movement. However, the MT lift to achieve this will have been considerable, at times as high as 100 kilometres and very probably averaging not less than 50 kilometres. The difficulties inherent in such a situation must have been further accentuated by the fact that as of 5 Nov (as indicated above the date of the initial blocking of the BRENNER railway) an Italian division was passing over the BRENNER on its way from GERMANY to ITALY. As to how successfully the enemy has been able to meet the situation we have as yet no direct evidence. It is clear, however, that he has been hit at what from the logistical point of view, and potentially from the tactical point of view, are his two weakest points, namely shortage of fuel and motor transport. Under the circumstances it is most probable that stocks in ITALY have dropped and there is at least indirect evidence that enemy stocks of fuel, and possibly of artillery ammunition, have been seriously depleted.

SUPPLY

It has long been evident that here in ITALY the enemy's supply position varies more or less directly with the degree of interdiction of the railways. In order appreciably to affect the enemy's supply position rail interdiction must be maintained at close to 100 percent since the enemy's daily requirements in terms of number of trains is very small in relation to the potential rail capacity available. (An average of about 10 trains a day is probably now sufficient to maintain enemy forces in ITALY). Also the zone of interdiction must have depth in order to force a long MT lift. Up to 18 Nov these conditions, i.e. nearly 100 percent interdiction through a deep zone, have been substantially met as the result of air bombing.

.....However, for.....

THIS PAGE IS UNCLASSIFIED

0617

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

notwithstanding great difficulties on his L of C the enemy's consumption rate must at the same time be forced up by heavy fighting or other means. Fortunately for the enemy such heavy fighting as has recently occurred has been confined to a relatively small portion of the front and at no one time has a major portion of his formations been heavily engaged. While this has to some extent been compensated for by recent successful attacks on dumps, it does not appear that the enemy's supply position as of 18 Nov was so precarious as to impose upon him an immediate change of strategic policy. Tactical decisions may, of course, have been affected.

RAILWAYS

Since 18 Nov unfortunately it appears likely that the enemy has to some extent been able to open up his L of C. A high degree of rail interdiction has been maintained in the N.E. but repair activity on the BRENNER has been intense, and since the 18th the line probably has been open for about 48 hours to through traffic. Even before the 18th traffic may have been possible as far South as a point about 15 miles North of VERONA. In addition, both to the South and West the enemy has succeeded in improving rail communications. Three rail bridges over the PO namely those at CASALE MONFERRATO, and TORRE BERRETTI in the ALESSANDRIA area, and at PONTELAGOSCURO just North of FERRARA are now passable. In addition several of the bridges across the TICINO river on lines between TURIN and MILAN are open.

A considerable amount of rail activity has been evident during the past week. On the BRENNER between 12 and 16 Nov, while through traffic was not possible, repairs had evidently progressed far enough to permit a considerable turnover at various points between VIPITENO (North of BOLZANO) and SAN AMBROGIO (just North of VERONA) and a general clearance of previously congested lines had taken place. Between 16 and 18 Nov turnover on the BRENNER had fallen off, but trains were seen headed South at several points as far South as PERI about 15 miles North of VERONA. The presence of a large number of empty flats at TRENTO and ORA has been a further indication of troops passing along the BRENNER; whether these flats had just arrived or were being cleared from other points along the line where they had been previously trapped as a result of cuts in the railway is not known, though the latter seems more probable. On 18 Nov a rather large concentration of rolling stock was seen near SAN AMBROGIO undoubtedly held up by the then existing cut but by this time probably cleared as repairs were then noticed to be in progress at this point; this cut may however have been at least temporarily reestablished by fighter bomber attack.

There has been comparatively little photo cover of the complicated network of lines leading up to the N.E. frontier but activity at UDINE, MONSELICE, TREVISO, MESTRE, PADUA and VICENZA, where change of yard contents and train arrivals and departures have been noted during the past week, indicate that these lines are active. Activity in this area is further indicated by the repair of the bridge over the PIAVE at NERVESSA and also the bridge immediately North of PADUA. However, the PADUA North bridge having again been destroyed, NERVESSA bridge is the only bridge open of all those between UDINE and PADUA across the BRENTA, PIAVE, LIVENZA and TAGLIAMENTO rivers.

West of VERONA the line to MILAN by way of BERGAMO was still heavily congested this week. Immediately West of VERONA there has been some turnover which suggests movement from VERONA as far as PESCHIERA and then South. West of PESCHIERA there has been a considerable turnover at BRESCIA, but with a bridge impassable between BRESCIA and PESCHIERA and apparently no turnover on the track East of BRESCIA, where there has been heavy congestion for some time, it seems improbable that the turnover at BRESCIA reflects a move Eastward. It is more probable that the Italian division which crossed the BRENNER recently is entraining again somewhere in this area and being moved through MILAN (where there has been considerable activity in the yards recently) to the TURIN area; this is further borne out by military-train activity at CHIVASSO where it appears that troops are

...detraining to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

detraining to get around the broken bridge immediately West of the town and by ground reports stating that Italian troops are moving through TURIN to the CUNEO area.

South of VERONA, activity on the direct line through OSTIGLIA (where the bridge over the Po is still down) to BOLOGNA seems to have been somewhat below normal this week. This is probably the result of the repair of the bridge over the PO at PONTELLAGOSCURO between the 11th and 16th; with this bridge repaired traffic Southwards from the VERONA area is undoubtedly moving via LEGNAGO, ROVIGO, and POLESELLA directly across the PO into the FERRARA area. While the line running N.W. from BOLOGNA to PIACENZA has been blocked at several points, alternative routes are available by way of secondary lines between the main railway and the PO. Considerable activity has been noted in this area including a number of possible troop-trains. West of PIACENZA, on the line running to TURIN via ALESSANDRIA, movement of troops appears to be in progress but from PR the direction remains uncertain. It may possibly involve Italian troops moving Westwards from the PIACENZA area to the TURIN area or perhaps 5 Mtn Division moving Eastwards to the Appennine front. Both movements may be in progress.

On the PO river there appeared to be no major developments this week other than the repair of the rail bridge at PONTELLAGOSCURO noted above. One point of interest however is that PR has confirmed that there are now at least four fuel pipe-lines across the river. These are located at PONTELLAGOSCURO, OSTIGLIA, BORGOFORTE and PIACENZA. At these points spur railway lines have been built and it appears that fuel is piped directly from rail tanker cars on the North bank to cars on the South bank.

SHIPPING

Shipping between GENOA and SPEZIA is continuing, and possibly there is some increase this week, presumably in an effort to step-up the evacuation of various industrial materials from SPEZIA. That at least some supplies are coming South by sea is most probable as indicated by the fact that a ship in a Southbound convoy between GENOA and SPEZIA blew up when attacked by Allied Naval Forces on the night of the 18th. Traffic in schooners and other small coastal craft continues from GENOA Westwards to SAVONA.

In the Adriatic between 16 and 19 November demolitions were in progress at PORTO CORSINI and it is probable that by now port facilities here and in the canal running to RAVENNA have been abandoned. Two small vessels were seen at PORTO CORSINI on 19 November but these are likely to have been for purposes of final evacuation or to assist in demolitions and mining. A fairly lively traffic in M/Vs, and occasional KT ship and a host of smaller craft continues between all the Northern ports from PORTO MARGHERA and VENICE to TRIESTE and POLA.

3. WESTERN FRONT

All along the front from VENLO to the Swiss frontier the enemy has been forced back during the past week. In the Southern sector of the front striking progress made been made by French and American forces. In the Centre METZ has been freed, and the MOSELLE crossed in strength, while at AACHEN and to the North British and American forces have made slow but steady progress over terrain vital to the enemy against stubborn German resistance.

In the South 19 Army, with a collection of formations presenting an array more formidable on paper than on the ground, was unable to resist for long before the BELFORT Gap and by 19 November its left wing had completely collapsed enabling French forces by a double thrust to occupy BELFORT and push along the Swiss frontier to the RHINE on a ten mile stretch North of BASLE. The enemy is now trying to prevent fresh exploitation down the RHINE Valley towards STRASBOURG and appears to be making a stand on the RHONE-RHINE Canal in the Southern outskirts of MULHOUSE. However, a threat to STRASBOURG is also developing further North where 19 Army, after conducting a long and stubborn withdrawal along the LUNEVILLE - SARREBOURG railway suddenly broke under the pressure of American armour and fell back 15 miles in one day to behind SARREBOURG.

...Reports so far....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Reports so far to hand speak of considerable enemy disorganisation in this area and American forces are now within 20 miles of STRASBOURG.

While Army Group G's Southern flank has had a disastrous week, the German withdrawal further North has been more orderly. Reinforced by 25 P.G. Div, a new arrival, and 21 Pz Div from the BACCARAT sector, the enemy forces in the METZ area were able to offer stubborn resistance before the fortress eventually fell and even now isolated forts are still holding out on the perimeter of the city. With the loss of the fortress German resistance has been less fierce and Allied forces have pushed across the German frontier North East of METZ.

From TRIER up to the AACHEN sector the front has been fairly quiet and main interest has centred on the arrival of a number of newly formed infantry divisions. Three Volksgrenadier divisions have put in their appearance, one South and two North of TRIER. It is clear, as suggested in last week's Summary, that the enemy is following a policy of putting in his new untried formations in quiet sectors while battle experienced formations are released for employment in other sectors. It is of particular interest that 212 Volksgrenadier Division which has been identified just North of TRIER was set up in POLAND some six weeks ago and has only just arrived in FRANCE. PW from this formation say that they were accompanied to the West by yet another Volksgrenadier division, this time from CZECHOSLOVAKIA. The fact that the enemy considers it necessary to bring formations all across EUROPE from the East at the present time is a clear indication of the priority which the Western front enjoys in his eyes.

In the AACHEN sector the fiercest fighting of the week has taken place. In the face of savage enemy resistance and across very extensive minefields, our advance has been slow. This is the vital sector of the front for the enemy and he must cling to every yard of German soil in order to keep the Allies from the RHINE. Nevertheless progress has been made in the past week. We are only six miles from DÜREN, ESCHWEILER has been entered, and GEILENKIRCHEN is entirely in our hands. An assortment of infantry divisions backed up by armour in the form of 9 and 116 Pz and 3 and 15 P.G. Divisions form the enemy's force in this sector. There have been indications however that some of the five missing Panzer divisions setting up under 6 Pz Army are getting ready to participate in the battle. Prisoners have reported the presence of four of them in the area immediately East and S.E. of AACHEN, and although none has been committed yet, it looks as though RUNDSTEDT is now ready to commit them as soon as he feels that his present forces at AACHEN can no longer take the strain.

In HOLLAND the British advance on the MAAS has made good headway against moderate to stiff opposition. The enemy seems to be reconciled to abandoning the West bank of the river and no new formations have been identified. The whole of 7 Parachute Division appears to be West of VENLO but that is all the Parachute representation in the area. 3, 5 and 6 Para Divs are still out of the line.

The winter offensive is now in full swing and the enemy is faced with a situation in which he is most vulnerable - a simultaneous attack on several widely separated sectors of the front. Already events in the South have shown that he is unable to meet his commitments in one sector without having to give ground elsewhere. Nevertheless RUNDSTEDT's is an old and cool hand, and has so far played with the measured caution of a chess player rather than the abandoned recklessness of a gambler. He may have been taken by surprise by the French thrust in the South, but his eyes are still firmly fixed on the AACHEN area where he knows full well what is at stake. The temptation to transfer his armoured reserve to the less crucial sectors further South has been resisted. The armour is still in the North and when it is committed, will probably be committed as a whole. NORMANDY taught a bitter lesson about piecemeal commitment of armour. The COLOGNE plain may show that it has been learnt.

Some points from a SHAEF Intelligence Summary on shortages in

....equipment of.....

THIS PAGE IS UNCLASSIFIED

0620

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

equipment of German formations in the West are of interest. In spite of the continued evidence of the acute shortage of fuel for vehicles of the armed forces, and, in spite of repeated accounts of immobilised vehicles and low unit motor transport strengths as a result of this shortage, the greater part of information received in recent weeks points in another direction, namely to a shortage of equipment, especially small arms, automatic weapons and motor transport.

Information from a senior officer prisoner of war to the effect that the usual tank strength for Panzer divisions is now between 20 and 50 tanks is a fair indication of the production problems encountered by the Germans under the strain of strategic bombing and heavy operational loss. That this applies to other production as well, is shown by the report of one unfortunate from a Landesschutzen battalion who stated that there were 3 Czech MGs in the whole unit. Other reports indicate that stores of arms confiscated at the time of occupation of CZECHOSLOVAKIA are now being issued to infantry units in default of German models. This practice particularly applies to non-German troops who receive outmoded weapons of Czech, French and Russian origin. Of course it may be that, as one prisoner of war glibly states, care had to be taken NOT to produce up-to-date German equipment, otherwise the Bulgarians would have promptly asked for it. The capture of a secret enemy manual mentions the first use in ground fighting by units of armoured Panzer Grenadier battalions of a heavy machine gun (Drilling MG 151/15 and 151/20) formerly used only as aircraft armament.

Most revealing is one prisoner of war report which gives in detail the composition of an infantry division supply column. In a total of 15 lorries, two thirds of which were confiscated from civilian sources, 5 different manufacturers were represented. Moreover the 15 lorries were of 5 classes ranging from 1½ tons to a lone Renault 3½ ton vehicle. The maintenance problem for this motley caravan is revealed by information obtained from an NCO formerly employed in the motor transport repair depot at LEIGNITZ, SILESIA. He stated that of 6 truck and tractor types commonly used by the Wehrmacht, spare parts for two are virtually unobtainable, parts for two others very scarce, and only for the remaining two is a fairly adequate supply available. These shortages he attributed directly to the bombing of industry and stated further that all German divisions have now but an average of one-third of their authorised motor transport strength. Using as an example the 3-ton Bergward truck, prisoner of war remarked that since the bombing of the HANSA-LLOYD plant in BREMEN there have been almost no replacement parts for this model and that when the gears are damaged, the vehicle has to be abandoned.

4. BALKAN FRONT

Russian progress during the past week has been confined to the sector N.E. of BUDAPEST where Army Group South Ukraine supported by Hungarian forces has been pushed back to the general line of the BUDAPEST-MISKOLCZ railway. The Russians have cut this railway at several points between BUDAPEST and HATVAN, and control it completely from exclusive HATVAN to exclusive MISKOLCZ. Both the latter towns are now closely threatened by Soviet forces.

South of BUDAPEST the front line has shown little change. Russian troops still hold their bridgehead at APATIN but are not across the river in sufficient strength to constitute a serious penetration of the DANUBE line. There is certainly no sign of any early German retirement to a defensive line further West; indeed, until Army Group E's withdrawal from Southern YUGOSLAVIA is considerably more advanced than at present, the enemy has every reason to hold on to his DANUBE positions.

In Northern YUGOSLAVIA some reorganisation of the chain of command seems to be in progress. 2 Pz Army still controls the formations fighting the Russians probably as far South as KRALJEVO. Under its command is thought to be a Corps KUEBLER identified in the VINKOVCI-BRCKO area and also 68 Corps from GREECE, most of whose former formations are now in the area West of BELGRADE. The allocation of divisions to these formations is not known. 118, 1 Mtn, elements of 117 Jg and possibly of 264 Inf divisions are all in the area.

....Elements of.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Elements of 13 SS Handschar division may still be about but a weight of evidence indicates that part of this formation has been dismissed as untrustworthy while the remainder has moved to the ZAGREB area. Somewhere West of BELGRADE also are the remains of 92 Mot Bde which, after being almost completely wiped out in the BELGRADE battle, is reported to be awaiting reinforcements in the VUKOVAR area. How much of 264 Inf Division is involved in the SLOVENJ area is not quite clear. Reports have indicated that the elements which left the Dalmatian coast were bound for BELGRADE but the Div H.Q. and at least a regimental group are still believed to be on the coastal sector, and it is unlikely that more than one regiment of the division is in SLOVENIA.

In Southern YUGOSLAVIA, the German withdrawal is meeting with varying success. From MACEDONIA Army Group E is succeeding in withdrawing its forces relatively rapidly. PRISTINA, 50 miles N.W. of SKOPLJE, is clear and enemy rearguards are falling back to the road junction of MITROVICA. The main, and indeed the only escape, route at present being used by these forces is that via NOVI PAZAR - VISEGRAD. 91 Corps at NOVI PAZAR probably controlling 22 P.G., 41 Fortress and elements of 133 Fortress Divs is retiring along this road leaving 22 Mtn Corps to conduct the rearguard, with probably 104 Jg and miscellaneous elements of other divisions including 11 G.A.F. under command. A bridging column has arrived at VISEGRAD to repair the bridge destroyed by Partisans earlier this month, and all the evidence suggests that the enemy intends at present to use the NOVI PAZAR - VISEGRAD road in preference to the alternative route via ANDRIJEVICA - ROGATICA. It is significant that no attempt has so far been made to clear the Partisans from the road centre of PLJEVLJA on the latter route.

In MONTENEGRO the enemy withdrawal as might have been expected is proving a much more hazardous affair. Here 21 Mtn Corps with 181 Inf Div and the bulk of 297 Inf Div under command has been attempting to open up the route from PODGORICA to NIKSIC where it would have the choice of taking either the NIKSIC - VISEGRAD, or the NIKSIC - MOSTAR road. Considerable troop concentrations have been reported at PODGORICA, and the enemy has succeeded in advancing as far as DANILOVGRAD. Here he has stuck. Partisans reinforced with Allied units have offered stubborn opposition to all attempts at pushing through to NIKSIC and 21 Corps' position is becoming serious. The only alternative route it can use is the ANDRIJEVICA - PLEVLJA road which is also blocked by Partisans. A determined attempt to open up the NIKSIC road is therefore to be expected when the withdrawal from ALBANIA is more advanced. Demolitions between TIRANA and SCUTARI are at present holding up this withdrawal.

On the Dalmatian coast the town of RISAN on KOTOR Bay has been taken by the Partisans who are also operating on the TIVAT peninsula The enemy situation in the KOTOR area is becoming difficult in the extreme and the Partisans speak of a general German withdrawal. In ALBANIA the German forces despite road demolitions have now reached ALESSIO, and the whole of ALBANIA should be clear of the enemy very shortly. The Germans will then have the task of getting Army Group E out of the long salient in YUGOSLAVIA back in a staged withdrawal to the defensive positions now being built in N.W. YUGOSLAVIA.

H.Q., A.A.I. INTELLIGENCE SUMMARY NO 71

OF 28 NOV, 1944

(a) This Summary will NOT be distributed below H.Q s of Army Corps. Sidelined information will not be reproduced in any Intelligence Summary of formations under this H.Q. without special permission.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-

1. ENEMY SITUATION

On 22 Nov we attacked again on the axis of Route 9 and succeeded in getting over the river COSINA to the South of the road. Very heavy fighting ensued with 26 Pz division but by the afternoon of 23 Nov the enemy had had enough. The German communique for 24 Nov described the action as follows : "The Eighth Army, with the concentrated mass of its forces and with the strongest employment of material threw itself against one single German division. In exemplary steadfastness the 26th Pz Division, under command Colonel CRASEMANN defended the cohesion of the front". (Incidentally, Colonel CRASEMANN commanded 8 Tank Regt in Nov 41, during Eighth Army's first offensive). In fact the evening before this announcement the division, which had lost 400 prisoners, made a rapid withdrawal across the LAMONE, leaving no rearguards behind apart from a few men in the houses of BORGO DURBECCO. The situation was in fact regarded as sufficiently serious to call for the employment of 577 G.R. which has been out of contact in reserve for some two months; it came in to the South of Route 9, on the left flank of its parent division and had some casualties apparently due to lack of contact with 26 Pz div to its North. 278 Div also withdrew to conform. 992 G.R. has suffered fairly heavily and on 23 Nov I Bn could only muster 102 all ranks including its medical personnel and Italian cart drivers. However, the divisions' left hand regiment, 993 G.R., still stayed forward between the rivers and a prisoner from I Bn taken in the area M 392265 on 27 Nov stated his orders were to withdraw only if pressed. Similarly, 871 G.R., the next adjoining regiment, stubbornly defended ALBERETO, M 3927, and a general line along 28 Northing and prisoners on 27 Nov said they had no orders about a withdrawal. 114 Jg Div also appears to be still in its old positions behind the FIUMI UNITI although the Partisans in this area have consistently reported a thinning out here and say the main body of the division is back behind the LAMONE. It certainly appears, that although the enemy line has now been extended by the withdrawal to FAENZA he is not yet prepared to give up any ground to the North. Such a withdrawal would involve abandoning RAVENNA and PORTO CORSINI and although the enemy has probably already carried out all the demolitions he wants, he still will not give them up without some sort of a struggle. South of FAENZA, on the other hand, he has withdrawn wholly behind the LAMONE though there may be still some enemy forward of the river in the mountainous Southern sector of 305 Div.

On the remainder of the front there have been minor changes in enemy dispositions only. A second regiment of 148 Div, 286 G.R., has turned up and is apparently in the SERCHIO Valley. 4 Alpine Bn, which has not been encountered for many months, announced its arrival by a deserter and its H.Q., from a civilian report, is at ABETONE, L 3311. It is possible, though a little difficult, to suppose that this Bn is alone responsible for the many reports of the arrival of Mountain troops in this sector, which have run to as high as six battalions, but they would be well within the normal Italian range of exaggeration if we could assume that 3 Alpine Bn had also arrived, possibly in a different sector. The supposition would not be unreasonable, as the two Bns have previously normally operated together.

.....There has been.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

There has been a steady flow of deserters on this front, reaching the record figure of 108 on 24 Nov, and a few statistics may be of interest. The figures available cover the period 8 - 22 Nov, and show that on 8 Army front there were 851 prisoners taken of whom 80 deserted and on 5 Army front 455 of whom 409 deserted. The difference is striking - 10% deserters in one case and 90% in the other - and requires a little explanation. The figures for 5 Army are heavily weighted by 136 Russians and 153 Italians, all deserters, who make up about two-thirds of the whole; however, of a total of 83 Germans, 46 or 56% and of 22 Austrians 17 or 77% were deserters. The main explanation must lie in the difference between a static and an active front. On 8 Army front opportunities for actually crossing the lines were much fewer than on the more thinly held and mountainous Western sector of 5 Army front; on the other hand on an active front with the Allies advancing many a would-be deserter can take the easier option of remaining behind when his comrades withdraw. In the latter case he is usually classed as an ordinary prisoner and not a deserter, an additional advantage for him but confusing for our statistics. It is dangerous therefore to build theories on enemy morale on these figures but the high proportion of pure German deserters on 5 Army front is certainly encouraging.

We have further news this week of changes in Northern ITALY. 162 division, whose withdrawal from the line in the RAVENNA sector was reported on 15 Nov, has been definitely identified at PIACENZA. It is apparently to take part in an anti-partisan drive in the mountains to the S.W. which is about all it is fit for. It was originally employed on this task in N.E. ITALY before the June crisis made it necessary to put it into the line, an experiment which has not been successful. In N.W. ITALY a usually reliable source states that 157 Mtn Division is being withdrawn from the Alps and the troops say they are going to the BOLOGNA front. Their destination may not necessarily be correct - it would be a natural assumption for the average man to make - but the move of the division seems to be confirmed. It makes much more unlikely the move away of 5 Mtn Div as this would leave the defence of the Franco-Italian frontier to only 34 Div and LITTORIO; in any case units apparently of 5 Mtn Div were reported moving up towards the frontier on 15 Nov in the VAL DI SUSA. It seems more likely that 5 Mtn and LITTORIO together will take over the Central and Northern part of the frontier, probably intermingled so as to avoid entrusting one large sector to LITTORIO. The various past reports which have suggested a move of 5 Mtn Div may have been based on a mistaken identity of 157 Mtn Div or of 3 and 4 Alpine Bns. In North-Eastern ITALY two further reports from good sources mention the departure of 44 Div, one by its number and the other by the name of the Divisional Commander, Gen von ROST. In both cases its destination is given as HUNGARY.

2. ENEMY SUPPLIES AND COMMUNICATIONS

Lack of photo recce this week makes an accurate assessment of the state of the railways difficult. However, air attacks against railways have been severely limited owing to poor flying weather and it must be presumed that a number of repairs have been effected. Under these circumstances it seems probable that the enemy's supply position, which was believed rather critical up to the end of last week, has been improved. On the other hand ground reports do indicate that the all-import BRENNER railway had not been opened up to through traffic as late as 25 Nov. In fact one report states that the enemy has abandoned repair of the bridge at ORA (over 100 kilometres North of VERONA) in favour of concentrating on the by-pass between ORA and S. MICHELE 20 kilometres to the South, which has been under construction for some time. Ground sources also report that owing to our air attacks on the BRENNER railway electric power facilities, only steam locomotives now operate between TRENTO and VERONA, and further that at the moment there is a shortage of steam locomotives. In view of these reports it seems that the BRENNER railway, if now open to through traffic, was not put in working order as quickly as was anticipated on the basis of photo recce alone. Hence, since it is definitely known that all through lines in N.E. ITALY were blocked up to at least 22 Nov, it may well be that the enemy is still suffering some shortages, particularly of fuel.

.....South and West...

THIS PAGE IS UNCLASSIFIED

0624

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

South and West of VERONA the state of the railways is probably reasonably satisfactory. As of 22 Nov there were two cuts in the line between VERONA and MILAN, one a bridge at which repairs were then in progress, and the other a large crater resulting from the probable explosion of an ammunition train. It is most likely that by now through rail traffic is possible from VERONA to within about 20 miles of TURIN. In fact while CHIVASSO bridge (about 15 miles North East of TURIN on the main MILAN-TURIN line) probably remains blocked, the VILLAFRANCA D'ASTI bridge (about 20 miles due East of TURIN) was under repair on 22 Nov; if the VILLAFRANCA D'ASTI bridge is now open, which seems probable, then TURIN can be reached from MILAN by proceeding South across the PO by the CASALE MONFERRATO or TORREBERRETTI rail bridges to ALESSANDRIA and then Westward to TURIN. The opening of this rail route is not of great significance from the point of view of military supply as demands in N.W. ITALY are not great, but it is of considerable interest in view of the troop movements now believed to be in progress and incidentally it eases the problems of evacuating Italian industrial facilities and production to GERMANY.

South of VERONA all PO bridges are thought to remain cut with the possible exception of the one just North of FERRARA at PONTELAGOSCURO which was open on the 22nd but attacked the same day with good results claimed. If PONTELAGOSCURO is open, it is not unlikely that through rail traffic is possible from VERONA South across the PO to the BOLOGNA area.

Owing to lack of photo recce no statement on rail activity is possible.

3. WESTERN FRONT

The rapid drive of French forces on to the RHINE North of BASLE last week did not go unchallenged. Although MULHOUSE and BELFORT soon fell to the French, 19 Army rallied sufficiently to launch a limited counter-attack with the object of cutting through to the Swiss frontier South of BELFORT. The spirit was there but the flesh was weak and the armour non-existent. Doubtless Gen WIESE of 19 Army had hoped to do at BELFORT what ROMMEL failed to do at AVRANCHES, but all he achieved was a certain limited infiltration into our positions which has now been mopped up. Nevertheless the tactics were sound, for 19 Army's situation in the VOSGES is serious and would be desperate if the Allies succeeded in driving Northwards towards COLMAR combined with a Southward push from STRASBOURG. Thus enemy resistance to our drive on the RHINE has been stiff all along the high ground of the VOSGES North of BELFORT. Nevertheless despite difficult terrain we have made advances of 10-15 miles all along this front throughout the past week.

At the Northern end of the great German bridgehead over the RHINE, General LECLERC's division ended another phase of its long trek from CHAD by the capture of STRASBOURG. Here the French have now completed mopping up. The situation with regard to the RHINE bridges is not altogether clear. Early reports suggested that the French had found one of the RHINE bridges intact and succeeded in passing armour across to KEHL on the German side of the RHINE, where some civilian sniping was encountered. South of the city, between STRASBOURG and BASLE, the enemy had at least seven pontoon bridges ready for installation on 19 November and may by now have more ready to deal with a possible hurried withdrawal of 19 Army across the RHINE.

N.W. of STRASBOURG 1 Army has been giving ground fairly rapidly before SAARBRÜCKEN. An interesting identification in this sector has been the Pz Lehr Division of 6 Pz Army. So far there has been only one identification of this formation, but its appearance away from the bulk of 6 Pz Army is less surprising than would have been that of one of 6 Pz Army's other four armoured divisions. Whereas prisoners had reported the presence of the four other formations of 6 Pz Army in the AACHEN sector, there had been no mention of Pz Lehr division, which was obviously making its way down to 1 Army's sector. Between STRASBOURG and SIERCK the enemy has what appears to be on paper a fairly strong armoured force. In addition to the Pz Lehr division, 11 Pz, 21 Pz, 17 S.S. P.G. and 25 P.G. Divisions are all represented. What they amount to on the ground is a

.....different matter....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

different matter. Their inability to stop the Allies crossing the German frontier on a 20 mile front West of SAARBRUCKEN can hardly be encouraging to the enemy. Nevertheless their presence in this sector is an indication that it enjoys a priority second only to that of the AACHEN area.

East of AACHEN German resistance has shown no sign of slackening in the course of the past week. Impeded by thick minefields and difficult going Allied progress has been slow. Some advances have been made in the HURTGEN Forest, but the most important advance of the week has been along the ESCHWEILER - DÜREN road where WEISWEILER and EREMZ to the North-East have been captured, an advance of about 5 miles in all. Progress has also been made in the direction of JULICH, and we hold the high ground about a mile West of the town. Although nothing in the way of an Allied breakthrough has been achieved in this area, there are indications that RUNDSTEDT is uneasy about the situation. 5 Pz Army has been reinforced by 10 S.S. Pz Div from the ARNHEM area, and more important still, one regiment of 1 S.S. Pz Div of 6 Pz Army has been identified North-East of GEILENKIRCHEN. This may presage the commitment of the whole of 6 Pz Army - the enemy's last armoured reserve. It certainly implies a lack of confidence regarding the ability of his present forces to check the Allied assault unassisted.

North of AACHEN heavy rain and extensive flooding have made operations in the British sector difficult. South of VENLO the enemy has abandoned the whole of the West bank of the MAAS, although clinging to a bridgehead at VENLO itself. Further North, advancing through mined and water-logged country, we have reached the MAAS 15 miles North of VENLO against light resistance. The enemy now has only light screening forces on the West bank of the MAAS here and the elimination of this bridgehead is only a matter of time.

The enemy's prospects have thus deteriorated still further in the past week. In the South, the best 19 Army can now hope for is to get itself back intact across the RHINE. In the Central sector the Allied threat in the SAAR may soon be even more serious than that from AACHEN. Only in the AACHEN area has RUNDSTEDT come near to exacting the price which German propaganda has assured us we shall have to pay for every yard of German soil. And he too has had to pay in costly currency - armour. Tanks are more precious to him than bodies at this moment. GOEBEL's mobilisation may turn out a Volksgrenadier division of sorts in three weeks. It cannot produce an armoured division at that speed. Already RUNDSTEDT's losses have forced him to draw on his armoured reserve and it may be that after all the situation will force him to fritter away piecemeal that precious reserve. Last week he had five armoured divisions completely uncommitted. This week he has three. His hope must be to wear out the Allied assault before the last verse of this ominous little nigger-boy song is reached.

4. BALKAN FRONT

North East of BUDAPEST, Russian progress has been slower in the past week. The Hungarian plain now lies behind the Red Army and in the mountainous country rising in places to over 3,000 feet the enemy has been able to offer stiffer resistance. The rail junction of HATVAN has been captured by the Russians but both MISKOLCZ and EGER are still in enemy hands. There has been no change in the BUDAPEST sector nor along the DANUBE front as far South as BATINA. A German Panzer Corps is reported operating in the BUDAPEST area under Lt.Gen KLEEMAN, one time commander of 90 Light division in the desert, and later of Assault Division RHODES.

In Northern YUGOSLAVIA the Germans have reported throughout the week Soviet attacks from the DANUBE bridgeheads at BATIN. and APATIN. MOSCOW has remained silent about th se, but is seems very probable that an attempt is being made to link up these two bridgeheads with the object of establishing a firm base on the West bank of the DANUBE preparatory to a drive North of the DRAV. into South West HUNGARY. Some light has

...shed on the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

shed on the confused German chain of command in this area by a report that 68 Corps is North of the DRAVA at PECS. As both 68 Corps and Corps KUBLER are known to be operating in this area it seems likely that KUBLER is on the right of 68 Corps South of the DRAVA, the latter's sector extending (to judge by the location of its H.Q.) into Southern HUNGARY. Further South 1 Mtn Div has been identified in the BRCKO (W 93) - BIJELJINA (X 22) sector. An indication of its losses after the BELGRADE battle is given in a recent captured document showing the strength of one of its battalions to be one officer and 24 men.

In N.E. YUGOSLAVIA the enemy is still trying to open up the UZICE (C 61) - ZVORNIK (C 12) road. A bridging column is at work repairing the bridge at LJUBOVIJA (C 35) the intention doubtless being to withdraw some of Army Group E together with 7 S.S. Mtn Div and the other forces in the KRALJEVO (J 39) area back along this road. It is too early to say yet whether this is in fact being done. P.R. of 22 Nov saw no movement on the road and reported at least three bridges still down.

In Central and Southern YUGOSLAVIA the varying fortunes of Army Group E's withdrawal have led to a split of the Army Group forces. On the East the bulk of the Army Group is pulling up along the NOVI PAZAR (J 13) - VISEGRAD (C 21) road, with some elements possibly using the alternative routes via RUDO (H 29) and GORAZDE (B 90). The RASKA (J 24) - KRALJEVO road is no longer in use and Partisans claim to control a large portion of it. The fact that the enemy allows the Partisans to operate so near to KRALJEVO suggests that Army Group E is now for the most part North of a line NOVI PAZAR - RASKA and the day may not be far distant when the whole front will start pivoting back on KRALJEVO. H.Q. Army Group E is now reported at SARAJEVO with 22 Mtn Corps and 91 z.b.V. Corps coming up from the South. Between them these formations have under command four fairly weak divisions (104 Jg, 22 P.G., 11 G.A.F. Fd and 41 Fortress) with battle groups of two others (524 G.R. of 297 Inf Div and 359 G.R. of 181 Inf Div). There is also a motley collection of troops amongst whom may be distinguished remnants and elements of 117 Jg Div, 21 S.S. Div, Assault Div RHODES and a number of fortress bns, naval and G.A.F. troops together with miscellaneous Base and L of C personnel.

The withdrawal of Army Group E from MITROVICA (J 30) last week left 21 Mtn Corps isolated in MONTENEGRO and Northern ALBANIA. This formation apparently controls the rest of Army Group E's forces, viz, 297 Inf and 181 Inf Divs (less the battle groups mentioned above) elements of 21 S.S. division, certainly not more than 1,000 strong, and about five fortress bns, the stronger of which appear to be cannibalising the weaker, together with such woeful remnants as the three bns of 999 Div which have been identified in Northern ALBANIA. This force has during the past week continued its efforts to break through from DANILOVGRAD (M 97) to NIKSIC (G 70). By dint of great effort it eventually reached DUROVICI 8 miles South of NIKSIC, and got no further. There has been no sign of 5 S.S. Mtn Corps sending a relief force down from MOSTAR to join up with 21 Mtn Corps, and it looks as if the latter has decided to seek less thorny paths of escape. Reports of Eastward movement from PODGORICA suggest that the enemy is now trying to open up the alternative escape routes via KOLASIN (H 20) and BERANE (H 50). The former is little better than a track, the latter a tolerably good road. Both are blocked by Partisans.

Meanwhile the garrison at KOTOR, despairing of ever seeing 21 Mtn Corps break out to the North has had to withdraw in a Southward direction down the coast road via BUDVA (M 60) and BAR (A 83) to SCUTARI, as the KOTOR - PODGORICA road was blocked by Partisan action. BAR has been evacuated by those forces who should by now have joined up with the rest of 21 Mtn Corps.

1. ENEMY SITUATION

On 22 Nov we attacked again on the axis of Route 9 and succeeded in getting over the river COSINA to the South of the road. Very heavy fighting ensued with 26 Pz division but by the afternoon of 23 Nov the enemy had had enough. The German communique for 24 Nov described the action as follows : "The Eighth Army, with the concentrated mass of its forces and with the strongest employment of material threw itself against one single German division. In exemplary steadfastness the 26th Pz Division, under command Colonel CRASEMANN defended the cohesion of the front". (Incidentally, Colonel CRASEMANN commanded 8 Tank Regt in Nov 41, during Eighth Army's first offensive). In fact the evening before this announcement the division, which had lost 400 prisoners, made a rapid withdrawal across the LAMONE, leaving no rearguards behind apart from a few men in the houses of BORGO DURBECCO. The situation was in fact regarded as sufficiently serious to call for the employment of 577 G.R. which has been out of contact in reserve for some two months; it came in to the South of Route 9, on the left flank of its parent division and had some casualties apparently due to lack of contact with 26 Pz div to its North. 278 Div also withdrew to conform. 992 G.R. has suffered fairly heavily and on 23 Nov I Bn could only muster 102 all ranks including its medical personnel and Italian cart drivers. However, the divisions' left hand regiment, 993 G.R., still stayed forward between the rivers and a prisoner from I Bn taken in the area M 392265 on 27 Nov stated his orders were to withdraw only if pressed. Similarly, 871 G.R., the next adjoining regiment, stubbornly defended ALBERETO, M 3927, and a general line along 28 Northing and prisoners on 27 Nov said they had no orders about a withdrawal. 114 Jg Div also appears to be still in its old positions behind the FIUMI UNITI although the Partisans in this area have consistently reported a thinning out here and say the main body of the division is back behind the LAMONE. It certainly appears, that although the enemy line has now been extended by the withdrawal to FAENZA he is not yet prepared to give up any ground to the North. Such a withdrawal would involve abandoning RAVENNA and PORTO CORSINI and although the enemy has probably already carried out all the demolitions he wants, he still will not give them up without some sort of a struggle. South of FAENZA, on the other hand, he has withdrawn wholly behind the LAMONE though there may be still some enemy forward of the river in the mountainous Southern sector of 305 Div.

On the remainder of the front there have been minor changes in enemy dispositions only. A second regiment of 148 Div, 286 G.R., has turned up and is apparently in the SERCHIO Valley. 4 Alpine Bn, which has not been encountered for many months, announced its arrival by a deserter and its H.Q., from a civilian report, is at ABETONE, L 3311. It is possible, though a little difficult, to suppose that this Bn is alone responsible for the many reports of the arrival of Mountain troops in this sector, which have run to as high as six battalions, but they would be well within the normal Italian range of exaggeration if we could assume that 3 Alpine Bn had also arrived, possibly in a different sector. The supposition would not be unreasonable, as the two Bns have previously normally operated together.

.....There has been.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

There has been a steady flow of deserters on this front, reaching the record figure of 108 on 24 Nov, and a few statistics may be of interest. The figures available cover the period 8 - 22 Nov, and show that on 8 Army front there were 851 prisoners taken of whom 80 deserted and on 5 Army front 455 of whom 409 deserted. The difference is striking - 10% deserters in one case and 90% in the other - and requires a little explanation. The figures for 5 Army are heavily weighted by 136 Russians and 153 Italians, all deserters, who make up about two-thirds of the whole; however, of a total of 83 Germans, 46 or 56% and of 22 Austrians 17 or 77% were deserters. The main explanation must lie in the difference between a static and an active front. On 8 Army front opportunities for actually crossing the lines were much fewer than on the more thinly held and mountainous Western sector of 5 Army front; on the other hand on an active front with the Allies advancing many a would-be deserter can take the easier option of remaining behind when his comrades withdraw. In the latter case he is usually classed as an ordinary prisoner and not a deserter, an additional advantage for him but confusing for our statistics. It is dangerous therefore to build theories on enemy morale on these figures but the high proportion of pure German deserters on 5 Army front is certainly encouraging.

We have further news this week of changes in Northern ITALY. 162 division, whose withdrawal from the line in the RAVENNA sector was reported on 15 Nov, has been definitely identified at PIACENZA. It is apparently to take part in an Anti-Partisan drive in the mountains to the S.W. which is about all it is fit for. It was originally employed on this task in N.E. ITALY before the June crisis made it necessary to put it into the line, an experiment which has not been successful. In N.W. ITALY a usually reliable source states that 157 Mtn Division is being withdrawn from the Alps and the troops say they are going to the BOLOGNA front. Their destination may not necessarily be correct - it would be a natural assumption for the average man to make - but the move of the division seems to be confirmed. It makes much more unlikely the move away of 5 Mtn Div as this would leave the defence of the Franco-Italian frontier to only 34 Div and LITTORIO; in any case units apparently of 5 Mtn Div were reported moving up towards the frontier on 15 Nov in the VAL DI SUSA. It seems more likely that 5 Mtn and LITTORIO together will take over the Central and Northern part of the frontier, probably intermingled so as to avoid entrusting one large sector to LITTORIO. The various past reports which have suggested a move of 5 Mtn Div may have been based on a mistaken identity of 157 Mtn Div or of 3 and 4 Alpine Bns. In North-E stern ITALY two further reports from good sources mention the departure of 44 Div, one by its number and the other by the name of the Divisional Commander, Gen von ROST. In both cases its destination is given as HUNGARY.

2. ENEMY SUPPLIES AND COMMUNICATIONS

Lack of photo recce this week makes an accurate assessment of the state of the railways difficult. However, air attacks against railways have been severely limited owing to poor flying weather and it must be presumed that a number of repairs have been effected. Under these circumstances it seems probable that the enemy's supply position, which was believed rather critical up to the end of last week, has been improved. On the other hand ground reports do indicate that the all-import BRENNER railway had not been opened up to through traffic as late as 25 Nov. In fact one report states that the enemy has abandoned repair of the bridge at ORA (over 100 kilometres North of VERONA) in favour of concentrating on the by-pass between ORA and S. MICHELE 20 kilometres to the South, which has been under construction for some time. Ground sources also report that owing to our air attacks on the BRENNER railway electric power facilities, only steam locomotives now operate between TRENTO and VERONA, and further that at the moment there is a shortage of steam locomotives. In view of these reports it seems that the BRENNER railway, if now open to through traffic, was not put in working order as quickly as was anticipated on the basis of photo recce alone. Hence, since it is definitely known that all through lines in N.E. ITALY were blocked up to at least 22 Nov, it may well be that the enemy is still suffering some shortages, particularly of fuel.

.....South and West....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

shed on the confused German chain of command in this area by a report that 68 Corps is North of the DRAVA at PECS. As both 68 Corps and Corps KUBLER are known to be operating in this area it seems likely that KUEBLER is on the right of 68 Corps South of the DRAVA, the latter's sector extending (to judge by the location of its H.Q.) into Southern HUNGARY. Further South 1 Mtn Div has been identified in the BRCKO (W 93) - BIJELJINA (X 22) sector. An indication of its losses after the BELGRADE battle is given in a recent captured document showing the strength of one of its battalions to be one officer and 24 men.

In N.E. YUGOSLAVIA the enemy is still trying to open up the UZICE (C 61) - ZVORNIK (C 12) road. A bridging column is at work repairing the bridge at LJUBOVIJA (C 35) the intention doubtless being to withdraw some of Army Group E together with 7 S.S. Mtn Div and the other forces in the KRALJEVO (J 39) area back along this road. It is too early to say yet whether this is in fact being done. P.R. of 22 Nov saw no movement on the road and reported at least three bridges still down.

In Central and Southern YUGOSLAVIA the varying fortunes of Army Group E's withdrawal have led to a split of the Army Group forces. On the East the bulk of the Army Group is pulling up along the NOVI PAZAR (J 13) - VISEGRAD (C 21) road, with some elements possibly using the alternative routes via RUDO (H 29) and GORAZDE (B 90). The RASKA (J 24) - KRALJEVO road is no longer in use and Partisans claim to control a large portion of it. The fact that the enemy allows the Partisans to operate so near to KRALJEVO suggests that Army Group E is now for the most part North of a line NOVI PAZAR - RASKA and the day may not be far distant when the whole front will start pivoting back on KRALJEVO. H.Q. Army Group E is now reported at SARAJEVO with 22 Mtn Corps and 91 z.b.V. Corps coming up from the South. Between them these formations have under command four fairly weak divisions (104 Jg, 22 P.G., 11 G.A.F. Fd and 41 Fortress) with battle groups of two others (524 G.R. of 297 Inf Div and 359 G.R. of 181 Inf Div). There is also a motley collection of troops amongst whom may be distinguished remnants and elements of 117 Jg Div, 21 S.S. Div, Assault Div RHODES and a number of fortress bns, naval and G.A.F. troops together with miscellaneous Base and L of C personnel.

The withdrawal of Army Group E from MITROVICA (J 30) last week left 21 Mtn Corps isolated in MONTENEGRO and Northern ALBANIA. This formation apparently controls the rest of Army Group E's forces, viz, 297 Inf and 181 Inf Divs (less the battle groups mentioned above) elements of 21 S.S. division, certainly not more than 1,000 strong, and about five fortress bns, the stronger of which appear to be cannibalising the weaker, together with such woeful remnants as the three bns of 999 Div which have been identified in Northern ALBANIA. This force has during the past week continued its efforts to break through from DANILOVGRAD (M 97) to NIKSIC (G 70). By dint of great effort it eventually reached DUROVICI 8 miles South of NIKSIC, and got no further. There has been no sign of 5 S.S. Mtn Corps sending a relief force down from MOSTAR to join up with 21 Mtn Corps, and it looks as if the latter has decided to seek less thorny paths of escape. Reports of Eastward movement from PODGORICA suggest that the enemy is now trying to open up the alternative escape routes via KOLASIN (H 20) and BERANE (H 50). The former is little better than a track, the latter a tolerably good road. Both are blocked by Partisans.

Meanwhile the garrison at KOTOR, despairing of ever seeing 21 Mtn Corps break out to the North has had to withdraw in a Southward direction down the coast road via BUDVA (M 60) and BAR (A 83) to SCUTARI, as the KOTOR - PODGORICA road was blocked by Partisan action. BAR has been evacuated by those forces who should by now have joined up with the rest of 21 Mtn Corps.

1. ENEMY SITUATION

On the Adriatic sector the week has seen a steady but stubbornly opposed advance Northwards between the MONTONE and LAMONE rivers which ended on 4 Dec when the enemy evacuated RAVENNA just in time to avoid being cut off there. For the early part of the week we were opposed by 356 Div which had all its three regiments strung out between the rivers on a front running East and West. On the night 2/3 Dec however, 356 Div pulled back behind the LAMONE, the HEIDEMARIE line as it appears to be named, leaving 741 Regt of 114 Jaeger Div, together with the Div Recce Bn, to oppose our Northward advance. They fought stubbornly for RUSSI and S. PANCRAZIO (M 4631) but by the night of 2 Dec they were back on the canal LA CANALA. At this point it became too dangerous to hold RAVENNA and 721 Jaeger Regt pulled out, leaving the city clear by morning of 4 Dec. Where 721 Regt has gone to is not exactly known but 741 Regt, according to a captured map, should be back behind the LAMONE by now, between route 16 and the railway, and presumably 721 Regt will also have swung into position, prolonging 76 Corps flank to the VALLI DI COMACCHIO.

In the meantime an Allied bridgehead has been formed across the LAMONE South of FAENZA in 305 Div's area. The West bank of the LAMONE is now clear as far North as the 21 Northing, though the country is difficult and our advance West is being strongly opposed. This advance does much to nullify the effect of the other main enemy modification of the front, a withdrawal of 715 Div and the right flank of 305 Div to the VENA DEL GESSO, a steep escarpment facing South which runs in a continuous line from TOSSIGNANO, M 0823, to join the high ground above BRISIGHELLA, M 2117. This enemy withdrawal was voluntary, contrary to his usual custom, and was accompanied by thorough demolition of roads South of the escarpment. The shortening of the line thus achieved has enabled the enemy to carry out some readjustments. 305 Div has shifted its weight slightly North, to just South of FAENZA, enabling 26 Pz Div, which is still possibly suffering from its defeat on the GERHILD line, to concentrate on route 9. 715 Div has extended its front as shown by the identification of II Bn 1028 G.R. on Monte RINALDO, M 4020. An interesting point is that, according to an intelligent prisoner from 305 Div, 577 G.R. has again been withdrawn into Corps reserve, which seems to point to a decision not to reinforce 76 Corps at present but leave it to manage as best it can with its present resources.

On the rest of the front the enemy showed some aggressiveness at the beginning of the week and by strong attacks succeeded in recapturing CASTELLARO, M 9933 and Monte BELVEDERE. After this spurt of energy he has remained quiet and contented himself with what look like routine reliefs in 42 Jaeger, 29 P.G. and 1 Para Divs. The last named now has all three regiments represented in the line. 29 P.G. Div, according to a deserter, is expecting to be relieved between 4 and 10 Dec and, after a three weeks rest in the CENTO area (L 8574), to move to 76 Corps to relieve 26 Pz Div. More interesting are the first signs of life in 90 P.G. Div. On 4 Dec one of the

.....Infantry Regts....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Infantry Regts, probably 361 G.R., was moving and was setting up a Message Centre at CASTEL MAGGIORE, 8 Kms North of BOLOGNA. This can scarcely have been a very long move, for the regiment was already somewhere N.E. of BOLOGNA, but it may be significant. On the other hand various indications on 5 Dec seemed to place the other elements of the division rather nearer 76 Corps' front. The division is therefore apparently divided over a fairly wide area and it is not possible to deduce where it will be employed; at least we can say that it is apparently ready for action. The location of CASTEL MAGGIORE however does perhaps invite us to look North as well as South - it is on the main route North from BOLOGNA by the PONTELAGOSCURO bridge - and it is not impossible that a regimental move in EMILIA may be a reflection of the situation South of Lake BALATON.

From Northern ITALY there is little to report though 162 Div's drive against the Partisans has started. On the French frontier the VARESE Bn of LITTORIO has relieved troops of 157 Div in the VAL D'AOSTA and 100 Mtn Regt has taken over the MONT CENIS pass. The destination of 157 Mtn Div is still unknown but it is more likely now that it will be Northeastern ITALY. The additional reason is provided by the departure of 71 Div. The reports of the latter's movements have not all agreed as to destination but most of them point to the Northeast. 44 Div has already been thrown into the battle against TOLBUKHIN's forces advancing from the historic battlefield of MOHACS and it is highly likely that 71 Div has also been drawn in to the same scene of continuing disaster.

2. ENEMY SUPPLIES AND COMMUNICATIONS

This week weather and other commitments restricted our air effort against enemy communications. It is true that many bridges remain cut and no direct access by rail to the area East of PIACENZA and South of the PO is likely to exist, but elsewhere in North ITALY it is probable that all points can be reached by through, if roundabout, rail routes, with the exception that there is a North-South line of interdiction running generally through a point about 25 miles due West of VERONA to MANTUA. This line divides the area North of the PO roughly into two equal parts of which the one to the East is by far the most important since it includes the BRENNER and N.E. routes into ITALY from GERMANY. Through rail traffic is now almost certainly possible over two of the Northeastern routes, and very probably over the BRENNER to possibly as far South as the PO. Under these circumstances and in view of the fact that the enemy's current supply requirements are now rather low any acute shortages which may exist are unlikely to be due to transportation difficulties.

The BRENNER railway, initially blocked on 5 Nov, was very probably open by 28 Nov at which time PR showed it passable to single line traffic almost as far as ORA, about 75 miles North of VERONA, where the bridge might possibly still have been cut at that time. Between 28 Nov and 1 Dec further attacks may have again briefly blocked the line not far North of VERONA, but on 1 Dec PR showed that it was open throughout. On 2 Dec weather finally permitted both medium and fighter bomber attacks and while PR of the same day confirmed that four cuts were achieved, no bridges had been hit and it is probable that the line was again open by the following day and certainly not later than the 4th. As already reported by ground sources, PR now confirms that steam traction is in use on the BRENNER at least as far North as TRENTO. From VERONA, exclusive, to just beyond BOLZANO, rolling stock during the past week has averaged between 2,000 and 2,500 items. While this must be considered a rather heavy concentration of rolling stock in as much as for military purposes the BRENNER is essentially a through route only, and while there has been movement at practically all points on this stretch, turnover is not thought to have been large owing to frequent interruption of the line, reduced potential capacity owing to the necessity for use of steam traction, the availability of only one of the two tracks at a number of points, and the not unlikely report that there is a shortage of steam locomotives. In any event it would appear that the enemy is still not getting enough through the BRENNER by rail alone in as much as on three consecutive nights between 1 and 3 Dec rather heavy MT movement was observed moving both North and South generally between VERONA and TRENTO.

...In the Northeast.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In the Northeast, the situation from the viewpoint of the enemy is considerably more favourable than on the BRENNER. Of the three rail routes generally between UDINE and PADUA the most Southerly has now been impassable at several points for a considerable period and the enemy appears to be making no serious effort to get it open. However, repairs on the most Northerly line have been rather rapid and it has probably been open for about the past ten days; in any event PR of 2 December showed it was passable throughout. Through traffic was then, and still is, possible from GERMANY at least to PADUA and also probably to VERONA. The Central of the three Northeastern routes was also shown by PR to be open by 5 December. As would be expected in view of interruptions to the BRENNER, traffic through Northeast ITALY is indicated to have been heavy by both PR and ground sources.

In Western ITALY this week repairs to two bridges just East of TURIN (which had been out for a considerable period) open this important industrial centre to through traffic. Trains can now move direct from TURIN to either MILAN or GENOA. A direct line is now also probably open between GENOA and MILAN via ALESSANDRIA since on 28 November the only block on this route was on the approach to the PO river bridge near TORREBERRETTI just North of ALESSANDRIA, and by this time repairs must be presumed to have been effected at this point.

With the exception of TORREBERRETTI bridge and a bridge immediately East of TURIN all rail bridges over the PO have been impassable this week. The area South of the PO and East of PIACENZA thus remains isolated by virtue of a block just West of PIACENZA and the long-standing damage to the GENOA-SPEZIA line. There appears to be little other change along the PO, but worthy of note is a statement by a PW that crossings in the area immediately East of FERRARA are reserved for the exclusive use of 26 Panzer Div. Whether there are similar divisional "sectors" elsewhere along the river is not known but it is not unlikely. It does suggest that at least armoured and motorised formations are drawing supplies direct from points North of the river; however, it seems logical to suppose that there are a number of Army dumps South of the river and in fact recent PW reports so indicate.

To the South of the PO, BOLOGNA now appears to have lost much, if not all, of its importance as a rail centre. On 4 and 5 December all stations, yards and sidings were unserviceable and virtually empty of active rolling stock. Also the main line running Northwest from BOLOGNA to PIACENZA seems to have been appreciably less active this week than heretofore though lack of PR makes a definite statement impossible.

With the development of our air attacks against the BRENNER and Northeastern railways traffic between GERMANY and ITALY through SWITZERLAND assumes increased potential importance. This traffic was at one time appreciable, particularly the movement of coal from GERMANY to ITALY. Despite the continued receipt of occasional ground reports (the most recent being that gun barrels were being shipped from ITALY to GERMANY in sealed cars purportedly carrying wheat) it seems likely that the volume of traffic of all kinds is now much reduced. In this connection the following report from LONDON is in point: "The cutting of the STRASBOURG-MULHOUSE-BASLE main line by the French and the bringing of the KARLSRUHE-FREIBURG-BASLE main line within artillery range, means that traffic between GERMANY and BASLE is completely at a standstill. Although it should be possible for the Swiss, if they so desire, to work the limited amount of German-Italian traffic which has passed in recent months, via SCHAFFHAUSEN and the other frontier stations in North East SWITZERLAND, it is doubtful if the Germans could cope with this traffic in view of the heavy military traffic and railway working difficulties reported in BADEN and WURTTEMBURG. Even though a limited amount of transit traffic may continue through SWITZERLAND for some time, there is now no likelihood of any large-scale resumption of this traffic".

.....3. WESTERN FRONT.....

THIS PAGE IS UNCLASSIFIED

0635

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. WESTERN FRONT

As the threat to the REICH increases on every sector of the front, so does enemy resistance stiffen. This week in the South and in the Centre RUNDSTEDT's armies have been giving ground much more reluctantly and fighting much more fiercely than in the first fortnight of the present offensive, while in the AACHEN sector, the enemy is resisting as stubbornly as ever. In the South 19 Army has been gradually contracting its RHINE bridgehead South of STRASBOURG. Offering stubborn resistance, particularly around SELESTAT, it has so far made no attempt to escape to the safety of the East bank of the RHINE. Indeed according to one report, the Germans consider 19 Army to be "expendable". Its casualties in prisoners alone have been proportionately higher than on any other part of the front, and a continuance of the present policy may see 19 Army written off altogether as an organised fighting formation.

North of STRASBOURG the approaches to the SAAR have been the scene of satisfactory Allied progress against tenacious enemy resistance. The enemy has appreciated that the advance represents a threat potentially as serious as that in the AACHEN area, and has reinforced the sector with two infantry divisions in the past week. These have been taken from General STUDENT's Army Group in HOLLAND which is being steadily denuded to meet the more urgent needs of the other sectors. In addition the Pz Lehr division of 6 Pz Army has now been fully committed, so fully indeed that prisoners are already talking of an early relief for further recuperation. This division prior to its commitment had had a longer period of rest and refit than any other Panzer division in the West, and even so there is ample evidence that it suffers from inadequate training and equipment trouble. Despite its reinforcements the German First Army in this area has been pressed back all along its front. Perhaps the most important event of the week in this sector has been the capture intact of a bridge over the SAAR South of SAARLAUTERN, which has enabled us to establish a firm bridgehead on the East bank of the river. The Siegfried line has yet to be breached in this sector, where, as at AACHEN, there are two lines of defences, and even a third line may exist behind NEUNKIRCHEN.

The EIFEL front has remained quiet all the week, but at AACHEN the intensity of the fighting has shown no diminution. STUDENT has been called upon to provide another infantry division for this sector, while out of RUNDSTEDT's reserve has come 3 Parachute Division into the area NE of AACHEN. The Recce Unit of 12 SS Pz Division (one of the four in 6 Pz Army has also appeared, but apart from this there have been no fresh identifications of 6 Pz Army. If, as seemed probable, RUNDSTEDT last week felt that the time had come to commit his armoured reserve, this week he seems to have stayed his hand. Although elements may have been committed, the bulk of 6 Pz Army still sits intact West of the RHINE, waiting either to join in the defensive battle, or, if the enemy gauges that we are becoming exhausted, to counter-attack and regain lost ground. Meanwhile the gigantic battle continues and every day a mile or two of German soil is lost to the Germans.

North of AACHEN, appalling weather and floods have given the fighting an amphibious character. There have been two important developments. The last German bridgehead on the West bank of the MAAS has been eliminated by the British attack on VENLO, while at ARNHEM the Germans have added to the floods by blowing the dykes. The enemy claims that this action has already caused a local Allied withdrawal.

Reviewing the present situation, RUNDSTEDT has three major considerations to bear in mind. The first is the enormous German casualty rate. In the first fortnight of this offensive, it is estimated that RUNDSTEDT lost 100,000 men in total casualties, of which figure prisoners represented over 60,000. Since then he has been losing along the whole front something in the nature of 9,000 men per day. Against this, RUNDSTEDT has to weigh the availability of his reserves and reinforcements, actual and potential. Sixth Panzer Army is still largely intact. Three Parachute divisions are still available (2 Para Div, destroyed at BREST, is now reported reforming in HOLLAND), and STUDENT may be able to give up still more

....infantry divisions.....

THIS PAGE IS UNCLASSIFIED

0636

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

infantry divisions from his Army Group. Thus there is not yet a shortage of immediate reserves. Moreover, with the beginning of a new month, a fresh wave of Volksgrenadier divisions should soon become available. Finally, the enemy has to consider the state of weariness and casualties among its opponents. His assessment of the former is unknown, but even in its public announcements OKW is surprisingly conservative in its estimates of the latter. For the whole of November the official German communiqué claimed only 5,200 Allied prisoners, an extraordinarily low figure in comparison with the enemy's own losses in prisoners in the same period.

RUNDSTEDT's situation is thus serious, but in no sense catastrophic. So far he has staved off an Allied breakthrough into any vital area of GERMANY, and while he still has reserves left he may yet hope to stem the Allied assault before irreparable damage is done. Stem it he must, for defeat on the West bank of the RHINE might be final.

4. BALKAN FRONT

The German situtiom in S.E. EUROPE has deteriorated still further in this past week. Along the whole front from the Czechoslovak border to Northern ALBANIA the official communiqués have had one setback after another to record. N.E. of BUDAPEST the slow enemy withdrawal has continued. MISKOLCZ and EGER have both been lost, and the railway from HATVAN to MISKOLCZ is now entirely in Soviet hands. The German line in CZECHOSLOVAKIA has been falling back in conformity, and there can be little doubt that a withdrawal at least as far as the HIGH TATRAS is envisaged.

However, the Soviet gains in North East HUNGARY have been overshadowed by the spectacular events in Southern HUNGARY. Attacking from their bridgeheads over the DANUBE at APATIN and BATINA, Soviet forces have achieved an important breakthrough into S.W. HUNGARY which has to date brought them within nine miles of Lake BALATON. PECS fell on 30 Nov; KAPOSVAR, 30 miles beyond, two days later and the Russian bridgehead is now 60 miles deep and 75 miles wide. Thus the whole German position in S.E. EUROPE has been changed in the course of a few days, and unless the momentum of the Russian drive is halted, and halted soon, the position of Army Groups F and E in the Balkans will become grave in the extreme. The German 68 Corps took the brunt of the Soviet attack. (Its Commander, General FELMY, must be looking back with nostalgic regret to the days, not long distant, when he led the life of an epicure, in the comparative quiet of ATHENS organising ineffective sabotage). The Corps' resources proved quite incapable of coping with the Russian pressure. 44 Inf Div, brought over hastily from the UDINE area where it was recuperating from its Italian battles, was identified earlier in the week in the MOHACS sector, and there is further evidence that the enemy is now making hasty and belated efforts to stem the Russian flood. 71 Inf Div from the Italian theatre is reported by more than one source to be on its way to HUNGARY, presumably to help 68 Corps, while 1 Mtn Div has left the BRCKO-ZVORNIK sector for OSIJEK and may also be destined to join 68 Corps.

A new division, 31 S.S., has also been identified in the past week in North YUGOSLAVIA and it too may be drawn into the KAPOSVAR battle if it is not already there. Little is known of this formation which is believed to be a 3 regt LE Div of six bns but it presumably contains a large percentage of Volksdeutsche. Yet another possible arrival is a new Hungarian "HUNYADY S.S. Div", volunteers for which were called for by BUDAPEST radio last week, although this formation, for what it is worth, is more likely to be employed defending BUDAPEST which is now threatened from the South by the Russian attack.

The move of 1 Mtn Div has shown clearly the inadequacy of German resources on the Balkan front; a combined Russo-Partisan force has wasted no time in advancing S.W. of NOVI SAD (X 87) to seize the town of SREMSKO MITROVICA (X 64) on the North bank of the SAVA, in the sector which 1 Mtn Div formerly held.

Under the influence of events further North, Army Group E's withdrawal from YUGOSLAVIA has been accelerated in the past week and about half of the Army Group is now back in the SARAJEVO area. KRALJEVO (J 31) has been

...evacuated and....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

evacuated and there are unconfirmed reports that CACAK (D 01) is in Bulgarian hands. NOVI PAZAR (J 13) on the Army Group's main escape road was abandoned last week and only rearguards are in contact at SJENICA (H 75), 30 miles N.W. of NOVI PAZAR. This force is unlikely to linger long at SARAJEVO, and we should soon expect to see it continuing its advance along the roads running Northward from the SARAJEVO - CACAK lateral.

Meanwhile, down in MONTENEGRO, 21 Mtn Corps has been able to do little to improve its position. The drive on NIKSIC (G 70) has now been finally abandoned and the enemy has been withdrawing stores and grain back to PODGORICA (N 01). 21 Corps paid heavily in the attempt to break out to the North. It is estimated that casualties in the period 13 to 25 Nov amounted to 680 killed and 1,300 wounded, the bulk of which came from 181 Inf Div, which bore the brunt of the fighting. Moreover, 21 Mtn Corps has enjoyed little more success in its attempt to drive Eastwards from PODGORICA (N 06). BIOCE (N 07) has been captured but there has been heavy fighting to the N.E. and advanced elements of 21 Mtn Corps seem to be no further forward than VILAC (N 07) 12 miles N.E. of PODGORICA. H.Q. Army Group E, despairing of ever seeing 21 Mtn Corps get back under its own steam has apparently decided to send it some much-needed help, and in the course of the past week a column of all arms has been making its way down the PLEVLJA (H 16) - HERCEG (H 50) road obviously with the intention of making contact with 21 Mtn Corps. Until it reached BIJELO POLJE (H 42) this column's progress was relatively smooth but South of BIJELO POLJE it has run into Partisan country and has been halted at least temporarily.

Elsewhere it has been a fairly quiet week in the Balkans except for the KNIN sector where after fierce fighting the Partisans have once more recaptured this important town. From SLOVENIA has come an interesting report regarding the setting up of a Cossack Cavalry Corps. According to Partisan sources a 2 Cossack Div will be formed - presumably in N.E. ITALY and SLOVENIA, where an increase in the number of Cossacks has been reported. This, together with the existing 1 Cossack Div, will form the Corps. Lt.Gen HELMUTH v. PANNWITZ, the present commander of 1 Cossack Div, will command the Corps while Col BOSSE, a regimental commander, will be promoted to a divisional command.

-o-o-o-o-o-o-

1. ENEMY SITUATION

On the 8 Army front the enemy is at the moment in process of being thrown back off yet another river line. After an unsuccessful attempt to establish a bridgehead across the LAMONE on the 5th in the area N.W. of RUSSI (the enemy counter-attacked strongly with S.P. guns and drove us back East of the river) two attacks were launched on the night 10/11 Dec and by the following morning we were firm on the West bank of the LAMONE. One of these attacks went in N.W. of RUSSI where the previous attempt had failed and by first light had pushed 114 Recce Unit back behind the FOSSO VECCHIO, a canal some 2,000 yards East of BAGNACAVALLO. The other bridgehead was made about 5,000 yards to the North and quickly captured VILLANOVA M 4541 from 741 Jaeger Regt and seized the bridge at 426398 intact. Counter-attacks later in the day by 190 Recce Unit, assisted by some 5-6 Tigers, against the right wing of this bridgehead in the area M 4542 were repulsed and by nightfall the enemy was West of the FOSSO VECCHIO between the 37 and 42 Northings. The day's fighting brought us in some 300 prisoners from 114 and 356 Divs.

Whereas the enemy appeared to be expecting the first attack over the LAMONE on 5 Dec, the crossing on the night of the 10th seems to have taken him unawares as is evidenced by the large number of prisoners and the capture intact of the bridge. The only reserves the enemy apparently had in this area, apart from internal battalion ones, were 190 Recce Unit and some Tigers. On the other hand, between the 8 - 10 Dec 90 P.G. Div (less its Recce Unit) moved from general reserve North and East of BOLOGNA into the line S.W. of FAENZA, thus indicating that the enemy was expecting a renewal of attacks in this area where the whole of the West bank of the LAMONE was already in Allied hands.

90 P.G. Div started getting ready to intervene on the 5th, by which date it had a battlegroup in the MEDICINA area and another one North of BOLOGNA. For the next few days it was content to play a watching role, during which time 305 Div was engaged in fairly heavy fighting S.W. of FAENZA. The enemy evidently decided that 305 Div was getting worn down in a battle of attrition and with 26 Pz Div on Route 9 still weak after its defeat on the GERHILD Line, he brought 90 P.G. Div down hurriedly and committed it between the two tired divisions. 90 P.G. Div's entry into the battle was as dramatic as on the two previous occasions on which it has been rushed into the line - on the CERIANO ridge S.W. of RIMINI and at M. GRANDE. Using about four battalions supported by tanks and S.P. guns, 90 P.G. launched a series of violent counter-attacks on the 9th, designed probably to knock the Allies off their balance just as they were building up for a renewal of the offensive and if possible hoping to gain a spectacular victory by throwing them back across the LAMONE. The attack progressed some 400 yards South of CELLE 2724 but elsewhere failed to gain any important ground. These spoiling attacks lasted only one day and cost 90 P.G. Div heavy casualties. Since then the Div has been unobtrusively settling down in its new sector, which now extends from approx the 29 to the 24 Easting.

.....90 P.G. Div.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

90 P.G. Div has therefore taken over most of 305 Div's front, and the latter has 577 G.R. and probably 576 G.R. as well in reserve. At the same time 715 Div, now back on the GESSO ridge, has shifted part of its weight further East and II Bn 725 G.R. is now on M. INCISA M 1718 with both bns of 1028 G.R. on its left stretching at least as far as the 21 Easting. It is too early to say whether the intention is to take 305 Div out of the line completely, but the fact that it was mentioned in the German Communiqué of the 8th Dec suggests, if previous experience is any pointer, that it has had fairly heavy casualties and may be earmarked for a rest. At the moment, however, such units as it has out of the line are the only immediate reserves available to be switched North to the BAGNACAVALLO area, should 114 and 356 Divs find themselves in trouble.

On the rest of the front apart from active patrolling, in which 1 Para Div was to the fore, and the usual flow of Italian deserters which reached a peak with 91 in the 24 hours ending 1500 hours 8 Dec, there was little ground activity of note. The relief of 29 P.G. Div, forecast for the first week of December by an intelligent prisoner captured late in November, has however been effected. On the 6th a prisoner was taken from 1059 G.R. who said that the rest of 362 Div had moved into the area South of BOLOGNA preparatory to taking over a sector in the line. Since then 1060 G.R. has been identified well inside 29 P.G. Div sector on the 92 Easting. There has been no contact at all with 29 P.G. since the 6th and it can be assumed that it is resting North of BOLOGNA. A prisoner statement that the third regt of 362 Div - 956 G.R. - had come in to the West of 1059 G.R. is interesting, and taken in conjunction with the finding of two bodies from 362 Fusilier Bn as far West as L 8632 would imply that some units of 362 Div have also moved into 65 Div sector. It would be surprising if the enemy were to take 65 Div as well as 29 P.G. out of the line and hand over the vital Route 65 sector to a single Div - and a division which though recently reformed has not a very high fighting reputation - but such a possibility cannot be altogether ignored: III Bn 4 Para Regt lost prisoners at L 9732, which is further West than we have previously had parachutists, and as a result 42 Jaeger Div may also have sidestepped slightly West into the old 29 P.G. Div sector, reducing the area to be taken over by 362 Div. In addition 4 Para Div with only one regt in the line has for long been on a narrow front, but now both 11 and 12 Para Regts are forward it may have extended slightly Eastwards into 65 Div sector. This reshuffle, if it has in fact taken place, might enable both 29 and 65 Divs to go out of the line and at the same time leave 362 Div with a sector of reasonable width. Even then the withdrawal of two divisions from the line South of BOLOGNA would imply that the enemy regarded an attack by 5 Army as unlikely for the moment: there is no evidence that such is his appreciation and pending further information it is wiser to carry 65 Div still in the line though on a narrow front with probably only one regiment forward.

In North West ITALY most of 157 Mtn Div is now believed to have left, and its place along the frontier has been taken by LITTORIO and 5 Mtn, with an Alpine Regt of the former in the AOSTA Valley and 100 Mtn Regt in the area of Mt CENIS pass. In the old 5 Mtn Div sector 85 Mtn Regt is in the M. S. GENEVRE area South to the PELLICE River while the rest of LITTORIO appears to have moved into the CUNEO area with responsibilities on the Col de la MADDELENA. 34 Div remains unchanged in the Southern part of the Alps. In N.E. ITALY Mountain troops have been reported arriving - on 24 Nov a detachment had reached the area South of UDINE from PIEDMONT and more troops were reported arriving in the UDINE area early in December. This must be 157 Mtn Div, and from these reports it appears to be taking over the sector vacated by 71 Div bounded roughly by UDINE - GORIZIA-exclusive TRIESTE - MONFALCONE - LATISANA. 71 Div has now been identified by the Russians near Lake BALATON and is struck off the strength of Army Group C. This reduces the strength of Kesselring's command to 26 German divisions plus Cossacks in N.E. ITALY in strength of about a division. There have been several persistent reports, however, of a new division in N.E. ITALY (it is referred to as "159 Division", which is clearly a corruption since that div is engaged on the Western Front). The

...possibility therefore.....

THIS PAGE IS UNCLASSIFIED

0 6 4 0

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

possibility therefore that an embryo division, or a low quality one, may have been given to Kesselring as recompense for the sacrifice of two divisions cannot be ignored. However surprising it may seem that the enemy should even consider sending reinforcements to ITALY when the calls of the Western and Balkan fronts seem so much more pressing, the fact cannot be overlooked that in the past three months he has been able to maintain a steady flow of replacements for the formations in ITALY. In any case it is unlikely that the departure of two divisions will affect the strategy of the Italian battle front. The enemy has clearly decided to hold on to the PO Valley as long as possible, for its economic importance which has greatly increased following the loss of large agricultural areas in the Balkans and the bombing of industrial plants in the REICH, as much as for the military advantages of fighting the Allied Armies on foreign soil. Several prisoners have referred recently to the winter line which is to be held in the Appennines South of BOLOGNA, and growth of defences round the city itself shows that the enemy has every intention of fighting a major battle to defend it. In the Adriatic the enemy continues his stubborn defence of river and canal lines, in pursuance of his policy of trying to wear down the Allied power of offensive, and only gives ground when forced to do so. The real stand for the Winter Line however has still to come, presumably when he has been pushed back to the shortest line between his present position South of BOLOGNA and the Valli di COMACCHIO. Even were Kesselring called upon to give up a further two divisions, it is doubtful whether it would change his determination to fight it out South of the PO.

2. ENEMY SUPPLIES AND COMMUNICATIONS

GENERAL

There may have been one or two days this week during which no through trains could operate between ITALY and GERMANY except by way of SWITZERLAND. At the moment, however, it is possible for trains to move from GERMANY through North East ITALY without transloading, and the BRENNER also is probably open. The PO bridges remain out as far West as PAVIA but throughout the week trains could probably get through to transhipment points on the North side of the river from the VERONA and PADUA areas.

The area North of the PO is still divided in two by a line of rail interdiction running generally North and South from MANTUA. South of the river there appears to be less rail activity than heretofore. The state of the railways in Western ITALY appears to remain relatively unchanged and through traffic is still possible between MILAN, TURIN and GENOA.

There is no appreciable change in the enemy shipping picture.

Although the state of the enemy's L of C is somewhat precarious there is nothing this week to indicate that the enemy is not getting sufficient supplies into ITALY to meet current military requirements.

RAILWAYS

(a) The Brenner Railway

Between 5 and 11 December there was only one day on which weather permitted a strong air effort against enemy railways. This was on the 10th when we succeeded in cratering the track on the BRENNER route at 6, or possibly 8, points between VERONA and a point about 100 rail-kilometres to the North. These cuts unfortunately all appear to have been craters in the track only and the line should have been open again by the 11th, or 12th, though the cratering of a fill a short distance North of VERONA might block traffic for a longer period. Between 5 and 10 December the BRENNER may have been interrupted for brief periods as a result of fighter-bomber attacks on several days but PR confirmation is not available. PR does show that the line was open on the 6th.

.....Just how much.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Just how much turnover there is on the BRENNER line is difficult to say. The line from VERONA, exclusive, to BOLZANO, inclusive, a distance of about 150 rail kilometres, was this week still rather heavily loaded with rolling stock; on 6 December about 2,000 items were present and on the 10th 2,500, which as an average is about the same as last week. PR shows that there has been definite movement on the line, but it is still believed that the large amount of rolling stock present represents not so much heavy traffic as it does an inability to clear the line of wagons which from time to time have been trapped between breaks in the railway. It seems probable that when Southbound loaded trains are held up they are unloaded and supplies are dropped off at temporary dumps near the railway or almost immediately carried South by MT. Over the past month a number of dumps have been established near the railway. In addition MT has been not infrequently observed of late along various roads from VERONA Northwards and PR of 10 December showed a considerable amount of MT activity along the road paralleling the railway all the way from BOLZANO South to VERONA though this last might reflect the reported arrival of an Italian division from GERMANY as opposed to supply traffic. Since the enemy is not thought to hold large supply reserves in ITALY he must maintain a more or less constant flow of traffic into the country, and thus, as soon as the railway is opened up it may well be that new supply trains are run through and empty rolling stock subsequently cleared as circumstances permit. In addition, a considerable amount of Northbound traffic is required to move foodstuffs and industrial materials from ITALY to GERMANY. For these reasons the fact that large numbers of wagons are now consistently seen on the BRENNER is not thought necessarily to reflect a large turnover, and it is probable that the line continues to work on a scale appreciably below its normal capacity.

(b) North East ITALY

Though through traffic through North East ITALY may have been impossible for one or two days this week, ground sources continue to report considerable rail traffic coming into ITALY through this area which PR tends to confirm. PR of 10 December shows that the rail diversion at CASARSA bridge C 150084, on the main line 25 kilometres West of UDINE, had been washed out some time between the 5th and 10th. This wash-out, coupled with the BRENNER cuts on the 10th would have made through rail traffic from GERMANY into ITALY (with the exception of the Swiss routes) impossible on the 10th had not the bridge at LATISANA (H 220075) on the most Southerly of the North East railroads, been repaired sometime between the 3rd and 10th. With the LATISANA bridge repaired a roundabout route through North East ITALY was open on the 10th. However, between the 5th and 10th there may have been one or more days during which both the LATISANA bridge and the CASARSA diversion were impassable, in which event no through traffic in North East ITALY would have been possible, since the loop-line which by-passes UDINE to the North West continued blocked as it has been for some time.

(c) North of the PO

In the general area VERONA - CREMONA - ROVIGO - VENICE lack of PR makes any assessment of the state of the railways and rail activity difficult. VERONA, VICENZA and PADUA all continue as active rail centres. The PO bridges remain out but throughout the week trains could probably get through to transhipment points on the North side of the river. Since the two bridges at MANTUA and the bridge at CALCINATO, about 40 kilometres due West of VERONA on the MILAN - VERONA line, continued blocked throughout the week through traffic is still impossible between the Eastern and Western sections of North ITALY.

(d) South of the PO

BOLOGNA, as at the end of last week, shows no sign of rail activity. In fact on the basis of such PR as is available railways in the entire area South of the PO and East of PIACENZA seem to be appreciably less active than heretofore; if such is in fact the case it is likely to be only a temporary condition in as much as the enemy fuel situation demands a maximum use of railway transport, but it may well be that for the time being at least the enemy has been forced to devote most of his repair

....efforts to.....

THIS PAGE IS UNCLASSIFIED

0642

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

efforts to keeping traffic moving over the BRENNER and North Eastern routes.

(c) North West ITALY

In the West the state of the railways appears to remain relatively unchanged. Four of the five rail bridges over the TICINO river between TURIN and MILAN remain out and as indicated above the MILAN-VARONA route is still blocked. However, direct routes continue open between MILAN, TURIN and GENOA. One development of interest is that, with the repair by 10 December of a bridge just West of PIACENZA, the PIACENZA - BOLOGNA line was opened up to through rail traffic from the West for the first time since early November. This is not considered of appreciable significance from the point of view of military supply since as already pointed out there is still a line of rail interdiction running North and South from MANTUA; in any event with all rail bridges out over the PO as far West as PAVIA, inclusive, if trains coming in over the BRENNER and North East rail routes were to reach the BOLOGNA area by way of PIACENZA, they would have to move all the way West to MILAN, Southwest across the PO to ALESSANDRIA and then Eastwards to PIACENZA towards BOLOGNA, a distance of some 500 kilometres, and it is obviously easier therefore to move military supplies across the more Easterly point of the PO even though transloading from train to MT is necessary. On the other hand repair of this bridge does open up a route by which rolling stock can be cleared from the area South of the PO and in fact recent PR shows a very appreciable decrease along the railway South East of PIACENZA. In addition it should greatly facilitate evacuation of various industrial and other materials.

SHIPPING

Over the past month there has been little change in the enemy shipping picture, except for the loss of the RAVENNA - PORTO CORSINI Canal which was quite active up to shortly before our advance into that area. What port, if any, is to replace the canal is not yet apparent, though CHIOGGIA (G 6523) is becoming increasingly active with barge traffic. Thirty barges were seen here on 10 December. These barges are thought to come South by way of the Canal which closely parallels the Northern Adriatic coast and, upon arrival at CHIOGGIA, to proceed inland by various canals to the PO and ADIGE rivers. CAVARZERE (G 4929), on the ADIGE about 20 kilometres S.W. of CHIOGGIA, is one of the most active inland points. An interesting ground report received this week states that on both 23 and 24 November three railway tank cars arrived at TRIESTE from where they were transported to the "Venetian coast". This report is not unlikely particularly in view of the fact that at the time in question all rail routes through the area stretching from PADUA to UDINE were blocked. In the Northern Adriatic proper shipping continues active between VENICE and TRIESTE but turnover is not thought to be large.

In the Ligurian sea activity continues on about the same scale. GENOA naturally remains the most active port and most of the active shipping (MT ships, F-boats, supply barges and coasters) here plies South to SPEZIA and back, with some activity at the intermediate port of SESTRI LEVANTE. West of GENOA a small amount of shipping continues to move to both SAVONA and IMPERIA, chiefly F-boats and small coasters, MT ships being confined to the GENOA-SPEZIA run.

3. WESTERN FRONT

The pattern of the fighting has not changed materially since last week and resistance continues stubborn in the critical sectors of AACHEN, the SAAR Valley and the KARLSRUHE gap. In the South 19 Army has been further compressed on COLMAR in spite of spirited opposition and frequent counter-attacks especially in the MULHOUSE and THANN areas. The loss of SELESTAT, however, threatens to release the Northern jaw of the trap and endanger the Army's whole position West of the RHINE. It is not surprising therefore that, in spite of an order by HITLER demanding valour rather than discretion, there are already many indications pointing to a general withdrawal to the safer side of the river. If this can be accomplished with a fair measure of success,

....the enemy will....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the enemy will no doubt feel able to release seasoned field troops for the more dangerous areas further North while holding the Upper RHINE with static troops of lower category. Meanwhile we may expect to see the retreat marked by the skilful obstinacy characteristic of the Germans in such situations, with every Allied advance within the pocket stiffly contested and every threat to the COLMAR-BREISACH escape route fiercely counter-attacked.

North of STRASBOURG, in the HAGENAU area, the enemy has shown considerable sensitivity in face of our advance which holds the double threat of turning his whole position in the SAAR Valley and of forcing the KARLSRUHE gap. But, though sensitive, he has not proved strong enough to halt us. BISCHWILLER, NIEDERBRONN and REICHSOVEN have fallen and finally, after a week's hard fighting, the capture of HAGENAU has opened the last approaches to the Siegfried Line in this area. In the SAARBRÜCKEN sector the loss of SAARUNION led to a substantial advance which has brought us to a line from ROHRBACH to SARGEMÜND. Here, as at SARRALBURG and DILLINGEN, the enemy has made repeated attempts to drive us from our bridgeheads East of the SAAR river, but has nothing to show for his pains. Throughout the SAAR sector his casualties have continued high - so high, it appears, in the Panzer Lehr Division that it has been compelled to retire from the line to pull itself together after little more than one week's fighting. The need for reinforcements is, therefore, as pressing as ever. A temporary stopping has been provided by the arrival in the DILLINGEN area of 719 Inf Div last reported as moving from HOLLAND to GERMANY; and there are indications, still unconfirmed, that 212 Volksgrenadier Div is moving to the SAAR sector from TRIER. But unless these new-comers have more effect on the battle than would appear likely, further and even more difficult shuffling will be necessary in the near future.

The EIFEL sector has had another peaceful week while further North in the COLOGNE sector the rate of our advance has been slowed down - but by no means stopped - by increasingly bitter opposition as we close up to the ROER River. Our attacks in the HUERTGEN Forest area continue to threaten the enemy's flank, and wear down his strength. According to a reliable report the daily averages of a battalion's casualties in this sector during the second half of November amounted to 40 wounded, 7 dead and 35 PW. To make up wastage on this scale only one new arrival has been identified during the week - 2 Para Div from HOLLAND; but there are unconfirmed reports that the last of the Para Divs, the Fifth, and 2 S.S. Pz Div from 6 Pz Army are both on their way. Should these reports prove true, RUNDSTEDT's reserves will be reduced to two Inf Divs (331 and 85) and two Pz Divs (9 and 12 S.S., the latter less its Recce Unit), and it seems probable that he will be forced to continue yet further down the slippery slope of piecemeal reinforcement.

In the ARNHEM sector the area of flooding between the WAAL and the Lower RHINE has grown during the past week. Meanwhile 6 Para Div has been brought up from reserve and put into the line South East of ARNHEM. Whether the enemy's immediate intentions here are aggressive or purely defensive, is not yet clear, but certainly both flooding and reinforcement reflect his continued fear of an attempt to turn his right flank and encircle the RUHR from the North.

The problem facing the enemy has not changed, nor is it nearer to its solution. Though the rate of his casualties has dropped from 9,000 to 5,000 a day, it is still much higher than he can afford. And though he has been able to reduce the rate of our progress in the North, it is only at the expense of the Centre and South. To hold us at all points he needs heavy reinforcements, and at once; but since he has no pool of trained reserves, the only reinforcements immediately available are undertrained and underequipped; and among such troops casualties are necessarily high. It is, therefore, a vicious circle in which, so far as one can see, RUNDSTEDT will be compelled to turn until the last resources of German manpower have been drained.

....4. HUNGARY AND THE BALKANS.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

4. HUNGARY AND THE BALKANS

In Northern HUNGARY fierce fighting has taken place throughout the week in the MISKOLCZ sector. Little progress has been made, but the Russians consolidated their previous gains by advancing some 5 miles along the railway leading North from the city.

Events to the North of the Hungarian capital have taken a new and dramatic turn and threaten to outshine the victories reported elsewhere by Marshal TOLBUKHIN. Marshal MALINOVSKY in a drive from the direction of HATVAN reached and captured VACS on the DANUBE, and striking North is reported to have reached the Slovakian frontier on a 15 mile front beyond BALASSAGYARMAT H 78. BUDAPEST, now surrounded from North, South and East, is facing the final phase of its period of German domination. Russian spearheads were 8 miles away to the North on the 10th while to the Northeast our Allies have reached to within 10 miles of the city. Roumanian troops are reported to be in the fore - and no better incentive could be offered to them than the capture of the Hungarian capital.

The Russian breakthrough in Southern HUNGARY has been further exploited. By 8 Dec the whole of the Southern shore of Lake BALATON was reported clear of enemy and a further crossing of the DANUBE South of BUDAPEST had been effected. Advancing N.E. from BALATON our Allies linked up in the area of Lake VALENCEI and are now threatening the important communications centre of SZEKES-FEHERVAR. The capture of this latter town would open up for the Russians one of the best routes to VIENNA. There is evidence that the enemy has hastily strengthened this sector, and one report states that the HUNYADI Armd S.S. Div is being hastily organised in the VARPALOTA D 89 area. This Div is composed of young Hungarian evacuees from TRANSYLVANIA.

Meanwhile, the enemy on the DRAVA flank, has been given no respite. The Russian crossed the river Southeast of BARCS on the 9th and claim to hold a substantial bridgehead. BARCS is firmly in Russian hands and unconfirmed reports state that VIROVITICA F 69 and SLATINA F 88 have fallen to our Allies thereby still further increasing the quandary of Army Group E.

To the Southeast fierce fighting is taking place in the SREM, centred on the Russian bridgehead at VUKOVAR X 18. German communiqués claim they have virtually eliminated the Russian forces to the N.E. of the city but the Russians and Partisans are advancing N.W. along the railway on VINKOVCI X 18 which they claim to be threatening. The capture of VINKOVCI by our Allies would render the German positions in VUKOVAR, and indeed the whole pocket from OSIJEK down the DANUBE to SOTIN, untenable.

The withdrawal of the tired forces of Army Group E is indeed a fighting one. 21 Mtn Corps in MONTENEGRO, is suffering afflictions in the shape of Partisan pressure and inclement weather. SJENICA H 75 was evacuated by Army Group E and promptly occupied by the Partisans and Bulgars. The tail, composed of forces from 91 Corps, appears to still have some sting as the evacuation was carried out almost without hindrance from the Partisans. However, each strongpoint given up by this force increases the threat to the forces trapped in MONTENEGRO. It remains somewhat problematical if the drive initiated by 21 Mtn Corps up the LIM Valley and the relief column of 91 Corps pushing down the MOJKOVAC - MITESEVO road can effect a junction in time to rescue the former force. Whatever the fate of troops concerned, they are unlikely to get out all their heavy equipment and MT, much of which will have been blocked by the destruction of bridges over the swollen rivers. A gap of some 10 miles is stated to still to separate the two forces, between which lie the Partisans, subject to the fire of both.

....Lt.Gen MUELLER.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

Lt.Gen MUELLER, former G.O.C. CRETE, is reported to be commanding a Corps in the ZVORNIK area composed of 7 S.S. Prinz Eugen Mtn Div, 104 Jg Div and elements of another Div, presumably 11 G.A.F. Div.

5. At Appendix 'A' is a report on "Allied Air Attack on German Oil Resources.

BRIGADIER,
B.G.S.(I).

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

dated 12 Dec 44.

ALLIED AIR ATTACK ON GERMAN OIL RESOURCES

The overall German shortage of petroleum products is well known. In ITALY the enemy has been able to "get by" only by the strictest economy measures and the maximum use of rail facilities. A captured order from Headquarters 10 Army dated 27 August, 1944, directed a 60 per cent cut in fuel consumption and presumably a similar reduction applies to all other formations in ITALY. There have been many reports of various economy measures, a recent example being a Tac/R report on 10 Dec of a number of MT moving in groups of three, the lead vehicle towing the other two in each case; a similar practice has been reported in FRANCE.

The current enemy overall position is briefly set forth in the following extract from A.F.H.Q. Weekly Intelligence Summary of 20 November:

" The enemy European oil situation at the end of September may be summarised as follows (the 'normal output' (100%) represents production figures prior to the comprehensive Allied bombing of oil targets in enemy Europe which started in April):

	Metric Tons per Month	
Pre-raid normal output of finished products	1,344,000	(100%)
Estimated production in August	526,000	(39%)
September	314,000	(23.5%)
October	436,000	(32%)
November	616,000	(46.1%).

" Revised estimates of the output of principal refined products in October and November are summarised below:

	Per cent of Pre-raid Normal Output	
	October	November
Gasoline	31.5	50
Kerosine	18	25
Gas/Diesel oils	38.5	60
Fuel oils	38	41.5
Lube oils	24	32
	32.5%	46% "

The above figures speak for themselves, but what they imply in terms of Allied strategic air effort is perhaps not quite so well known. Thus the following unclassified report (extracted from MAAF Air Intelligence Weekly Summary of 4 December) by an R.A.F. Squadron Leader, recently broadcast by B.B.C., on how this reduction of German petroleum-products production has been accomplished is of interest:

" I want to say something tonight about the building by the Germans of an important oil industry in Europe and about our present campaign to destroy that industry again from the air.

" You'll remember that in the first year of the war many an optimistic article was written proving, with many a fact and figure, that Germany couldn't really be a serious menace because she simply didn't command the necessary oil to sustain a modern war. The facts and figures were all very impressive and nobody seemed to be able to contradict them. How then has Germany in fact been able to sustain five years of world war? Where has she found the oil to do it?

" She has done it in three ways. First, she has built about two dozen enormous synthetic oil plants. These plants turn a part of Germany's ample coal supplies into fuel oil and petrol. At the beginning of this year they were turning out enough

oil ...../

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

oil to meet about forty per cent of Germany's needs; but that wasn't enough; where did the other sixty per cent come from: It came from two sources: first from the conquered Roumanian oil fields, and second - and this is the thing which I don't think many people have realised - from several new oil fields which the Germans had discovered in their own territory.

" The fact is that just before the war the Germans had struck oil on a considerable scale in the Reich itself. Then they found impressive oil deposits in both Austria and in Hungary. When we re-discover Central Europe we shall find that it has become a considerable new oil producing area. That's a new fact in the economic geography of the world.

" These three sources of oil, the great synthetics, the Roumanian oil field and the newly discovered wells of Central Europe were between them giving the Nazis over a million-and-a-quarter tons of oil a month at the beginning of this year. That was probably just about enough for their needs. But it wasn't by any means ample; the Germans were still after more oil; for instance, the strategy of their 1942 campaign in Russia was probably distorted by the need to break through to the huge oil sources of the Caucasus. Without them the Nazis can never have felt really happy and secure about their oil position. All the same, an output of a million-and-a-quarter tons a month was a most remarkable achievement. It was the fuel basis for the Nazis drive for world empire.

" Why did we let all this happen? Why did we let the Nazis build their huge synthetic plants, sink their new oil wells and build their refineries? It's true that you can't effectively bomb oil wells themselves; but you can bomb the refineries without which the output of the wells themselves is useless. Why then didn't we switch our air attack on to oil four years ago, as many people were always saying that we should?

"The answer is perfectly simple; we tried to do so and found we couldn't. In 1940 and 1941 R.A.F. Bomber Command, which was then the only bombing force in the field, made experimental attacks on several of the big synthetic oil plants such as the two Gelsenkirchen plants in the Ruhr for instance. But we soon found that we had neither the forces nor the operational technique to do them serious harm. In those days small precise targets such as oil plants were difficult to find. When they were found they couldn't be hit hard enough to put them out of action for long enough to matter; it wasn't the lack of will but the lack of means, which stopped us bombing oil in 1941.

" In the years that followed, two major developments in air warfare took place. First and foremost the American day heavies, the Fortresses and Liberators, with their attendant long-distance fighters, appeared in the skies of Europe; and, second, R.A.F. Bomber Command acquired the new scientific instruments, and learned the operational technique, needed to attack precise targets at night. Both these things had to happen before the two bomber forces could go for oil.

" Even then we couldn't start out on oil straight away. All this time the Nazis were not idle either. When, two years ago, the Forts and Liberators first cast their shadows on German soil, the Nazi leaders saw the red light; they began building defensive fighters on an altogether new scale. The leaders of the American Air Forces weren't unaware of this; they saw that if the Germans were allowed to carry through their huge program for mass producing single-engine fighters - literally on a scale such as the world had never seen - it might never be possible to strike at the vitals of Germany by daylight. And so the first task of the Forts and Liberators, before they could go for oil or anything else, was to strike down the rising defensive power of the German Air Force itself. For nine grim months, from about July 1943 to March 1944, the 8th and 15th American Air Forces went for the German fighter assembly plants, and the American escort fighters fought huge battles over the Reich. At all costs they had to nip the menace of the Germans' vast new fighter program in the bud.

" That struggle culminated in a spell of exceptionally clear weather in the final week of last February. In that week the Americans bombed almost every one of the basic German fighter assembly plants. The work of that week, and of all the other attacks on their aircraft industry, didn't prevent the Germans from turning out fighters. On the contrary, by a remarkable effort of dispersion they have managed

to maintain ...../

THIS PAGE IS UNCLASSIFIED

0648

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

to maintain a very considerable output. But what those attacks did do was to decide the balance of air power. They were decisive in the sense that never again has there been any doubt that the American day heavies could penetrate into every part of Central Europe. Those attacks meant that for the past six months American air power has been decisively ahead of the German defense.

" No sooner was that issue decided than it became essential to choose the next objective for attack. Air superiority had been won; the great question was how to use it? It's been used in two ways. In the first place air superiority has made possible the invasion of Europe by our land and sea forces; second, and hardly less important, it has made possible, at last, a sustained and concerted attack on Germany's oil resources. In April of this year that attack began.

" The two great American air forces of day, precision bombers - the 8th and the 15th - have played the predominant part in the campaign against oil. In the case of the 15th, based in Italy, we now know exactly what they achieved, for when the Russian troops entered Ploesti and so captured the Roumanian refineries they found that the output of Roumanian oil had been reduced to under a quarter of what it had been four months before. Thus the magnificent work of the 15th had meant that the Germans suffered the crippling loss of the bulk of their Roumanian oil as early as April and May.

" The Eighth U.S. Air Force, from this country, has taken as its specialty the synthetic plants of Central Germany - such as Louna, Brux and Politz. Each of these plants is an industrial monster, several square miles in extent. Many hundreds of tons of bombs must strike such a monster, not once but again and again, before it's finally put out of action. And many hundreds of tons are striking them.

"But the Americans have been the first to recognise that Bomber Command of the R.A.F. has proved able to play surprisingly large part in the attack on oil. In the early months of this year, Bomber Command proved that they had developed a new capacity to hit precise targets such as oil plants at night. Bomber Command can now find them with their instruments, light them with their flares, mark them with their target indicators, and hit them with their bombs. The most important synthetic oil plants of the Ruhr, were first put out of action in a series of successful night precision attacks during the early months of this summer. But with the advance of our Armies a new development has occurred. We can now give fighter cover to Bomber Command over the Ruhr, and in recent weeks the Ruhr plants have been attacked by R.A.F. Lancasters and Halifaxes in the middle of the day. Such day precision bombing of German targets is an entirely new development for Bomber Command, and it is a remarkable tribute to the versatility of the crews that they have been able to make a success of it.

"What have been the results of going for oil this summer? First a word of warning. We must not imagine that a particular day will dawn on which every German tank and lorry and car will stop dead in its tracks because its petrol tank has run dry, and every German aircraft will fall out of the sky! In real life things don't happen like that. I repeat that one of the greatest errors that we can make is to look at any one attack which we are making on the enemy by itself, because no one attack will win this war. What will win it is the air attack on oil, plus the ground attack on the German armies, plus the bombing of the German cities, plus the naval blockade, plus every other form of attack which all the Allies are making on the enemy. But having said that we can already state some very positive and definite results from our attack on oil.

"Last month the enemy managed to produce only a small proportion of the oil fuel which he produced in March, before our attacks began. I musn't tell you how small that proportion was: but I can assure you that it was so small that it will cripple the enemy's whole war effort, if only his oil output can be kept down for a few months more. Already, hardly a drop of oil is being used in German war industry. Every industrial lorry and truck runs on one of those clumsy producer gas gadgets, with all the loss of efficiency which that entails. But we also know from captured documents that actual German military operations at the fronts, both on the ground and in the air, are already being gravely handicapped for lack of oil.

.... "Unquestionably, if...../

THIS PAGE IS UNCLASSIFIED

0649

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

"Unquestionably, if only we can prevent the recovery of his oil industry, there will come a point when the work of the German Panzer Divisions and the German Air Fleets will be so crippled for lack of fuel that they won't be able to withstand the pressure of the Allied Forces. I say "if we can prevent a recovery", because you musn't for a moment suppose that the German oil production which we had destroyed by last month will stay destroyed, if we leave it alone. On the contrary, the Nazis are making the most extreme efforts to repair and rebuild their plants. They have now gone to the lengths of building permanent "repair camps" alongside the major synthetic oil plants, so that each time they are bombed the repair squads can rush into the plants almost before the smoke has cleared. Therefore the job ahead of the Allied Air Forces, the job of keeping down the Nazi oil industry, will be almost as big and difficult as the job of crippling that industry, the job they have done this summer. The struggle goes on! Much has still to be done, but more and more in the air, as on the ground, the balance tilts our way.

"After the war, the 1944 attack on German oil supplies will be studied as the first major air attack, with adequate resources, upon the economic vitals of an enemy power."

-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The defence of the HEIDEMARIE Line, based on the LAMONE, has now called in three fresh divisions from elsewhere. Last week 90 P.G. Division, under its new commander Graf von SCHWERIN, was unable to do more than arrest our advance West of FAENZA and this week it has been joined by 98 Inf Div from the SILLARO Valley and by 29 P.G. Div from reserve. In spite of this the enemy has been cleared from the line of the lower LAMONE and out of FAENZA and for all his reluctance to lose ground except under pressure he can scarcely stay much longer on the small strip of the river which he still holds North of FAENZA. In the meantime he has no reserve at all for the rest of the front apart from 26 Pz Div, which may now be available in that role, albeit severely reduced in infantry strength.

After successfully crossing the LAMONE in the area between the 42 and the 37 Northings on the night of 10/11 Dec, we were able to advance across the FOSSO VECCHIO to the NAVIGLIO canal taking some 250 PW from 114 and 356 Divs and successfully resisting a counter-attack by 190 Recce Unit which was rushed up with some Tigers in support as the only immediate available reinforcement. However on the night of 12/13 Dec 98 Div started to move off from the area of CASTEL SAN PIETRO, where it was holding a narrow front in the SILLARO Valley, and by 13 Dec both bns of 289 G.R. and II Bn 117 G.R. were already in action against a bridgehead over the NAVIGLIO which we had forced that night. At the time of the crossing we were opposed only by the "M.G. Bn Field Marshal Kesselring", not quite such a picked unit as it appears from the title, but of high morale. Subsequently the third regiment of 98 Div was identified and it appears that all six infantry bns and the recce bn are in the line. In the meantime we had resumed the attack South of route 9. Heavy fighting continued on the night of 14 Dec and all day 15 Dec, especially around the village of CELLE, M 2724, but by the night of 15 Dec the enemy had pulled back to the line of route 9 after 90 P.G. Div had lost some 220 PW out of a total of 450 for the whole of 8 Army front. By the morning of 16 Dec FAENZA had been evacuated, though 26 Pz Div still had 9 P.G.R. in the area in a very weak state, and 305 Div was back behind the SENIO.

By now the situation West of FAENZA was causing the enemy even more alarm than the northern bridgehead over the NAVIGLIO. 90 P.G. Div, rather shaken by its losses, was on a wide front in a peculiar salient, facing S.W. 305 Div on its right had the SENIO to protect it but was very weak and exhausted and 26 Pz Div on its left, though still fairly strong in tanks as German armoured divisions go, was so reduced in infantry that 9 P.G.R. could scarcely muster 100 men. It was necessary to bring up the last

....available reserves....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

available reserve: 29 P.G. Div. On the night of 16 Dec 71 G.R. was coming in on the SENIO in the neighbourhood of the route 9 crossing, and by next day 15 G.R. was disposed along the line of the railway down almost as far as FAENZA. 992 G.R. had come in in the area of FAENZA itself, facing South, and 26 Pz Div had broken contact and passed across the SENIO to an unknown destination. 90 P.G. was also back across the river but it is presumably still manning the banks South of route 9; indeed a prisoner was taken from III Bn 361 G.R. at M 2325 on 18 Dec. The relief of 26 Pz Div by 29 P.G. was forecast by an intelligent prisoner from the latter some time ago, but it can safely be asserted that when 10 Army contemplated that relief they envisaged a later date and different circumstances. 71 G.R. had been out of the line since about 28 Nov but 15 G.R. was only relieved about 5 Dec, which does not allow it much rest. Indeed it appears that the decision to commit 98 Div has also involved a change of plan, for prisoners state that they had been reconnoitring billeting areas for it near BOLOGNA. 26 Pz Div is now therefore the only reserve, inadequate at least as regards its infantry, and the enemy may well be considering from where some further reserve can be drawn.

West of the SENIO there has been little activity. 334 Div lived up to its reputation for aggressiveness in the spirited action which led to the recapture of TOSSIGNANO and a special mention for I Bn 755 in the Wehrmacht communiqué. To its North the former sector of 98 Div, a very narrow one, has apparently been taken over by 1 Para Div and II Bn 4 Para Regt had moved its H.Q. to FORNACE, M 027290, by 14 Dec. Most of 1 Para Div is now probably in the line and on 13 Dec they tried another unsuccessful attack on M. CERERE. Moving still further West various identifications have shown that 65 Div retains its sector and apparently elements of all three regiments are forward. On the extreme West we have had our first deserter from ITALIA division, an engineer who says that his bn, together with the recce bn and some artillery, have arrived at AULLA, P 7821. Presumably these units are to represent the division, under command of Monte Rosa, just as a selection from the troops of San Marco div have also been brought forward to gain a little battle experience before passing on to diversify our PW cages.

There have been some changes in command. A captured document shows that 14 Pz Corps now controls the area formerly under command 51 Mtn Corps, i.e. between 76 Corps and 1 Para Corps. Presumably 51 Mountain Corps has moved to the coastal sector in a straight exchange, and the area is certainly sufficiently mountainous to provide a spurious excuse for substituting a more experienced and efficient Corps H.Q. at the point of greater importance. From other documents it appears that Gen LEMELSEN is at present commanding 10 Army. This may be a temporary arrangement while VIETINGHOFF is commanding the Army Group in Kesselring's absence. Gen BADE, G.O.C. 90 P.G. Div, has left for GERMANY where he is to be Inspector General of the Volkssturm and has been succeeded by Lt.Gen Graf von SCHWERIN, descendant of the victor of HOHENFRIEDBERG, and one of the earliest members of the Afrika Corps, but a failure as commander of 116 Pz Div in the West.

162 Division is reported to be moving away from the PIACENZA area in the direction of CREMONA. Another report, from a usually very reliable source, states that the division's anti-Partisan operation in the hills South of PIACENZA is considered as completed and it is to return to "the RAVENNA front". It is not very likely that 162 Div would be put in on an active front, particularly after the drastic purge of last month which removed so many of its German personnel, but it might be considered suitable for coastwatching North of the VALLI di COMMACCHIO and perhaps for the defence of the PORTO GARIBALDI isthmus. The Partisans South of PIACENZA though they have suffered losses and been driven from many positions can scarcely be said to have been mopped up by 162 Div's feeble operation but with ITALIA division arriving in the area the enemy may prefer to spare German blood by encouraging the fratricidal strife which is all the Republican divisions are suited for. A further problem on order of battle in the enemy's rear

....has been posed....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

has been posed by pay-books of the Kesselring M.G. Bn which showed a recent alteration to 1227 Field Training Grenadier Regt of 155 Field Training division. This is the first we have heard either of the Regt or the div, and both appear to be newly created. It is clear that ITALY would be a very suitable place for a new Field Training division, as being one of the few bits of occupied territory still left to the Germans, and C in C S.W. may have demanded something to take the place of 44 and 71 Divs and have been glad to get a division of this type, even if he has to supply some of the cadres from his own resources. At any rate from the fact that the paybook entry had been altered after the troops had already been in ITALY for some time and that the new entry is apparently still valid we can at least deduce that 1227 Field Training Regt is in ITALY; we may perhaps derive some support for the presence of the division from the frequent reports of a 159 Div in N.E. ITALY, which was shown last week to be false as to the number. It is unlikely however, that such a formation, if it exists, can make any important contribution to the enemy's fighting strength in the near future.

2. ENEMY SUPPLIES AND COMMUNICATIONS

GENERAL

Very bad weather has hampered our air offensive against the North Italian railways during the past week and lack of PR makes any detailed assessment of the enemy communications situation very difficult. It is, however, probable that he has had little difficulty in maintaining an adequate flow of supplies into ITALY from the REICH.

BRENNER

The BRENNER line is believed to have been open during the early part of the week, but fighter bombers claim to have cut the tracks in several places between S. AMBROGIO and TRENTO on 15 and 16 December and to have blocked the TRENTO marshalling yards on the 17th; it is therefore probable that no through rail traffic was possible South of TRENTO on these three days. On 15 December heavy bombers attacked INNSBRUCK on the German side of the BRENNER Pass and cut all through lines. However, it is probable that at least one track could be re-laid within 24 hours and the whole line is now believed to be open. North of TRENTO the by-pass line between ORA (A 914550) and S. MICHELE (A 780376), which has been under construction since October, was shown by PR on the 10th December to be complete.

There have been several reports recently that the enemy is using the FORTEZZA (W 1900) - DOBBIACO (B 6595) - BELLUNO (B 6229) line which forms a convenient alternative to the Southern portion of the BRENNER route. This route includes a stretch of narrow gauge line between DOBBIACO and PIEVE di CADORE which will only carry 450 tons a day and necessitates re-loading twice; however, the enemy may prefer this delay to making long MT hauls down the BRENNER road. The Lake GARDA shipping makes a good alternative to the most vulnerable 70 Kms of the BRENNER line between ROVERETO and VERONA, and a ground source report dated 10 December states that craft carrying supplies sail regularly from RIVA (A 5505) to PESCHIERA and DESENZANO.

NORTH EAST ITALY

Throughout the past week through rail traffic is believed to have been possible from TARVISIO at least as far as the river BRENTA and probably as far as PADUA and VICENZA. 160 truckloads of ammunition and 32 tanks are reported to have passed through TREVISO in a Westerly direction during the first nine days of December.

PLAIN OF LOMBARDY

In the Plain of LOMBARDY, whilst all the bridges over the river PO remain impassable East of PIACENZA, the main approaches to the river from the North and North East are probably open. VERONA station and marshalling yards have been

....quite active.....

THIS PAGE IS UNCLASSIFIED

0653

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

quite active and ground sources reported considerable movement of fuel and ammunition trains from VERONA to OSTIGLIA and MANTUA during the past week. The two bridges at MANTUA and the bridge at CALCINATO are still believed to be impassable; thus through traffic between North West ITALY and the railways to the REICH, except those through SWITZERLAND, is probably impossible. South of the river PO fighter-bombers have been very active during the past week and it is doubtful whether any large scale rail movement has taken place. It is probable however that the enemy will have concentrated on keeping at least one line open between the river crossings and the front, and traffic has been reported running into MODENA from the North during the night.

NORTH WEST ITALY

In North West ITALY the situation remains unchanged. Through traffic is still believed possible from TURIN to MILAN and GENOA whilst to the East the lines are open from MILAN via BERGAMO as far as CALCINATO, to PIACENZA, and probably to MANTUA via TREVIGLIO and CREMONA. On 13 December PR showed activity on the MILAN - BERGAMO and MILAN - TREVIGLIO lines, and on 14 December two train lengths of loaded flats were seen at ROVATO station. Ground sources report heavy traffic between TURIN and MILAN and on lines running East and Southeast from MILAN. Trains going East are probably loaded mainly with industrial material and other loot being evacuated to GERMANY, and those going Southeast with supplies from the large number of dumps concentrated between MILAN and Lake COMO, but at least two reports have recently been received of troop movements over these lines. These are probably connected with the move of 157 Mountain Division from North West to North East ITALY.

On the Ligurian coast the GENOA-SPEZIA line is still completely impassable, but the line has been open West of GENOA and two or three trains a day are reported to be running as far as IMPERIA.

SHIPPING

On the Ligurian coast at least two MT-ships as well as coasters and F-boats continue to ply between GENOA and SPEZIA, while SESTRI LEVANTE and other small ports East of GENOA continue to show a turnover of supply barges and F-boats. At SAVONA and IMPERIA, however, no activity has been noted during the past week and it is probable that shipping going Southwards from GENOA is now reduced to an insignificant trickle if not stopped altogether.

On the Adriatic, reports have been received that ammunition is being shipped from VENICE to CHIOGGIA. PR showed 30 barges at the latter port on 10 December and from earlier cover it is clear that the canal system leading South from here is in use for this traffic.

Coastal traffic between VENICE and TRIESTE and other Northern Adriatic ports has been normal, and there has been some revival of activity at POLA. A small amount of ship-building still continues on this coast as is indicated by the launching of a supply barge at PORTO MARGHERA and two F-boats at MONFALCONE during the past week.

EVACUATION OF MATERIAL

Reports from all parts of North ITALY indicate that the enemy continues to evacuate as much industrial material and food as possible to GERMANY. There have been several reports recently of rail lines and copper wire being removed from the TURIN - GENOA - CUNEO area and trains loaded with sheet-iron, ingots, scrap and industrial material are stated to be arriving at MILAN from TURIN. 20 train-loads of food supplies are stated to have left the UDINE area for GERMANY during the first week of December and trains going North East from TREVISO between 1 and 9 December were reported to be loaded with cattle, metal, wheat, sugar and MT.

.....3. WESTERN FRONT.....

THIS PAGE IS UNCLASSIFIED

0654

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. WESTERN FRONT

To the accompaniment of a barrage of guns and words, von RUNDSTEDT on 17 Dec launched a major counter-offensive on the Western Front. Supported by the strongest G.A.F. effort since D Day, the assault was launched on a 55 mile front between MALMEDY and TRIER. At least fifteen German divisions are at present involved in the attack and there are reports that more formations are waiting ready to take part in the battle, and may by now be involved. The spearhead of the attack was initially formed by 116 Pz Div brought down from the AACHEN sector and 2 Pz Div which had been missing from the line for some time. Since then three armoured divisions of 6 Pz Army including the battered Pz Lehr Div have been committed. Two further Pz Divs of 6 Pz Army still remain to be committed, and there are reports that at least two armoured divisions of 5 Pz Army are on their way to the battle area. Supporting the armour is the strong and reformed 5 Para Div plus nine infantry or Volksgrenadier divisions including two completely new formations formed in the REICH which have been identified for the first time since the attack started. The attack was preceded on the night of 16/17 Dec by the dropping of small parties of sabotage parachutists behind our lines, some of whom have now been liquidated, while most of the remainder have established contact with the German ground forces. Official reports so far available indicate that the enemy with an appreciable local superiority in men and material has succeeded in making penetrations of up to seven miles on a 25 mile front, while there are unconfirmed reports that the Germans have reached the Belgian town of ST.VELOT, 5 miles S.W. of MALMEDY, an advance of about 15 miles. It is clear from captured documents that this attack represents the beginning of an all out enemy effort, and that it has been planned by the enemy for some time. It is probable that when RUNDSTEDT saw that he could hold the Allied November attack without committing the Sixth Pz Army, his strategic reserve, he took the decision to launch a counter-offensive as soon as the Allied assault began to lose its momentum. The withdrawal of the bulk of the German armour from the line (except in the SAAR-KARLSRUHE sector) which has been taking place over the past fortnight was an indication that the offensive would not long be delayed. Whether the German main effort is to be concentrated in the present sector or whether this is a large diversionary attack is not yet clear. RUNDSTEDT may hope to achieve a major breakthrough into BELGIUM: in any case he will expect to draw Allied forces away from the AACHEN and SAAR sectors, and then launch subsidiary attacks to clear the Allies from these areas of GERMANY. The key to the situation is the commitment of 6 Pz Army. The fact that it has now been committed in the MALMEDY - TRIER sector is a good indication that this is the main sector of the battle.

On the remainder of the Western Front, there have been few startling developments. In ALSACE the enemy still resists strongly in the areas of MULHOUSE and SELESTAT. 19 Army has in fact been showing some aggressiveness in the Southern part of the ALSACE pocket and limited enemy infiltration into MULHOUSE itself is reported. A captured order of 708 Volksgrenadier division, one of 19 Army's formations, dated 20 November is of interest. It draws attention to the unduly high percentage of personnel reported in casualty returns as missing in action. The order lays down that a special report is to be submitted by Bn or Company Commanders whenever the proportion of missing is greater than 25% of battle casualties, the intention being to institute Courts Martial for desertion.

North of STRASBOURG the First German Army has been falling back under pressure to the German frontier, and at one point near WISSEMBOURG we have crossed into GERMANY and captured six villages. German opposition has been at its stiffest around BITCHE which has been entered by Allied patrols who later withdrew. Further West however, resistance to our advance into the SAAR Valley has to some extent lessened and better progress has been made.

In the AACHEN sector the withdrawal of the German armour from the line has led to some decrease in German resistance. The retirement to the ROER river has continued in this past week and we have closed up to

.....the ROER.....

THIS PAGE IS UNCLASSIFIED

0655

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the ROER South of DUREN against fairly light resistance. North of AACHEN the British Army Group front has remained very quiet all week. The floods in the ARNHEM sector have to some extent receded, but there is no indication of any change in the present enemy policy of holding firmly to his extended front in HOLLAND. There, as along the whole of the Western Front, eyes are centred on the EIFEL sector where in the coming week we may expect to see the shape of the present German strategy. It will certainly be a week of decisive importance. RUNDSTEDT is not playing for small stakes. Victory or death is what he promises his men. He does not exaggerate.

4. BALKAN FRONT

During the past week the most active sectors on the Hungarian front have again been to the North of MISKOLCZ and of BUDAPEST. The BALATON - DRAVA front appears to have been stabilized except for the area South of BARCS, where a Russian crossing of the DRAVA has met with some success.

The MISKOLCZ offensive, aimed primarily up the valleys of the SAJO and HERNAD rivers, met considerable opposition, especially along the railways. The Russian advance retained its impetus and the capture of BOLDVA J 9191 and SAJO SZT PETER to the West enabled Soviet forces to fan out on a wider front. To the East, along the BODROG river, good progress was made. Latest reports show that the Russians have reached and in places crossed the pre-MUNICH Czechoslovakian frontier on a 70 mile front, bringing them to within 10 miles of KOSICE (KASSA). This frontier lies in this area about 15-20 miles South of the German made 1938 frontier. The enemy is likely to defend KOSICE bitterly; not only is it the key to communications over the entire area but also a rich industrial centre with a modern, fully equipped airport adjoining its Southern suburbs.

In the battle for BUDAPEST, the Russians, while keeping up frontal pressure, are attempting to outflank the city from the North and South. Slight progress was, however, made to the N.E. where, after fierce fighting, the enemy were cleared out of FOT and MOGYOROD. Some Russian armour is reported to have reached UJPEST but here the enemy is holding firm and it is thought that the Russian effort was a reconnaissance in force rather than an all-out attempt to capture the suburb. Due North of BUDAPEST Soviet troops penetrated some miles into Czechoslovakian territory to capture SLAHY, while progress was made to the West at the DANUBE bend North of VACS. Our allies have maintained silence about progress towards SZEKES-FEHERVAR between the Lakes BALATON and VELENCEI, an example the enemy has also followed. It is known, however, that the threat of a left hook at BUDAPEST caused some regrouping of the enemy forces and considerable forces including armour are facing each other in this vital sector.

The enemy has succeeded in stabilising the front between BALATON and the DRAVA along a line running South from incl KERASZTUR, through MIKE A 74 to West of BARCS. A more economical line for 2 Pz Army would appear to run from BALATON some 15 to 20 Kms East of NAGYKANIZSA and thence down to the DRAVA. However, events in the South have no doubt dictated the choice of ground to Gen ANGELIS.

In JUGOSLAVIA Army Group E's painful withdrawal from SERBIA and BOSNIA has been further endangered by the Russian bridgehead extending from BARCS to MOSLAVINA across the DRAVA. If, as appears probable, the Red Army extends its drive to BROD, it will force Gen LÖHR's Army Group (E) to fight its way out to the N.W. through Central BOSNIA, a country strongly held by the Partisans and now in the grip of winter. The whole withdrawal movement hinges on the speed of 21 Mtn Corps' extrication from its precarious situation in MONTENEGRO. Only slight progress has been made by this Corps during the past week. Splitting forces at MATESEVO, the column taking the Northern route is stated to have reached KOLASIN (a mile or two further North), while progress along the Eastern loop was held up just short of ANDRIJEVICA. One column from 22 Inf Div, pushing down from BIJELO POLJE has arrived at

....BERANE where fighting.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

BERANE where fighting is taking place; the other, the main relief column, using the more direct MOJKOVAC road, is held up just South of that town. The speed of this withdrawal is, it appears, dependent on the amount of bridging equipment at the disposal of the enemy. Partisan activity, inclement weather and R.A.F. strafing have all taken toll of the tired enemy whose losses are believed to be considerable. The Partisans are following up the enemy withdrawal and causing considerable rearguards to become involved in costly fighting. SPUZ M 97 and TUZI N 05 have been evacuated by the enemy and an unconfirmed report says that TITO's forces have entered PODGORICA. In the meantime the eventual escape corridor of 21 Corps is being whittled down to a long narrow salient. UZICE C 61 and LJUBOVIJA C 35 are now in Partisan hands and ZVORNIK is stated to be under Partisan attacks. The only Northward routes available therefore are that to SARAJEVO via VISEGRAD, or failing that via GORAZDE B 90. Both roads are flanked by strong Partisan forces and each has a number of river crossings, which may at this stage present greater difficulties than the Partisans.

In DALMATIA the Partisans have scored further successes following the fall of KNIN. SUCEVICI P 62, GRACAC P 42 and the road through MEDAK to exclusive GOSPIC have been captured and Partisan sources report the fall of SRB P 63 as imminent. 15 Mtn Corps, responsible for this sector, has to cope with extended supply lines running back to the ZAGREB-BROD railway, a task seemingly beyond its capabilities and manpower, and it is reported that 188 Res Mtn Div with commitments astride the neck of the Istrian peninsula has been called upon to aid the depleted forces at the disposal of the Corps. The despatch of two Bns of 138 Res Mtn Regt from FIUME to SENJ J 70 will enable a like force of 392 Legion Div ex SENJ to be switched against the Partisans to the Southeast. However, even with 188 Res Mtn Div extending its sphere of responsibility as far South as SENJ, the forces of 15 Mtn Corps would still appear inadequate, as reports continue to arrive of Cossacks moving out of the Corps area from the SISAK-ZAGREB sector to the North.

THIS PAGE IS DECLASSIFIED IAW EO 13526

DIARY-JOURNAL OF A GERMAN TANKMAN

It is not known whether HANS HAUCK, tankman of the 11th Panzer Division, is a soldier by nature or developed into one out of necessity; but in his diary-journal covering the 7½ years of his army life there is no spirit of rebellion, no references to what else he might have been doing. He is a member of the German Army, a private, a corporal, and then a serjeant. He is a tankman and his horizon is bounded by what he sees or can hit from his tank. Tank warfare is a professional speciality which he is proud to master.

In this diary, as remarkable for what it doesn't say as for what it does, is reflected neither a HITLER fanatic nor a HITLER critic; the author stands rather as a matter-of-fact, unsentimental, hard-fighting German, out to do his duty whatever that may cost him. In the short description of 7½ years of Army life, years fraught with combat, hardships and dangers, there is not one word of complaint or a single expression of weariness.

The diary begins with mention of his labour service which HAUCK passed through from April to October, 1937. "Then right into the Army. After a tough training period the first experience, entrance into the SUDETANLAND. Christmas 38 I was made a Corporal and on 30 September 39 our service time was up. But by that time the war had started."

In June 1940 HAUCK "finally" was sent to FRANCE where he saw but little action. His unit returned to GERMANY and HAUCK was promoted to Sergeant and made an instructor of weapons.

In January 1943 HAUCK was transferred to the 3rd Company of the 15th Panzer Regiment and after training in FRANCE with the newest German tank, the Panther, and a talk to the men by GUDERIAN, HAUCK's battalion, "GERMANY's first Panther battalion", makes a blitz move to RUSSIA. "On 5 July 43 the battle at and around BJELGOROD. We are in support of the division GROSSDEUTSCHLAND... I experienced the first Russian bombing attack. The bombs are not particularly well aimed. They fall 200 metres away. Artillery firing at us falls a few hundred metres short. Also for the first time I experience the fire of the so-called Russian "STALINORGEL" -- It is similar to our WERFER. We receive reports that our first wave has destroyed 3 American tanks (Type Pilot) out of a total of 5. " The next day HAUCK's tank was put out of action by a direct artillery hit but he was unhurt. "Even the oldest tankfox said that the days at BJELGOROD were not easy. We lost many good comrades. We gained ground slowly, but lost tank after tank. Therefore we started to retreat after 4 weeks. "

Twice during action on some 10 Russian battlefields HAUCK's unit was trapped by the Russians for 3 days but managed each time to escape. During the time HAUCK destroyed 2 enemy tanks when his semi-disabled vehicle was attacked by 10 of the enemy, received the Iron Cross, did not abandon his tank when it got stuck in No-Man's Land but stayed with it for a whole night until he was pulled out.

"In January 44 -- I had just received the silver tank medal -- I get into a tank, and right away we are trapped by the Russians again. 3 days without food, ammunition or gas. In one day I finished off 3 tanks, my highest score so far. Finally we succeed in breaking through, my tank has to be hauled ..."

During a furlough taken at this time HAUCK records nothing except that fact although he takes note of almost everything he sees and experiences on the field of battle. He refinds his unit as his battalion CO was leading it out of the Russian lines, and notes in his diary that "on the day when the troops were free again, Major v. L. found the hero's death as a result of a direct bombing hit. "

During ..../

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

During the middle of June 1944 his Division, the 11th Panzer Division, is moved to FRANCE, and the diarist recorded "a wonderful trip through the Balkans ... GERMANY... FRANCE to BORDEAUX." When the Americans landed in South of FRANCE his division, which had been stationed in the TOULOUSE - CARCASSONE area, was shipped to NIMES, but HAUCK had to go by road through villages occupied by "terrorists" and crossed the Rhone by ferry in the fire of American planes. But though his tank was damaged and had to be blown up for lack of spare parts the emotional balance of Sgt HAUCK appeared unaffected. "The next day terrific artillery and mortar fire begins behind MONTPELLIER... Broken vehicles and dead everywhere. Our vehicles were sent singly through the fire. Those who were lucky got through. We were lucky."

At BELFORT, HAUCK is delighted to hear people say that his division, the Ghost Division, has destroyed 3 American divisions and has enabled a whole army to withdraw to the Reich. "In an American order of the day it says that the 11 Pz Div is an Elite Div which will fight very hard."

Concerning the German Army in the South of FRANCE Sgt HAUCK then records, "The Southern Army has not covered itself with glory. They had become soft in FRANCE...These airforce and marine soldiers only wanted to live well and to go home when the first shots were fired..."

Concerning American tanks (mostly Shermans) he writes that they fear the Panther and evade it. Otherwise, the Sherman is a snappy car with rubber treads, a so-called road tank of 28 tons and a rather quiet engine. But he shows great respect for American guns.

On 10 October 1944 HAUCK, who has been in reserve near SAARBURG for lack of tanks "finally...can get into a Panther again". The next day he is in action, defending a village the Americans are trying to take. The fire he encounters is so heavy that he cannot get out of his vehicle. "This morning I occupied a new position. Lt S. was killed by a shot in his head. Today we have also received a good deal of lead. The Americans have sent thousands of shells into the village, not a single house is intact."

The last entry was made on 13 October, when HAUCK says, "Yesterday we had another interesting day and an exciting night. During the night our artillery and mortars did quite a bit of shooting too, so the Americans asked for a truce to take care of the dead and wounded. This truce was of some advantage for us also because we could get out of the tank. The crew had already assumed submarine habits, heavy beards, not washed for days, we looked like escaped convicts, dirty, torn, but we stand. The Americans have not gained an inch of ground during the last days despite their material superiority."

1. ENEMY SITUATION

Generally the enemy on the Adriatic is now back on the IRMGARD line (the SENIO river), though North of FAENZA 278 Div and 356 Div are still forward of the river and are at present holding the NAVIGLIO Canal between the 30 and 35 Northings. Both divisions only withdrew under strong pressure from the banks of the LAMONE and have been very reluctant to give up any ground in their bridgehead across the SENIO. Further North 98 Div held firm North and South of BAGNACAVALLO till the 21 Dec, but then following a day's heavy fighting withdrew overnight behind the SENIO and gave up the town. The decision seems to have been taken suddenly in contradiction to previous orders to hold on to the positions as long as possible. As a result the withdrawal was not as skilfully carried out as normally and several interesting documents fell into our hands. One of these identified a new Corps H.Q. - 73 Inf Corps - which was shown to be at CHIESA NUOVA M 2050, and apparently commands the Eastern flank of 10 Army with 114 Jaeger, 98 Inf and 356 Inf Divs under its command. In 76 Pz Corps, to the West of 73 Corps, apart from the fighting in which 278 Div has been involved, there has been only patrol activity along the banks of the SENIO and in the SANTERNO Valley. Some regrouping has however been carried out. 26 Pz Div, taking with it the remnants of 20 G.A.F. Div, has vanished from the front and is now carried in reserve - unlocated but probably in the rest and refit area North and N.E. of BOLOGNA previously visited by 29 P.G. and 90 P.G. Divs. On the SENIO 90 P.G. Div has gradually extended its front South West, by switching 200 P.G.R. from its left to its right wing, and now appears to have taken over the whole of the sector originally held by 305 Inf Div. 29 P.G. and 90 P.G. Divs now hold a front along the SENIO about 13 - 14 Kms long with the CASTEL BOLOGNESE apparently inclusive to 29 P.G. Div. The only clue as to the whereabouts of 305 Inf Div was brought in on Christmas Day by a deserter who said that he left his Regt (578 G.R.) in IMOLA on the 22nd, and that it had just received orders to move to the BOLOGNA area. 305 Inf Div has therefore presumably joined 26 Pz Div in central reserve and is likewise resting and refitting.

Regrouping has not been confined to the Adriatic sector. South of BOLOGNA it is now certain that 16 S.S. Div has been withdrawn into reserve. An agents' report of 20 Dec stated that it had arrived in the PARMA area and since then prisoners have been taken from 10 Para Regt (4 Para Div) on the 83 Easting, who said that they had relieved S.S. troops. 10 Para Regt was previously out of the line resting and it looks as if with its return, almost certainly up to strength, 4 Para Div has extended its front West to include a large part if not all of 16 S.S. Div's sector. An agent's report that an Italian battalion - the LUPO Bn. - is also in the area is at present unconfirmed.

The decision to withdraw 16 S.S. Div from the line when two other divisions (26 Pz and 305 Inf Divs) were already moving into reserve, is difficult to explain: either 26 Pz or 305 Divs were so weak that the enemy did not feel that they could be regarded as immediate reserve, or

....else, encouraged.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

else, encouraged by the preliminary success of the offensive in the West, the enemy decided to try his luck with an attack here in ITALY as well. It may be that HITLER has decided that the moment has arrived to make the supreme effort and by inflicting defeats on the Anglo-American Armies both in the West and in ITALY hopes to sow discord between the Western Powers and RUSSIA. If he decides to attack in ITALY the most likely part of the front is undoubtedly the Western Appennines, where he probably appreciates that the line is only thinly held by the Allies and where a quick success might enable him to seize the port of LEGHORN and also turn the whole of the Fifth Army's positions in the Mountains North of FLORENCE. It is undoubtedly significant therefore that 157 Mountain Div which started to leave N.W. ITALY in mid-November and which was apparently moving into N.E. ITALY (elements of a Mountain Div were reported arriving in the UDINE Plain in the first fortnight of December), was stated by a normally reliable source to have been ordered on 15 Dec to move to the SPEZIA area. Since then troops of the division have been seen moving South through PIACENZA, while concentrations of German mountain troops were also reported on 24 Dec at SARZANA R 7710 and also PONTREMOLI. Assuming that most of the division moved down from N.E. ITALY while the tail of it was diverted Southwards in MILAN, the division could by now be very nearly complete in its concentration area. Another division may also be moving South into the Western Appennines - the ITALIA Div - which has been concentrating in the PARMA area and S.W. of the town astride Route 62. Two battalions (the Recce and the Eng Bn) have been reported by deserters and by agents to be already in the SPEZIA area, while several reports have been received that the division is to move into the line. Heavy traffic was reported South through the CISA Pass between 17 - 21 Dec, connected, one source states, with the move of the ITALIA Div. On two occasions the morale of the division has been described as high (unusual for Republican formations) and one interesting report states that the division is not to be used in a defensive role but for counter-attack and that each infantry regt will be attached to a German Div.

The arrival of two more divisions in the SPEZIA area would be out of all proportion to the defensive requirements of the sector. If the statement about the role of ITALIA is accurate, relief of MONTE ROSA is not envisaged. And there seems little reason why 148 Div (which has been engaged in nothing more strenuous than patrol clashes) should be relieved, especially by a division which was in process of moving to N.E. ITALY at the time. The decision to send 157 Mtn Div down to the SPEZIA area clearly indicates a change of plan on the part of the Higher Command and the fact that it happened in the middle of December just when the attack was going in on the Western Front may or may not be a coincidence.

From several civilians who have crossed the lines come reports that the enemy is planning a counter-offensive on the West coast. According to two sources the Germans are feverishly rebuilding the bridges which they had previously blown on a stretch of the road North of CASTELNUOVO L 1209: this is confirmed by photographs. PR also showed a new bivouac area with fresh tracks and dumps some 12 Kms N.E. of SPEZIA on 25 December. Otherwise there are no visible signs of a build up for an offensive and there appears to have been no great increase yet in the gun strength, though artillery fire has been heavier than for some time. The evidence for a German offensive is based therefore largely on various agents and Partisan reports of considerable increase in the numbers of troops in the area.

Early on the morning of the 26th an attack was launched against our positions in the SERCHIO Valley. Some 4 or 5 German battalions have been reported engaged, together with some Italian troops. The enemy succeeded in capturing three villages in the hills East of the river (1,000 fresh troops are reported to have arrived recently in this area and to have taken part in the attack), while a battle raged all day for the village of CALOMINI L 1202. These enemy attacks necessitated a slight withdrawal on our part. The only identification so far obtained is from a corpse of II Bn 285 G.R. (148 Div). This is the first identification of this Regt which has until recently been reported in the GENOA area. The following day started quietly and it is too early yet to say whether these attacks in the SERCHIO Valley were an isolated action or a diversion designed to draw off reserves, prior to a larger scale attack down the coast. The timing of the attack depends probably on

.....the enemy's.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the enemy's appreciation as to how imminent he considers a renewal of the attack on BOLOGNA. He may decide either to strike first hoping to throw the Allies off their balance or else fight a protracted battle of attrition for BOLOGNA, and having worn the Allies down strike on the rebound. At the moment the first alternative seems the more likely. To some extent timing will also depend on the weather. Experience on the Western Front shows that he waited for a spell of cloud and fog in order to ground our air force. The force available to the enemy at present would appear to be 148 Div, 157 Mtn Div, ITALIA Div and the four bns of MONTE ROSA Div which have been in the SERCHIO Valley for some weeks; in addition, 16 S.S. Div may be made available from the PARMA area if the enemy considers 305 Div and 26 Pz Div sufficient reserve for the main part of the front. The prisoners from 10 Para Regt stated that the S.S. troops they relieved said they were moving West to attack.

In Western ITALY dispositions appear to be on the whole unchanged, though several reports suggest moves by 5 Mtn Div: but these are probably connected with the readjustment of sectors consequent on the withdrawal of 157 Mtn Div. From the coast between VENTIMIGLIA and CHIAVARI comes a report of thinning out by the Germans about 20 Dec: this was presumably 285 G.R. leaving the GENOA area and moving South to the SERCHIO Valley. 162 Division continues to be reported between PIACENZA and VOGHERA with one battalion as far West as OVADA 0 7575.

There is no more news of 155 Field Training Division though a report from a ground source mentions the fact that equipment was being collected in the TURIN area to form a new division. From N.E. ITALY there is an unconfirmed report that 188 Res Mtn Div is being upgraded to a Mountain Div.

2. ENEMY SUPPLIES AND COMMUNICATIONS

GENERAL

From 19 to 25 December bad weather again impeded our attacks on the North Italian railways, and it is possible that the enemy has been able to maintain an adequate flow of supplies into the country. Both photo recce and ground source reports indicate that there has been unusual activity over the lines between TARVISIO and the PADUA - VICENZA area during the latter half of the month, and this traffic appears to have included a certain amount of trooping. This information coupled with a report of MT and troop movements on the PARMA - SPEZIA road on 24 December, appears to fit in with the reported move of 157 Mountain division from UDINE to SPEZIA area.

BRENNER

There have been no medium bomber attacks on the BRENNER railway during the past week, but fighter-bombers claim to have cut the line in several places South of TRENTO on 20, 21, 22 and 25 December. However, no bridges were hit and though complete photographic cover is lacking, it is believed that no part of the line has been closed for more than a few hours. There has been a large turnover of rolling stock at both TRENTO and BOLZANO during the latter part of the week, and activity at ALA, ORA, S. AMBROGGIO and PERI. Light loading at the smaller stations is a further indication that there has been no major hold-up of traffic and that trains have been able to run right through without unloading and transhipment of stores. Activity continues in the marshalling yards at MERANO, on the line running North West from BOLZANO, and the presence there of 47 hospital coaches on 20 December seems to indicate that they are being used as an overflow for the BOLZANO marshalling yards. Some indication of the importance which the enemy attaches to the maintenance of the BRENNER line is given by a captured order dated 26 November which states that men returning from leave (except those whose divisions are in action) whose trains are held up may be put to work on the line. Similar action is authorised in the case of reinforcement trains, so long as those are not March or Convalescent units coming as

.....reinforcements to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

reinforcements to fighting units.

On the German side of the Pass INNSBRUCK was again attacked on night 24/25 December. A ground source report dated 17 December stated that the attack on the 15th had stopped all traffic and that a by-pass line is now being laid from HALL (3 miles East of INNSBRUCK) to ZIRL (9 miles West) which will connect with the BRENNER line South of INNSBRUCK. The same source also reports that traffic for ITALY is now using the line from WÖRGL, 35 miles N.E. of INNSBRUCK, to MITTERSILL (X 3725) and LIENZ (X 0505), presumably joining the BRENNER line at FORTEZZA.

N.E. ITALY

Excepting the 23rd of December when the line was temporarily cut between SACILE (B 8407) and CONEGLIANO (B 7001), and West of MOTTA DI LIVENZA (D 9288), through traffic from TARVISIO to PADUA and VICENZA has been possible on at least one and probably two lines during the whole of the past week.

During the latter half of this month these lines appear to have been very active. According to one ground source 157 wagons full of troops, 187 cars of MT, 120 loaded with ammunition and 68 of horses, horse-drawn transport, guns and AFV's as well as 30 fuel tankers, passed through TREVISO in the direction of PADUA and VICENZA between 15 and 18 December. Another report stated that two trains of troops from NORWAY arrived at MOTTA DI LIVENZA on 18 and 19 December. Photo recce on 23rd showed a train of 27 covered wagons and 15 flats loaded with MT either loading or unloading in UDINE East marshalling yard and a train of 21 wagons and 12 MT laden flats standing by. On the same day a string of 15 flats and 12 wagons was seen on the tracks at C 096073 just West of CASARSA and another of 6 wagons and 25 flats loaded with MT, horse-drawn vehicles and other equipment near S. VITO and C 111023. All these trains had departed by 25 December, on which date activity was noted at nearly every station along a 65 mile stretch of line between CASARSA and CASTELFRANCO VENETO including two 35-wagon trains moving East near PORDENONE.

A report dated 21 December states that two or three ammunition trains and at least one fuel train pass through TREVISO every week. Any one line is sufficient to carry all military traffic, and trains are pushed through as rapidly as possible at night and remain halted on the main lines between stations during the day, locomotives being removed. Bridging material is kept in the immediate vicinity of all railway bridges, and repairs, which normally take from ten to twenty days, are carried out by Italian workmen. When the railways are working properly there is very little road traffic.

PLAIN OF LOMBARDY

On the main VERONA-MILAN line the bridge at CALCINATO (F 1960) remains impassable, and the bridge at CHIARI (K 7668) was destroyed on 25 December. The line between VERONA and BRESCIA has been less active than usual, but a certain amount of rolling stock has been cleared. Both lines running East from MILAN, however, appear to have been active and concentrations of rolling stock including loaded flats have been reported by PR throughout the week. On 22 December there was a train length of 44 loaded flats at OSPIDALETTO (K 9369) goods depot and a large number of stores including large machinery-type crates on the ground, while between CHIARI and ROMANO DI LOMBARDIA there were 700 goods wagons, 70 of which were loaded flats. This traffic seems to fit in with recent ground source reports of the transfer of industries from TURIN to the MILAN and BERGAMO areas.

On the line from PADUA to FERRARA the bridge North of ROVIGO remains impassable but the line is being used as is shown by the presence of 30 wagons standing just South of the bridge on 25 December and activity at ROVIGO station. Three train lengths totalling 144 wagons were seen on the line South of PADUA on the same day. The line from VERONA to OSTIGLIA has been open and active throughout the week and the VERONA-BORGOFORTE line

....was open.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

was open from 22 December, when the two bridges at MANTUA were seen to be repaired, until 25 December when the tracks were cut between MANTUA and BORGOFORTE. Very little activity was noted on this line between these two dates, but the fact that the enemy took the trouble to repair both the bridges at MANTUA seems to indicate that the line is to be used, possibly in connection with the reported movement of troops from the UDINE to the SPEZIA area.

All rail bridges over the river PO East of PIACENZA remain impassable and there has been little apparent movement South of the river. Heavy road traffic and troop movements were, however, reported on the road running South from PARMA through PONTREMOLI, AULLA and PALLERONE (P 8121) on 24 Dec. The same report states that there are troop and vehicle concentrations and workshops at TERRAROSSA (P 7724).

N.W. ITALY

The bridge over the river PO at TORPEHERETTI remains passable, and that at CASALE was reported possibly passable on 24 December, thus there are now two routes open between GENOA and MILAN. Through traffic is also possible from GENOA to TURIN and from TURIN to MILAN.

A ground source report of 7 December stated that 75 trains of industrial material had left GENOA for MILAN since 23 Nov, and a further 45 were reported to have passed through ALESSANDRIA between 10 and 20 December. There have been no reports this week of traffic between TURIN and MILAN.

SHIPPING

The amount of traffic between GENOA and SPEZIA has increased slightly during the past weeks and there are now four KT ships and nine F boats on this run. Ground sources report that a regular convoy sails from GENOA going S.E. every evening and on 24 Dec four of these ships were reported to be loaded with fuel. Four F boats have also been engaged in evacuating stocks of iron and steel from MUGGIANO to GENOA. One coaster and two schooners are apparently still plying between GENOA and SAVONA and three F boats occasionally reach IMPERIA.

There has been little photo cover of the Adriatic coast during the past week, but traffic of coasters and M/Vs between VENICE, TRIESTE and POLA appears to continue as usual. There was no active shipping at either CHIOGGIA or PORTO MARGHERA on 22 Dec, but on 25th there were twenty barges in CHIOGGIA and two tows of 6 small barges moving South towards the harbour.

3. WESTERN FRONT

Maps captured during the past week have given us the picture of the German plan at the start of the present battle, and have enabled us to assess the developments of the situation after one week of fighting. The attack was launched on a two Army front, 6 S.S. Pz Army to the North, 5 Pz Army to the South. The former was to advance along the axis MALMEDY-LIEGE with II S.S. Pz Corps (2 and 9 S.S. Divs) right and I S.S. Pz Corps (1, 12 S.S. and possibly one other division) left, the intention being to reach the MEUSE from North of LIEGE down to HUY and establish bridges over the river. 5 Pz Army was to attack on the main axis MARCHE-NAMUR thrusting on to the MEUSE all the way between HUY and GIVET. On 5 Pz Army's left, 7 Army was to hold and protect the Southern flank of RUNDSTEDT's drive.

Viewing the situation after a week's fighting it is evident that the enemy has had to make considerable modifications in his plan - evident too that he was always prepared to adapt it to exploit any success

....achieved.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

achieved. 6 S.S. Pz Army's performance has doubtless been disappointing to the Germans. The stubborn Allied defence from STAVELOT to MONSCHAU prevented either of the Army's two Corps from achieving any decisive breakthrough. Indeed it may be said that II S.S. Corps on the right never really made any progress. Certainly RUNDSTEDT by the fourth day of the attack seems to have decided to abandon the Northerly thrust of 6 S.S. Pz Army in the MONSCHAU area and to concentrate the armour in the STAVELOT sector where all four S.S. Pz Divs of the Army have been identified. Even so its drive made only slow headway - thanks in large part to the magnificent defence of an American armoured formation in the ST. VITH sector. By the end of the first week there was evidence that RUNDSTEDT had decided, in view of the meagre success of 6 S.S. Pz Army, to concentrate his main effort further South.

Here 5 Pz Army attacking on the MARCHE-NAMUR axis has made considerable headway. With a spearhead of 2 Pz and 116 Pz Divisions, probably the two best armoured formations in the West, General MANTEUFFEL of Tunisian fame has driven across Northern LUXEMBURG and is within striking distance of the MEUSE itself. The general line VIELSALM - BASTOGNE, a front of some 25-30 miles, was reached very rapidly, but from then on the enemy advance was compressed into an ever narrowing front. VIELSALM held, and BASTOGNE, although surrounded, remained in Allied hands. The enemy pushed on to the line ST. HUBERT - HOTTON, this time a front of only 18 miles and here again the shoulders of the drive have held: ST. HUBERT is in our hands and we are holding firm at HOTTON. West of here the situation is still very fluid and no front line as such exists. As in 1940, the spearhead has pushed on, for the moment at any rate ignoring its flanks in the speed of its rapid advance Westwards. Further back however, RUNDSTEDT is now trying to push out his flanks to North and South. Northwards heavy pressure is being exerted against the American positions between MARCHE and STAVELOT while to the South the Pz Lehr Div, after a successful initial drive West and S.W. of BASTOGNE, has received some reinforcements in the form of two infantry divisions to meet the Allied counter-attack against the German Southern flank. This is mainly an armoured battle, however, and the chief interest is centred on the employment and disposition of the enemy's armour. In addition to 2, 116 Pz and Pz Lehr Divs, the enemy has brought up 15 P.G. and 9 Pz Divs from reserve, and at least part of 11 Pz Div from the SAAR sector to reinforce 5 Pz Army, and there are indications that two further mobile divisions, also from the SAAR Valley are moving up Northwards. Meanwhile elements of 2 S.S. Pz Div of 6 Pz Army were identified on Christmas Eve in the middle of 5 Pz Army's sector, suggesting that RUNDSTEDT's plan is now to reinforce the latter's success with all the forces available. Still further armour may become available. 10 S.S. Pz Div is still in the DUREN area uncommitted, and there are reports, so far unconfirmed, that the enemy has two more S.S. Pz Divisions somewhere South of TRIER which may have been resting in GERMANY from the Eastern front. Thus the position is that 5 Pz Army has got six, possibly seven, armoured divisions at present engaged in the battle while two more are believed coming up from the SAAR, and two others may possibly be available as a strategic reserve. 6 Pz Army has four or five armoured divs committed and may have one more available, although of course, any or all of these may be transferred South to exploit 5 Pz Army's success. The infantry has so far not been prominent in this battle, but there are by now at least thirteen infantry or parachute divisions committed and more may become available.

The attack has been carried out with a ruthlessness which is an indication of the importance attached to it by the enemy. The tactics and the rumours of 1940 have been well to the fore. The most interesting of the units so far encountered in the battle is 150 Pz Bde, a formation dressed entirely in American uniform with American equipment and Sherman tanks. In addition special sabotage units wearing American uniform are known to be operating in the battle area, one of which is thought to have been entrusted with the mission of assassinating the Supreme Allied Commander. The familiar rumours are also being spread

....with singular....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

with singular lack of originality, new were reports of groups of parachutists being dropped disguised as nuns and priests. None of these has so far any confirmation and they appear to rest only on a sense of what is historically fitting.

There is little to report from elsewhere on the front. In the South the French took a 3,000 ft hill North of MUNSTER, but lost it again to a violent counter-attack. German resistance on the COLMAR bridgehead remains fierce, and the reported recent visit of HIMMLER to this sector suggests that it needs watching carefully, although so far there has been no indication of any enemy thickening up. Further North the departure of 11 Pz Div from the SAAR has been compensated for by the arrival of a new Volksgren Div set up in GERMANY. In HOLLAND enemy patrols have been active across the MEUSE on several occasions obviously with the intention of discouraging any thinning out from the British Army Group sector.

Thus far, RUNDSTEDT need not feel dissatisfied with the results he has achieved. A deep breakthrough has been effected in the Allied line and the situation is still not stabilised. Already German patrols may be on the MEUSE. On the other hand he must pay some attention to the strong resistance being offered to the flanks of his salient, and it is to be expected that in the coming week we shall see determined enemy efforts to widen the breakthrough to North and South. But the most significant item of the week's news was the map which showed intended bridging points over the MEUSE. This is no limited offensive to drive us back to the line of the MEUSE or to clear us from the SAAR and RUHR areas of GERMANY. As RUNDSTEDT stakes all, so he must hope to gain all. By this stage the possibility of repeating the victories of 1940 must be very present in his mind.

4. BALKAN FRONT

This week has seen important developments in the battle for HUNGARY. While Soviet pressure has been maintained in the MISKOLCZ sectors, forcing the enemy to abandon his salient in the MATRA and BUKK mountains, the threat to BUDAPEST has developed with dramatic suddenness. The Germans had for some time been reporting Russian attacks in the sector Lake BALATON - BUDAPEST, and when last week the Soviet drive was resumed along the DANUBE North of the Hungarian capital, it was clear that a pincer attack on BUDAPEST was developing. This has made very considerable headway. North of the city the Russians advancing through very difficult country have forced a crossing of the IPOLY river and are now less than 100 miles from VIENNA itself, while to the South the ring around BUDAPEST has been closed and the DANUBE reached 25 miles N.W. of BUDAPEST. Further South the rail centres of SZEKES FEHERVAR and BICSKE have both been captured by the Russians. Thus a situation of some seriousness has arisen for the enemy. North of the DANUBE the Russians are emerging from close and wooded country into the flatter and more open terrain of the BRATISLAVA plain while South of the capital the capture of SZEKES FEHERVAR gives the Red Army control of the road and rail communications leading into western HUNGARY. The stage is however not yet set for a Soviet advance on VIENNA, for while BUDAPEST is still in enemy hands the Russians may be reluctant to push ahead. For that reason we may expect the enemy to cling on stubbornly to the city itself in order to deny to the Russians its communications network. In Southern HUNGARY the Germans have reported Soviet attacks in the area between Lake BALATON and the DANUBE, but these have apparently made little headway.

In YUGOSLAVIA it has been a fairly quiet week. There have been three main sectors of interest. In the North East the enemy appears to be abandoning the DRINA Valley altogether. The need for additional forces in the SREM to establish a firm front and to deal with the situation around the Russian bridgehead South of the DRAVA has probably forced this decision upon the enemy. 11 G.A.F. Div which was down in the DRINA Valley appears to be moving Northwards to the VINKOVCI (X 08) area, in which sector elements

.....of 118 Jg.....

THIS PAGE IS UNCLASSIFIED

0666

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

of 118 Jg and 264 Inf Divisions are also reported. The UZICE-ZVORNIK road has been completely abandoned and a Partisan attack is developing against BIJELJINA (X 22), the only large town now left to the Germans in the DRINA Valley. The enemy's main concern must now be to establish a firm front West of UZICE (C 61) in order to prevent Bulgar-Partisan exploitation Westwards along the UZICE-ZVORNIK road. The loss of VISEGRAD on this road, 30 miles West of UZICE, would force the three divisions now in MONTENEGRO to withdraw along one difficult mountain road running Northwest from PLEVLJA (H 16) to ROGATICA (B 91). Control of the enemy formations in Eastern and S.E. YUGOSLAVIA appears now to have devolved on 91 Corps as H.Q. 22 Corps which was last identified in the VISEGRAD area is reported to have left Central YUGOSLAVIA via SARAJEVO and BROD bound for HUNGARY. Thus, apart from 21 Mtn Corps still engaged with Partisans in MONTENEGRO, Army Group E has only 91 Corps to cope with developments on its Eastern flank South of the SAVA river. True, now that 21 Corps' relief has been effected, 91 Corps will be free to concentrate entirely on the East, but the commitment is none the less considerable.

In MONTENEGRO, now that the relief of 21 Mtn Corps by 22 Division has been effected we must expect the enemy's withdrawal to be effected relatively rapidly, although the Partisans are continuing to harass and attack the enemy's retreating columns. Latest information on the withdrawal is that LIJEVA RIJEKA (N 28), 25 miles N.E. of PODGORICA, has been evacuated. Shortage of fuel appears to be causing the Germans some concern, and several reports speak of MT having to be destroyed owing to the lack of petrol to remove them.

In DALMATIA there has been fierce fighting in the sector N.W. of KNIN. For some time a Partisan offensive has been in progress here and last week the town of SRB, 35 miles S.E. of BIHAC, fell to them. The enemy's reaction to this was to start a counter-offensive Southwards on both sides of the BIHAC-KNIN road which has made some headway in the areas N.W. and N.E. of SRB. This development was not altogether surprising. The enemy cannot afford to let a serious Partisan threat develop against BIHAC, the loss of which would deny to him the important network of main and subsidiary roads which centre on this town. There is indeed some evidence that the enemy is seriously concerned about the paucity of his forces in N.W. YUGOSLAVIA, and a certain amount of thickening up is apparent. 4 Croat Div which had been operating in the SRIM has been brought over to 15 Corps' sector, while 41 Fortress Div last week was reported to be moving through SARAJEVO en route for BROD and may be intended as further reinforcement, although of course it may equally well be following 22 Mtn Corps' footsteps towards HUNGARY. In any case further reinforcements for the North West should become available in a not too distant future when 2 Corps is once more safely back into Army Group E's fold.

1. ENEMY SITUATION

Generally the enemy on the Adriatic is now back on the IRMGARD line (the SENIO river), though North of FAENZA 278 Div and 356 Div are still forward of the river and are at present holding the NAVIGLIO Canal between the 30 and 35 Northings. Both divisions only withdrew under strong pressure from the banks of the LAMONE and have been very reluctant to give up any ground in their bridgehead across the SENIO. Further North 98 Div held firm North and South of BAGNACAVALLO till the 21 Dec, but then following a day's heavy fighting withdrew overnight behind the SENIO and gave up the town. The decision seems to have been taken suddenly in contradiction to previous orders to hold on to the positions as long as possible. As a result the withdrawal was not as skilfully carried out as normally and several interesting documents fell into our hands. One of these identified a new Corps H.Q. - 73 Inf Corps - which was shown to be at CHIESA NUOVA M 2050, and apparently commands the Eastern flank of 10 Army with 114 Jaeger, 98 Inf and 356 Inf Divs under its command. In 76 Pz Corps, to the West of 73 Corps, apart from the fighting in which 278 Div has been involved, there has been only patrol activity along the banks of the SENIO and in the SANTERNO Valley. Some regrouping has however been carried out. 26 Pz Div, taking with it the remnants of 20 G.A.F. Div, has vanished from the front and is now carried in reserve - unlocated but probably in the rest and refit area North and N.E. of BOLOGNA previously visited by 29 P.G. and 90 P.G. Divs. On the SENIO 90 P.G. Div has gradually extended its front South West, by switching 200 P.G.R. from its left to its right wing, and now appears to have taken over the whole of the sector originally held by 305 Inf Div. 29 P.G. and 90 P.G. Divs now hold a front along the SENIO about 13 - 14 Kms long with the CASTEL BOLOGNESE apparently inclusive to 29 P.G. Div. The only clue as to the whereabouts of 305 Inf Div was brought in on Chrismas Day by a deserter who said that he left his Regt (578 G.R.) in IMOLA on the 22nd, and that it had just received orders to move to the BOLOGN. area. 305 Inf Div has therefore presumably joined 26 Pz Div in central reserve and is likewise resting and refitting.

Regrouping has not been confined to the Adriatic sector. South of BOLOGNA it is now certain that 16 S.S. Div has been withdrawn into reserve. An agents' report of 20 Dec stated that it had arrived in the PARMA area and since then prisoners have been taken from 10 Para Regt (4 Para Div) on the 83 Easting, who said that they had relieved S.S. troops. 10 Para Regt was previously out of the line resting and it looks as if with its return, almost certainly up to strength, 4 Para Div has extended its front West to include a large part if not all of 16 S.S. Div's sector. An agent's report that an Italian battalion - the LUPO Bn. - is also in the area is at present unconfirmed.

The decision to withdraw 16 S.S. Div from the line when two other divisions (26 Pz and 305 Inf Divs) were already moving into reserve, is difficult to explain: either 26 Pz or 305 Divs were so weak that the enemy did not feel that they could be regarded as immediate reserve, or,

....else, encouraged.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

else, encouraged by the preliminary success of the offensive in the West, the enemy decided to try his luck with an attack here in ITALY as well. It may be that HITLER has decided that the moment has arrived to make the supreme effort and by inflicting defeats on the Anglo-American Armies both in the West and in ITALY hopes to sow discord between the Western Powers and RUSSIA. If he decides to attack in ITALY the most likely part of the front is undoubtedly the Western Appennines, where he probably appreciates that the line is only thinly held by the Allies and where a quick success might enable him to seize the port of LEGHORN and also turn the whole of the Fifth Army's positions in the Mountains North of FLORENCE. It is undoubtedly significant therefore that 157 Mountain Div which started to leave N.W. ITALY in mid-November and which was apparently moving into N.E. ITALY (elements of a Mountain Div were reported arriving in the UDINE Plain in the first fortnight of December), was stated by a normally reliable source to have been ordered on 15 Dec to move to the SPEZIA area. Since then troops of the division have been seen moving South through PIACENZA, while concentrations of German mountain troops were also reported on 24 Dec at SARZANA R 7710 and also PONTREMOLI. Assuming that most of the division moved down from N.E. ITALY while the tail of it was diverted Southwards in MILAN, the division could by now be very nearly complete in its concentration area. Another division may also be moving South into the Western Appennines - the ITALIA Div - which has been concentrating in the PARMA area and S.W. of the town astride Route 62. Two battalions (the Recce and the Eng Bn) have been reported by deserters and by agents to be already in the SPEZIA area, while several reports have been received that the division is to move into the line. Heavy traffic was reported South through the CISA Pass between 17 - 21 Dec, connected, one source states, with the move of the ITALIA Div. On two occasions the morale of the division has been described as high (unusual for Republican formations) and one interesting report states that the division is not to be used in a defensive role but for counter-attack and that each infantry regt will be attached to a German Div.

The arrival of two more divisions in the SPEZIA area would be out of all proportion to the defensive requirements of the sector. If the statement about the role of ITALIA is accurate, relief of MONTE ROSA is not envisaged. And there seems little reason why 148 Div (which has been engaged in nothing more strenuous than patrol clashes) should be relieved, especially by a division which was in process of moving to N.E. ITALY at the time. The decision to send 157 Mtn Div down to the SPEZIA area clearly indicates a change of plan on the part of the Higher Command and the fact that it happened in the middle of December just when the attack was going in on the Western Front may or may not be a coincidence.

From several civilians who have crossed the lines come reports that the enemy is planning a counter-offensive on the West coast. According to two sources the Germans are feverishly rebuilding the bridges which they had previously blown on a stretch of the road North of CASTELNUOVO L 1209: this is confirmed by photographs. PR also showed a new bivouac area with fresh tracks and dumps some 12 Kms N.E. of SPEZIA on 25 December. Otherwise there are no visible signs of a build up for an offensive and there appears to have been no great increase yet in the gun strength, though artillery fire has been heavier than for some time. The evidence for a German offensive is based therefore largely on various agents and Partisan reports of considerable increase in the numbers of troops in the area.

Early on the morning of the 26th an attack was launched against our positions in the SERCHIO Valley. Some 4 or 5 German battalions have been reported engaged, together with some Italian troops. The enemy succeeded in capturing three villages in the hills East of the river (1,000 fresh troops are reported to have arrived recently in this area and to have taken part in the attack), while a battle raged all day for the village of CALOMINI L 1202. These enemy attacks necessitated a slight withdrawal on our part. The only identification so far obtained is from a corpse of II Bn 285 G.R. (148 Div). This is the first identification of this Regt which has until recently been reported in the GENOA area. The following day started quietly and it is too early yet to say whether these attacks in the SERCHIO Valley were an isolated action or a diversion designed to draw off reserves, prior to a larger scale attack down the coast. The timing of the attack depends probably on

.....the enemy's.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the enemy's appreciation as to how imminent he considers a renewal of the attack on BOLOGNA. He may decide either to strike first hoping to throw the Allies off their balance or else fight a protracted battle of attrition for BOLOGNA, and having worn the Allies down strike on the rebound. At the moment the first alternative seems the more likely. To some extent timing will also depend on the weather. Experience on the Western Front shows that he waited for a spell of cloud and fog in order to ground our air force. The force available to the enemy at present would appear to be 148 Div, 157 Mtn Div, ITALIA Div and the four bns of MONTE ROSA Div which have been in the SERCHIO Valley for some weeks; in addition, 16 S.S. Div may be made available from the PARMA area if the enemy considers 305 Div and 26 Pz Div sufficient reserve for the main part of the front. The prisoners from 10 Para Regt stated that the S.S. troops they relieved said they were moving West to attack.

In Western ITALY dispositions appear to be on the whole unchanged, though several reports suggest moves by 5 Mtn Div: but these are probably connected with the readjustment of sectors consequent on the withdrawal of 157 Mtn Div. From the coast between VENTIMIGLIA and CHIAVARI comes a report of thinning out by the Germans about 20 Dec: this was presumably 285 G.R. leaving the GENOA area and moving South to the SERCHIO Valley. 162 Division continues to be reported between PIACENZA and VOGHERA with one battalion as far West as OVADA 0 7575.

There is no more news of 155 Field Training Division though a report from a ground source mentions the fact that equipment was being collected in the TURIN area to form a new division. From N.E. ITALY there is an unconfirmed report that 188 Res Mtn Div is being upgraded to a Mountain Div.

2. ENEMY SUPPLIES AND COMMUNICATIONS

GENERAL

From 19 to 25 December bad weather again impeded our attacks on the North Italian railways, and it is possible that the enemy has been able to maintain an adequate flow of supplies into the country. Both photo recce and ground source reports indicate that there has been unusual activity over the lines between TARVISIO and the PADUA - VICENZA area during the latter half of the month, and this traffic appears to have included a certain amount of trooping. This information coupled with a report of MT and troop movements on the PARMA - SPEZIA road on 24 December, appears to fit in with the reported move of 157 Mountain division from UDINE to SPEZIA area.

BRENNER

There have been no medium bomber attacks on the BRENNER railway during the past week, but fighter-bombers claim to have cut the line in several places South of TRENTO on 20, 21, 22 and 23 December. However, no bridges were hit and though complete photographic cover is lacking, it is believed that no part of the line has been closed for more than a few hours. There has been a large turnover of rolling stock at both TRENTO and BOLZANO during the latter part of the week, and activity at ALA, ORA, S. AMBROGGIO and PERI. Light loading at the smaller stations is a further indication that there has been no major hold-up of traffic and that trains have been able to run right through without unloading and transhipment of stores. Activity continues in the marshalling yards at MERANO, on the line running North West from BOLZANO, and the presence there of 47 hospital coaches on 20 December seems to indicate that they are being used as an overflow for the BOLZANO marshalling yards. Some indication of the importance which the enemy attaches to the maintenance of the BRENNER line is given by a captured order dated 26 November which states that men returning from leave (except those whose divisions are in action) whose trains are held up may be put to work on the line. Similar action is authorised in the case of reinforcement trains, so long as these are not March or Convalescent units coming as

.....reinforcements to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

reinforcements to fighting units.

On the German side of the Pass INNSBRUCK was again attacked on night 24/25 December. A ground source report dated 17 December stated that the attack on the 15th had stopped all traffic and that a by-pass line is now being laid from HALL (3 miles East of INNSBRUCK) to ZIRL (9 miles West) which will connect with the BRENNER line South of INNSBRUCK. The same source also reports that traffic for ITALY is now using the line from WÖRGL, 35 miles N.E. of INNSBRUCK, to MALLNITZ (X 3725) and LIENZ (X 0505), presumably joining the BRENNER line at FORTEZZA.

N.E. ITALY

Excepting the 23rd of December when the line was temporarily cut between SACILE (B 8407) and CONEGLIANO (B 7001), and West of MOTTA DI LIVENZA (D 9288), through traffic from TARVISIO to PADUA and VICENZA has been possible on at least one and probably two lines during the whole of the past week.

During the latter half of this month these lines appear to have been very active. According to one ground source 157 wagons full of troops, 187 cars of MT, 120 loaded with ammunition and 68 of horses, horse-drawn transport, guns and AFV's as well as 30 fuel tankers, passed through TREVISO in the direction of PADUA and VICENZA between 15 and 18 December. Another report stated that two trains of troops from NORWAY arrived at MOTTA DI LIVENZA on 18 and 19 December. Photo recce on 23rd showed a train of 27 covered wagons and 15 flats loaded with MT either loading or unloading in UDINE East marshalling yard and a train of 21 wagons and 12 MT laden flats standing by. On the same day a string of 15 flats and 12 wagons was seen on the tracks at C 096073 just West of CASARSA and another of 6 wagons and 25 flats loaded with MT, horse-drawn vehicles and other equipment near S. VITO and C 111023. All these trains had departed by 25 December, on which date activity was noted at nearly every station along a 65 mile stretch of line between CASARSA and CASTELFRANCO VENETO including two 35-wagon trains moving East near PORDENONE.

A report dated 21 December states that two or three ammunition trains and at least one fuel train pass through TREVISO every week. Any one line is sufficient to carry all military traffic, and trains are pushed through as rapidly as possible at night and remain halted on the main lines between stations during the day, locomotives being removed. Bridging material is kept in the immediate vicinity of all railway bridges, and repairs, which normally take from ten to twenty days, are carried out by Italian workmen. When the railways are working properly there is very little road traffic.

PLAIN OF LOMBARDY

On the main VERONA-MILAN line the bridge at CALCINATO (F 1960) remains impassable, and the bridge at CHIARI (K 7668) was destroyed on 25 December. The line between VERONA and BRESCIA has been less active than usual, but a certain amount of rolling stock has been cleared. Both lines running East from MILAN, however, appear to have been active and concentrations of rolling stock including loaded flats have been reported by PR throughout the week. On 22 December there was a train length of 14 loaded flats at OSPEDALETTO (K 9369) goods depot and a large number of stores including large machinery-type crates on the ground, while between CHIARI and ROMANO DI LOMBARDIA there were 700 goods wagons, 70 of which were loaded flats. This traffic seems to fit in with recent ground source reports of the transfer of industries from TURIN to the MILAN and BERGAMO areas.

On the line from PADUA to FERRARA the bridge North of ROVIGO remains impassable but the line is being used as is shown by the presence of 30 wagons standing just South of the bridge on 25 December and activity at ROVIGO station. Three train lengths totalling 144 wagons were seen on the line South of PADUA on the same day. The line from VERONA to OSTIGLIA has been open and active throughout the week and the VERONA-BORGOFORTE line

....was open.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

was open from 22 December, when the two bridges at MANTUA were seen to be repaired, until 25 December when the tracks were cut between MANTUA and BORGOFORTE. Very little activity was noted on this line between these two dates, but the fact that the enemy took the trouble to repair both the bridges at MANTUA seems to indicate that the line is to be used, possibly in connection with the reported movement of troops from the UDINE to the SPEZIA area.

All rail bridges over the river PO East of PIACENZA remain impassable and there has been little apparent movement South of the river. Heavy road traffic and troop movements were, however, reported on the road running South from PARMA through PONTREMOLI, AULLA and PALLERONE (P 8121) on 24 Dec. The same report states that there are troop and vehicle concentrations and workshops at TERRAROSSA (P 7724).

N.W. ITALY

The bridge over the river PO at TORREBERETTI remains passable, and that at CASALE was reported possibly passable on 24 December, thus there are now two routes open between GENOA and MILAN. Through traffic is also possible from GENOA to TURIN and from TURIN to MILAN.

A ground source report of 7 December stated that 75 trains of industrial material had left GENOA for MILAN since 23 Nov, and a further 45 were reported to have passed through ALESSANDRIA between 10 and 20 December. There have been no reports this week of traffic between TURIN and MILAN.

SHIPPING

The amount of traffic between GENOA and SPEZIA has increased slightly during the past weeks and there are now four MT ships and nine F boats on this run. Ground sources report that a regular convoy sails from GENOA going S.E. every evening and on 24 Dec four of these ships were reported to be loaded with fuel. Four F boats have also been engaged in evacuating stocks of iron and steel from MUGGIANO to GENOA. One coaster and two schooners are apparently still plying between GENOA and SAVONA and three F boats occasionally reach IMPERIA.

There has been little photo cover of the Adriatic coast during the past week, but traffic of coasters and M/Vs between VENICE, TRIESTE and POLA appears to continue as usual. There was no active shipping at either CHIOGGIA or PORTO MARGHERA on 22 Dec, but on 25th there were twenty barges in CHIOGGIA and two tows of 6 small barges moving South towards the harbour.

3. WESTERN FRONT

Maps captured during the past week have given us the picture of the German plan at the start of the present battle, and have enabled us to assess the developments of the situation after one week of fighting. The attack was launched on a two Army front, 6 S.S. Pz Army to the North, 5 Pz Army to the South. The former was to advance along the axis MALMEDY-LIEGE with II S.S. Pz Corps (2 and 9 S.S. Divs) right and I S.S. Pz Corps (1, 12 S.S. and possibly one other division) left, the intention being to reach the MEUSE from North of LIEGE down to HUY and establish bridges over the river. 5 Pz Army was to attack on the main axis MARCHE-NAMUR thrusting on to the MEUSE all the way between HUY and GIVET. On 5 Pz Army's left, 7 Army was to hold and protect the Southern flank of RUNDSTEDT's drive.

Viewing the situation after a week's fighting it is evident that the enemy has had to make considerable modifications in his plan - evident too that he was always prepared to adapt it to exploit any success

....achieved.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

achieved. 6 S.S. Pz Army's performance has doubtless been disappointing to the Germans. The stubborn Allied defence from STAVELOT to MONSCHAU prevented either of the Army's two Corps from achieving any decisive breakthrough. Indeed it may be said that II S.S. Corps on the right never really made any progress. Certainly RUNDSTEDT by the fourth day of the attack seems to have decided to abandon the Northerly thrust of 6 S.S. Pz Army in the MONSCHAU area and to concentrate the armour in the STAVELOT sector where all four S.S. Pz Divs of the Army have been identified. Even so its drive made only slow headway - thanks in large part to the magnificent defence of an American armoured formation in the ST. VITH sector. By the end of the first week there was evidence that RUNDSTEDT had decided, in view of the meagre success of 6 S.S. Pz Army, to concentrate his main effort further South.

Here 5 Pz Army attacking on the MARCHE-NAMUR axis has made considerable headway. With a spearhead of 2 Pz and 116 Pz Divisions, probably the two best armoured formations in the West, General MANTEUFFEL of Tunisian fame has driven across Northern LUXEMBURG and is within striking distance of the MEUSE itself. The general line VIELSALM - BASTOGNE, a front of some 25-30 miles, was reached very rapidly, but from then on the enemy advance was compressed into an ever narrowing front. VIELSALM held, and BASTOGNE, although surrounded, remained in Allied hands. The enemy pushed on to the line ST. HUBERT - HOTTON, this time a front of only 18 miles and here again the shoulders of the drive have held: ST. HUBERT is in our hands and we are holding firm at HOTTON. West of here the situation is still very fluid and no front line as such exists. As in 1940, the spearhead has pushed on, for the moment at any rate ignoring its flanks in the speed of its rapid advance Westwards. Further back however, RUNDSTEDT is now trying to push out his flanks to North and South. Northwards heavy pressure is being exerted against the American positions between MARCHE and STAVELOT while to the South the Pz Lehr Div, after a successful initial drive West and S.W. of BASTOGNE, has received some reinforcements in the form of two infantry divisions to meet the Allied counter-attack against the German Southern flank. This is mainly an armoured battle however, and the chief interest is centred on the employment and disposition of the enemy's armour. In addition to 2, 116 Pz and Pz Lehr Divs, the enemy has brought up 15 P.G. and 9 Pz Divs from reserve, and at least part of 11 Pz Div from the SAAR sector to reinforce 5 Pz Army, and there are indications that two further mobile divisions, also from the SAAR Valley are moving up Northwards. Meanwhile elements of 2 S.S. Pz Div of 6 Pz Army were identified on Christmas Eve in the middle of 5 Pz Army's sector, suggesting that RUNDSTEDT's plan is now to reinforce the latter's success with all the forces available. Still further armour may become available. 10 S.S. Pz Div is still in the DÜREN area uncommitted, and there are reports, so far unconfirmed, that the enemy has two more S.S. Pz Divisions somewhere South of TRIER which may have been resting in GERMANY from the Eastern front. Thus the position is that 5 Pz Army has got six, possibly seven, armoured divisions at present engaged in the battle while two more are believed coming up from the SAAR, and two others may possibly be available as a strategic reserve. 6 Pz Army has four or five armoured divs committed and may have one more available, although of course, any or all of these may be transferred South to exploit 5 Pz Army's success. The infantry has so far not been prominent in this battle, but there are by now at least thirteen infantry or parachute divisions committed and more may become available.

The attack has been carried out with a ruthlessness which is an indication of the importance attached to it by the enemy. The tactics and the rumours of 1940 have been well to the fore. The most interesting of the units so far encountered in the battle is 150 Pz Bde, a formation dressed entirely in American uniform with American equipment and Sherman tanks. In addition special sabotage units wearing American uniform are known to be operating in the battle area, one of which is thought to have been entrusted with the mission of assassinating the Supreme Allied Commander. The familiar rumours are also being spread

....with singular....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

being dropped disguised as nuns and priests. None of these has so far any confirmation and they appear to rest only on a sense of what is historically fitting.

There is little to report from elsewhere on the front. In the South the French took a 3,000 ft hill North of MUNSTER, but lost it again to a violent counter-attack. German resistance on the COLMAR bridgehead remains fierce, and the reported recent visit of HIMMLER to this sector suggests that it needs watching carefully, although so far there has been no indication of any enemy thickening up. Further North the departure of 11 Pz Div from the SAAR has been compensated for by the arrival of a new Volksgren Div set up in GERMANY. In HOLLAND enemy patrols have been active across the MEUSE on several occasions obviously with the intention of discouraging any thinning out from the British Army Group sector.

Thus far, RUNDSTEDT need not feel dissatisfied with the results he has achieved. A deep breakthrough has been effected in the Allied line and the situation is still not stabilised. Already German patrols may be on the MEUSE. On the other hand he must pay some attention to the strong resistance being offered to the flanks of his salient, and it is to be expected that in the coming week we shall see determined enemy efforts to widen the breakthrough to North and South. But the most significant item of the week's news was the map which showed intended bridging points over the MEUSE. This is no limited offensive to drive us back to the line of the MEUSE or to clear us from the SAAR and ROER areas of GERMANY. As RUNDSTEDT stakes all, so he must hope to gain all. By this stage the possibility of repeating the victories of 1940 must be very present in his mind.

4. BALKAN FRONT

This week has seen important developments in the battle for HUNGARY. While Soviet pressure has been maintained in the KASSA and MISKOLCZ sectors, forcing the enemy to abandon his positions in the MATRA and BUKK mountains, the threat to BUDAPEST has developed with dramatic suddenness. The Germans had for some time been reporting Russian attacks in the sector Lake BALATON - BUDAPEST, and when last week the Soviet drive was resumed along the DANUBE North of the Hungarian capital, it was clear that a pincer attack on BUDAPEST was developing. This has made very considerable headway. North of the city the Russians advancing through very difficult country have forced a crossing of the IPOLY river and are now less than 100 miles from VIENNA itself, while to the South the ring around BUDAPEST has been closed and the DANUBE reached 25 miles N.W. of BUDAPEST. Further South the rail centres of SZEKES FEHERVAR and BICSKE have both been captured by the Russians. Thus a situation of some seriousness has arisen for the enemy. North of the DANUBE the Russians are emerging from close and wooded country into the flatter and more open terrain of the BRATISLAVA plain while South of the capital the capture of SZEKES FEHERVAR gives the Red Army control of the road and rail communications leading into Western HUNGARY. The stage is however not yet set for a Soviet advance on VIENNA, for while BUDAPEST is still in enemy hands the Russians may be reluctant to push ahead. For that reason we may expect the enemy to cling on stubbornly to the city itself in order to deny to the Russians its communications network. In Southern HUNGARY the Germans have reported Soviet attacks in the area between Lake BALATON and the DANUBE, but these have apparently made little headway.

In YUGOSLAVIA it has been a fairly quiet week. There have been three main sectors of interest. In the North East the enemy appears to be abandoning the DRINA Valley altogether. The need for additional forces in the SREM to establish a firm front and to deal with the situation around the Russian bridgehead South of the DRAVA has probably forced this decision upon the enemy. 11 G.A.F. Div which was down in the DRINA Valley appears to be moving Northwards to the VINKOVCI (X 08) area, in which sector elements

.....of 118 Jg.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

of 118 Jg and 264 Inf Divisions are also reported. The UZICE-ZVORNIK road has been completely abandoned and a Partisan attack is developing against BIJELJINA (X 22), the only large town now left to the Germans in the DRINA Valley. The enemy's main concern must now be to establish a firm front West of UZICE (C 61) in order to prevent Bulgar-Partisan exploitation Westwards along the UZICE-ZVORNIK road. The loss of VISEGRAD on this road, 30 miles West of UZICE, would force the three divisions now in MONTENEGRO to withdraw along one difficult mountain road running Northwest from PLEVLJA (H 16) to ROGATICA (B 91). Control of the enemy formations in Eastern and S.E. YUGOSLAVIA appears now to have devolved on 91 Corps as H.Q. 22 Corps which was last identified in the VISEGRAD area is reported to have left Central YUGOSLAVIA via SARAJEVO and BROD bound for HUNGARY. Thus, apart from 21 Mtn Corps still engaged with Partisans in MONTENEGRO, Army Group E has only 91 Corps to cope with developments on its Eastern flank South of the SAVA river. True, now that 21 Corps' relief has been effected, 91 Corps will be free to concentrate entirely on the East, but the commitment is none the less considerable.

In MONTENEGRO, now that the relief of 21 Mtn Corps by 22 Division has been effected we must expect the enemy's withdrawal to be effected relatively rapidly, although the Partisans are continuing to harass and attack the enemy's retreating columns. Latest information on the withdrawal is that LIJEVA RIJEKA (N 28), 25 miles N.E. of PODGORICA, has been evacuated. Shortage of fuel appears to be causing the Germans some concern, and several reports speak of MT having to be destroyed owing to the lack of petrol to remove them.

In DALMATIA there has been fierce fighting in the sector N.W. of KNIN. For some time a Partisan offensive has been in progress here and last week the town of SRB, 35 miles S.E. of BIHAC, fell to them. The enemy's reaction to this was to start a counter-offensive Southwards on both sides of the BIHAC-KNIN road which has made some headway in the areas N.W. and N.E. of SRB. This development was not altogether surprising. The enemy cannot afford to let a serious Partisan threat develop against BIHAC, the loss of which would deny to him the important network of main and subsidiary roads which centre on this town. There is indeed some evidence that the enemy is seriously concerned about the paucity of his forces in N.W. YUGOSLAVIA, and a certain amount of thickening up is apparent. 4 Croat Div which had been operating in the SREM has been brought over to 15 Corps' sector, while 41 Fortress Div last week was reported to be moving through SARAJEVO en route for BROD and may be intended as further reinforcement, although of course it may equally well be following 22 Mtn Corps' footsteps towards HUNGARY. In any case further reinforcements for the North West should become available in a not too distant future when 21 Corps is once more safely back into Army Group E's fold.

(b) This Summary will be destroyed within 48 hours of receipt.

--oOo-o-o-o-o-

1. ENEMY SITUATION

The attack on our Western flank came to nothing in a rather unexplained way and part at least of the forces which were expected to take part in it have been shifted over to the extreme Eastern flank. In the latter area the enemy has had to pay for his policy of staying forward of the SENIO, and disproportionately highly. A new division has been identified in ITALY and KESSELRING, after a three month absence, has returned to reassure his troops in a New Year message that "I am leading you in the battles of 1945".

8 Army front was quiet over the last days of December but the Germans took the opportunity of pulling out 90 Div, a badly battered formation, and substituting the relatively fresh and up to strength 16 S.S. Division, extending the latter's sector to include some 2,000 yards of front previously held by 114 Jaeger Div. When our attack did start on 2 Jan it mainly hit the latter division and took 200 prisoners from it in the first two days. On 4 Jan the Wehrmacht communiqué claimed that a large scale attack had begun and we were able to clear our Northern flank right up to the South shore of the VALLI DI COMACCHIO, beating off with heavy losses a counter-attack by 16 S.S., supported by 26 Recce Unit, and clearing up the enemy Southern bridgehead between the SENIO and the M.VIGLIO Canal. The day's bag was over 500 prisoners and the enemy may well have feared that worse was to come, in particular no doubt an attack across the SENIO. At that point the weather closed down but as far as the enemy knows this may only be a temporary and fortuitous check on our programme. He must, indeed, so consider it if he still holds to the appreciation which was in the mind of the Intelligence Officer of 278 Division when he wrote his Intelligence Summary for 22 Dec. In this interesting document, which shows incidentally that propaganda is apparently allowed more weight in the assessment of enemy capabilities than a scientific approach to the subject should demand, it is stated that the Allies must at all costs break through to BOLOGNA as quickly as possible in order to free troops from ITALY to meet the German offensive in the West. The writer, who over-estimates the reserves available to 8 Army, considers that the main threat will be up route 9, using 1 Cdn Corps and 2 N.Z. Division. To meet this threat the enemy is clearly still concerned to reinforce his Eastern flank yet further. 114 Jaeger Division, which put up a very mediocre performance and must now be in a very weak state indeed, especially 741 Jg Regt, has been pulled out and it is not yet known what formation has relieved it; there may well be other changes: 356 Div, for instance, is in a bad way and 278 Div even more so.

An interesting identification on the extreme Eastern flank is of III Bn 740 G.R. of 710 Inf Div. The division has been in Southern NORWAY for the last three and a half years, and has never fought before. It left early in December and as far as is known only 740 G.R., plus some of the divisional artillery, is South of the PO. III Bn appears to be responsible for the defence of the isthmus between the sea and the lake and the other two battalions are dispersed between the lake and the PO.

....On the Western.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

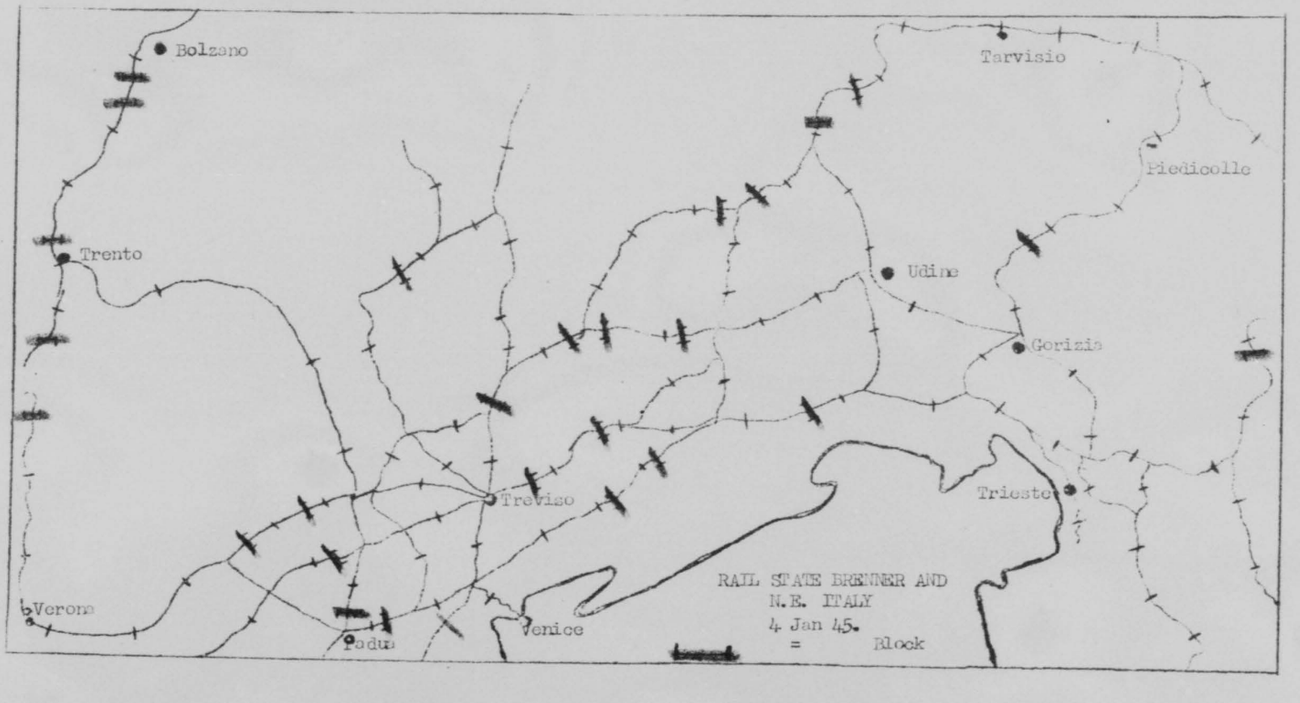
On the Western flank the enemy attack in the SERCHIO Valley which started on 26 Dec soon petered out and by the end of the month we had regained all the ground abandoned. The motives for the operation are a little mysterious; reinforcements had been brought up to the SERCHIO Valley in the form of 285 G.R., the regiment of 148 Div which had previously been in the GENOA area, the MITTENWALD Alpine Training Bn and 4 Alpine Bn, and either the whole or a greater part of the ITALIA Division. It is possible that the offensive was meant to have a more remote objective - LUCCA and LEGHORN, the troops had been told - but that it was cancelled when it became clear that surprise had been lost and the Allies had taken timely counter-measures. 157 Mtn Div was never definitely identified in the area; the two Alpine Bns might well account for reports of its presence and later evidence suggests that it was somewhere not far North of BOLOGNA at any rate by the end of December. ITALIA Division was certainly somewhere between the CISA Pass and SPEZIA and since it has not been used for a relief of MONTEROSA it might well have been intended for an offensive. 16 S.S. Division, at the time of the attack still unlocated in reserve, has turned up on 8 Army front; to their surprise, apparently, as when they were relieved by 4 Para Div they told the paratroopers that they were going West to attack. 305 Div, another reserve formation, was on 31 Dec in the area of BAZZANO, 16 miles East of BOLOGNA. 26 Pz Div is stated to be in the area FERRARA - CENTO - S. NICOLO FERRARESE (M 195715). Enemy dispositions are in fact, aligned for a defensive on the Eastern flank and give no hint of offensive intentions, for the present at least, on either the Central or Western sectors.

In North ITALY the only change has been the shifting of the 10 MAS Flotilla or the BORGHESE Division, as it is sometimes called from the name of its commander, to the UDINE - TRIESTE area. The spirit of the division, which is very much a private army belonging to Prince BORGHESE, is said to be as much anti-German as anti-Allied and its move to the TRIESTE area is said to be intended to guard against a Jugoslav coup-de-main in the event of a German collapse or withdrawal. One of its units, the LUPO Bn, is under command of 16 S.S. Div. On the French frontier, 5 Mtn Div, about whose movements there was some doubt, lost prisoners just North of the MADDALENA Pass on 7 Jan, and is undoubtedly still in the same general area.

2. ENEMY SUPPLIES AND COMMUNICATIONS

(a) RAILWAYS

From 26 Dec up to 4 Jan excellent weather permitted us again to step up our air attacks against enemy communications after a period of about 10 days during which weather severely restricted operations. Since the 4th the weather has again closed in and total sorties by M.A.T.A.F. since then have averaged only about 200 a day as opposed to an average of about 1,200 for the period 26 Dec - 4 Jan. During this latter period railways in enemy-occupied territory were heavily disrupted. Whereas on 25 Dec the BRENNER railway and one rail route through N.E. ITALY were probably open to through traffic, on 4 Jan there were five cuts on the BRENNER railway and each of the three rail routes in N.E. ITALY were blocked at at least four points. (A sketch of the rail state as of 4 Jan appears on the following page). No through traffic in N.E. ITALY was possible between 26 Dec and 4 Jan and over the same period the BRENNER was continuously blocked with the possible exception of 1 or 2 days. Since 4 Jan no PR has been available but as of 8 Jan no through traffic is likely to have been possible in the N.E. and, on the basis of fighter-bomber claims, the BRENNER may perhaps have been still blocked. Aside from the high degree of rail interdiction achieved a development of major interest is the appreciable deepening of the zone of rail interdiction. The BRENNER line has been cut almost as far North as the BRENNER Pass and heavy attacks have been made on INNSBRUCK, the Northern terminus; in the N.E. the zone has been extended out to something over 150 kilometres from the PADUA area.



....Further South one.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Further South one or more of the many rail lines running South to the PO river have probably been open at all times up to or within 15 kilometres of the river, but all permanent bridges, both road and rail, over the PO East of PAVIA remain out.

(b) RAILWAY REPAIRS

The difficulties inherent under the circumstances of constant interruptions of the railways and shortage of petrol are obvious. The enemy has at least partially met the petrol shortage by strict economy measures and by use of substitute fuels. In the face of our air effort against railways, he has, abetted by adverse weather, only been able to move trains by virtue of a highly organised and efficient repair system. In one instance recently a bridge on the BRENNER was repaired in 48 hours.

In view of the enemy's lack of petrol and the relative inefficiency of substitute MT fuels, and further his none-too-adequate number of MT, the importance of his ability to keep the railways in operation cannot be over-emphasised. In this connection recent information from Ps/W is of interest. They state that there is a railway air raid warning service which works in conjunction with the civilian and Luftwaffe service. When enemy planes are reported mobile "Trouble-Shooter" railway repair crews in the area are immediately alerted. The message originates at the regular control warning stations and goes from there on to sub-stations to the "Trouble-Shooter" units. In the event that rail damage occurs, the exact information as to location and extent of damage is phoned or radioed to the railway station. From here necessary instructions are radioed directly to receivers aboard the repair train. Complete instructions are given as to necessary repair while the train is in transit. It is claimed that the entire German railway net-work has been carefully alloted to various of these units for the repair of all possible damage. These crews are briefed on the most important rail sections so that in the event these are destroyed, all the planning and preliminary preparations for repairs have been previously accomplished. The crews' headquarters are located at various large rail centres, from where they are dispersed to "waiting stations". These "Trouble-Shooter" crews are described as consisting of the following: one car for files on possible repairs with from 3 to 9 expert technicians, two to four "workshop" cars for welding equipment, cranes, tools, spare parts, ties, switches etc., one to two cars for quarters and kitchen facilities, one to two cars for spare rails and large replacement parts, one to two cars for cement, gravel, stone blocks, etc. for road-bed construction. Ground sources report, and PR tends to confirm, that essentially similar special railway repair trains are currently operating in ITALY.

Another item of interest in enemy railway repair effort is the practice of using a short temporary bridge span at night only, the span being removed during the hours of daylight to give the impression that the bridge is impassable. Ground sources report that this stratagem is used at six bridges, namely those near CALCINATO (F 1058) and PESCHIERA (F 4255) on the main MILAN-VERONA line, VOGHERA (K 0813) and RUBIERA (L 4667) on the main TURIN-PIACENZA-BOLOGNA line, LEGNAGO (L 8825) on a secondary line running N.E. to the PADUA area, and NERVESSA (G 6295) on the main VERONA-UDINE line. The use of such a span has been confirmed at CALCINATO bridge by night PR, but here the practice is currently no longer possible in as much as recent attacks have further damaged the bridge.

(c) SUPPLIES

While on the basis of the present scale of fighting the rail interdiction achieved has probably not resulted in any acute shortage of supplies, no build-up is likely to have been possible over the past two weeks, troop trains will have been delayed, and much movement made

.....by MT with.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

by MT with a consequent increase in motor fuel consumption which the enemy can ill-afford. AFR has shown road traffic in the BRENNER line area as far North as BOLZANO and a ground source reports that 300 MT with trailers loaded with ammunition for the front passed through TREVISO during 1 and 2 Jan. Other ground sources again report a shortage of fuel in North ITALY. The Germans are reportedly buying petrol on the black market (presumably for unofficial purposes) and one source goes so far as to indicate serious inroads into the stocks of spiritous liqours in North ITALY in reporting that the enemy is using GRAPPA, a "special high grade GRAPPA", as motor fuel. Other reports state that in ITALY the Germans continue to convert their MT to Gasogene burners and according to a PW a general order affecting all German MT has been issued directing the conversion of all vehicles to gasogene with the exception of tanks, SPs and heavy prime movers.

(d) SHIPPING

There has been little PR of the Ligurian ports since 26 December. However, it is known that one MT ship and a coaster reached SPEZIA from GENOA on 7 January and 4 F-boats were at active berths in the latter harbour on the same date. It is possible that two other MT ships and 11 F-boats which were seen at active berths in GENOA are also plying between these two ports. At least six F-boats are under repair at CANTIERI PONENTE ship yards.

West of GENOA there appears to have been some increase in activity at SAVONA, at least three coasters besides schooners and other small shipping are now operating between these two ports.

On the Adriatic traffic in coastal craft continues between VENICE, TRIESTE, POLA and FIUME on a somewhat reduced scale, whilst GRADO and other small ports show little or no activity since 28 December. However, the traffic in river barges from VENICE to CHIOGGIA and the inland canal system continues to be lively. Twenty-four barges were seen at CHIOGGIA on 27 December and 22 on 3 January, and activity has also been noted on the CHIOGGIA-CAVANELLA D'ADIGE-PORTO DI PO canal system.

There has been some increase in air activity against shipping along the Ligurian coast in the past week.

(e) ENEMY INSTALLATIONS, UPPER ADIGE VALLEY

All along the Upper ADIGE Valley, between MERANO (A 8291) and RIVA at the Northern end of Lake GARDA, the enemy has built up a considerable number of installations of all kinds. Twenty-nine have so far been identified from air photos including three fuel dumps, seven ammunition dumps, two MT spare-parts depots, three vehicle parks and fourteen general stores dumps, whilst a further fuel dump, six ammunition dumps and two workshops have been reported by ground sources but not yet confirmed by photo recce.

The majority of these installations, which hug the main BRENNER railway and subsidiary lines, have shown every appearance of activity of late, and it is probable that, whilst in the first place many of them were built up as a strategical reserve, they are now being used for the reception of stores unloaded from supply trains held up on this frequently-bombed stretch of line, thus preventing a pile-up of loaded rolling stock in the marshalling yards and along the tracks. These stores will be carried on to the PO Valley by MT, or by train when the line is cleared, according to the urgency with which they are required. Stores from those dumps in the vicinity of RIVA and ROVERETO are reported to be transported down Lake GARDA by ship.

Description and layout of installations in this area are given at Appendix 'A'.

.....5. WESTERN FRONT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. EASTERN FRONT

Captured documents and prisoners' statements leave little doubt that Field Marshal von RUNDSTEDT, having failed to reach the MEUSE in his pre-Christmas drive, decided to turn his main effort Northward in the direction of LIEGE. By the end of 1944, an extremely powerful concentration of German armour had become apparent along the Northern flank of the salient where five armoured divisions were contacted along a 10 mile front between HOTTON and GRANDMENIL, to be joined, according to PW, by two further mobile divisions from the SAAR and AACHEN sectors. The attack was to be launched as soon as unfavourable weather prevented the operation of the Allied air forces, and LIEGE was the objective.

It was not lack of determination on the enemy's part, but strong Allied pressure from the South which frustrated the German plan. The relief of BASTOGNE on 27 Dec caused a radical change in the situation on the enemy's Southern flank. From being an encircled garrison well behind the front line, BASTOGNE became a dangerous salient itself pointing deep into the flank of the German salient. Even prior to its relief very determined efforts had been made by 15 P.G. Div to capture the town, and after the relief, the enemy more than redoubled his efforts, clearly appreciating that the drive on LIEGE was impracticable so long as heavy pressure was being exerted against his left flank. Even before the end of the year 7 P.G. Div of 6 Pz Army had been transferred to the BASTOGNE sector and was followed soon after by 1 S.S. Pz Div. Since then we have seen a steady transfer of the enemy armour from the North flank of the salient down to the South. All of 6 Pz Army with the exception of 2 S.S. Pz Div has moved South; this, coupled with the arrival of two Volksgrenadier divisions from GERMANY has led to a concentration of fourteen enemy divisions in the area of BASTOGNE, half of which are mobile divisions. Heavy enemy pressure continues against BASTOGNE, so far with comparatively little success. West of the town, we have cut the BASTOGNE - ST. HUBERT road, while to the East limited Allied progress has been made in clearing the ground overlooking the ARLON - BASTOGNE road.

As a result of these moves the enemy's Northern flank has been left relatively thinly held, and such reinforcements as have so far appeared to make good the departures have been from other sectors rather than new Volksgrenadier divisions from the REICH. An infantry division from the area South of AACHEN has appeared and there has been a general tendency for the infantry to shift its weight Westwards. The strenuous opposition encountered by the Allied attack between AACHEN and VIELSALM has however tended to decrease latterly, and the advance is being slowed as much by mines and appalling weather conditions as by enemy opposition. The loss of the VIELSALM - LAROCHE road represents a serious setback to the enemy who has now only one road running Westwards from ST. VITH to the tip of his salient near ROCHEFORT, but there is as yet no sign of any counter-attack in this area. His infantry divisions in this offensive must have been a considerable disappointment to RUNDSTEDT. It is clear that the Volksgrenadier division makes a better showing on paper to the accompaniment of GOEBBELS' trumpets than on the inhospitable slopes of the ARDENNES. The failure of 6 Pz Army in the early days of the offensive was largely due to the inability of the supporting infantry to achieve their objectives, and now again in the present Allied attack the results have not been promising.

The enemy's position in the salient has thus undergone a substantial change in the past fortnight. An unforeseen and certainly unwelcome change in his plan has had to be made as a result of Allied pressure. From preparations for the offensive, he has been forced suddenly on to the defensive and has had to reshuffle and divide up his armoured force with some haste. He has now in the area of the salient some twenty-seven divisions of which one (11 Pz) is a doubtful starter having been missing since its fleeting appearance in the first days of the battle. There is so far no evidence of further immediate reinforcement for the ARDENNES battle, but 10 S.S. Pz Div may be in the offing and two parachute divisions from

.....HOLLAND are also.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

HOLLAND are also possible candidates.

Meanwhile the German winter offensive was carried a stage further on 1 January by the opening of a new attack in the SAAR sector between SAARGEMUND and ZWEIBRÜCK. This was launched initially by five infantry divisions and one mobile division, which have since been joined by one further mobile division - the missing 21 Pz - two further infantry divisions and one mountain division. The latter is 6 S.S. Mtn Division which left NORWAY at the same time as 710 Inf Division, now arrived in FRANCE. 2 Mtn Div from NORWAY is reliably reported to be following 6 S.S. Mtn Div. The SAAR attack has made considerable progress. All the ground which we held in GERMANY between the SAAR river and the RHINE has been lost and in its deepest penetration the enemy drive reached a point 12 miles from the important rail centre of SAARGAU, at the head of the so-called SAVERNE Gap. The BISCHWILLER - SAARBRÜCKEN railway has been cut at WINGEN and enemy pressure is still heavy. Apart from the push in the direction of SAARGAU, no particular Schwerpunkt is yet discernible in this attack and pressure seems to be general along the whole of the 35 mile front. A recent PW statement that the French S.S. Div CHARLEMAGNE is in the vicinity is however of some significance. This division is believed to be a semi-political formation on the lines of the LEGION units in BELGIUM and is likely to be present in any area where the enemy may hope to achieve a substantial incursion into FRANCE.

At the same time the enemy has been active in ALSACE. On 7 January he succeeded in establishing two bridgeheads across the RHINE North of STRASBOURG. About two bns of infantry supported by tanks appear to be involved and have cut the KARLSRUHE - STRASBOURG railway. Simultaneously an attack has been launched South of STRASBOURG on both sides of the RHONE-RHINE canal near RHEINAU. These moves may be the beginning of an encircling attack on STRASBOURG, or they may be diversionary and holding excursions to be exploited more fully if any weakening of Allied resistance becomes apparent. Certainly the reported presence of the notorious S.S. Reichsführer HIMMLER in this area is disturbing.

Elsewhere on the front there have been several interesting features. Prisoners taken in the AACHEN area have said that their task is to launch holding attacks and continue active patrolling. If the elusive 10 S.S. Pz Division last reliably reported at DUREN could be located, some confirmation of this information might be provided. As it is, the AACHEN area still needs careful watching. Further North in HOLLAND, there have been no further indications of the suspected enemy offensive across the MAAS near MERDYCK, but in Eastern HOLLAND the enemy remains in an aggressive mood. The enemy bridgehead over the MAAS North of ROERMOND was short-lived, but active patrolling intended to pin down Allied forces continues.

Nearly four weeks after his first attacks were launched the full scope of the enemy's plan is still not altogether apparent. Both in the South and the North his hand may not yet be fully revealed. It seems clear however that the principal part of the plan, the drive to LIEGE and ANTWERP has been frustrated. When RUNDSTEDT switched his armour Southwards to BASTOGNE it must have been with the realisation that this was to be no 1940. The projected push to ANTWERP constituted a formidable threat to the Allied position in Western EUROPE. With the change of plan there are no immediate war winning strategic objectives within RUNDSTEDT's grasp. Nevertheless, even if the German drive goes no further, the C in C West will have achieved certain important objects. Every day that he keeps the Allies on the defensive postpones the day of the final assault on GERMANY, increases the burden of war weariness, gives GERMANY opportunities of splitting the Allied bloc. These are not inconsiderable factors in the present situation.

THIS PAGE IS DECLASSIFIED IAW EO 13526

4. BALKAN FRONT

The new year has seen a slowing down of the Soviet offensive in HUNGARY and the commencement of German counter-attacks to relieve the encircled BUDAPEST garrison. In the area North East of the capital the front has assumed a static appearance in the winter-bound conditions of the TATRA mountains and the Soviet push on LOSONC has been temporarily halted some five miles short of the town. Further west a period of inactivity ensued after Russian forces had reached the HRON river and following familiar tactics established bridgeheads over it. In the past two days however, the Red Army has been able to push on beyond the river along the North bank of the DANUBE in the direction of KOMAROM. Forward Soviet troops are now eight miles from this town which stands on the NITRA river. The NITRA, and behind that the VAH river, both offer possible defensive positions for the enemy before he is forced to retire to the BRATISLAVA line covering AUSTRIA. A curious situation has now arisen. While the Russians push Westwards along the North bank of the DANUBE, German forces, separated from them only by the width of the river, have been attacking Eastwards along the South bank. They have captured ESZTERGOM and have reached DICSO, 20 miles West of BUDAPEST. The enemy counter-attacks have been launched with a considerable weight of armour estimated at some 300 tanks and with a force which includes two armoured divisions transferred from the Central sector - 3 S.S. Pz Div TOTENKOPF and 5 S.S. Pz Div WIKING. The arrival of these two divisions now brings the estimated strength of Army Group South, which is believed to be responsible for the battle in HUNGARY North of Lake BALATON, up to twenty-three German divisions of which eight are Panzer and three P.G. Divs. How much of this force is now locked up in BUDAPEST is not clear, but according to an unconfirmed report elements of six or seven German divisions are involved.

South of BUDAPEST there has been no change in the front line. 8 Pz Div from the Central sector has been identified N.E. of the Lake, and in the same area is the Fifth Gav Regt Feldmarschall von MACKENSEN, apparently an independent brigade which according to the German communiqué has covered itself with glory by its steadfastness in face of powerful Soviet attacks.

In YUGOSLAVIA, the enemy build up around the Soviet DRAVA bridgehead has continued. West of the bridgehead some 30,000 enemy troops including Croats and Cossacks are reported while to the East a large proportion of the troops formerly under Corps MUELLER in the DRINA Valley are now concentrated. These include elements of 11 G.A.F., 117 Jg, 7 S.S. and 264 Inf Divisions. 118 Jg Div which is also in the area, has been reported as entraining in the VINKOVCI area for GERMANY. The destination looks improbable, but there seems no reason why the division should not be withdrawn from the SRIM for employment elsewhere in view of the considerable reinforcements which have recently arrived in the SRIM. Meanwhile the enemy has been exerting pressure Eastwards against the Soviet line near VINKOVCI, and OTOK has been retaken. There are also indications that an attack on the Soviet DRAVA bridgehead is imminent. Already what appears to have been a reconnaissance in force has taken place. A force composed largely of Croats from 1 Croat Assault and 5 Croat Infantry Divisions captured PITOMACA, 12 miles N.W. of VIROVITICA and then advanced South East. However a sharp counter-attack by Yugoslav Partisans in the bridgehead restored the situation and PITOMACA is again in our hands. This can hardly have been an all-out enemy effort and a resumption of the attack is therefore to be expected. Meanwhile Russian reinforcements are being ferried across the DRAVA into the bridgehead area.

There is little fresh from the DRINA Valley where BIJELJINA remains in enemy hands and is probably held by elements of 7 S.S. Prinz EUGEN Mtn Div. Corps MÜLLER Headquarters itself is now in the SRIM and may have replaced Corpsgruppe KÜBLER as formation controlling the SRIM sector. General KÜBLER who is now reported to be commanding 1 Mtn Div has probably moved with his division from Southern HUNGARY.

21 Corps' withdrawal is proceeding rapidly despite extremely bad weather conditions. H.Q. 21 Corps has reached SREDNEVO by 4 Jan, and the Corps rearguards are well North of MAGLAJNO. Since leaving MATESEVO, ...the Corps

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the Corps has probably suffered comparatively light losses, but the troops must by now be in an extremely tired and dispirited mood, and there is ample evidence on the ground of the enormous MT losses suffered in their withdrawal from the MONTENEGRO pocket. At least a thousand MT were lost in the 25 mile stretch between PODGORICA and MATESEVO.

Further North the enemy attack on TRAVNIK is still bogged down some three miles from the town itself. Heavy snowstorms are reported to be hindering operations in this area. That the enemy is however prepared to make strenuous efforts to capture TRAVNIK and reopen the TRAVNIK - BIHAC road is shown by the presence of elements of 104 Jg Division in the area. This formation had been operating in the DRINA Valley early last month and had not since been satisfactorily located. Another new identification in the TRAVNIK area is 505 Recce Unit, presumably consisting of Army troops in view of its high number.

In SLOVENIA there has been considerable enemy activity during the past week. A series of mopping up operations in the CELJE area and to the West in which 13 S.S. Police Regt has been prominent, have seriously weakened the Partisan forces since large stores of food have been removed by the enemy and a number of farms burnt. At the same time a second drive has commenced in the area S.W. of the ZAGREB-LJUBLJANA road. No details are available as yet as to the composition of the forces engaged in this operation. What is clear however, is that as the German withdrawal from YUGOSLAVIA gains momentum the enemy is making determined efforts to clear up the areas through which his L of C will eventually run to the final defence line in N.W. YUGOSLAVIA.

APPENDIX 'A' TO H.Q. 15 ARMY GROUP
INTELLIGENCE SUMMARY NO. 76 DATED
9 JANUARY, 1945.

ENEMY INSTALLATIONS UPPER ADIGE VALLEY

MERANO — MT park on the Eastern outskirts of the town at A 813902, contained at least 35 vehicles on 20 Dec 44. Two tronches and five buildings are possibly used for petrol storage. Barracks and stores depot 1 mile South of the town at A 825887, reported by ground sources to be ration and clothing depot. This depot was active on 25 Dec 44 when at least 25 vehicles were parked throughout the area.

LANA — Ammunition dump reported by ground sources at A 823853 on 20 Jul 44; has not yet been confirmed by PR.

VILPLANO — Stores depot consisting of six buildings and piles of stores in the open reported by ground sources to be an Army Group clothing dump, situated at A 87077 and connected to BOLZANO road and railway was active on 28 Dec 44.

NALLES — General stores dump consisting of a warehouse and eleven storage type buildings hidden in woods at A 854771 and connected to BOLZANO-MERANO road. Was active on 28 Dec 44.

TERLANO — A dangerous stores dump reported by ground sources to contain fuel and ammunition is situated West of the road between TERLANO and SETTEQUERCE stretching from A 890740 to A 900729. Has shown no signs of activity since the latter half of November.

BOLZANO — Barracks, general stores and MT park at A 950716, appears constantly active, up to 50 vehicles normally present.
Small ammunition dump at A 962690.
Large open stores dump in a ravine close to a small station on the BRENNER line at A 999702. Appears active.

LAIVES — Many buildings hidden in woods at A 954643, reported by ground sources to be a TODT depot. Shows many signs of activity and includes some half buried stores which might be fuel.
MT spare-parts depot, reported by ground sources to be sub-depot of 406 Central Spare-Parts Depot, at A 953622. Appears to be continually active, and as many as 55 vehicles have been seen there.

ORA — Fuel dump at A 935570 about one mile North of ORA station. Is one mile long and half a mile wide, and said by ground sources to be largest fuel dump in ITALY. In October it was reported that tunnels were being constructed for the storing of this fuel, but the dump was still active on 20 Dec 44. Dangerous stores dump at A 899592 appears active.
Ammunition dump at A 904558. This dump was attacked during the first week in October, but was still active on 23 December.
Open stores dump at A 943538, was active on 23 December.
Ground source report of 22 November stated that all cellars in ORA had been requisitioned for the storage of supplies and that material is dumped in holes between the road and the railway lines.

PALUDEL TORO — Ground source reports an ammunition dump in this area (A 8849).

CORTINA — Ammunition dump at A 834440, was active up to 28 November, but there have been no signs of activity since.

.....MIZZOCORONE.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

MEZZOCORONA — MT depot at A 790409, was active and contained 155 vehicles on 28 December.
General stores depot at A 785326 lying along the TRENTO-BOLZANO railway line, consists of three areas located close together which include several buildings and a station. Shows considerable activity up to 30 December.
General stores dump consisting of stores piled in the open and several small buildings at A 786391. North of the railway sidings at MEZZOCORONA/S. MICHELE station. This dump was active on 30 December, but at least some of the stores are believed to be lumber.

ERMULO — 15 long low buildings at A 739551 reported by ground sources to contain MT spares from the 'OM' MT factory at BRESCIA.

S. GIACOMO — Ground sources report the existence of seven underground ammunition stores between S. GIACOMO (A 940375) and A 949374. No photo confirmation is available.

TRENTO — General stores dump consisting of seven buildings near the railway at A 775259.

MARGINE — Stores dump at A 863225, just S.E. of MARGINE station, consisting of two small buildings and unidentifiable stores stacked in the open.

CALDONAZZO — Large depot consisting of 20 buildings and stores stacked in the open, reported by ground sources to be fuel and Engineer depot, at A 904155. Served by main TRENTO-UDINE line and active up to 1 December.

LEVICO — Small fuel dump on Western outskirts of LEVICO at A 905170.

CALLINO — Ground sources report an ammunition dump at CASTEL PIETRA (A 748077). This has not as yet been confirmed by photo recce.

ROVERETO — Ground sources report that arms and ammunition are stored in a large house marked with the red cross at road fork A 707063. Ammunition is also reported to be stored in the church at A 707042. No photo confirmation of these reports is available. In ROVERETO marshalling yard (A 700034) and several adjoining industrial areas, the whole covering an area one mile long and a quarter of a mile wide, are quantities of stores piled in the open and an indication of stores in buildings. At A 707045 is a possible MT park.
A dangerous stores dump at A 686001, believed to contain ammunition showed indications of activity on 1 January.
Supply dump at A 675010, located at MORI station and including the station buildings and adjoining industrial area where stores are piled in large quantities. This dump suffered slight bomb-damage in December, some of the stores being destroyed, but it was still quite active on 1 January.

RIVA — Photo recce shows a possible ammunition dump at A 582020.
Ground sources report a fuel dump beside the road between RIVA and ARCO at A 567059. Photo confirmation is lacking.
A PW reports the existence of MT and WT repair shops in road tunnels at A 547029 and A 544020, and states that other supplies are also stored in tunnels along this road.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-o-o-

1. ENEMY SITUATION

The week has been unusually quiet along the whole front, due largely to the rigours of the weather. The enemy has continued to make raids at various points, almost all with the object of taking prisoners for identifications, which indicates he is still rather nervous about our intentions. He has further strengthened his positions on his Eastern flank and this has involved a thinning out South of BOLOGNA.

On 10 January a tentative identification placed II Bn 25 Jaeger Regt on the Canadian Corps front. This was the first indication of the formation which had relieved the battered 114 Jaeger and it remained unconfirmed until the night of 14 Jan when a strong enemy raiding party lost a wounded prisoner who identified II Bn 40 Jaeger Regt. Next morning further evidence was provided by a long-range deserter from 1 Para Div who stated that 42 Jaeger Div was in the line from the RAVENNA-FERRARA railway to the North. 16 S.S. Div has therefore extended its sector Northwards. For this reason, probably, a further reinforcement has been brought up in the shape of 956 G.R. of 362 Division, both battalions of which have been identified in the area of the 40 and 41 Northings. More recently, I Bn 1060 G.R. has been identified further South at M 359341 which is well in 356 Div's area. It is possible that the intention is to relieve 356 Div although this cannot yet be considered as definite.

The departure of two adjacent divisions from the front East of route 65 has been compensated by bringing up a division from reserve. 305 Inf Div appears to have taken over the whole sector between the 89 Easting, 65 Div's left boundary and the 97 Easting, 1 Para Div's left boundary. This is a larger sector than has been customary in this area South of BOLOGNA, but it is not so important or accessible as the sectors on either flank, which include route 65 and MONTE GRANDE, and in any case the enemy appears still to be preoccupied by the threat from the East. It is perhaps a little surprising that the sector should be given to a division so recently relieved from the line as 305 Div, but the enemy has not much choice in the matter. 157 Mtn Div might have been considered as there are some indications that it is in the BOLOGNA area but possibly it is judged too inexperienced as yet.

The conclusion drawn last week from enemy dispositions was that he was aligned for a defensive on the Eastern flank and showed no sign of taking the offensive, for the present at least, in the Centre or West. This still remains true but as time goes on and the expected attack on the Eastern flank still does not materialise we must expect a change in the enemy's appreciation. He may even, with the force he has built up there, try to attack himself on the Eastern flank though if he did so it would more probably be in the nature of a spoiling attack than a serious attempt at a breakthrough.

....2. ENEMY SUPPLIES AND COMMUNICATIONS...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLIES AND COMMUNICATIONS

(a) GENERAL

This week the rail situation has, from our viewpoint, generally deteriorated owing to weather continuing to restrict our air attacks, particularly against the vital BRENNER and N.E. rail routes. On only two days, namely on 9 and 15 Jan, were medium bombers able to operate, and on 13th and 14th Jan MATAF was able to fly a total of only 14 and 9 sorties respectively. It seems likely that the BRENNER railway has been open for most of the week and that through traffic has been possible between the UDINE and PADUA areas for one or two days. The situation on the three frontier routes to the North and East of UDINE is not known, but all three may still be blocked. In any event it would seem that over the past week sufficient supplies for the currently low enemy requirements were getting into ITALY largely by rail.

(b) RAILWAYS

(i) Brenner Railway.

On 9 and 10 Jan PR of the BRENNER, while incomplete, indicated that the line was very probably open throughout. On the 15th over 100 medium bombers attacked the BRENNER at various points. Results were somewhat disappointing in that PR showed that only the approaches to two bridges had been cut. Between the 9th and 15th the BRENNER was attacked by fighter-bombers on several occasions; owing to lack of PR the cuts claimed cannot be confirmed and while these attacks will have slowed down traffic, the cuts in fact achieved are unlikely to have blocked the right of way for more than a matter of hours in any given instance. It seems probable therefore that the BRENNER has been open for most of the past seven days.

(ii) North East ITALY.

The situation on the three N.E. frontier rail routes to the North and East of UDINE is obscure owing to lack of PR. It is known that on the 15th the central route (of secondary importance) was still blocked but that by the 16th one of the two bridges down on the important TARVISIO route running North from UDINE had been by-passed by construction of a diversion. Whether or not the other bridge on the TARVISIO route and the bridge on the most Southerly frontier route are still unrepaired is problematical; they were last seen as cut on photos of 4 Jan and it is conceivable that they may still be down in view of their height making repair difficult and the fact that they are located at points where construction of a diversion would also be difficult. The only further information is a ground source report that the TARVISIO route was to be in operation on or about 20 Jan.

Between the UDINE and PADUA areas PR shows that by the 15th enemy repair efforts had almost opened up a through route; on that date the main line from UDINE to PADUA and VICENZA was closed only by virtue of damaged rolling stock blocking the line at one point. Also on the 15th the secondary line immediately to the South of the main UDINE - PADUA line was blocked only by track craters at two points. However, on the line nearest the coast at least three bridges remain, as usual, down. Hence no through traffic in this area was possible on the 15th, but a through route may well have been opened up by the 16th and in fact it is not unlikely that trains were getting all the way through without transhipment one or two days immediately prior to the 15th. In addition to this the loop line running from TRENTO, on the BRENNER railway, South East to CASTELFRANCO VENETO, 30 kilometres North of PADUA, has been open all week and by not later than the 15th trains from CASTELFRANCO VENETO could move more or less directly into the PO Valley and on down to or close to the river itself.

(iii) PO Valley.

The only new development in the PO Valley is that while

....through traffic...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

through traffic remains possible between TURIN, GENOA and MILAN, this area was isolated from the Eastern portion of the Valley by attacks of 9 Jan. This will have slowed down the movement of industrial materials and foodstuffs to GERMANY, but is otherwise of no major consequence under present circumstances; in any event the bridges attacked on the 9th were only alternative targets, weather having prevented attacks on the primaries along the BRENNER and in N.E. ITALY. The rail bridges over the PO remain blocked with the exception of those West of PAVIA, though it is interesting to note that there was some evidence of possible repairs being made at CORBOLA (G 483050) and PONTELAGOSCURO (M 118916) rail bridges on 10 and 11 Jan respectively. Several of the many lines running South to the PO have remained open up to or almost up to the river.

South of the PO while a number of bridges remain out there is still considerable trackage open. One report of interest in this connection is that our forward troops on the nights of 13/14 and 14/15 Jan heard train movement on the railway running N.E. out of CASTEL BOLOGNESE (M 2427). These trains may have come from the BOLOGNA or FERRARA areas. CASTEL BOLOGNESE is only about 2 Kms beyond the front line and the fact that the enemy is willing to risk trains this far clearly indicates his policy of moving trains far forward in order to conserve MT fuel. Similar instances have been reported before.

(iv) Railway Repairs.

A recent study by 3rd Photo Group of air photos of seven rail bridges may well be the answer to certain unexplained delays in the repair and apparent inconsistencies in the maintenance of serviceability of rail bridges. This study suggests that under certain circumstances bridges are left only partially repaired by enemy design. This seems to be the case when: (a) an alternative route is open; or (b) other bridges on the same line are out and undergoing more extensive repairs; or (c) a diversion is open in the immediate proximity of the bridge; or (d) when it is desired to protect a bridge from further air attack and its present serviceability is secondary to a future use. In general, it would seem that the enemy's policy on certain bridges is not to make them serviceable if there is no immediate need of their use.

(v) Effect of Rail Interdiction on Troop Movements.

Owing to the comparatively limited scale of ground fighting during the past two months, heavy rail interdiction on the BRENNER and N.E. rail routes for considerable periods has not decisively affected the tactical situation. However, apart from generally disrupting the enemy's L of C, forcing him to devote considerable manpower and equipment to keeping his L of C sufficiently open to maintain himself in ITALY and causing the consumption of MT fuel which he can ill afford, these attacks have appreciably delayed troop movements from GERMANY to ITALY. This latter fact is indicated by two recent PW reports, which are, generally speaking, typical of troop movements into, out of and within ITALY.

In one case an Infantry March Bn of 500 men moved by rail from LINZ, GERMANY, to TRENTO. From TRENTO the battalion moved by bus to FERRARA, and then marched on foot to ARGENTA (M 2862) where they finally arrived on 31 Dec having left LINZ on 23 Dec. The rail trip from LINZ to TRENTO, which would ordinarily require less than 24 hours for a military train, took four days owing to the fact that the train was held up by breaks in the railway and eventually had to make a 300-kilometre rail detour and rejoin the BRENNER railway just North of BRESSANONE (B 2294). A point worthy of note is the fact that these troops were carried in open wagons and at various stations men had to be admitted to hospital owing to prolonged exposure to cold; the fact that open wagons were used suggests a shortage of coaches and covered wagons, or at least that the railway system in the REICH is so upset as to make distribution of rolling stock most difficult.

.....Another instance.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Another instance of interest is the move from NORWAY of 12 Coy, 740 G.R. (710 Inf Div), recently identified on 8 Army's right flank. The Company sailed from NORWAY on 26th Nov 1944 and left a Danish port by train for ITALY on 2 Dec. Coming down through MUNICH and SALZBURG the train entered ITALY over the TARVISIO route, passed through UDINE and arrived at TREVISO (G 6377) on night 9/10 Dec. Here the Company detrained and the following night marched 45 kilometres to an unidentified locality and after two days' waiting boarded a train which moved them down to the ROVIGO area. From here they were carried by bus and lorry to COMACCHIO (M 5669) where they arrived on night 16/17 Dec. It is noteworthy that at a time when rail interdiction in N.E. ITALY was comparatively light the trip from DENMARK to TREVISO, about 1,200 kilometres as the crow flies, took no longer than the move from TREVISO to COMACCHIO, a distance of about 100 kilometres by road. It is probable that the 45-kilometre night march from TREVISO was made in order to get across the BRENTA river (flowing from North to South just East of a line VICENZA-PADUA) over which all rail bridges were down at the time in question.

(c) SHIPPING

Owing to lack of photo cover there is no information this week on the Ligurian ports except that both LA SPEZIA and SAVONA were active on 11 Jan. A ground source report of 13 Jan states that all war material from the Tyrrhenian front is transported from GENOA to LA SPEZIA by sea, and this report appears to be substantiated by statements of two Italian merchant sailors who were recently employed on ships at GENOA.

According to these seamen, active merchant shipping in the Gulf of GENOA up to 2 Jan consisted of some Italian cargo ships, five German KT ships and 20 F-boats, whilst naval craft included two Italian corvettes, one torpedo boat of French origin, 10 V-boats for escort service, five armed tugs and twenty MAS. [illegible] and facilities are under control of the German Navy and are operated by both German and Italian Republican personnel.

Seven Italian coasters carrying from 200 to 1,000 GRT, are engaged in carrying coke from SAVONA to GENOA. These operate in convoys of three or four together with an escort of VP-boats; they leave GENOA at dusk reaching SAVONA and being loaded the same night, and sail again for GENOA at dusk the following day.

The KT ships and F-boats are employed in running ammunition and other supplies down to LA SPEZIA and evacuating industrial material back to GENOA. Convoys normally reach LA SPEZIA about 2030 hours and ammunition is unloaded directly into trucks and railway wagons, after which the ships are loaded with scrap metal and dismantled machinery and are ready to start the return trip between 1600 and 1800 hours the following day.

The arsenal and harbour of SPEZIA were almost completely dismantled and much of the machinery evacuated in December, but the submarine repair shops and another small workshop are still functioning, carrying out repairs to MAS and other small motor driven craft. The fitting out yards are said to have suffered from air attacks, but the machinery is still practically intact.

A PW from 13th Convoy Protection Flotilla (SICHERUNGSFLOTTILLE) states that the Flotilla is based on S. MARGHERITA (P 192386) but the escort craft lie up during the day in the various small ports and coves along the Ligurian coast.

On the Adriatic coast PR of 12 Jan showed continued barge activity at CHIOGGIA, and on the same day it was seen that demolitions were taking place at PORTO GARIBALDI, the railway areas having been extensively cratered. There was no cover of any of the other ports in the Adriatic, but a ground source report dated 11 Jan stated that, so as to relieve the coal shortage in VENETO, a 6,000 ton ship was expected to bring coal from ARSA to VENICE, whilst other loads were to be shipped by barge from GRADO.

....3. WESTERN FRONT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

A. WESTERN FRONT

The enemy is losing at least temporarily the initiative which he gained so dramatically and effectively in the middle of December. Except in the STRASBOURG area where gains of some consequence have been made in the past week, he has been unable to achieve any substantial success in the Southern part of the front, while up in the ARDENNES, RUNDSTEDT has abandoned his attempts to resume the attack towards the MEUSE. The German communiqué for 11 January reported that "the part of the front which protruded Westwards across the OURTHE has been taken back without being imperilled by the enemy", a confession that the long-range objectives of the ARDENNES drive had been abandoned, and indeed that the initiative in that area is no longer in German hands.

However, in the extreme South the German command, now reported to be in the ruthless if militarily inexperienced hands of HIMMLER is still forcing the Allies on to the defensive. The Northwards drive along both sides of the RHONE-RHINE Canal, carried out by two infantry divisions has made considerable progress bringing the enemy within 12 miles of STRASBOURG and cutting off a number of Allied troops. Pressure has been exerted Westwards as well as Northwards and the enemy has succeeded in cutting the COLMAR-STRASBOURG road. He is clearly trying to get the elbow room for manoeuvre in this area which the present narrow sector between the road and the RHINE does not give.

North of STRASBOURG there has been sharp fighting around the RHINE bridgeheads, where one enemy Infantry Division and an Armoured Brigade appear to be involved. The Bde, 106 Pz, is the only surviving independent Armoured Brigade in the West (apart from the sabotage formation 150 Pz Bde) and is reported to have about 40 tanks or SP guns. It appears to be dividing its efforts in the South between the COLMAR push and the RHINE bridgeheads.

Meanwhile on the SAAR-PALATINATE front the First German Army has been unable to maintain the successes of the early days of the offensive. Prisoners' statements suggest that this offensive did not in fact form part of the original plan and was only launched when it became apparent that the ARDENNES drive was not attaining its objectives. This seems quite probable, as all the armour now engaged in this sector was reliably reported to be moving Northwards at the height of the ARDENNES battle. During the past week a third mobile formation, 25 P.G. Division, together with 7 Para Div from HOLLAND, has appeared in the line to reinforce the efforts of the two mobile and eight Infantry Divisions previously involved. Both the new arrivals have come in on the extreme left of 1 Army in the area North of HAGENAU where 21 Pz Division was already operating. 17 S.S. P.G. Div which is in the line in the SAARGEMUND area has not however been moved East to reinforce the success achieved by the two other mobile formations in 1 Army, and it seems probable that the enemy has not yet given up hope of achieving a penetration in the SAAR region. The commander of 17 S.S. Div, Colonel LINGER, is now in our hands. However in a week of fierce attack and counter-attack, no substantial progress has been made by the enemy. The fiercest fighting has been in the region of WINGEN on the KARLSRUHE-SAARGEMUND railway. WINGEN has been cleared of the enemy and the railway is firmly in our hands.

The ARDENNES salient has been in a state of flux since the failure of RUNDSTEDT's second attempt to retake BASTOGNE. Despite the strong concentration of armoured and infantry forces which he had collected around the town, he at no time got nearer than 2 miles from BASTOGNE and by the middle of last week must have realised that his efforts were in vain. Failure there meant more than local failure, for the Allied hold in BASTOGNE was a threat to his whole position in the salient. The decision to pull back was made about 10 Jan, and the withdrawal has been carried out relatively successfully. Most of the armour seems to have got away

...without suffering...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

without suffering serious harm, and the only black spot in the withdrawal was in the area S.E. of BASTOGNE. Here the enemy was not quite quick enough and lost 3,500 P.W. By 15 Jan only eleven enemy divisions were firmly identified West of the line VIELSALM-BASTOGNE, and the bulk of those are now East of the BASTOGNE-HOUFFALIZE road. The enemy withdrawal may well continue considerably further Eastwards than the line of the OURTHE, possibly to the line of the SALM-CLERF rivers. Much will depend on the success achieved by our new attack between STAVELOT and MALMEDY. In contrast to operations further West, we are encountering very stiff resistance here, which is likely to become stiffer as formations emerge from the narrowing Westerly tip of the salient. The enemy clearly cannot at this stage allow a serious threat to develop to ST. VITH.

North of the salient, the week has been quiet. The likelihood of a German offensive in HOLLAND has receded with the final departure of 711 Infantry Division for the Eastern front and the withdrawal of 7 Para Div from the line. 6 Para is still there but there have been no further indications of enemy offensive plans other than possible limited operations to tie down Allied forces.

No assessment of the present position in the West can be complete which does not take into account the situation in the East. Until major operations occurred on the Eastern front, it seemed probable that the enemy would be in a position to devote most of his available reinforcements to the war in the West, and indeed the flow of Volksgrenadier Divisions has lately been exclusively Westwards. Now however that the Russians have resumed the offensive on the grand scale, the problem of a three front war once again faces the enemy. Even before the Russian attack started, an Infantry Division had been transferred from HOLLAND to HUNGARY and now that "embittered fighting has started along the entire Eastern front" as the German communiqué puts it, the problem will assume an acuter form. Nevertheless the enemy may not yet have abandoned all offensive plans in the West. He has now one parachute, two Panzer and four Infantry Divisions "floating" in the West and there are reports of a concentration in the TRIER area which might conceivably be intended for an attack in the direction of LUXEMBOURG. Much has been at stake in the West and much still is. We have for that the evidence of an Officer P.W. who has given details of a conference held at the Reichs Chancellery about 10 December. This was attended by various Army, Corps, Division and Brigade Commanders from the Western Front and was addressed by HITLER. HITLER told his audience that the ARDENNES offensive was to reach the MEUSE in two days and ANTWERP in three weeks. The objectives were

a) the encirclement of 48 Allied Divisions or the enforcing of a general Allied withdrawal,
b) to gain time for consolidation of the German War Industry especially synthetic oil,
c) by accentuating political differences on the continent and by propaganda to detach one of the Allies from the war.

The enemy has failed in his first objective, and has little hope of success with his last. Whether the price in casualties which he has had to pay for the time he has gained was a fair one will be shown by future events, but in face of a major offensive in the East reinforcements are likely to be precious.

4. EASTERN FRONT

On 13 Jan, the Soviet winter offensive on the Central sector opened with an attack launched from the bridgehead over the VISTULA at BARANOW. Preliminary rumblings of the offensive had been heard four days earlier when the German communiqué spoke of lively fighting activity in the bridgehead area. Substantial gains were made first to the West of

.....BARANOW, resulting.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

BARNOW, resulting in the capture of KIELCE and an approach to within 25 miles of CRACOW. These were followed by a break out from the Russian bridgeheads at PULAWY and MARK., South of WARSAW, to capture RADOM and an advance Westwards from the River NAREW North of the capital. Since then, to judge by the German communiqué, the advance has been rapid. Fighting is reported in the area of CZESTOCHOWA, Southwest of TOMASZOW MAZ and N.W. of WARSAW. Finally, the Russians claim the liberation of the capital. Further North a Russian advance is also reported along the INSTERBERG railway in East PRUSSIA, but the extent of this is not known. In a situation which is developing so rapidly that it is still confused, the one clear fact is that the offensive in the East is on a gigantic scale.

In HUNGARY, the past week has seen also a flare-up of the fighting N.E. of BUDAPEST where the Soviets have captured the rail junction of LOSONC and have pushed on across the post-MUNICH SLOVAK border. Further West, however, fighting has been on a lesser scale and the Russian push along the North bank of the DANUBE has been halted on the NITRA river. South of the DANUBE, the heavy German counter-attacks of the previous week have come to a halt around BICSKE, 17 miles West of BUDAPEST, and unless they can be resumed shortly on a major scale, the position of the BUDAPEST garrison appears hopeless. In PEST, the Russians have already captured the Parliament buildings which stand on the East bank of the DANUBE and it appears that the greater part of BUDA is now in their hands.

There has been little else of interest from HUNGARY apart from the startling identification by the Russians of 711 Infantry Division. This formation had been in HOLLAND near ARNHEM until the middle of December when it was pulled out of the line and left, according to one report, for GERMANY. It was presumed that this meant the usual rest and refit, and its unexpected reappearance on the Eastern front is significant in that it implies that the enemy has few, if any, surplus divisions ready in GERMANY to meet the needs of the moment. 711 Div's arrival raises the total strength of Army Group South to some twenty-four divisions, about eleven of which are mobile.

It has been a quiet week in YUGOSLAVIA with cold and snowy weather impeding any important operations. In the North, the Russian BARGS bridgehead has been quiet after the flare-up of the previous week. The enemy build-up in the SREM, East of the bridgehead, continues. The possible departure of 118 Jg Division reported in last week's Summary has been compensated for by the arrival of 41 Fortress Division which seems to have reached the end of its weary and hazardous journey from GREECE. The enemy lay-out in this area is now fairly clear. Immediately East of the bridgehead are elements of 264 Div with 11 G.A.F. Div on its right based on ERNESTINOVO. Adjoining it and apparently facing Eastwards is 117 Jg Division with a sector as far South as the VINKOVCI-BROD railway. From the railway down to the SAVA river is 41 Fortress Division, and South of the river with elements as far down as BIJELJINA is 7 S.S. Prinz Eugen Division. The remnants of 21 S.S. SKANDERBEG Division are in the general area of BRCKO. 118 Jg Division is reported to be moving to the ZAGREB area, where it may well be joined by 738 Jg Regt which it left behind at MOSTAR last October and which is reported to be moving Northwards.

Some reorganisation of the chain of command is taking place as a result of these moves. General KUBLER who commanded a Korpsgruppe in the SREM seems to have left with 1 Mtn Div (which he commanded) for HUNGARY. With his departure responsibility for the SREM is thought to have been taken over by Corps MULLER whion had been commanding operations in the DRINA Valley at the start of last month. A later report however, states that 34 Corps is in the SREM and it is possible that this is the same as Corps MULLER since there is hardly room for two Corps Headquarters in the limited area of the SREM.

In the South, H.Q. 5 S.S. Corps, for long in the SARAJEVO

.....area, is.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

area, is reported moving Northwards to BROD. This seems reasonable as 21 Mtn Corps from MONTENEGRO has now reached SARAJEVO and may well have taken over command of 5 Corps' area. 21 Corps rearguards are now North of PRIJEDOLJE and there should soon be no enemy left South of the SARAJEVO-UZICE road.

Total enemy forces on the Eastern front are now estimated at 150 Divisions of which rather less than one third are in HUNGARY and YUGOSLAVIA.

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 78 OF

23 JANUARY, 1945

(a) This Summary will NOT be distributed below H.Qs of Army Corps. Sidelined information will not be reproduced without permission of this H.Q.

(b) This Summary will be destroyed within 48 hours of receipt.

-0-0-0-0-0-

1. ENEMY SITUATION

The whole front has been more than usually quiet, particularly in the latter part of the week. The enemy continues to make raids on 5 Army front, mainly for the purpose of obtaining identifications and keeping track on our reliefs, which he must suspect to be frequent. 1 Para Div has been, as might be expected, especially active in this line; it has been stiffened by the addition of two G.A.F. Penal battalions, 3 and 4 G.A.F. Jaeger z.b.V., which are apparently combined into a Regiment NEUKUM, no doubt called after the commander. This raises 1 Para Div to the unprecedented total of twelve battalions and a Recce Company. On 8 Army front the enemy reacted with strong patrolling to his discovery that an Italian division had come into the line, and on 17 Jan he put in quite a strong raid further South in the area East of FUSIGNANO which cost III Bn 36 S.S. heavy casualties for no gain. Since 21 Jan, however, the enemy appears to have gone over to a more passive defence on the SENIO, evacuating and demolishing houses on our side of the river which he previously held and generally pulling back to the west bank almost all along the line. He still, however, remains forward on the FOSSO VECCHIO at the Northern end of his position.

Unconfirmed indications put H.Q. of 356 Div in the area M.2978 on 18 Jan; if this is so it is most likely that the division has been relieved from the line, where we have had no indication of its presence for some time, and may have been replaced by 362 Div. The location given for Div H.Q. is far enough North to raise conjecture in present circumstances as to whether the division may not be on its way to an even more remote destination on the Eastern front, but of this there is no sign at all as yet.

The relief of 356 Div, if confirmed, will be the only change in enemy forward dispositions. In rear areas there have been a few changes and a few new identifications. 135 Fortress Bde is stated by prisoners to have moved from SPEZIA to GENOA. Elements of 162 Div have been reported North-East of TURIN and in the UDINE area while the bulk remains South of PARMA; since it is not, in its present state, likely to fight as a division it is not surprising to find it making detachments in battalion strength to widely separated areas. On the French frontier 5 Mtn Div has been firmly identified in its old place by prisoners taken from both of its Jaeger regiments; there have been reports of a move by 34 Div from its sector at the Southern end of the Franco-Italian frontier but these are not confirmed and are probably due to the employment of elements of the division in an anti-Partisan drive North of SAVONA. Various reports, none of them explicit, appear to locate the hitherto elusive 155 Field Training division at TREVISO, having collected thither elements from VERONA and BELLUNO. The S.S. KARSTWEHR division, which is apparently only in brigade strength, appears to have moved from ISTRIA or VENEZIA GUILIA to FRIULI; more information is needed on this formation which is probably only of value as an anti-Partisan force at present.

2. ENEMY SUPPLIES AND COMMUNICATIONS

BRENNER

After a period of seven days during which the BRENNER railway was

...probably open.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

probably open to traffic most of the time, it was interdicted on 15 Jan, again on 17 Jan and has been cut at one or more places South of BOLZANO ever since. On 22 Jan the bridges at LAVIS (A 7430) and ALA (F 6690) were both impassable, the through tracks were cut at TRENTO station and the approaches to the bridge at ROVERETO (A 6903) were blocked, making a total of four blocks on a 50 Km stretch of railway. It is interesting to note that whereas track cuts are normally repaired in a matter of hours, both the blocks at TRENTO and ROVERETO were two days old, whilst at one station in VERONA 60% of the undamaged stock was still inactive on 16 Jan due to unrepaired track cuts. This delay may be due to bad weather conditions or lack of materials and labour. That the interdiction of the BRENNER line has driven the enemy on to the roads is evidenced by the fact that heavy MT movement was observed from the air all along the ADIGE Valley and down both sides of Lake GARDA on night 17/18 Jan, whilst very little activity has been reported by PR along the line South of TRENTO between 16 and 20 Jan. Ground sources report that road traffic in this area is suffering badly from a shortage of tyre chains, and one case has been reported of a column of 600 vehicles being held up for 30 hours. A coal shortage was reported in the VERONA area earlier in the month and coal trains were said to be held up North of TRENTO.

NORTH EAST ITALY

On 15 Jan only one track cut prevented through traffic running between UDINE and PADUA, and at least one line was probably open on 16th. On 17 Jan a considerable bomber effort was put out over these lines and the total of destroyed bridges was brought up to 15, making four separate lines of interdiction through a zone about 100 Kms deep. Between the 18 and 22 Jan two bridges have been repaired, but it is still necessary to negotiate at least two blocks on every possible route between UDINE and the PADUA - VICENZA area. East of UDINE the bridge at BOROVNICA (D 283032) on the LJUBLJANA line was still out on 22 Jan and that at BODRAS (C 721231) on the Central Frontier route, which was impassable on 16 Jan, has probably not yet been repaired. The line from UDINE to TARVISIO, however, has been open and active since 17 Jan.

Whilst on 18 Jan, at any rate, there was considerable activity all alon the line from TARVISIO to UDINE, there have been little signs of activity West of UDINE during the past week and a considerable number of wagons made up into train lengths have been lying idle on the line between CITTADELLA and VERONA. As in the case of the BRENNER, the interdiction of the North Eastern railways appears to have forced the enemy to turn to his precious and overtaxed road transport; one report states that on 11 Jan 200 MT with trailers brought wheat to UDINE and reloaded with ammunition for the front. Coal shortages have also been reported at UDINE, TREVISO and VENICE earlier in the month, but these shortages were probably alleviated at any rate to a considerable extent on 15 and 16 Jan and it is probable that since the opening of the TARVISIO - UDINE line coal has been brought down to GRADO and shipped to VENICE by sea.

PO VALLEY

The enemy appears to have become more concerned about the railway bridges over the river PO of late, and during the past week he has managed to complete repairs on three of these bridges which had been impassable since the first air attacks in July, namely those at BRESSANA BOTTARONE (K 1624), PIACENZA (K 6216) and CORBOLA (G 4805). The most important of these is the bridge at PIACENZA which links the main BOLOGNA line with MILAN in the N.W. and VERONA in the North; this bridge was still open on 22 Jan. The bridge at CORBOLA is the most Easterly of the PO railway bridges and hence off the enemy's main L of C. It is also on a dead-end line which is believed to be inactive; the line running West from the bridge to ROVIGO is, however, open. It is unlikely that the enemy would repair this bridge without some special reason, but what that reason is is not readily apparent. In any event approaches to this bridge are now cut.

.....On 20 Jan.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On 20 Jan PR showed that the suspension cables which were strung across the 350 ft gap left by the destroyed mid-portion of the OSTIGLIA rail bridge early last month had been decked with planks forming a suspension bridge capable of carrying foot traffic, and possibly light vehicles. Similar arrangements exist at BORGOFORTE and CASALMAGGIORE, whilst other destroyed bridges have just the cables.

SHIPPING

There has been no photo cover of the Ligurian ports this week and no other reports on shipping in the Mediterranean have been received. On the Adriatic barge traffic from VENICE to the South continues via CHIOGGIA and coastal traffic continues between VENICE and TRIESTE including at least one MV and an oiler. Oil tankers were also seen at active berths in both these harbours on 18 Jan. There has also been MV and barge activity at PORTO NOGHERA and GRADO. The coal traffic from the ARSA Channel is being maintained by coasters and barges: one of the former has reached TRIESTE and another FIUME. The bauxite traffic from PARENZO is also being maintained, but by a few barges and small vessels only. The converted tanker PROMETHEUS, which was being used as a collier and was loading at ARSA Channel on 29 December, has not been seen since 2 January, when she was at POLA. As she was missing on the almost complete cover of the Adriatic ports obtained on 15 January, it is possible that she was the victim of the attack by bombers and R.P. aircraft of M.A.C.A.F. on the night of 4/5 January: they claimed to have engaged a "2,000 ton tanker" in the Northern Adriatic but could not observe results.

INSTALLATIONS

UDINE, which stands at the Eastern end of the N.E. Italian road and railway networks, forms a natural unloading point for reserve stores entering ITALY via the TARVISIO and PIEDICOLLE routes. This area, which was also the main forward dumping ground for the old Italian frontier defences, always contained a number of permanent military installations which the Germans have turned to their own use. These have been added to in the last year and especially since the attacks on the N.E. railway system have made it necessary to have storage facilities ready at all points. Dumps have also lately been reported in the TARVISIO area.

There are now a total of 43 reported installations in the UDINE - TARVISIO area including 4 ammunition factories and filling plants, 16 ammunition dumps, 8 fuel dumps and 15 general stores dumps, MT parks, workshops, etc. Of these all 4 factories, 9 ammunition dumps, 2 fuel dumps and 7 miscellaneous stores dumps have been confirmed by PR. Installations are grouped as follows :

TARVISIO - CAMPOROSSO (C 6469) area

Confirmed:	1 ammunition dump
	1 general stores depot
	1 MT park and repair depot
Unconfirmed:	1 fuel dump
	1 ammunition dump
	1 fuel and ammunition dump
	1 ration dump

TOLMEZZO (C 3458)

Confirmed;	1 ammunition dump
	1 MT depot and stores dump
	1 general stores depot

.....OSOPPO (C 2941).....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

OSOPPO (C 2941)

Confirmed: 1 very large MT depot and stores
1 ammunition factory. This factory was very severely damaged by sabotage in Nov, and may now be inactive.

Unconfirmed: 1 fuel dump

Area 10 miles radius of UDINE

Confirmed: 5 ammunition dumps
2 fuel dumps
2 general stores depots

Unconfirmed: 3 fuel dumps
2 MT parks
2 workshops

General area CODROIPO (C 2008) - S. DANIELE (C 2430) - VIVARO (C 0521)

Confirmed: 4 ammunition filling factories
1 ammunition dump
1 general stores dump

Unconfirmed: 2 fuel dumps
2 ammunition dumps
1 MT spare parts depot
1 general stores depot
1 workshop

3. WESTERN FRONT

Despite the winter-bound conditions of the Western Front, there have been developments of considerable significance in this past week. The threat to STRASBOURG from the North has increased as the enemy has linked up all his RHINE bridgeheads, while in the ARDENNES there are signs that a change of enemy policy has taken place. Two new Allied attacks have also started, one of which has led to yet another penetration of REICH territory.

The French attack in ALSACE between COLMAR and MULHOUSE gained initial surprise, and the enemy was forced back some three miles without great difficulty. He recovered rapidly, however, and, although we continue to gain ground, it is against a stiffening defence characterised by frequent local counter-attacks. The enemy has clearly no intention of yielding without a struggle the COLMAR bridgehead to which he has clung so doggedly over the past two months. He has, in all, elements of five divisions in the bridgehead area, but is reported to be transferring some forces from the bridgehead up to the area North of STRASBOURG. The troops actually holding the bridgehead are probably only in poor condition. They have had little rest since the heavy battles of the VOSGES in November and December, and have not had high priority in the matter of replacements. The position in ALSACE seems to be in fact that the enemy is content to conduct a stubborn defensive in the bridgehead area while he exploits and reinforces his successes achieved North of STRASBOURG. A recently captured document leaves little doubt of the enemy's intentions here. It is signed by SS OBERGRUPPENFUHRER von MAUR as or for C in C Army Group Upper RHINE - a new identification, but probably the new title for Army Group G. An Obergruppenfuhrer is the Waffen S.S. equivalent of a full general, but whether Von MAUR is in fact the Army Group Commander, or is only Chief of Staff to HIMMLER whom rumours would have as the Army Group Commander, is not clear. The document is of interest, however, in that after the usual preamble about the Hour of Destiny being at hand, STRASBOURG is indicated as the objective of the present offensive.

.....The enemy has.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The enemy has indeed made considerable headway North of STRASBOURG. On 17 January a third bridgehead was established over the RHINE North of STRASBOURG in the area due East of HAGENAU: the identification of 10 SS Pz Div, previously reported in the SAAR area, was an indication that this constituted a more serious threat than the previous bridgeheads. It was rapidly reinforced and the enemy succeeded in penetrating about three miles inland from the RHINE, cutting across the STRASBOURG - KARLSRUHE railway. At the same time renewed enemy pressure developed on the left wing of the First German Army in the area of HATTEN and a junction was effected between the new bridgehead and the First Army troops. This was followed by a link up of all three RHINE bridgeheads North of STRASBOURG, thus giving the enemy a continuous front West of the RHINE. First Army has continued the attack on its left wing and elements of 17 SS P.G. Div have been transferred from the SAARGEMUND area to reinforce the drive. The enemy has penetrated as far as the outskirts of BISCHWILLER and HAGENAU and strong pressure continues.

The PALATINATE front has been generally quiet, although in a limited offensive operation on German soil near REMICH we advanced about two miles and have clung to our gains despite counter-attacks conducted by 11 Pz Division, at last located after its disappearance in the latter half of December. It is worthy of record that the Russians claim to have identified 11 Pz Div on the Central sector during the past week, and as SHAEF reidentified it at REMICH on the following day, the Division seems to be as mercurial in its appearances as in its disappearances.

The ARDENNES salient had shrunk to a bulge by last week, and it seemed as if the enemy had decided to call a halt to his withdrawal. Resistance stiffened appreciably after the fall of HOUFFALISE, although we continued to gain ground, notably North of ST. VITH. The ARDENNES line was held in the main by infantry, and, although fleeting glimpses were observed of all the armour which took part in the December attack, these were in the main only rearguards, and not more than four mobile divisions have recently been firmly in contact. By 21 Jan it became apparent that a change in enemy policy was taking place. Resistance slackened, and close contact with the enemy was lost all along the front from DIEKIRCH to N.W. of ST. VITH. Conditions once more resembled those of the previous disengaging movement. Road blocks and heavy minefields constituted the main obstacle to the advance, and only in the area North of ST. VITH was there anything resembling the earlier heavy resistance. Considerable Eastward movement is reported as the enemy pulls back in the direction of his December start line, and heavy losses have been inflicted on him by the Allied air forces.

In HOLLAND, the week has been characterised by the opening of an Allied offensive North of SITTARD in the direction of HEINSBERG. This attack initially provoked comparatively little reaction from the enemy who seemed content to leave the sector in the hands of two low grade infantry divisions. The attack continued to make headway, penetrated across the German frontier due West of HEINSBERG, and is now about two miles from HEINSBERG itself, where enemy resistance is stiffening appreciably. This attack is not yet in contact with the main defences of the SIEGFRIED Line. Further North in HOLLAND, the enemy has been in aggressive mood and effected a local penetration in Bn strength into our positions N.W. of NIJMEGEN. This has now been eliminated. 344 and 712 Divisions, which have been missing from HOLLAND for some time, are now reported by the Russians to be in action on the Eastern front.

It is too early yet to say that the events on the Eastern front are affecting enemy policy in the West. The fact remains, however, that in the Northern half of the front RUNDSTEDT has not only lost the initiative, but is pulling back again to the shelter of his fixed defences. Only in ALSACE is the enemy now showing any real aggressiveness and the attack here is

...in the main.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in the main political, designed to offer the German public something of a palliative in the form of STRASBOURG to compensate for the disappointments which the New Year has brought in the West. It does not of itself constitute a serious threat to the Allied strategical position in Western Europe. The identifications reported by the Russians of divisions transferred from West to East are so far tentative and await confirmation, but it seems clear that on the main sectors of the Western front RUNDSTEDT is pulling in his horns, perhaps as a consequence of the claims which have been made on his Army Groups.

4. EASTERN FRONT

East PRUSSIA and POLAND

The Soviet winter offensive is developing on the grand scale all along the vast front in East PRUSSIA, POLAND and CZECHOSLOVAKIA, at a speed greater even than that of the 1944 summer offensive. In the fluid and fast changing situation, four main drives are now apparent. Coming into East PRUSSIA from the North and East, General CHERNIAKOVSKY's Third White Russian Armies have been advancing along the axes of the TILSIT - INSTERBURG and the KOVNO - INSTERBURG railways. They have penetrated deeply into East PRUSSIA and have captured INSTERBURG itself, 45 miles from KONIGSBERG. Meanwhile further penetrations into East PRUSSIA have been made from the South by the Second White Russian Army Group under the command of Marshal ROKOSSOVSKY who, following the capture of WARSAW, has been attacking North-Westwards along the WARSAW - DANZIG railway. This was the thrust which led to the fall of ALLENSTEIN and the less important but historically gratifying capture of TANNENBERG.

Meanwhile South of the VISTULA two major offensives are in progress. On the right, the First White Russian Army Group under Marshal ZHUKOV attacking along the WARSAW - BERLIN highway, captured LODZ on 19 January and has since driven on to within 30 miles of POZNAN. This drive has cut the main trunk railway from BERLIN via POZNAN to East PRUSSIA at INOWROCLAW, 25 miles S.W. of TORUN and has led to the capture of BYDGOCZSZ Further South, Marshal KONIEV's First Ukrainian Armies have achieved the most spectacular, and for the enemy the most alarming, successes of the past week. In addition to capturing CRACOW, they threaten to outflank from the North the whole industrial region of SILESIA by a penetration to date 30 miles deep on a 45 mile front into German territory. This has been effected in the area S.E. of BRESLAU and has cut across the BRESLAU - KATOWICE railway at GROSS STREHLITZ. According to latest reports KONIEV's forces are now within ten miles of the ODER.

There has been little news so far of enemy counter measures to meet the grave situation. When the attack started the enemy had at least half of the total armour on the Eastern front concentrated in HUNGARY. As a result there were few mobile reserves in the centre to meet the Russian blow when it fell. It is possible that the long lull on the VISTULA front had tempted the enemy to appreciate that Soviet offensive efforts this winter were to be confined to HUNGARY, so that he took the chance of thinning out in the centre in order to counter the threat to AUSTRIA. It is just conceivable that in view of this a quick decision was made to pull back voluntarily from the VISTULA line, although the gloomy tone of the German communiqués this week and the absence of any references to a voluntary withdrawal, lends no support to this theory. However, voluntary or not, it seems apparent that the withdrawal has got out of hand. Very incomplete Soviet claims covering only part of the front put the prisoner total in nine days at 60,000, while German broadcasts suggest that there are still large

.....numbers of enemy....

THIS PAGE IS UNCLASSIFIED.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

numbers of enemy forces operating isolated behind the Soviet forward troops. In any case it is difficult to see what the enemy could gain by voluntarily allowing the Russians to penetrate deeply into the REICH and threaten a vital industrial area. Among the divisions which the Soviets claim to have identified on the Central sector in the past week are two infantry divisions last located in HOLLAND and 11 Pz Division from the ARDENNES. The latter seems a very dubious identification. Other identifications reported from the Central sector are normal and do not show as yet any thickening up of this sector at the expense of other areas.

HUNGARY

Except in the Slovak border region the front in HUNGARY appears to have been so far unaffected by the impact of events further North. The enemy has been pulling back from the mountainous salient in CZECHOSLOVAKIA which had developed as a result of the Russian drive across Southern POLAND. KOSICE has been evacuated and the withdrawal continues through the snow bound TATRA Mountains, probably without great interference from the Russians. In Central HUNGARY however, Army Group South is in an aggressive mood. Despite the loss of PEST and the greater part of BUDA vigorous efforts are being made by the enemy to relieve the remnants of the garrison he left behind in the Hungarian capital. The Germans have attacked in the sector between Lake BALATON and SZEKES FEHERVAR, and according to their own claims have reached the DANUBE, captured SZEKES FEHERVAR and are driving Northwards between Lake VELENCZE and the DANUBE. They now appear to be about 25 miles due South of BUDA. The relief of the beleaguered garrison, coupled with the recapture of STRASBOURG in the West, would paint one bright streak across the sombre picture of the present German situation, but the BUDAPEST effort is at any rate likely to be rather a sally in order to extricate encircled troops than a determined effort to recapture and hold the ruined Hungarian capital. In the past week the Rumanian General Staff has reported the presence of 3 and 6 Pz Divisions in HUNGARY. Both were previously in the Central sector and their arrival brings the total of Panzer Divisions in HUNGARY to ten.

YUGOSLAVIA

The enemy has been in aggressive mood in the SAVA. The long awaited operation to eliminate the Partisan-Soviet DRAVA bridgehead has started with attacks launched from both East and West. On the West the enemy has made little headway and the Partisans claim to be counter-attacking West of VIROVITICA. In contrast to operations earlier this month, which were handled by Croat forces, the present attack is being conducted by German troops. On the East side of the bridgehead the enemy has, however, succeeded in making a penetration of about seven miles, capturing the town of CADAVICA which is about 23 miles East of VIROVITICA. An offensive has also been launched Eastwards from the SAVA conducted, according to Partisan reports, by elements of four German Divisions, possibly 11 G.A.F., 117 Jg. 41 Fortress and 7 S.S. Mtn, all of which are in the area. The object of the attack is probably to regain the old German defence line which ran from VUKOVAR through SID to the confluence of the DRINA and the DRAVA. As the enemy is already reported to have recaptured SID, it seems that he is in a fair way to achieving this object.

Elsewhere in YUGOSLAVIA there has been little to report. Contact was lost with 21 Mtn Corps a week ago in the area North of PRIBOJ, owing to heavy snowstorms and nothing further has been heard of it. It is probable that there are now no German forces left South of the DRINA river. A withdrawal from the MOSTAR area would now seem reasonable, and reports received during the past week of Northward road movement from MOSTAR probably presage the beginning of this withdrawal.

In BOSNIA the enemy has renewed his attempts to capture TRAVNIK. An effort is now being made to capture the town from the North by means of an advance Westwards from ZENICA across the VLASIC Mountains. Last reports put German forces three miles from TRAVNIK.

....From N.W. YUGOSLAVIA.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

From N.W. YUGOSLAVIA several reports have been received o considerable Northward rail and road movement from ZAGREB. On 21 Ju ZAGREB Marshalling Yards which had been almost empty on the previous contained over 900 trucks. This movement possibly represents the departure of 118 Jg Division which is said to be leaving for GERMANY. In view of what has happened in POLAND this week, the destination may after all be correct. There is need of more divisions in GERMANY.

5. At Appendix 'A' is a report on V-1 or Pilotless Aircraft.

APPENDIX 'A' TO 15 ARMY GROUP
INTELLIGENCE SUMMARY NO.78 OF
23 JANUARY, 1945

V-1 OR PILOTLESS AIRCRAFT

1. The following is a brief account of some recent experiences.

2. The V-1 or pilotless aircraft, known officially as FZ G 76, has been employed in two ways - (i) launched from concrete platforms, (ii) launched from an aircraft. The average speed of both these types is about 300-350 mph.

3. Platform launched

Construction of the platform is generally known to most of us, as there have been pictures in the illustrated papers. They have been much used in FRANCE, both as a nuisance and aimed against big depots such as ANTWERP and LIEGE. In the recent offensive by von RUNDSTEDT in the ARDENNES, a great many were fired for 48 hours preceding the attack, mainly, it is thought, with the object of creating alarm and despondency in the rear and of keeping people awake, because the effect of these is extremely noisy, both in transit and in explosion. It is an interesting point that, despite intensive bombing from the air, the nuisance was not stopped, and this is true also of the period when these were launched from the North coast of FRANCE against the South coast of ENGLAND. Despite, therefore, our great air superiority and our very efficient photography, we should not count on destroying the menace before it can hurt us.

The range is about 250 miles, the warhead is one ton containing an unusually high explosive substance. About 20% hit the ground quite near to the launching site; the height of approach is about 2,000 feet or less. It is not an accurate weapon and the V-1 launched from a series of sites, as from the North of FRANCE, can be expected to fall within an area of 10 miles' radius and not less. They are useful therefore particularly against large towns such as LONDON.

4. Air launched

These are underslung on the parent aircraft, either Heinkel 111 or possibly Do 217 and several methods of direction finding have been used. Launching over the North Sea has been carried out with the aid of Pathfinder aircraft marking the track and point of release, although navigation has also been carried out by D/R and W/T means. The optimum height of release is 1,500 feet though this is not rigidly adhered to: the V-1 has been found to approach the coast at little more than 500 feet. They are most inaccurate and according to Radar plots not 50% reach the shore after launching. They have so far only been launched from the sea about 50 miles out from the coast.

The parent aircraft can be considered very vulnerable whilst making their launching runs, as they must reduce their speed to approximately 150 miles per hour.

5. The threat against this country

It would be possible for air launched V-1 to be directed against the coast ports of LEGHORN and ANCONA. It is not thought that platform launched V-1 could be despatched over the APENNINES, but this has not yet been proved. If launched across the coast at ports they would be difficult to deal with by gunfire, since the gun would be sitting on the VP itself and birds shot down would be apt to fall on the butts.

It is believed however, that the enemy has a maximum of 75 aircraft equipped for carrying V-1. These are at present based in North West GERMANY. It is considered very unlikely that, in view of their prior use against ENGLAND and the Western Front and, to a limited extent, on the Eastern Front, the enemy will be in a position to bring down even a few of these aircraft to operate against targets in this theatre.

.....In the event....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In the event of the V-1 being used in this theatre an efficient P....D. scheme would be essential. The V-1 is launched from aircraft by night invariably and special measures have been devised: e.g. at ANTWERP searchlights were used to provide illumination for squads digging people out of buildings that had been hit.

-o-o-o-o-o-o-

1. ENEMY SITUATION

There has been little activity along the front but considerable activity behind it and it appears that the crisis on the Eastern Front has at last begun to have an effect on the situation of Army Group C. One Division is already on its way out of ITALY and the reshuffling which has gone on suggests that it is intended to release other formations as well. As might have been expected the stress of great events has led to a plentiful crop of rumours that the Germans are evacuating the whole of Northern ITALY and although this is a cry which has become tedious from repetition during the past seventeen months the justified scepticism with which it has been received in the past should not prevent us from conceding that there may now be some truth in it.

At the beginning of the week Army Group C, as far as was known, had five divisions in reserve; it was well placed, therefore, to answer a sudden call for help. However not all of these divisions were suitable for despatch to the Eastern Front: not 157 Mtn Div, for instance, which was relatively inexperienced and in any case would find no mountains between the VISTULA and BERLIN, though many in ITALY; 26 Pz Div was the only mobile division available and perhaps KESSELRING still retains enough pull to make sure of keeping his only Armoured Division. It had been appreciated, therefore, that the first sign that reinforcements were on their way to GUDERIAN would be a quick reshuffle between the reserves and the front line divisions, and this expectation was not disappointed. On 24 Jan two prisoners were taken from II Bn 290 G.R. of 98 Div at M 3534; there was a little doubt whether they had relieved a unit of 356 Div or 1060 G.R. of 362 Div which had earlier been identified in that area. However it was clear that 356 Div was out of the line, which was confirmed by the location of Div H.Q. at M 2978. The next day revealed a more thorough change when two prisoners were taken from 3 Coy 11 Para Regt of 4 Para Div, at L 296286. From their story it appeared that they had been relieved in their former position, S.W. of BOLOGNA, by 157 Mtn Div and that they themselves had relieved 29 P.G. Div. This has since been confirmed by further indications of the move across of 4 Para Div H.Q. A recent deserter from 305 Div who lay concealed near CASTEL BOLOGNESE for some time and watched the coming and going gives more information. According to him troops of 29 P.G. Div on their way back to the front told him they were going to GERMANY. Unfortunately this is what troops just relieved from the line always say, and especially at a moment of crisis like this; however it may still be true. He also said that 4 Para Div was going to relieve 90 P.G. Div as well as 29 P.G. - not impossible in view of the great strength in infantry of 4 Para Div, but it does not seem to have happened yet since the main elements of the division were still in the line on 29 Jan. 90 P.G. might, however, be in process of moving over slightly to the West and allow the relief of either 715 or possibly 334 Div.

.....Our appreciation.....

THIS PAGE IS UNCLASSIFIED

0706

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Our appreciation of the destination of 356 Div was soon confirmed by reports from ground sources in the North East. On 25 Jan a great deal of loading activity was reported at various stations in the PADUA area - CITTADELLA, CASTELFRANCO VENETO and CAMPOSAMPIERO - and troops, MT and equipment were being shipped off in a Northeasterly direction. A later report stated both that this movement had been going on since 23 Jan, and that it was paralleled by heavy road movement, and also that the troops involved were from 356 Div. The divisional sign was observed on both the road and rail moves. Unusual concentrations of rolling stock have continued to be observed at various points in North ITALY on the routes leading out of the country and one cannot be certain that 356 Div will be ITALY's only contribution; 29 P.G. Div is at least a candidate for the Eastern Front and it is the type of division which would be most needed there. The enemy is in a strong position in ITALY; his reserves out of the line have never been so plentiful and it is suggested that he could spare up to five divisions without thereby abandoning a line South of the PO, holding more or less the same positions as now though perhaps with a slight withdrawal on his left flank. Any large contribution would probably involve a withdrawal to the line of the TICINO and the PO and subsequently to his strongest prepared line in N.E. ITALY, the ADIGE. Such a move would mean abandoning N.W. ITALY and it must be said at once that there have been several reports that such is in fact the German intention. These reports should not be given too much credence for the simple reason that many armchair strategists work out the reasons why such a move should be made, and most are not above representing speculations as facts. We must wait for harder evidence. There is one piece of evidence which might point that way; the heavier movement observed recently at night in the MILAN area, mainly in an Easterly and Northerly direction. But we cannot know what is being carried in these vehicles; if troops, the evacuation theory is strongly supported; if Fascist civilians fleeing the wrath to come, evacuation may be about to begin; but it may just as well be merely a rather larger consignment than usual of the loot in the form of industrial equipment and war material which the Germans have been removing from ITALY for many months past.

To recapitulate: one division has left ITALY and although a second may be on the way there is no firm evidence that any more are booked to go. The enemy can spare up to five divisions before he need think of withdrawing to the line of the PO and there is no firm evidence that he has any such intentions. On the basis of past precedents and in view of the travelling conditions between ITALY and GERMANY today, any help KESSELRING is likely to send to the Eastern Front will probably be too little and too late.

2. ENEMY SUPPLIES AND COMMUNICATIONS

GENERAL

The most important development on the enemy's L of C in the past seven days is the almost certain movement of troops out of ITALY. Movement appears to have taken place over the BRENNER and N.E. railways and rather heavy road movement has also been noted. Owing to the state of the railways and the enemy's shortage of transport generally, movement of troops will have been accomplished only with difficulty. At least one division appears to be on the move; whether or not additional troops are moving cannot, purely from the point of view of volume of rail and road movement so far observed, be definitely stated.

The only direct information on enemy supply recently has been reports on coal shortages for both railways and industries. Over the past two weeks these reports have been received from a considerable number of sources and it is thought that the information is correct. So far as supplies for the front itself are concerned there is no evidence of particular shortages at this time, though it is quite possible that damage to the railways, lack of coal for rail transport and demands made on transport

....facilities for troop.....

THIS PAGE IS UNCLASSIFIED

0707

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

facilities for troop movements, may, at least to some extent, have depleted stocks. However, no acute shortages are looked for on the basis of the current scale of fighting.

RAILWAYS

BRENNER ROUTE

Prior to 28 Jan the last date on which the BRENNER was known to be blocked was 22 Jan. Between the 22nd and 27th no PR of the line was available, but PR of the 28th showed that the line was open throughout, and it is estimated that it had probably been open since the 25th though fighter-bombers may well have achieved temporary blocks between these two dates. The line may have been closed on the 26th by attacks made subsequent to the PR sortie of the same day, which, as stated above, showed the line to be open. In any event on the 29th there were at least five rail cuts South of TRENTO and one to the North. Attacks against the line were continued and the line was still blocked on the 30th.

There was pronounced rail activity on the BRENNER on the 28th, with five trains seen moving North. A number of flat cars, both loaded and unloaded have been seen along the BRENNER since the 28th and a very large number of flats, a few loaded with AFVs, were seen at VERONA and immediately to the S.W. of VERONA on the 28th. The fact that the BRENNER railway has been blocked since the 28th, or at least the 29th, and the fact that when open it can probably handle only limited traffic owing to damage to the right of way and the necessity of using the less efficient steam instead of the normal electric traction, may account for the recent rather heavy Northward road movement at night in the area Westward of the BRENNER railway as far as MILAN. This road traffic appears to converge on the BOLZANO area, which would be a logical area to load trains in order to avoid the effect of our air attacks on the railway, these attacks having been almost exclusively confined to points on the line South of BOLZANO. That such may be the case is perhaps indicated, but by no means conclusively, by the fact that on the 29th PR disclosed in the immediate vicinity of BOLZANO an apparent shelter in the side of a mountain with three large entrances about which there was a great deal of pedestrian and MT activity.

NORTHEAST ITALY

Throughout the week all routes between the PADUA and UDINE areas have remained blocked. However, some repairs have been made and one of the possible routes has been blocked only at one bridge for the past several days. Fighter-bombers may have created further track cuts. Beyond UDINE both the Central and Southern frontier routes remain cut, but the remaining and most important route running North to TARVISIO has almost certainly been open throughout the week.

Rail movement in the North East does not seem to have been particularly heavy though a somewhat larger number of flat cars than usual have been noted since 28 Jan in the general area VICENZA - PADUA - TREVISO. However, PR available between 23 and 27 Jan, inclusive, was scanty and actual movement will be largely, if not exclusively, confined to the hours of darkness. In any event the ground report of troop movements by rail in this area towards UDINE on the 25th, is not disproved by rail movement in general and flat cars seen by PR tend to confirm a troop movement. In fact at one of the stations mentioned as a loading point by the ground source, PR picked up a number of empty flat cars. It is also of interest to note that on the night of 30/31 Jan seven trains were observed on the line between TREVISO and CASARSA (C 1108); the two trains whose direction of movement was observed were going East towards UDINE. It is not improbable that troops may still be passing through this area.

....PO VALLEY AND NORTHWEST ITALY...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

PO VALLEY AND NORTHWEST ITALY

Of the three rail bridges over the PO which had long been impassable but had been repaired by the end of last week, two have again been knocked out, namely the one just South of PAVIA and that near CORBOLA (G 4805). The third bridge near PIACENZA is still open. All other rail bridges over the PO, with the exception of that at CASALE MONFERRATO (J 6432) remain out.

Interdiction in North West ITALY has been stepped up recently and at present the Eastern section of the PO Valley is isolated from the Western section. Between MILAN and TURIN through traffic remains possible but the main line has been blocked all week. Just East of TURIN on the main line running Eastward South of the PO it is curious to note that between 21 and 28 Jan the enemy removed a span of a bridge which some time ago had been fully repaired after air attacks. Alternative routes exist around this bridge and based on study of other bridges it would appear that the span has been removed in an attempt to protect the bridge from air attack thereby making it more readily available for a future use which for the moment is more important to the enemy than the present availability of the bridge. Alternatively the bridge might be in use at night, being made passable by means of a temporary span.

SHIPPING

Photo cover of 28 and 29 Jan shows that at least two KT ships besides smaller craft are still plying between GENOA and LA SPEZIA. On 28 Jan there were 18 F boats and 14 supply barges at active berths in GENOA harbour. There has been no cover of other harbours.

On the Adriatic, cover of 25 Jan shows that the traffic in coasters, KT ships and Siebel Ferries continues from VENICE to TRIESTE and other Northern ports. Barge traffic continues at CHIOGGIA.

3. WESTERN FRONT

Ever since it was reported in the West last November, the movements of 6 S.S. Pz Army have been a major consideration in assessing the enemy's long term intentions. As a strategic reserve it remained uncommitted West of the MEUSE during the November battles. As an armoured spearhead it played a leading part in the successes achieved by RUNDSTEDT's December offensive. Today its movements are still of predominant interest in the enemy situation on the Western Front. Since RUNDSTEDT decided (or had the decision made for him) some ten days ago to pull back from the general line DUNKIRK - HOUFFALIZE - ST. VITH to the shelter of the Siegfried defences, there has been little contact with 6 S.S. Pz Army. At least three if not all four of its armoured divisions are out of the line, and the ARDENNES rearguard action has been conducted by 5 Pz Army. Moreover, considerable and in the main industrious road movement has been in progress for several days from the ARDENNES, the trend of the traffic being for the most part Northeastwards. The suggestion that 6 S.S. Pz Army is to be the first of RUNDSTEDT's contributions to the Eastern front seemed to be confirmed by the heavy loadings at COLOGNE and other major Marshalling yards West of the RUHR on 23 Jan and subsequent days. This was followed by air reports of definite Eastward rail movement from MUNSTER, OSNABRUCK and HAM. A prima facie case does therefore seem to exist for the move of 6 S.S. Pz Army to the East. However a startling development ensued on 26 January with the capture on the body of a dead officer of an Operation Order signed by von DIETRICH the Commander of 6 S.S. Pz Army. This gave the routes for the move on the night of 22/23 Jan of I S.S. Pz Corps (1 and 12 S.S. Pz Divs) to the ROTTERDAM-UTRECHT area. The question arises whether this was a genuine document or a plant. While clearly there are important strategic objectives to be gained by an attack with an armoured force North

....of ANTWERP,.....

THIS PAGE IS UNCLASSIFIED

0709

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

of ANTWERP, it seems incredible that the enemy should split his still powerful Armoured Army, at a time when its employment as a whole on the Eastern Front might be of decisive significance in halting the Russian advance. It is of course just possible that II S.S. Pz Corps with 2 and 9 S.S. Pz Divs is in fact to go East alone, but until there is confirmatory evidence that I S.S. Pz Corps has appeared in HOLLAND, the evidence of the captured document is at least open to considerable suspicion.

With the withdrawal of 6 S.S. Pz Army the front in the ARDENNES has had few features of interest. Identifications have shown no surprises although 2 Pz and 9 Pz Divs of 5 Pz Army continue to lose prisoners and show no immediate disposition to yield place to infantry elements. Enemy resistance has been generally light throughout the week but the appalling weather conditions have considerably impeded Allied progress. Nevertheless by now the enemy is virtually back on the December start line and gives no sign of further aggressiveness in this area.

The whole front has indeed been quieter than for some time past. In the COLMAR pocket, the enemy has resisted vigorously the French attack near MULHOUSE and we have made little further progress. Elements of 106 Pz Bde which has been North of STRASBOURG have been identified in the pocket. North of COLMAR, however, the enemy seems to have been surprised by the American attack of 27 Jan and has given ground rather unexpectedly. We have reached the outskirts of COLMAR while to the East the RHONE-RHINE Canal has been reached without resistance. It seems evident that the enemy has no further intentions of developing the immediate thrust to STRASBOURG from the South.

North of STRASBOURG there has been little further to report. According to the German radio, HIMMLER is now on the Eastern Front, and has thus presumably left the Army Group Upper RHINE in the hands of the aged Von MAUR. The last firm date on which HIMMLER was still known to be in the West was 13 January when he addressed a congratulatory message to the troops in the then newly formed RHINE bridgehead North of STRASBOURG. Since HIMMLER's departure, Von MAUR seems to have felt the weight of his 81 years and has shown little further aggressiveness. The bridgeheads which were established over the MOTER river West of HAGENAU were short-lived and the attack has not yet been resumed. His failure to press home the attack on STRASBOURG suggests that the enemy may no longer feel it worth his while to maintain the initiative in the West as a matter of basic strategy. On 5 January Von MAUR had hoped to be able to tell the Führer "in a few days" that the Swastika again flew from STRASBOURG Cathedral. Being so far unable to say this, he may now be satisfied at having forced the Allies to pay attention to the Southern sector long after MODEL had lost the initiative in the Centre.

The only other area of interest in the West has been HOLLAND. In the region of the Dutch-German frontier, the British attack encountered rather stiffer enemy opposition after the capture of HEINSBERG, although no new divisions have been identified. However under pressure, the enemy has fallen back to the line of the ROER river, and we are now established along the West bank of this river all the way from its confluence with the MAAS to a point approximately 10 miles South of DÜREN. The enemy's front in HOLLAND remains thinly held and along its 200 miles there are now only thirteen divisions in contact. A new Army H.Q. - 25 Army - is now reliably reported in HOLLAND, and is believed to be commanding on the extreme right of the German line under Army Group H. We thus have eight Army HQs in the West controlling rather more than 80 divisions, a more generous allotment of Armies than is enjoyed by either the Eastern or Italian fronts.

.....4. EASTERN FRONT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

4. EASTERN FRONT

EAST PRUSSIA, POLAND AND CZECHOSLOVAKIA

The Soviet winter offensive sweeps on to the ODER without any apparent slowing down after eighteen days of battle. While in the North the Third and Second White Russian Army Groups are completing the conquest of East PRUSSIA, in the centre the First White Russian Army Group has reached across the German frontier to within 75 miles of BERLIN and cut the BERLIN - DANZIG railway. On the left Marshal KONIEV's First Ukrainian Army Group has completed the capture of the Upper Silesian industrial region. In CZECHOSLOVAKIA the German withdrawal has brought the Russians up to the HIGH TATRA Mountains.

After the capture of INSTERBERG General CHERNIAKOVSKY continued his advance due West in the direction of KONIGSBERG, at the same time pushing his left wing South and Southwestward to make contact with ROKOSSOVSKY's Army Group somewhere in the region of ALLENSTEIN. A two pronged thrust on KONIGSBERG has now developed from the North and from the South; both drives have reached the outskirts of the East Prussian capital. The Germans estimate that CHERNIAKOVSKY is using some forty-three Divisions in his present attack. On the enemy side the Russians have reported the destruction of 69 Inf Division in the Masurian Lake fighting, while 61 Inf and 31 Inf. Divisions have both received mentions from the German radio for their "defensive successes".

Meanwhile ROKOSSOVSKY, striking up the WARSAW-DANZIG railway with a force estimated by the Germans at fifty-eight divisions, has made spectacular gains. After making contact with the Third White Russian Group near ALLENSTEIN he has cut off East PRUSSIA from land communication with the outside world by a drive which has reached the Baltic at TOLKEMIT. What proportion of the German 3 Pz Army and 4 Army is now cut off is not known. Between them these Armies were thought to contain about twenty-four divisions. The enemy now appears to be launching counter-attacks against the Russian wedge from the area N.W. of ALLENSTEIN and claims to have reached PREUSSEN-HOLLAND.

In the central sector of the front Marshal ZHUKOV has continued his attack South of the VISTULA along the WARSAW-BERLIN railway. The Germans estimate that at least thirty-seven Soviet Divisions are engaged in this attack. (The German forces involved are the 2nd and 9th Armies probably worth about thirty divs). ZHUKOV has by-passed POZNAN and crossed the German frontier on both sides of SCHNEIDEMUEHL. His Army Group has cut the BERLIN-DANZIG trunk line at SCHNEIDEMUEHL and is now about 75 miles from BERLIN itself. On the 1st White Russian Group's left Marshal KONIEV, whose force (1st Ukrainian Army Group) the enemy has estimated at forty divisions, has now reached the ODER N.W. and S.E. of BRESLAU. It seems evident from German admissions, although the Soviets themselves say nothing, that KONIEV has succeeded in establishing at least one bridgehead over the ODER at STEINAU, 33 miles N.W. of BRESLAU and probably others to the Southeast. Meanwhile S.E. of BRESLAU the Russians have completed the conquest of the Upper Silesian industrial region with the capture of GLEIWITZ, KATOWICE and HINDENBERG. Opposing the advance of KONIEV's forces are the German 4 Pz Army and the 17 Army. Identifications reported on the First Ukrainian Front in the past week by the Russians include 25 Pz Division, routed in the RADOM battle, and 45, 68, 72, 75, 304 Infantry Divisions all of which are believed to have been badly knocked about. Between them the two German Armies involved are believed to control about twenty-five divisions. Further South the German withdrawal from CZECHOSLOVAKIA has continued without serious Russian interference. The enemy is now nowhere nearer to KOSICE than 30 miles and is generally back on the HIGH TATRA Mountains. 1st Pz Army is reported to be conducting this withdrawal.

...The situation developing.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

The situation developing on the great battlefield of the central sector is strangely analogous to that in Eastern POLAND in the summer of 1944. Once again the Russians are approaching a major river obstacle. Once again they are faced with the reduction of a large city on both banks of the river, and once again, as with every river they have ever reached, they are making determined efforts immediately to establish bridgeheads on the west bank. On the First Ukrainian Front KONIEV's efforts are already being directed to establishing firm bridgeheads and to reaching BRESLAU. Further North, however, the river has yet to be reached and the Russian drive has not yet lost its momentum. It seems possible that the Soviets have kept more forces in reserve in the Northern half of the central sector than in the South, so that the impetus of the advance could be maintained over the larger distances to be covered before reaching the ODER. The present Russian object is probably to close up to the ODER all along its length before a German counter-attack can be mounted, and to establish at least one firm bridgehead over it; but old German defences, which may have been modernised, exist between the ODER near ZULLICHAU, North of STEINAU, and the WARTHE at SCHWERIN, and may continue Northwards to the Baltic. Although these may not be strong, they may be sufficient temporarily to stem the Russian tide whose strength must be affected in some degree by the German held rocks of POSEN and THORN. But wherever the Germans may stabilise the reduction of East PRUSSIA can meanwhile be completed. The stage will then be set for the battles of the spring.

HUNGARY

The impact of events in the Central sector has not yet made itself felt on the Hungarian front and there is so far no evidence of any large scale enemy thinning out. Nevertheless with disaster at hand on the Central Front, it is to be expected that a major transfer of armour from HUNGARY to the North will soon take place, if it has not already started. The shortening of the line in CZECHOSLOVAKIA makes it possible however for the enemy to release a certain number of Infantry Divisions from there for use elsewhere, and it is conceivable that some of these may be used to cover the approaches to the BRATISLAVA Gap, as replacement for any armour withdrawn.

North of the DANUBE it appears that recent enemy efforts to clear the Russians from the East bank of the NITRA river and the area of KOMARON have met with some success. The Russian line is now reported to run through BATORKASZ and North of SUTTO - in other words, the Soviet held area West of the HRON river has been reduced to a comparatively small bridgehead.

In BUDA mopping up continues. South of BUDA the German drive reached the area of VAL, 17 miles S.W. of BUDAERSZ during the past week and appears to have halted there in the face of Russian counter-attacks. The Russians are attacking the long and awkward flanks of the German salient from both North and South and seem to have frustrated this second large scale German attack to relieve the Hungarian capital. On the other hand the enemy may feel that, although his main object has not been achieved, he has given the Soviets a sharp blow which may preclude an immediate resumption of the attack on BRATISLAVA.

Heavy road movement in the past week from ZAGREB Northwards to VARAZDIN suggests that 11th Pz Division may now be arriving on 2 Pz Army's front South of Lake BALATON.

YUGOSLAVIA

There has been little operational news from YUGOSLAVIA.

.....after the sharp.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

After the sharp activity of the previous week the enemy attack on the BARCS bridgehead has once more subsided. This may in part be accounted for by the arrival of Bulgarian artillery reinforcements on the North bank of the DRAVA. Nonetheless it is strange that the enemy has not pressed home the successes which he so easily gained at the start of his attack on the bridgehead. - Further East, however, the attack in the SREM has continued and appears to have achieved its objective in regaining for the enemy the old VUKOVAR - SID - DRINA mouth defence line, which now seems to be firmly back in his hands. 297 Inf Division may well have been involved in the Southern flank of these operations as its presence in the SAVA Valley was reliably reported on 24 Jan.

The main feature of interest in YUGOSLAVIA in the past week has however been the temporary halt in the withdrawal of Army Group E. On 19 January the supplement to the German communiqué was devoted to a summing up of Army Group E's retirement from the S.E. and since that date no further towns have been evacuated by the enemy. On the contrary there is every evidence that he intends to hold on to the SARAJEVO area with advanced outposts at VLASENICA, VISEGRAD and MOSTAR. To the N.W. the enemy has in the past week cleared the SARAJEVO-VLASENICA highway and is now continuing offensive operations Northeastwards from VLASENICA; to the East he still holds on to the strong natural defensive positions at VISEGRAD and to the S.W. the enemy is not only conducting offensive operations in the MOSTAR region but he is actually reported to be reinforcing the area: 1,000 Germans and 800 Ustaschi troops have arrived there since about 15 January. It seems very probable, in view of this evidence, that a change in enemy policy has now taken place and that, until his higher policy dictates a further withdrawal, Gen LÖHR has decided for the time being to stay where he is. The present enemy held territory in YUGOSLAVIA corresponds very roughly to the borders of CROATIA. It is thus at least conceivable that HITLER has ordered LÖHR to halt his withdrawal on the present line in fulfilment of obligations he may feel towards the Croat State for its contribution to the German war effort. A brief word on the Croat Army may therefore be of interest at this juncture and is included at Appendix 'A'.

The only other area of interest in YUGOSLAVIA is TRAVNIK where the enemy after several unsuccessful efforts over the past two months has at last succeeded in capturing the town. This is of some importance in that it strengthens his hold on the L of C from SARAJEVO to BROD and may well be followed by further efforts to open up an additional L of C Northwestwards towards BANJA LUKA or BIHAC.

APPENDIX 'A' TO 15 ARMY GROUP
INTELLIGENCE SUMMARY NO. 79 OF
30 JANUARY, 45

THE CROAT ARMY

The Croat Army, as now mobilised, consists of sixteen divisions of various strengths and a number of independent Brigades. The C in C, General MATIJ. CANIC has his G.H.Q. at ZAGREB, while the divisions, seldom stronger than 8,000 men, are located as follows :

1 Assault Div :	BJELOVAR area. Took part in attack on Russian DRAVA bridgehead.
2 Inf Div	ZAGREB. In process of forming.
3 Inf Div	VINKOVCI X 08. Operational. Took part in fighting at OTOK X 06.
4 Inf Div	DVOR, K 81. Operational.
5 Inf Div	BJELOVAR. Operational.
6 Inf Div	BANJA-LUKA. Poor quality Div. Garrison duties.
7 Mtn Div	NOVA GRADISKA. Operational.
8 Inf Div	SARAJEVO area. Operational.
9 Inf Div	MOSTAR area. Operational.
10 Inf Div	BIHAC area. Operational.
11 Inf Div	OTOCAC G 98 Operational.
12 Inf Div	HRGKO W 93 Operational. S of SAVA.
13 Inf Div	KARLOVAC Reported to be a good Div
14 Inf Div	BROD. Guards railway BROD-ZAGREB
15 Inf Div	DOBOJ M 28. Newly formed. Believed to be of poor quality.
16 Rpl Div	ZAGREB. Purely a reinforcement Div.

These Divs, poorly armed and lacking in heavy weapons, are of problematical value, though the human material is good. Some effort has been made to bolster morale by mixing the fanatical USTASCHI with the less reliable DOMOBRAN or conscripted troops. However, numerous cases of desertion have been reported and TITO's amnesty to all who deserted, published recently, brought over a steady flow of Domobran, in many cases with their arms, to the Partisans. Nevertheless the Croats have proved a useful addition to the German Armed Forces and HITLER may feel that he must now discharge his debt by defending the frontiers of CROATIA.

1. ENEMY SITUATION

The patrol activity which has monopolised the communiqués of the last week has been most valuable in widening our picture of the enemy's dispositions and intentions. Assisted by the services of a larger number of deserters than usual the prisoners taken have confirmed in general terms the conclusions reached in our last Summary that no great changes in policy were yet being effected, though regroupings and reliefs continue.
